"FAISCE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to name, and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 4TH, 1896.

BIRTH.

On June 18th, at Niigata, the wife of JOHN G. DUNLOP, of a daughter.

MARRIAGES.

On 29th inst., at Christ Church, by the Rev. E. Champneys Irwine, M.A., Rector, E. FLINT KILBY to ANNIE BRITTAN, daughter of the late John McMeikan Shaw, and sister of Mrs. P. E. Fred Stone, of Yokohama.

At Christ Church, Yokohama, on June 29th, by the Rev. E. Champneys Irwine, M.A., DONALD FRANKER, Inverness, to CHRISTINE MARIE DRUMMOND, of Yokohama.

SUMMARY OF NEWS.

THE Midland Counties have beaten the Australian Eleven by four wickets.

THE French Chamber of Deputies has passed the Bill to annex Madagascar.

THE Powers have proposed to the Porte to appoint a Christian Governor in Crete.

THE Fifth National Bank will continue business on an increased capital of yen 300,000.

THE death is announced of Sir Augustus Harris, of the Drury Lane Theatre, London.

THE *Taiwan Shimpō*, published in Taipeh, on the 17th June, appeared with the first page

printed in Chinese ideographs, and the second page in Japanese characters.

THE Yokohama Specie Bank will open a branch office in Hongkong about the 10th of this month.

MR. HORI KATSUTARO, a millionaire merchant of Nagoya, died on the 25th inst., at the age of 71.

THE application for permission to increase the capital of the Nippon-Yusen Kaisha has been granted.

It is estimated that the seismic-wave of the 15th ult., travelled over the Pacific at the rate of 9 miles a minute.

LI HUNG-CHANG continues his triumphal tour through Germany, many gorgeous fêtes being arranged in his honour.

A ROYAL salute was fired last Sunday in honour of the coronation of Her Majesty Queen Victoria Empress of India.

MR. R. VON KRENCKI has been elected Chairman of the Kobe Municipal Council, in the room of Mr. J. J. Ensle deceased.

MR. HARA KEI, the newly-appointed Japanese Minister to Korea, and his wife, left Tokyo on the 25th at 6.45 p.m.

H.I.H. PRINCE FUSHIMI has wired from Marseilles that he leaves there the 5th of July. He is expected at Yokohama on August 15th.

MARSHAL MARQUIS YAMAGATA is expected to arrive at Yokohama on August 3rd. His gastric maladies have troubled him sorely in Europe.

THE affairs of the Seiya Railway Company are said to be in great disorder owing to some scandalous and fraudulent proceedings among the officials.

THE seismic-wave that did so much damage in the north-east of Japan on the 15th June, was felt in the Hawaiian Islands, where it did no damage at all.

THE Venezuelans have arrested and conveyed to their territory Mr. Harrison, a Government official, who was directing the making of roads on the British side of the Schomburg Line.

MARQUIS ITO, Minister President, Marquis Saigo, Minister of the Navy, and Lieut.-General Katsura, Governor-General of Formosa, have returned from their trip to the new colonial possession.

A JAPANESE errand-boy in the employ of Messrs. MacArthur and Co., of Yokohama, abstracted a cheque for \$300 from a letter addressed to the firm, and cashed it at a Chinese exchange-shop. He was subsequently arrested.

By Government notification No. 259, issued on the 26th inst., it is announced that payments for serum and vaccine from the Government laboratories, can be made in revenue stamps.

HIS MAJESTY THE EMPEROR had a narrow escape at the railway crossing at Shibuya-station, Tokyo, on the 29th ult., owing to the stupidity of an engine-driver and conductor. Fortunately no one was hurt.

To open up steamship communication with Formosa, the Government will make a contract with a private company, offering yen 60,000 as an annual subsidy for the encouragement and protection of the trade.

THE Peninsular and Oriental Steam Navigation Company have entertained Mr. Shoda, the Managing Director of the Nippon Yusen Kaisha, at an important representative gathering of

English and Japanese officials and representatives of the mercantile shipping interests. The Japanese Minister also was present, and warm expressions of mutual regard were interchanged.

MR. NAKAMURA SEIDAN, Director of the Central Observatory, will leave in the middle of this month for Kushiro, Hokkaido, to take observations of the total eclipse of the Sun. The English and American expeditions left this week.

THE *Asahi* states that the Imperial Estates Sales Committee has decided to grant a sum of about 70,000 yen to the people of Sado, and 50,000 yen to the people of Ikuno, to reconcile them to the transfer of the mines in those places.

THE Fourth of July programme in Yokohama includes a baseball match between an American team and the nine of the Tokyo Higher School, a cricket match, sailing races, and aquatic sports among the men of the American fleet in Yokohama Bay.

THE American Democrats are profoundly divided over the silver question. Mr. Whitney, the Democratic leader, declares that the adoption of a silver programme by the Chicago Convention will lead to the disruption of the party.

HIS MAJESTY the King of the Belgians; the President of the French Republic; and H.M. the Emperor of Austria, following the example of Queen Victoria, have sent expressions of their sympathy on account of the recent sad disaster in the north, to the Emperor, through their Ministers.

THE Mashona revolt is spreading and there has been severe fighting in the Mazoe district, between the rebels and a party escorting the women and children. So far as can be ascertained, twenty whites have been murdered and fifty-nine either killed, wounded, or missing in Mashonaland. Troops are being hurried to the front.

THE Foreign Office announces that Mr. F. W. Playfair has been appointed Consular agent at Kobe *ad interim*, owing to the death of Mr. J. J. Ensle, British Consul for Hiogo and Osaka, who died on the 14th inst. Mr. R. G. E. Foster is appointed Consular agent at Nagasaki from the 15th, Mr. J. J. Quin having gone on leave. Mr. A. M. Chalmers is appointed Vice-Consul there.

BUSINESS in Cotton Piece Goods, Woollens, and Cotton Yarns has been very dull, only small sales being reported, and quotations for all are nominal until real business set in again. Small day-to-day trade in Metals, all in favour of buyers, and no improvement is looked for for some time to come. The demand for Kerosene is likewise very quiet, the country dealers being absolutely asleep. A very considerable business has been done in Brown Sugars, Manila's especially finding favour, but other sorts, with the exception of White Refined, are dull. Nothing has been done this week in Raw Silk. A few samples of the new crop, as reported last week, were sold for \$730, but now shippers refuse to go on, and holders are expressing their willingness to take less in order to induce some business. Waste Silk has moved slightly, and the stock is now down to 3,700 piculs. Tea has seen a steady business, but the returns for the half season are very disappointing, being 135,000 piculs against 160,000 this time last year. Growers are in despair at the prices now prevailing, but buyers declare that they cannot give more. The Second Crop Leaf is reported to be inferior to last season's. Exchange has had another steady week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The *Fiji* and the *Nichi Nichi* are fated to disagree on many questions, and well-matched controversialists they are. Their spirit of competition has extended even to the collection of funds for the relief of the sufferers by the recent disaster in the north, for so zealously do they exert their influence to have contributions entrusted to them that many mercantile corporations are obliged to divide their subscriptions into two parts and transmit a moiety to each journal, so as not to provoke the umbrage of either. The controversy in which the two have been engaged this week relates, first, to the granting of patents of nobility to the Lord Abbots of the two Hongwan Temples, and secondly, to the Navigation Encouragement Law. As our last summary showed, the *Fiji* attacked the alleged policy of the Government, and we now find the *Nichi Nichi* defending it. The latter journal traverses the *Fiji's* arguments and observes that the Government's estimate of a sum of some 300,000 *yen* as likely to be paid out in the form of subsidies during the present half-year, was based on the fact that, at the time of passing the law, there were about 28 steamers qualified to receive such subsidies. It was also thought an appropriation of 900,000 to 1,000,000 *yen* a year would suffice for the purpose at first. That estimate is now proved to be plainly under the mark, judging from the present extraordinary activity of maritime enterprise, and the Authorities are considerably embarrassed, as may easily be inferred. Some persons hold that the Treasury must be prepared to pay out an annual sum of fully six million *yen*, if Japanese ship-owners are to get into their hands one-half of the country's total foreign carrying trade (21,700,000 *yen*), of which only one-seventeenth now comes to them. It is not easy to determine, however, whether financial conditions will admit of such a liberal use of public money. This much premised, the *Nichi Nichi*, proceeds to discuss points at issue between it and the *Fiji*, and alleges that the exact qualifications of steamers entitled to receive a subsidy have yet to be determined. It expresses astonishment at the ignorance displayed by the *Fiji's* assertion that the *Tosa Maru* is the only double-bottomed steamer owned by the Yusen Kaisha, and therefore the only vessel possessing the restrictive qualification that the Government is supposed to contemplate enforcing. In point of fact, about 18 steamers owned by that Company are double-bottomed, the only difference between the *Tosa Maru* and the others in that respect being one of quality. As the *Fiji's* objection to the provisions of Art. IX., which make the authorities' special sanction an essential preliminary to the employment of foreigners, the *Nichi Nichi* alleges that such a proviso is deemed useful, as a means of determining whether a foreigner whose employment is contemplated by a ship-owner possesses the necessary qualifications. The *Nichi Nichi* further expects that an amendment of the Law, in the sense of setting a limit to the total amount of the subsidy, will be submitted to the Diet next session, and also in the sense of closing up the loopholes through which foreign capitalists might attempt to turn the Law to their account.

The *Fiji* gives a long rejoinder. It scoffs at the idea that the authorities estimated the subsidies on the basis of the then existing number of qualified steamers only, and avers that the statements in the *Nichi Nichi* have entirely confirmed its suspicion as to the Government's intention of having recourse to stringent restriction. Our contemporary singled out the *Tosa Maru*, because of information that the authorities contemplated limiting the grant of a subsidy to double-bottomed steamers of the *Tosa Maru's* standard. As for the question of seeking the approval of the authorities before engaging foreigners to serve on Japanese steamers, the *Fiji* fails to appreciate the utility of such a proviso, inasmuch as the matter, being inseparably connected with the interests of ship-owners, they

may be trusted to engage men of established competence. The *Fiji* is entirely opposed to the *Nichi Nichi's* plan of putting a limit to the amount of the bounty, and declares that such a measure would be unfair, as well as calculated to cripple the natural development of maritime enterprise. Further, it suggests that the amount, say, 10 million *yen* a year, should be defrayed for a period corresponding to the average life of a steamer, that is to say, 10 or 15 years, so that any steamer commencing to run within that limit of time would be entitled to a subsidy. Lastly, it criticizes as narrow-minded the suspicion of the *Nichi Nichi* that foreign capitalists might elude the restrictions of the Law. Such an apprehension is inconsistent with the actual state of affairs, for the Yusen Kaisha and the Toyo Kaisha have no names of foreigners on their list of shareholders, and the Japanese public is rich enough to furnish whatever funds are wanted. Besides, what evil would there be in utilizing foreign capital?

Two other wordy fights have been going on between the rivals, but we need not trouble our readers with details. Suffice it to say that while the *Fiji* has no scruples about adding to the burden of the people when measures conducive to the development of national enterprises are in question, the *Nichi Nichi* is inclined to be more cautious, and holds such lavish expenditure to be inadmissible under Japan's existing circumstances.

The *Fiji's* argument against conferring patents of nobility on the Lord Abbots of the two Hongwan Temples is equally outspoken. It contends that to make Counts of these great dignitaries of the church is to pull them down from the high pedestal on which they stood, and it attributes the measure simply to a whim of the authorities, who originally instituted these artificial and entirely childish social distinctions for the purpose of themselves profiting by them, and then proceeded to extend them to others, so that the latter might become supporters of the whimsical idea. The action of the Hongwan Abbots is equally blameworthy, for the *Fiji* learns that instead of declining the offer, they themselves agitated to obtain the title. Such hankering after things worldly is plain evidence of degeneration, and the *Fiji* doubts strongly whether temples of the kind are worthy to furnish spiritual guidance to the masses. The editor at all events, will never look to them for such guidance.

The comments of the *Nichi Nichi* on the above deserve to be quoted at more length, not because we endorse our contemporary's contention, but because much interesting historical information is furnished as to the origin of the Temples and the lineage of their hereditary Lord Abbots. Setting out by stating that the grant of the title of Count to the two Abbots was due not to any meritorious services rendered by them in connection either with the Restoration or with the late War, but entirely to the distinguished achievements of their ancestors and to the status of their houses, the *Nichi Nichi* proceeds to review the history of the *Monto*, beginning with that of Shinran, the founder of the Sect, who was the son of a Court noble named Hino Arinori. In consequence of offering funds for carrying out the coronation ceremony of the Emperor Gokashiwabara (1501 to 1557 A.D.), Hino's 9th descendant and the latter's successors were nominated *Monzeki*, a title formerly borne by Imperial Princes who entered the priesthood. In the time of the 11th descendant, the Sect was subdivided into two distinct branches, the Higashi Hongwanji being for the first time created, as a result of the policy of Iyeyasu. Thenceforth the two branches began to entertain unfriendly feelings towards each other, in connection with which the *Nichi Nichi* describes the treatment accorded to the Lord Abbots of the two, in pre-Restoration days, at the Courts both of Kyoto and of the Regency, and shows that all these facts militate against the views of the *Fiji*. It is indignant at the allegation of its contemporary that the accept-

ance of such titles by the Abbots is vulgarizing and derogatory to their dignity, and it avers that such a declaration is tantamount to calling in question the dignity of the Imperial Court, the fountain-head of all honours and titles. The *Nichi Nichi* believes that the titles conferred on the Lord Abbots are entirely independent of religious considerations, being primarily due to the status of the two Houses of Otani. The Hongwan Sect is peculiar, in that, as the founder Shinran laid down, it combines both spiritual and worldly elements, and the title was conferred in consideration of the worldly element. If the Court conferred no higher title than that of Count upon the Lord Abbots, it was because the main stock of the two Houses of Otani, namely, the House of Hino, occupies that position in the peerage. The *Fiji*, when it condemns the acceptance of a title by the Lord Abbots, seems to have overlooked the fact that they were actually Peers more than two decades before the present time, as well as the fact that untitled Peers are not permissible according to the strict interpretation of the Peerage Law. The *Nichi Nichi* finally asks why, if the *Fiji* is so averse to artificial social distinction, it does not openly and plainly declare for a republican form of Government.

The controversy of the two leading papers having occupied so much of our space, we can devote only a brief notice to other articles, and in truth there is not much to say about them. First comes the question of female education, discussed by the *Kokumin*, which says that things foreign and things Japanese being at present merely mixed and not thoroughly coalesced, the problem of female education shows the taint of the times, one section of publicists declaring for western systems and the other for Japanese. When mixed residence is inaugurated and more intimate coalescence of foreign and Japanese ideas has taken place, a definite principle will be found whereon to base the policy of education.

The victories gained by the lads of the Tokyo Higher School at base-ball over the players of Yokohama and also over the baseballers of an American man-of-war, furnish a theme for editorial discussion in the columns of the Tokyo *Asahi*. Although the winners ought not to be satisfied with their achievements, since, while they are practically the champions of all Japan, their antagonists can not pretend to represent the players of their own countries, one lesson can be learned from this incident, namely, that small as the Japanese are in stature and build, they can cope successfully with their bigger and stouter brothers of the West. That consideration should tend to dispel the delusion under which worshippers of the Occident labour.

Mr. Miyake, in the editorial columns of the *Nippon*, writes about *samurai* and their code (*bushido*). He describes at length the admirably disinterested and chivalrous characters of Garibaldi and Gordon, and says that, judging from the unstinted reverence in which their memory is held in the West, Europeans and Americans do not seem to have entirely degenerated into base worshippers of Mammon. Turning to typical instances of *samurai* in Japan, the writer singles out Uyesugi Kenashin, in former times, and Saigo Takamori, in modern, and says that, as the former's brilliant example contributed to uphold the military code (*bushido*) for the space of three centuries, so the latter's merits of the same nature are felt even to this day. It is chiefly because of Saigo's influence that military men shrink from keenly pursuing their own interests. But is there now any one qualified to succeed Saigo as a model exponent of the *bushido*? The *Nippon* avers that there is not, and finds the fact no less deplorable than incomprehensible, inasmuch as officers hold their positions for life, and need not be concerned about financial matters. Let them devote themselves to upholding and asserting the canons of the *bushido*, and this effort will conduce much towards purging the people of the base custom of selfishness.

The last article to be summarized is a discus-

sion in the *Mainichi's* columns about the advice said to have been tendered by a certain Power to Japan to pay a portion of the Chinese War Indemnity to Korea. The *Mainichi* contends that as the War really rose from Japan's desire to uphold the integrity of Korea and maintain the peace of the Orient, if Korea seeks to participate in the Indemnity on the plea of damages suffered by her in consequence of the War, then Japan must prefer the same demand against Korea, for it was on the latter's account that such inestimable damage was suffered by the Japanese nation. In point of fact, the idea is wholly due to the machinations of a third party desirous of playing Korea and Japan against each other. That Korea is really grateful to Japan for having upheld her cause is apparent from the special mission she sent to this empire to offer thanks. It would be positively contrary to justice and common sense to acquiesce in any such absurd demand, a declaration that the *Mainichi* wishes to place on record, seeing that constant repetitions of the rumour seems to indicate that it has some foundations in fact.

EDITORIAL NOTES.

SHOCKING AFFAIR AT KOBE.

In the *Kobe Herald* of Saturday evening we find particulars supplementing our telegram announcing the news of the attempted suicide at Kobe. It says, we regret to hear Mr. S. Rosenfeld, who only returned from a business trip to the United States a fortnight ago to-day, attempted to take his life at an early hour this morning by shooting himself with a revolver. The bullet entered the right temple and emerged on the left side, severing the membranous sac holding the right eye, in its passage. The eye fell out. The deplorable act is believed to have been committed at about 5 o'clock this morning, but the unfortunate gentleman's condition was not discovered until 7 a.m., when an attendant went, as was his wont, to shave him. Mr. Taylor, who occupied the same house as Mr. Rosenfeld, was then aroused, and help was promptly summoned. There is some ground to hope that the wound will not prove fatal, but the patient lies in a very precarious state and even if he survives it is doubtful if he will ever recover his eyesight. The sad affair has cast quite a gloom over the community, Mr. Rosenfeld having been very well liked; and as a rule of an uncommonly cheerful and buoyant disposition. We say as a rule, for it was known to his friends that he was subject to occasional fits of extreme depression, when the temptation to take his own life assailed him with almost irresistible force. This much he had confessed in times past, but no one attached serious weight to the disquieting statement. What motive existed for the act is not known. He was both trusted and much liked by his employers, the Japanese Fan Co. of New York, and so far as is known he was as free as most men are of business and social cares.—After lingering in semi-unconsciousness for several days, during which the other eye had also to be removed, Mr. Rosenfeld died at three o'clock on Thursday afternoon, and was buried on Friday.

SUGGESTED CENTRAL MARKET FOR KOBE.

Just before the adjournment of the last meeting of the Kobe Municipal Council, Mr. Hellyer brought the following proposition before the assembly:—"That the Municipal Council address the Governor of this *Ken* asking that arrangements may be made for the establishment of a provision-market adequate to meet the growing requirements of Kobe." Proper provision for the large resident and floating population, he added, was a matter of the greatest importance. It might not exactly come within the Council's province, but as there was no other public body to bring it forward he ventured to ask the Council if it would not adopt this motion. The present arrangements for supplying the wants of the population here were quite inadequate, only equal to what was required twenty years ago. If the Government would

take the matter in hand and establish a market where the people from the country could bring in their produce and the people here could go to fulfill their requirements, it would be a great boon to both parties. One important point was this: there were often a great many ships here and sometimes it was impossible for them to get what they required. The stewards had to go from one little shop to another and were often at their wits' ends to get what they wanted.—Mr. J. Connelly, in seconding the resolution, thought that the question was one for the Consular Board to take up. The proposition was accordingly altered to:—"That the attention of the Consular Body be drawn to the necessity of establishing a Provision Market suitable to the needs of the Community and of vessels visiting the Port." It was then carried unanimously.

ALLEGED ATTEMPTED ROBBERY.

UYEDA HYONOSUKE alias Torii Hachizo, a youth of 15, employed as an errand-boy by Messrs. MacArthur & Co., of No. 10, Bund, has just been arrested on a charge of attempted robbery. The boy was sent to the Post Office for the mails on Tuesday, and abstracted a letter containing a cheque of \$300 drawn on the Hongkong and Shanghai Bank, at Yokohama, by Mr. H. A. C. Bonar, of Hakodate, in favour of Mr. MacArthur. Later in the day he took the cheque to the Gen-tai Exchange shop, No. 52, and cashed it for \$300, less commission. Upon the Chinaman sending the cheque into the H. & S. Bank, payment was refused. He accordingly went to the Kagacho police station and laid information. Mr. Nakajima, one of the detectives, upon getting the clue went to No. 3, Benten-dori, and found the would-be thief at home. He had not had time to spend a cent of the money, and the whole of it was accordingly handed back to the Chinaman. The arrest was made between three and four o'clock on the 30th ult.

H.M.S. "EDGAR."

H.M.S. *Edgar*, after a stay on this station lasting from the 10th November, 1894, left Yokohama for good on Wednesday. She went to Hakodate to exchange one hundred men, and leaves there on the 7th July. Then the *Edgar* goes on to Hongkong and will stay there till about the 11th August. We understand that the "homeward pennant," that will be flung to the breeze, probably at Hakodate, is a thing to marvel at for breadth and length, while the gilded bladder that will decorate the end is larger than the average. Captain Henderson and his officers will carry away with them the best wishes of the foreign communities of Tokyo and Yokohama for their future welfare and success, while not a few Japanese naval officers will follow the careers of several among them—whose friendship they made on the bleak coasts of the Gulf of Pechili—with fraternal interest.

THE BEHRING SEA CONVENTION.

A TELEGRAM that appears in the *New York Herald*, dated Washington, June 8th, says that President Cleveland and Queen Victoria will officially proclaim within a few days the Behring Sea Convention which their respective Governments have entered into. The Senate has made public the text of the treaty. It provides for the appointment of a joint commission to ascertain the amount of damages sustained by the owners of British sealing vessels seized in Behring Sea by United States revenue cutters before they had authority to do so under the terms of the *modus vivendi*, or the approved decision of the Paris arbitration tribunal. The long preamble of the Convention recites the facts of the treaty of 1892, and the failure of the tribunal of arbitration provided for it, to satisfactorily settle all matter in dispute. The Convention provides that all claims arising under the treaty of 1892 and the award and findings of the tribunal of arbitration shall be referred to the commissioners, one appointed by Great Britain and the other by the United States. These commissioners are to meet in Victoria, B.C. If either so requests, they shall also sit in San Francisco. The decisions reached by the com-

missioners in each claim shall be accepted by the two governments as final. They are given full authority to examine under oath every question of fact not found by the tribunal of arbitration, and shall have such powers to procure or enforce testimony as may hereafter be provided by legislation. If in any case the commissioners fail to agree, the differences shall be referred for final adjustment to an umpire to be appointed by the two governments jointly, or in case of a disagreement to be nominated by the President of the Swiss Confederation. The amount awarded to Great Britain under the convention is to be paid by the United States within six months after the award is made.

METALS.

MESSRS. S. W. ROYSE & Co., in their Report, dated, Manchester, May 23rd, say:—Prices of Pig Iron fell during the early part of this month, but have since improved, and are now firm at an advance of a few pence per ton. The Engineers' strike has had a depressing effect, but this strike is not expected to last much longer. There is not, however, a large business passing at present, and it is mainly for delivery prompt or during the next few weeks, the disposition amongst both buyers and sellers being not to operate far forward but to wait and see the course of events. The finished iron trade in the Midlands is fairly good, and more new business is now coming forward. Copper has advanced some 25s. per ton during this month, and is quite firm; the visible supply is said to have decreased by about 17,500 tons during the last twelve months. Spelter is nearly £2 per ton dearer than it was a month ago, and has a strong position. Tin has advanced about 20s. per ton during the last four weeks. Lead is slightly dearer, and is steady.

RAW SILK TRADE AT KOBE.

DURING the last twelve months, according to the *Osaaka Mainichi*, the exports of waste raw silk from Kobe amounted to 664,983 lb., valued at 386,967 yen, the largest amount since the opening of Kobe for foreign trade. Our informant adds that the establishment of a raw silk exchange has been approved, the Jinei Kaisha has augmented its capital and the Japan Raw Silk Company has been organized, its shares being now put on the market. The company has already received one bale of new crop silk from a mill in Tajima province and the Jineisha also received five bales (coarse, denier 14) on the 28th inst. from the Sanyo Silk Reeling Mill at Kasaoka, Bitchu. Thus there is a good beginning of the trade this year.

PRIZE DISTRIBUTION.

THE annual distribution of diplomas to graduates of the Kyoritsu Jogakko, No. 212, Bluff, took place last evening. Despite the unfavourable weather, there was a large attendance, and the long programme was most successfully carried through. The Graduates were Miss Tama Oyama, Miss San Maruya, Miss Ine Otani, Miss Tami Iwama, Miss Kin Yamaga, and Miss Mitsuru Yonekura.

KOBE MUNICIPAL COUNCIL.

MR. R. VON KRENCKI has been elected Chairman of the Kobe Municipal Council, in the room of the late Mr. J. J. Enslie.

THE REVISED TREATY WITH BELGIUM.

The negotiations with Belgium for Treaty Revision seem to have been concluded very quickly. They were conducted by Viscount Aoki on Japan's part, and the *Yiji Shimpō* says that the Foreign Office received official intimation of the new Treaty having been signed in Brussels on the 22nd instant. This speedy procedure on Belgium's side is attributed by our contemporary to a desire to promote trade with Japan—a desire that has received considerable impetus from the opening of the Nippon Yusen Kaisha's new European service of steamers, touching at Antwerp.

THE SEISMIC WAVE.

Saturday, June 27.

The report submitted by the Miyako Observatory to the Iwate Prefectural-office about the seismic wave, is as follows:—The day had been overcast, as had also been the previous day. It rained and was foggy. The atmospheric pressure and temperature were above the average for the corresponding days in other years. At 6.32.30 p.m. a slight shock of earthquake was felt, lasting for about 5 minutes. Its direction was E.N.E. and W.S.W., and the motion was extremely slow. At 6h. 53m. 30s.; and at 8h. 33m. 10s.; and at 8h. 39m. slight shocks were again perceived. Further, between 9 and 10 p.m. four shocks were experienced, between 10 to 11 p.m., one shock, and between 11 and midnight, two shocks—in all 13 seismic movements. The hour at which the seismic wave occurred, that is the time at which the sea began to recede, could not be observed with any prevision, but must have been at about 50 minutes past 7. At about 8 o'clock, the water rose, but fell somewhat in a few minutes. At 8.7 p.m. the biggest wave, about 15 ft. high, came on with a fearful booming sound, and instantly swept away all houses or living things that were in its path. Subsequently, six waves of more or less volume rolled in, and till noon of the following day similar abnormal seas swept the coast. On the 16th inst., 13 shocks; on the 17th inst., 12; and on the 18th inst., 6, of a very weak description, were felt.

At Toni, the impetus of the rushing wave was so vast that houses, trees, and so forth were all overthrown towards the land. The Yusen Kaisha has consented to place one of its steamers the *Chitose Maru*, at the disposal of the three afflicted districts until the end of July, at a reduction of 50 per cent. of the usual rates. The steamer is to cruise backwards and forwards along the afflicted coast at intervals of every 3 or 4 days, calling at each place of importance.

Wednesday, July 2.

The tide-gauge maintained by the Department of War at Ayugawa, in the Oshika District of Miyagi Prefecture, since 1890, furnishes important data for scientific men in conducting investigations into the calamity that recently devastated the Pacific coast of north-eastern Japan. The tide-gauge used is Thomson's self-registering instrument. In addition to the place mentioned above, similar gauges are set up at Misaki, in Kanagawa Prefecture; Hanasaki-mura, in Nemuro; Kushimoto, in Wakayama; Iwasaki-mura, in Aomori; two places in Miyazaki Prefecture, and one place each in Ishikawa and Shimane Prefectures. Three records from Ayugawa, Hanasaki, and Misaki have been prepared by the Survey Bureau of the Department, with notes affixed. The record of the Ayugawa tide-gauge and the notes are given in the *Chuo*, from which we extract these particulars:—

The diagram, shows that the sea, which was calm as on ordinary occasions, suddenly receded by about 20 centimeters (registered) at 25 minutes past 8 p.m. on the 15th of June, that is to say, at the hour when the gauge ought to have indicated flood tide. At half-past 8, a large wave struck the instrument and caused it to indicate a height of 1.40 metres. In about 5 minutes the indicator receded. Subsequently, at intervals of four or five minutes, the indicator rose and fell, tracing an extraordinarily serrated diagram, resembling in form the teeth of a dog. The heights of the wave were nearly equal at 9.30 and at 9.50 p.m., but at 11 p.m. there was a rise of about 2 metres, showing a total difference of 2.70 metres. Thenceforth the altitude of the waves grew lower and lower, but several days elapsed before the sea resumed its normal condition.

The instrument on the beach of Hanasaki-mura, Nemuro, suddenly marked a height of 40½ centimeters at 8.50 p.m. on the 15th of June, and some 5 minutes afterwards, it fell about one metre. Subsequently, during the space of about an hour, 5 or 6 vibrations were recorded and a deeply serrated diagram, like the teeth of a saw, was traced by the indicator. Unfortunately the instrument went out of gear from

that moment, and an untrustworthy result was recorded. At 8.10 a.m. on 16th of June, the instrument was re-adjusted, but at that time the sea had nearly resumed its normal condition, and the diagram showed undulations not exceeding those generally seen on occasions of storm.

The diagram obtained at Misaki, represented, from 8.10 p.m. on the 15th of June, a slightly undulating line different from the record on ordinary occasions. The height of the wave indicated on the instrument was 20½ centimeters, and vibrations were felt every 5 minutes, but they grew weaker and weaker, until, in a few days, they ceased altogether.

Collating the three diagrams, it is clear that the force of the wave was only slightly felt to the south of Choshi. The diagrams obtained at Ayugawa and Hanasaki show a difference of 20 minutes between the times when the instruments at the places indicated extraordinary changes. Supposing the velocity of the water's movement to have been uniform, the centre of disturbance must have lain in the Pacific Ocean eastward of Kamaishi. The site where the Ayugawa tide-gauge stands is protected on the east by Kinkwazan and the headland of Kuro-misaki, while in the south it has an island called Omiji. Consequently, it does not face direct to the Pacific Ocean. The situation of the Hanasaki tide-gauge is very similar, for it is at the end of a small inlet facing north-east, and has on the south two islands that protect it against the direct action of high waves.

Though the disturbance was similar in physical configuration at the two places, the manner of its occurrence differed. For whereas in Ayugawa the water receded at first and then rushed in, such was not the case at Hanasaki. The inference suggested is that the seismic wave must have had its origin at a place nearer to Ayugawa than to Nemuro, for not only was there a difference of 20 minutes between the times when the disturbance made itself sensible at the two places, but also in the former place the water first receded before pouring inland with great force.

We read that this report from the Bureau is in process of being translated into several languages, for presentation in Europe and America.

The moneys already disbursed in Miyagi Prefecture, where the loss of property is generally estimated at a fifth of that in Iwate Prefecture, are 5,000 yen from the Sanitary Fund, and 47,120 yen from the Central and Local Relief Funds, a total of 52,120 yen. The fishing boats carried away or wrecked in Miyagi Prefecture aggregated 2,491, estimated to be worth 107,240 yen, an average of about 43 yen, and the nets destroyed were 70,991, estimated at 12,500 yen, an average of less than 20 sen each. This estimate given in the *Tokyo Asahi* is evidently wrong, so far as concerns the nets. At any rate, the Miyagi Prefectural Authorities are said to have applied to the Central Government for an extraordinary disbursement of 190,000 yen, to be applied to the purpose of furnishing fishing gear to the sufferers.

If, as is generally believed, the extent of the disaster in Iwate Prefecture is five times as great as that in Miyagi, a sum of about one million yen must be disbursed from the Treasury to afford relief to the sufferers in the former region and to provide for their future subsistence.

Vernacular journals continue to describe the horrors of the catastrophe in Iwate and Miyagi Prefectures, but it seems to us that the public has heard enough about these things. What has already been written is sufficiently awful to render all further details superfluous. Interest now centres upon the scientific phase of the phenomenon—what was the cause of the disturbance and where did it have its origin? Everything bearing upon these questions is important, and we therefore translate from the columns of the *Official Gazette* the following report compiled and forwarded by the Hokkaido Administration Board, under date of the 25th ultimo:—

The times of the inflow of the seismic wave and those of its outflow in the vicinity of Hori-

izumi, Hitaka district, differed more or less according to localities, but in general the wave flowed in between 8.30 and 9.30 p.m. on the 15th of June, and receded between 11.30 p.m. on the same night and about 1 a.m. on the following morning. The weather did not present any unusual feature throughout that interval. The wave came from the south, and struck Cape Erimo, the impact dividing it into two currents, one travelling eastward, the other westward. The former swept the coast of Hitaka as far as Horiizumi, while the latter made itself felt as far as Saru. At the commencement of this unusual phenomena a peculiar sound was heard from the direction of the sea, and the beach was laid bare to the extent of 100 yards or thereabouts, during an interval of over 10 minutes. Thereafter a vast wave rolled in with tremendous force, and swept inland to a distance of tens and hundreds of *ken* (one *ken*=6 ft.), according to localities. It then receded with great velocity, this forward and backward movement being repeated three times. It was the second advent of the wave that caused most damage. The height of the mass of water is calculated to have been about 10 ft. at Horiizumi, from 8 to 15 ft. along the coast stretching from Utabetau to Kokoshi, and from 12 to 30 feet along the coast from Saru to Shono. The casualties to life and property were, 6 drowned, 5 wounded, 25 houses swept away or wrecked, as also 12 sheds, 1 junk, and 83 fishing boats. Over 164 *koku* of fish manure were carried into the sea. Furniture and implements lost or damaged were too numerous to be catalogued.

The damage caused by the calamity in Iwate Prefecture may be approximately estimated from a computation that the District Office of Kisen has made with reference to the losses suffered by the villages and towns in that locality:—

Buildings swept away, 4,557, the value of which, at the rate of 100 yen each...	Yes, 455,700
Salt-fields devastated (15 acres)	8,000
Places for curing fish or making fish manure, 24 destroyed, at 380 yen each.	9,120
Boats (2,391) and fishing gear swept away; estimated at 100 yen per boat..	239,100
Cattle drowned (650); estimated at 20 yen per head	13,900
Crops destroyed, (1,187 acres); estimated at 15 yen per <i>tan</i>	7,125
Furniture washed away from 1,519 houses; estimated at 150 yen per house.	227,850
Arable land laid waste (502 acres); estimated at 100 yen per <i>tan</i>	200,000
Building land laid waste (200 acres); estimated at 100 yen per <i>tan</i>	80,000
Cash lost	500,000

Grand Total1,739,995

As the number of dwelling-houses washed away in Iwate Prefecture totalled 5,920, of which those in the Kisen district constituted about one-fourth, we may infer that the damages resulting from the calamity throughout the Prefecture aggregated about 7 million yen, supposing the estimate of the Kisen District Office to be fairly correct. This, of course, does not take into account the loss inflicted on the local marine industry by the death of the fishermen.

THE WAVE AT HAWAII.

In the issues of the *Commercial Advertiser* of Honolulu for June 16th and June 17th, we find the following:—

The report that there had been a tidal, or more properly a volcanic, wave in the harbour and all along the Coast naturally leads one to think of the volcanic waves of the past. These waves are a sure sign of volcanic action in some part of the shores of this ocean. They most frequently come from South America, though they have been caused by action in other places, as the one that swept across the Pacific from Japan to San Francisco when the terrible earthquake of Simoda took place, and again one was slightly apparent here after the Krakatoa eruption.

A volcanic wave struck the shores of Hawaii in May of 1819, shortly before the death of Kamehameha I. It was thought by the natives to presage some dire calamity and they were convinced that the prophecy was correct upon the death of the monarch. This wave came from South America.

In 1837, on November 7th, there was a tremendous commotion of the sea all round the Islands. Alexander's history says:—"At Hilo the sea first

receded and then suddenly rose twelve feet above high-water mark, carrying away houses and doing great damage. Twelve lives were lost at Hilo, and more would have been but for the boats of an English whaler, then in port. This came from Chile, and to give some idea of the speed at which it travelled, the earthquake in Chile occurred the same day that the wave reached these islands.

There was a volcanic wave on May 17, 1841, another in 1868, another in 1871, and again in 1878. The wave of 1871 was caused by the tremendous earthquake at Arica, Peru, where volcanic waves kept sweeping in sixty feet high for several hours, destroying everything along the coast. On this occasion a United States man-of-war was carried bodily two miles inland, and there left stranded.

Besides volcanic waves from lands afar there have been our local waves, caused by volcanic action on Hawaii. The most notable of these was connected with the great eruption which commenced March 27th, 1868. On April 2nd there was a terrific earthquake, followed by an enormous volcanic wave which rolled in upon the coast of Kauai sweeping away the villages from Kanae to Keaunohu. Over eighty people lost their lives. At the same time the coast of Puna sank four feet and the stumps of the coconuts that were then growing can be seen now amid the surf.

There is very little doubt that the wave yesterday is a message from afar, not from Hawaii. There would have been earthquake shocks here and the rise would have been greater.

The wave commenced at 7:38 a.m. on an ebbing tide. At 7:45 the summit of the wave, one-tenth of a foot, was reached, and at 8 it was at its lowest. It then began reaching its highest elevation, two-tenths of a foot, at 8:05, and what is extremely curious, holding it till 8:33, with slight oscillations. At 8:48 it dropped and at 9 began to rise again, reaching an elevation of three-tenths of a foot.

These rises and falls continued till 3 o'clock, showing fourteen noticeable waves in fourteen hours. The *Advertiser* is indebted to Mr. Walter Wall for the chart of the volcanic wave, which is an exact copy of the Government tide gauge. It is also indebted to him for valuable information as to the height and time of the waves.

Honolulu, June 17th.

From reports received by the *Fames Makee* yesterday morning the tidal wave as noticed here Monday was very much more pronounced along the coast of the island of Kauai. Through the kindness of Captain Peterson of the *Fames Makee*, which arrived early yesterday morning, an accurate story of all the details of the wave as noticed at Kapaa was given a reporter of this paper.

"To begin with, I want to tell you that since 7 o'clock Monday morning I have shortened my prescribed existence by at least five years, lost more hair than I care to talk about, and became almost knock-kneed from the strain of the trip. I was never so glad to be in Honolulu in all my life, and let me assure you that whenever I go into Kapaa again it will be with the feeling of a heathen howling in terror before a god.

"We were at Kapaa on Saturday night, but pulled out from there while the wind was blowing a gale. At Hanalei we lay over Sunday and got back to Kapaa to discharge the remainder of our freight early Monday morning.

"We first noticed the peculiar action of the water at about 7:30 o'clock and I became convinced at once that we were in for a tidal-wave. Two boats, with sixteen bags of coal apiece had gone ashore, and when I looked in towards the wharf I saw that they were stuck fast in the sand near the landing. A couple of minutes later and they were left high and dry and the sailors were forced to hold up the boats to keep the coal from spilling out. Simultaneously with the occurrence to the boats, I felt the *Makee* settle on the sandy bottom and knew that we were in for it. I made up my mind then and there to get out of that hole as fast as I could. I blew the whistle for the boats, and after making several attempts they succeeded in getting alongside.

"In the meantime the waves were playing havoc with the *Makee*. We had seven lines attached to buoys, and anchors set in various places, as you are aware that the nature of the bottom inside the reef at Kapaa is such as to allow no anchors to be dropped.

"The swinging motion produced by the waves caused two of our hawsers to part, one at the bow and another at the stern. If we had remained there much longer all our hawsers would have parted and we should have been smashed to pieces on the reef. I can tell you that such a prospect was by no means pleasant.

"We succeeded in getting out into deeper water between two waves at about 9 o'clock. This

could have been done by no other steamer than the *Makee*, for a guardian angel watches over her continually. This is the cause of her proverbial good luck.

"We made for Hanalei to take sugar, and left for Honolulu in the evening. Our trip down was one of the worst I ever experienced."

The purser, in speaking of the experience of the *Makee*, added a few facts to the captain's story.

"The water is twelve feet deep where the *Makee* was moored. Our good steamer draws eleven feet and when the water receded she was solid in the sand.

"From observations taken by looking at the reef and other places I judge that the water dropped at least three feet.

"Telephone messages received from Kilauea told of a big wave at that place. The water had receded, leaving a dry space of about forty feet around the landing. At Nawiliwili the water rushed over the Government road and the bridges.

"Old people in Kanai say they have never before witnessed such a thing, and may of the natives believe it to be a premonition of a coming evil."

Kanai, where the seismic wave is said to have been severely felt, is the North-westernmost island of the Hawaiian group. It is situated in N. Lat. 22° and W. Long. 159½°, whereas the region where the seismic wave worked the greatest destruction on the coast of Japan is in N. Lat. 39° 15' and E. Long. 142°. The wave's presence was experienced at Hawaii at a little before 8 a.m. on June 15th, corresponding with 2 a.m., approximately, on the 16th June, Japanese time. Hence it appears that the wave traversed a distance of about 3,390 miles in some 6 hours, which gives an average velocity of translation equal to a little over 9 miles a minute. This assumes the centre of disturbance to have been in the immediate vicinity of the Sendai coast, but even if we locate it at a distance of five or six hundred miles from that coast, the calculation is not materially altered. Between Sendai and Kanai Island the only obstacles of a seismic wave are a rock (Bird Island) and a coral reef (Midway Isles). It will be noticed from the *Commercial Advertiser's* accounts that at Kanai, where there are no harbours worthy of the name, the water first receded some forty feet and then rose 3 feet, whereas at Honolulu official scientific observations showed the rise to be only 1.2 to 2.1 inches, and the movements were observed during the day. On the whole the evidence seems to indicate that the centre of the disturbance may be located some 500 to 600 miles off the coast of Sendai, about the 39th parallel of latitude. We can scarcely hope that any record of observations will come from districts in Japan where the wave wrought no destruction, for a harmless rise and fall of the water occurring at night would not have attracted attention. It is possible, however, that some valuable data may be obtained from the Bonin Islands. The great Gifu earthquake made itself felt throughout the whole length of Japan, but its effects at Kamaishi do not seem to have been more marked than were the shocks that preceded the advent of the seismic wave on June 15th. Hence, so far as concerns the translation of the actual seismic force, there appears to be nothing unreasonable in assuming that it had its origin at a point not more than five or six hundred miles from the Sendai coast.

REPORT FROM THE GOVERNOR OF IWATE.

Saturday's issue of the *Official Gazette* contains a long report on the seismic wave from the Governor of Iwate, under date the 24th ultimo.

On the 15th inst., the weather was misty from morning, and the thermometer fluctuated between 80° and 90° F., about 10° higher than in ordinary years. People suffered much from this unusual heat, but did not think it particularly strange, the weather being generally fickle in the *Baiu* (spring rain) season. The 15th, coinciding with the May festival, according to the old calendar, a feast was held in every family, and the hours were passing merrily, when, at dusk, repeated shocks of earthquake were felt, and at about 8 in the evening, a sound as if made by the firing of big cannon was heard from the direction of the sea, off the coast of Higashi Hei district. Such a sound from the sea not being uncommon, the inhabit-

ants did not pay much attention to it, thinking that it might be caused by men-of-war practising gunnery. Only a few minutes had elapsed, when a seismic wave suddenly rolled in with most terrible force, and towns and villages along the coast, through a distance of over 175 miles, were inundated. In a moment men, cattle, buildings, ships, and so forth, were almost entirely swept away, so that towns which had been thickly populated only the day before, were turned into sandy wastes. Corpses were piled in heaps, houses were completely wrecked, and the whole scene presented the most ghastly and heart-rending aspect, impossible to describe. It is reported that the wave was as high as 80 ft., and that, though more or less variation occurred according to locality, the devastation and damage inflicted by the wave were most serious in places facing the south-west. Strange to say, fishermen plying their trade about 5 miles off the coast, noticed merely a slight swell and had no suspicion of the occurrence of such a catastrophe. As soon as reports of the calamity were received, steps were at once taken to extend succour to the sufferers. The Local Chief of Police was directed to visit the scene of the disaster, the Secretary of the Prefecture was despatched to Higashi Hei; the Councillor, to Kisen and Minami Hei; and the Chief Tax Collector, to Kunohe. At the same time, 33 clerks and police inspectors, together with 113 police constables and 450 coolies, were sent to various afflicted districts, to succour the survivors, to dispose of the remains of the killed, and to restore order. Neighbouring towns and villages that escaped unhurt offered the services of their fire-brigades and coolies, and the number of working-men available altogether amounted to above 4,000. The disaster having proved fatal to many medical practitioners living along the coast, and the survivors having lost their supply of drugs and instruments, the greatest difficulty was experienced in extending efficient aid to the sufferers. A large quantity of carbolic acid, bandages, and such things, was quickly sent; and at the same time, 15 doctors and 15 nurses were expressly engaged and despatched to the scene of disaster. Even this proved insufficient, in consequence of the multitude of sufferers, but how to meet the urgent need of the moment was a perplexing problem, the number of medical practitioners in this prefecture being from the first comparatively small. At this juncture, 12 surgeons from the Second Military Division, and 7 doctors, 2 pharmacists, and 28 nurses from the Red Cross Society, arrived, and were forwarded to one or other of the afflicted districts. But the ambulance staff still proved inadequate, and on the arrival of a party of troops belonging to the Sendai Engineering Corps, one surgeon from the same Division, and five physicians and one nurse from the Fukushima Branch of the Red Cross Society, the detachment from the Sendai Barracks was hurried forward to Miyako, and the physicians from Fukushima were distributed to other places. In addition to the above, a number of medical men have been requisitioned from towns and villages adjoining the afflicted districts, and drugs, instruments, and other matters needed in surgical operations are being forwarded to places where they are wanted. Further, in order to give prompt relief to survivors suffering from starvation, more than 1,000 *koku* of rice have been sent with all speed to the scene of the disaster.

The extent of the calamity, as classified according to the respective districts, is as follows:—

KISEN DISTRICT.

The area of devastation was widest in this district, and the damage was consequently considerable. In the hamlet called Matsugaura, one of the group that collectively form Hirata-mura, the wave wrecked houses standing at a height of 50 feet above the sea, and boats were swept inland to elevations not less high. The police-barrack was washed away; the police constable on duty was badly injured, and his family was carried out to sea. In Snekaki-mura, the same fate overtook the police barrack, and the constable on duty, together with

his family, 6 persons, were lost. In Ofunawatari the telegraph poles along the coast, through a distance of 2,160 yards, were entirely levelled, and in Koto-mura, more than 450 acres of arable land were devastated. In Ayasato-mura, so tremendous was the force of destruction that the bodies of the dead had their skulls crushed or their upper or lower limbs broken or torn away. Out of the whole staff of the village office, only the Headman escaped; the school-house and the police-barracks were washed away, and the constable on duty and his family were all killed. In Okiri-mura, the police-barrack was annihilated and the constable and his family drowned. The school-house was also washed away but one of its teachers, Sato Jiu, succeeded in carrying to a place of safety, even before he looked after his own family, the Emperor's picture. In Toni the disaster was conspicuously severe. Not only were the police-barracks washed away and the constable and his family carried off by the wave, but out of a population of some 2,800 souls, 2,100 were killed.

Detailed statements of casualties to life and property in the district:—

Place.	Original Population.	No. of Deaths.	No. of Wounded.
Kisen	3,651	23	10
Takata	3,489	3	unknown.

MINAMI-HEI DISTRICT.

The extent of area devastated in this district is considerably smaller than that of the above, but the casualties to life were far more serious relatively. In the Kisen district, the deaths in one town and eleven villages aggregated 6,800; while in the Minami-Hei district they were above 6,600, though only two towns and one village were struck by the wave. Kamaishi was a town of some 1,200 houses, and over 6,000 inhabitants. All the houses, except a hundred or thereabouts, were washed away; the streets being turned into a mass of ruins, and the corpses of the dead being strewn everywhere. Farms along the coast were over-laid with mud, and the Police Office, the Post and Telegraph Office, and six School-buildings were swept away. One police constable was killed, and the inspector and other members of the Office were all seriously wounded. One expert of the Post and Telegraph Office escaped unhurt, and a few hours subsequently, he placed a reserve instrument in working order, and managed to re-establish communications which had been temporarily suspended. The damage at Otsuchi-machi and Usamai-mura was equally terrible.

Place.	Original Population.	Deaths.	Wounded.

HIGASHI-HEI DISTRICT.

In this District Taro suffered most from the wave, which rose there to a height of above 100 ft. So irresistible was the force of the water that more than 100 pine trees, measuring two spans in circumference, were broken off at the base, and a sailing vessel was cast on the side of a hill, 140 yards from the beach. The officials in the Village Office and the school teachers were all drowned, the police-barrack was carried away, and two constables, together with their families, were drowned. In Omoni-mura, the place where the police-barrack stood was converted into a desert, and the only thing that remained was the roof of the Village Headman's house, crushed into the side of a hill. Ships and boats were entirely swept away or wrecked, and the police constable on duty, and his family, were drowned. The disaster was not less severe in Funakoshi-mura, where the village office, the police barrack, and the school building were carried away; the police constable on duty was badly injured, and his family were destroyed. In Yamada-machi, the Police Office was wrecked, more than 1,000 people were killed, and fire that broke out after the seismic calamity burned to death more than 40 of the survivors.

Total

Latest researches have resulted in a reduction of the total casualties. Investigations carried up to 6 p.m. on the 21st inst., put the deaths at 23,416, whereas they are now given as 23,309. According to telegrams given in the Tokyo papers, this diminution is said to be due to the fact that more than 100 persons, stranded upon islands, have been discovered and taken off by the war-vessel *Tatsuta*.

Thus, according to the latest official reports, the casualties to life and property in the afflicted districts, including Hokkaido, stand as follow:—

Place.	Deaths.	Wounded.	Houses Washed away or wrecked.
Iwate	23,309	4,396	7,429
Miyagi	3,314	776	1,396
Aomori	340	213	465
Hokkaido	6	5	25

Total

The special correspondent of the *Shogyo* estimates the damage to boats and fishing gear, that were washed away or destroyed by the wave, at 250,000 yen in Miyagi, 540,000 yen in Iwate, and 90,000 yen in Aomori, all in round numbers. If to these figures be added the damage to cultivated fields, to houses, and the loss of other valuables as well as cash, the whole must reach a very large figure. The fishing industry alone in each of the three districts produced over 1½ million yen a year, on the average, and this has been seriously crippled, especially in Iwate, owing to the destruction of the fishermen and their implements.

Besides disbursements from the Local Relief Fund, 50,000 yen to Iwate and 10,000 yen to Miyagi have been allotted from the Central Relief Fund. The employment of these Relief Funds is, however, subject to various restrictive conditions. For instance, the fund can not be used except to provide rations of food to sufferers disabled by calamity, or to pay taxes, or for the purpose of erecting temporary shelter and

purchasing agricultural implements and seeds. The sufferers from the last calamity being fishermen and not farmers, the letter of the Relief Fund Law, strictly considered, does not allow the Authorities to apply the money for the purchase of fishing implements. The only other Law applicable to such a case, is the Paupers Law, issued in 1874, which grants relief to widowers or widows, about 70 years of age, who have no one to look after them and are incapacitated, either from sickness or age, from pursuing business, or to persons under 15 years who are sick, or orphans under 13 years, the grant of rice under this law being at the rate of 3 *go* for one man and 2 *go* for one woman. It is evident that both the Relief Fund Law and the Paupers Law are inadequate to meet the present requirements, and the only seemingly lawful alternative is to make an appropriation from the Surplus Revenue as an outlay of urgent character.

This relief question is inviting serious attention from the Government and from political parties. We read in the *Tokyo Asahi* that the Government and the Radicals think it advisable to make appropriations out of the Relief Fund and the Surplus Revenue, in the form of disbursements of an extraordinary and urgent nature, while the Progressive Party have arrived at the conclusion, in a meeting held on the 27th instant by members staying in Tokyo, that an extraordinary session of the Diet must be convoked to deal with the question. The National Unionists intend to formulate a definite conclusion when their representative despatched to the scene of disaster to inspect the actual state of affairs, returns to Tokyo and submits his report on what he has observed.

Surgeons of the Sendai Barrack engaged in the devastated districts report that the majority of the wounded are suffering from injuries inflicted by baulks of timber or wreckage of houses, and that the inflammation of the lungs by which many are attacked, is also ascribable, for the most part, to external injuries. Long immersion in the water and the subsequent wearing of wet clothes must have made the survivors susceptible to cold, resulting in the catarrh of the throat and so forth. External injuries are chiefly on the head and the limbs, especially the feet, and there are many cases of sprains and bruises as well as serious hurts to the thorax and spine. The wounds are, for the most part, in a purulent state, and accompanied by fever. The report from Aomori says that the majority of cases are inflammation of the lungs, caused by drinking sea-water impregnated with fish-manure or fish-oil. Those who did not drink much do not, for the moment, show any such symptoms, but even these are liable to develop the same trouble after the lapse of one or two weeks. It is expected therefore that the number of patients will greatly increase, as compared with what it is at present.

THE SEISMIC WAVE AT THE BONIN ISLANDS.

A letter received by Professor Clay MacCaulley from the Bonin Islands, under date June 19th, says:—"We had a tidal wave here two or three mornings ago. We, in our house, did not feel it, being asleep at the time, but a friend lost some turtles through it. The disturbance was very gentle, but close observation showed that the stones at the bottom of the sea became visible and invisible at short intervals during two days." There is an unfortunate vagueness about the language of the writer, but evidently had the wave occurred the day but one before the letter was penned (*i.e.* the 17th of June), the expression "two or three mornings ago" would scarcely have been employed, neither would a disturbance ended the preceding evening have been referred to as a thing of the past. It seems fair to assume that the writer alludes to the morning of the 16th—the very early morning, since the people of the Bonins were still in bed. Even on that hypothesis, however, the information is puzzling. The Bonins lie almost on the same meridian of longitude as the region of Japan that suffered, and the distance is only

750 miles. The records obtained from Hawaii indicate that the wave crossed the Pacific at an average speed of 540 miles an hour, and as the speed must have diminished in proportion to the distance from the origin of disturbance, the wave ought to have reached the Bonin Islands within about an hour of its impact against the shores of Iwate Prefecture. Yet the early morning is spoken of as the time of its coming. Further, its magnitude and force at the Bonins were evidently less than they were at the most northern island of the Hawaiian group. In other words, its impetus in a direct southerly line became virtually exhausted within a distance of 700 or 800 miles. We also know that when it struck Cape Erimo, which is only 200 miles north of Kamaishi, its destructive energy had already dwindled to comparative insignificance. Thus, speaking broadly, the direct north-and-south component of the initial force was almost dissipated within a total distance of twelve or thirteen hundred miles at most, whereas the component along the Kamaishi-Kanai line—*i.e.* a line travelling some fifteen points south of east—retained destructive energy through a distance of over 3,000 miles. All this would consist with the theory of a great seismic disturbance exercised in a definite direction at the bottom of the ocean—a disturbance similar to that exhibited at Bandaisan, when the whole of the country on one side of a mountain was devastated, that on the other remaining unharmed.

CURRENT TOPICS.

We are told by the *Asahi* that the Imperial Estates Sales Committee has decided to grant a sum of about 70,000 *yen* to the people of Sado, and 50,000 *yen* to the people of Ikuno, to reconcile them to the transfer of the mines in those places.

The Court has appointed the following artists to form a Fine Arts Committee of the Royal Household, on the recommendation of Baron Kuki, Privy Councillor and President of the Imperial Museum:—

Painting: Messrs. Kishi Chikudo, Yamana Tsurayoshi, Kawabata Gyokusho.
Architecture: Mr. Ito Heizayemon.
Glyptic work in Metals: Mr. Umio Shomin.
Keramics: Mr. Miyagawa Kozan.
Cloisonné Enamel (Shippo): Messrs. Namikawa Sosuke and Namikawa Yasuyuki.
Bronze casting: Mr. Suzuki Chokichi.
Lacquer: Messrs. Kawanobe Heizayemon and Ikeda Taishin.

It was by the special approval of the Emperor that the above nominations were made.

Statistics of joint-stock companies coming under the direct control of the Department of Agriculture and Commerce, are published:—

AT THE END OF 1895.		
		Capital, Yen.
Commercial	622 companies...	57,168,500.200
Industrial	519 companies...	74,585,456.500
Agricultural	76 companies...	1,884,475.450
Totals	1,217	133,638,343.150

COMPANIES NEWLY ESTABLISHED BETWEEN JAN. AND MAY, 1896.		
Commercial	68	10,558,500.000
Industrial	138	30,050,300.000
Agricultural	2	4,000.000
Totals	208	40,618,300.000

COMPANIES WHOSE CAPITAL WAS INCREASED DURING THE SAME PERIOD.		
Commercial	19	4,470,000.000
Industrial	22	2,769,000.000
Totals	41	7,239,000.000

Summing up this above we have:—

NO. OF COMPANIES.		
Commercial	690	72,197,000.000
Industrial	657	107,410,256.500
Agricultural	78	1,888,475.450
Total	1,425	181,495,732.150

Companies that went into liquidation between January and May of the current year, or were

dissolved, or disappeared from other causes, were as follows:—

DISSOLVED OR PUT IN LIQUIDATION.		
Commercial	10	531,500.000
Industrial	5	123,000.000
Total	15	654,500.000

DISAPPEARED FROM OTHER CAUSES.

Commercial	1	55.00.000
Industrial	3	182,000.000
Agricultural	1	4,500.000
Total	19	843,740.000

Summing up the above we have:—

NO. OF COMPANIES.		
Commercial	11	1,194,240.000
Industrial	5	305,000.000
Agricultural	1	4,500.000
Totals	17	1,503,440.000

Deducting the latter totals from the former we have:—

NO. OF COMPANIES.		
Commercial	679	71,002,760.000
Industrial	652	107,105,256.500
Agricultural	78	1,883,975.450
Totals	1,109	179,991,992.150

The problem of reconstructing the building of the Imperial Diet, is again on the *tapis*. The present edifices being flimsy affairs, intended only to satisfy temporary requirements, are not expected to last more than two years longer. Two sites have been proposed, on the open space in front of the Kyobashi, within the castle grounds; another the unoccupied plot in front of the General Staff Office. However, the consent of the Imperial Household for employing the former site cannot be easily obtained, so that the second locality must of necessity be chosen. The next question is whether to erect a permanent or a temporary building. A permanent building would require, it is estimated, a sum of over 3 million *yen*, whereas one million would suffice for a temporary edifice.

In either case, the work can not be completed in one or two years, and the Authorities are very anxious to discover whether the present buildings can be made to last until the new are completed. It is believed that a Budget asking for the necessary appropriation will be submitted in the Diet next session.

For some unexplained reason, the Nihonbashi Election Section has been represented, from the first opening of the Diet, by candidates identified with one party or other of the Opposition. The electors have recently been consulting as to whom they should return in succession to Baron Kusumoto, whose elevation to the Peerage disqualifies him to sit in the Lower House. Their choice has at last fallen on Mr. Hamaguchi Kichiyemon, a wholesale dealer in soy and table salt, residing in that quarter of Tokyo, who has promised to espouse the cause of the Opposition. The electors have always been undivided, and Mr. Hamaguchi will doubtless be elected unopposed.

HIGH-PRICED PROVISIONS AND IMPROVIDENCE.

So long as public interest remains centered on the terrible events in the north-east, we shall read in the vernacular newspapers a great many startling stories, difficult either to credit or to discount. For example, the *Chuo Shimbun* says that so great was the scarcity of provisions in the Ta-no-hama hamlet in Iwate Prefecture, that 5 *yen* was paid for a ball of rice made up in the form of *nigiri-meshi*. The purchaser is further represented as having bought three balls for 15 *yen*, and still remained hungry.

By way of rider to the above, we are informed by the same journal that in the village of Taro, the people being very well-to-do, nearly every household possessed one or two hundred *yen*. Instead of lodging the money in a savings bank, they kept it in small boxes in their households, and very little of it now remains.

SHIPPING NEWS.

We have already mentioned that it is in contemplation to open regular services to Australia and Bombay, two out of the four special routes remaining to be subsidized. With reference to the Vladivostock and Korsakoff services, an advertisement has appeared in the *Official Gazette*, inviting contracts, but as the remaining two, namely, Bombay and Australia, demand arrangements of greater magnitude, arrangements that the Yusen Kaisha alone is capable of undertaking, overtures have already been made to that company by the Department of Communications, and the matter is now in process of negotiation. It is expected that an understanding will easily be arrived at, inasmuch as the Yusen Kaisha has been carrying on a service to Bombay for some time, and its already planned programme includes the establishment of a service to Australia. The subsidies to be granted for those two services are said to be as follow:—

	For the latter half of 1896.	Subsidy per annum till the 31st year of Meiji.
	Yen.	Yen.
Australia ...	175,109.035	350,218.070
Bombay.....	99,142.695	198,285.389

The total of subsidies and bounties to be received by the Yusen Kaisha is estimated at above 5 million yen, of which about 1½ millions fall under the head of subsidies and over 3½ millions under that of bounties, as shown below:—

Since the sum that the Yusen Kaisha alone is to receive amounts to such a large figure, it is easy to understand that the whole outlay attending the operation of the Laws for Encouraging Navigation and Shipbuilding, when the sums paid to the Osaka Shosen Kaisha are taken into account, will aggregate over seven million yen. There is further to be considered the services that the Oriental Steamship Company purposes opening a year or two hence, to America and Europe. If that programme be carried out, the annual disbursements from the Treasury for promoting maritime enterprise will eventually exceed 10 million yen, assuming that the rates provided in the laws are strictly adhered to.

One of the causes, we read in the *Yiji*, why disasters to ships are now so much more frequent than in previous years is incompetence on the part of the officers. It would seem that the recent sudden increase in the number of Japanese-owned ships has resulted in the employment of captains and mates who carry licenses obtained in virtue of their experiences alone, and have not graduated in any regular course of navigation, or passed any examination, and who, prior to this unexpected demand for ship's officers, had been superseded by the younger generation of regularly trained seamen. These antiquated mariners were engaged in one business or another, but scarcity of men to navigate vessels and a consequent rise in seamen's emoluments, induced them to come forward once more for service at sea. Owners of ships are warned by our contemporary to pay more attention to the qualifications of the officers to whom they entrust the charge of life and property.

THE QUESTION OF LAND LEASES.

In the *Osaka Asahi* we find the judgment given by the Osaka Appeal Court in the case that recently caused so much comment, between a Portuguese-American lessee and a Japanese land-owner in Kobe. Some years ago, the Supreme Court of Japan placed on record a pronouncement that whenever foreigners held land from Japanese under perpetual leases, no special agreement existing as to the immutability of the rent, it is perfectly consonant with the fundamental principles of justice that the rent be considered alterable, in conformity with the rates ruling in the market. This judgment of the Supreme Court has been constantly availed of by Japanese land-owners, and suits claiming the right of raising rents have been brought before the Law Courts. Foreign lessees, as a rule, have managed to evade the obligation defined by the Supreme Court. Taking advantage of the absence of any provision in Japanese Law enabling Japanese lessors to obtain an attachment against the property of foreigners, the latter—in Kobe for example—set the regulations of the *Kencho* at naught, and with the approval of the foreign Consuls, transferred their leases to other foreigners, thus seeking to elude the claims preferred against them by the Japanese lessors. The judgment recently given by the Osaka Court of Appeal in a case of that nature that had risen between two Kobe lessors and a Portuguese lessee, formally condemns the practice resorted to by foreigners. It declares that the transfer of a lease, if not endorsed by the Local Office, is null and void, and that, as the appellant in the suit continued to stand in the relation of lessee towards the respondents, he must submit to have his rent duly raised. It may be added that the judgment of the lower Court had been in the same sense.

Such are the Osaka journal's comments. It sometimes seems quite idle to hope that the conduct and motives of foreigners can escape the grossest misrepresentation at the hands of Japanese journalists. Here we have the *Osaka Asahi* writing as though there had been a deliberate attempt on the part of foreign land-renters to defraud their Japanese landlords and evade the just provisions of law. Nothing could be farther from the truth. Speaking generally, foreigners that had leased lands direct from private Japanese owners outside the original limits of the Settlements, entertained no conception whatever that their rents, fixed in perpetuity, as they supposed, were liable to readjustment according to appreciations in the average price of adjacent lands. When that fact was brought home to them suddenly by the judgment of a law Court, they were taken completely by surprise. Hitherto they had considered their leases virtually their own property, to hold or to transfer as they pleased, and their action with regard to them had been perfectly upright. Naturally they demurred to what they regarded as an unwarrantable interference with their rights of property, and though they now recognise the justice of the principle on which the judgment of the Japanese tribunals is based, it is extravagant to suppose that they could have recognised it merely in obedience to the dictum of a Japanese landlord. The *Asahi* writes as though disputes of this nature had been of common occurrence, as though the question had long been on the *sapir*, and as though foreigners had constantly resorted to the device of transferring their leases in order, dishonestly, to evade their obligation. That is untrue and unjust. The transfer of a lease could not have affected the landlord's rights in any way, nor does it appear that anything of the kind was ever attempted with such an object. In the very case that forms the basis of our Osaka contemporary's comments, there was a transfer, not of lease but of ownership, and not on the foreigners' side but on that of the Japanese. It was a transfer made evidently with the object of facilitating a demand for increased rent, and to impartial observers it bore a very questionable aspect. Before, therefore, the *Asahi* spoke of transfers, it should have ascertained, for its own sake, on which steed the saddle sat. There is

no fault whatever to be found with foreign lessees in the matter. They have never wilfully evaded their obligation, and will always be ready to satisfy it when they understand it properly and on good authority.

ACCIDENT TO THE IMPERIAL CORTÈGE.

We read in the *Tokyo Asahi* an account of an accident which occurred to the Imperial cortège when the Emperor visited the Riding School at Meguro-mura on the 29th ultimo. That morning the cortège left the Palace at half past eight, and as the route lay across the track of the Nippon Railway at Shibuya Station, a message was sent a day previously to the Shinjuku Police Office, under whose jurisdiction the district falls. The latter therefore, despatched a notice to the Shibuya Station-master, directing him to keep the line clear when the cortège was to pass, an essential precaution, inasmuch as, according to the time table, a train was to arrive at Shibuya from Shinjuku at the very hour when the cortège was expected to reach the former place. A red flag was duly displayed on a post erected close by the station, and a workman was also sent to wave another danger signal up the track, some 300 yards from the station. Presently the cortège approached the line, but just as it was about to cross, the train from Akabane for Shinagawa came on at its usual speed, the driver and guard entirely unconscious of the red signal displayed from the post. Nor did the efforts of the workman to attract the attention of the careless conductor prove successful, though he waved the red signal frantically. By the time that the train had come close to the signal-man, the mounted gendarme in the van of the cortège and four mounted Police-inspectors that followed, two and two, had already crossed the track, and others were about to follow. The signal-man struck the engine with the handle of the flag, whereupon the driver, who must have been in a somnolent condition, became conscious for the first time of what was in progress. He strove to check the train, but its impetus carried it forward until it had passed through the cortège, and totally obstructed its advance. The engine was then ordered to steam on, and after a delay of a minute or so, the procession passed over the line. It is said that when the train appeared in sight, the people standing on both sides of the road to see the cortège pass, raised a loud cry of alarm. Indeed, had the cortège reached the spot half a minute earlier, it is impossible to tell what consequences might not have ensued. After the moment of intense suspense, the bystanders burst into a lusty cheer of "*Bansai*." The Chief of the Shinjuku Police hastened to the spot when the news reached him, and made strict inquiry into the cause of the affair. He and his subordinates, who were on duty that day at Shibuya, tendered their resignations to the Metropolitan Police Board the same day.

SUMMARY OF THE RELIGIOUS PRESS.

We resume from to-day our monthly summaries of the Religious Press, the preparation and publication of which have been interrupted for some time owing to causes that baffled our control. We also purpose to publish, about the middle of every month, a summary of magazine and current literature.

MOJI FORT.

Moji Fort, which has for some time been in process of construction, on the Hayadomoye promontory, is now completed, says the *Tokyo Asahi Shimbun*, and has received its armament of 25-cent. guns. They were duly and successfully tried on the 25th instant. These guns are capable of piercing 16 inches of armour. They would prove very formidable to any ship attempting to pass the Shimonoseki Straits.

SUBSCRIPTIONS TO RELIEVE THE SEISMIC-WAVE SUFFERERS.

IF our readers will look at the list of subscribers to the Seismic Wave Relief Fund, as published in these columns, they will see that a hundred and sixteen names are recorded, and that the total subscribed is \$3,739, making an average of over \$32 per subscriber. That is a very remarkable figure. On the occasion of the Gifu earthquake, we showed that the sum put up by charitable foreigners in Yokohama amounted to no less an average than \$7 per head of the whole community, the Chinese of course excluded. That, also, was a most remarkable figure. But each case invites one very obvious comment; it is, that the subscribers are virtually limited to the "Taipans," and to what may be called the upper strata of the foreign residents. The clerks, the small store-keepers, the small retail dealers, the masters of drinking saloons, the handicraftsmen, and so forth, are conspicuous by their absence. Why is that, we wonder. It cannot be possible that these people are altogether wanting in the sentiment of charity. In truth, their more intimate acquaintance with the hardships of life generally educates their sympathies, and renders them readier to help the indigent than are men actuated merely by abstract principles of benevolence. *Neither is it conceivable that they are wholly too impecunious to give something.* That can be a question of degree only. If a leading mercantile firm gives one, two or three hundred dollars, a clerk can surely afford one, two or three dollars, and the various elements of the community's substrata can subscribe proportionately small amounts. But they subscribe scarcely anything at all. Missionaries with wives and families to support on an income of ninety or a hundred dollars monthly, contribute ten, fifteen or twenty dollars, but clerks with much better salaries and no one whatever depending on them, contribute nothing. It is singular. One explanation only presents itself—a very unwelcome explanation; namely, that charity in such cases is checked by vanity. Reluctant to invite comparison as to the inferiority of their resources, many folks prefer to stand aloof altogether. The greatest teacher of ethics that the world has ever seen, administered a most refined rebuke to that kind of self-consciousness when he appraised the Widow's mite so much higher than the rich man's talent. Looking at the vernacular journals, we find long lists, published daily, in which contributions of ten, twenty or thirty *sen* occupy as honourable a place as the thousands of *yen* subscribed by the IWASAKI or the MITSUI. But in the Yokohama and Tokyo foreign residents' list, only three names stand for less than five dollars. Altogether, the subscribers that have sent

in money to the three principal newspapers aggregate 273 out of a community of some twenty-five hundred, and their subscriptions amount to \$7,808, an average of \$28.60 a head. Thus we have a small but remarkably munificent minority, and an apparently indifferent or uncharitable majority. It is a nice subject for reflection.

WILLIAM MCKINLEY.

(COMMUNICATED).

WILLIAM MCKINLEY has just been nominated for the high honour of President of the United States of America, by the Republican National Convention assembled at St. Louis—a memorable and decisive victory. He has been opposed by the leading and most skilful politicians, throughout the country; the big political machines in all the leading States have been used to their utmost capacity to defeat him; but without promises to place-hunters or pledges to any man, MCKINLEY has triumphed. In the history of the Republican party, extending over forty years, no man has ever been so nearly the unanimous choice of the party as he. Not less than nine-tenths of the party favoured him. No doubt, this is in large part due to his being the great representative and champion of the protective tariff idea, but to that must be added the thorough confidence of the people in his integrity as a man, and his honesty and ability as a statesman. He is a typical representative of sturdy American manhood as well as the Champion of Protection. He was born at Niles, Ohio, Feb. 26, 1844; the son of a manufacturer of some means and standing in that community. He studied at the common schools and at Poland Academy. His studies, however, were interrupted by the breaking out of the great American Civil War, at the very beginning of which MCKINLEY, with patriotic zeal, enlisted as a private soldier, though but seventeen years of age. The Ohio regiment, of which he became a member, seems destined to become celebrated not only for its determined fighting, but for having contained within its ranks two men destined to become President of the United States—RUTHERFORD B. HAYES, for some time its Colonel, afterward Major-General and President, and WILLIAM MCKINLEY, who, after serving throughout the war and rising to the full rank of Captain, was breveted Major by President LINCOLN for gallantry displayed in many desperate and bloody battles. After the war, MCKINLEY studied law, and removing to Canton, Ohio, where he has even since resided, was elected Prosecuting Attorney of Stack County in 1869. In 1876, he was elected to Congress, and continued to be re-elected every two years for fourteen years. He was led by the interests of his district to make a special study of the Tariff, and soon came to be looked upon

as one of its ablest advocates on the floors of Congress. In 1888, when the Republicans elected GEN. HARRISON as President, they also gained control of both Houses of Congress, and MCKINLEY became one of the two leading contestants for Speaker of the Lower House. He was, however, defeated by a few votes by the present speaker, THOMAS B. REED. Mr. REED, however, at once appointed MCKINLEY, Chairman of the most important Committee, that of Ways and Means, and he was recognized as the leader of the majority in the Lower House. In this capacity he was instrumental in drawing up, advocating, and defending the bill which became known the world over as the MCKINLEY Tariff Bill. It was one of the most important pieces of legislation in the history of the country, and its merits or defects, as the case may be, are the merits or defects of Protection as a system. At any rate, the measure proved entirely too radical to suit the temper of the people, and at the next election the Republicans were everywhere badly beaten, MCKINLEY himself failing to return to Congress. This latter failure, however, was brought about by the Democratic Legislature of Ohio changing his district so as to make it overwhelmingly Democratic. Even then he was only beaten by some 300 votes. That was in 1890. In 1891, the people of his own State, Ohio, rewarded him by electing him Governor, by over 21,000 plurality. The defeated Democrat, CAMPBELL, had been elected two years before by over 10,000 plurality. The issue was Protection, and CAMPBELL, being one of the ablest Democratic statesmen in the country, the incident was looked upon as a great vindication of MCKINLEY. But the election, two years later (1893), was even more so. Again the issue was Protection and the money question—the Democratic Candidate being for free coinage of silver and MCKINLEY for sound money, and MCKINLEY triumphed by more than 80,000 plurality—the largest obtained by any man in Ohio since the War. After the close of his second term as Governor of Ohio, MCKINLEY lived quietly in his home at Canton, but the masses of the Republican party throughout the country have been enthusiastically naming him for President. This is not the first time MCKINLEY has had advocates who urged his claims to this high office. In 1888, almost two years before the MCKINLEY bill was framed, MCKINLEY went to Chicago as the leader of the Ohio delegation to the Republican Convention, which met to nominate a candidate for President. No candidate had anywhere near a majority and the mention of MCKINLEY as a dark horse was received with great enthusiasm, and those who ought to know said he could have been nominated. The man was most determined, however, in his refusal to allow his name to go before the Convention, considering that it would

be charged against him as dishonourable if he, who was there as the chief advocate of JOHN SHERMAN, should himself receive the honour. He declared his position in a short and manly speech to the Convention. HARRISON was finally nominated. Again, in 1892, MCKINLEY was the real hero of the Republican Convention. He was made permanent Chairman, and though refusing to allow his name to be put before the Convention, almost 200 delegates insisted on voting for him. Every one knew that he would be a prominent candidate this year, but few realized what a profound hold he had taken upon the mind of the people. One of his acts which greatly strengthened this hold was his honourable and manly conduct under personal misfortune while serving as Governor of Ohio. A business friend in Ohio having failed, it was found that about 75,000 dollars of his paper had been endorsed by Mr. MCKINLEY. He hastened to make good every dollar of this obligation. The payment swept away all his savings, and it was even necessary, in order to pay it all, that his wife should sacrifice her own property—upon which there was no legal claim. In all this he showed his true character and gained much in public esteem, and in the end lost little in money, for friends finally came forward and rescued his property—an action honourable alike to them and to him. It is sterling honesty and high integrity that the people of America want to see in their President, even more than brilliant qualities of statesmanship. Not that MCKINLEY is lacking in this respect, however, for he is an all-round man and a statesman of high rank. The writer of this sketch is not a member of Mr. MCKINLEY's party, does not believe in a high protective tariff, does not suppose he should vote for him if he was at home in the United States, and writes therefore without prejudice in honour of a great and good man. It is to the credit of the United States that none but good men have ever been elected President—WILLIAM MCKINLEY will mark no exception. J.W.D.

THEATRICALS IN TOKYO.

According to rumour there is some chance that the private theatricals performed recently at the French Legation in Tokyo may be publicly repeated in the cause of charity. We trust that report may prove correct in this instance, for the unanimous verdict was that better acting has never been seen on an amateur stage in the East.

A HEAVY LOSS.

The *Yomiuri Shimbun* alleges that during the night of the 26th instant, an American gentleman staying with his wife in the Kinkiro, an inn at Enoshima, was robbed of two cheques for twenty thousand and three thousand dollars, and of eight *yen* in Japanese currency. The police are said to be prosecuting vigorous inquiries.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The Christian press furnishes abundant proof that churches of all denominations are engaged in a struggle, in one form or other, with the current of Japanese nationalism and self-assertion. It is of course one of the main objects of foreign missionaries to render the Japanese churches pecuniarily independent of foreign support; and among Protestant missionaries, at any rate, there is a general desire to avoid the imposition of burdensome formularies and practices that do not constitute an essential part of Christianity. The principle that it is not necessary that an Oriental Church should be an exact imitation of its Western models is generally acknowledged, and numerous concessions are constantly made in response to proposals advanced by native churches. As an illustration of the truth of this remark, we may quote a few lines from Bishop Bickersteth's pastoral letter, published in May last. Referring to the recent decision of a Synod of Bishops, whereby the 39 articles of the Church of England were excluded from the Japanese Prayer Book, Bishop Bickersteth says:—"Now the 39 articles have no oecumenical authority. They are English of the English, an outcome of the special circumstances of the Church of England in the 16th century. . . . They are not, and do not profess to be, a complete statement of Christian doctrine, and were certainly never intended by their compilers to be imposed as a standard of orthodoxy outside the British Isles. Further, speaking generally, the imposition of elaborate doctrinal standards, as distinguished from the brief devotional enumeration in a creed of the facts of belief, is an evidence of weakness." The Bishop adds, "Though the East is but little concerned in Western controversies, it has and always will have its own modes of thought, its own problems, its own difficulties; and this being so, it would seem that the doctrinal confession of an Eastern Church, if its formulation be deemed requisite, should be the work of Oriental theologians, be racy of the soil, spring out of a surrounding of Eastern circumstances and carry to those who study it the obvious meaning of its own allusions and references." Though all this, and a great deal more, is admitted by the majority of foreign missionaries, there is a general feeling that the demands for freedom of thought and action constantly made by Japanese churches are fraught with danger, in that they are apt to be extended so as to include liberty to decide on the doctrines of the Church which it is necessary for a Japanese to accept in order to be enrolled as a member. "I deeply regret," says Bishop Bickersteth, in the Charge from which we have quoted, "that it does not seem to me possible to accept as Christian a great deal that goes by that name in Japan. The manifesto put forth at Nara last year, at a very large meeting, as expressing apparently the maximum of common belief of those who attended, is lamentable evidence of the results in a country like Japan of what is called 'liberal' or undenominational Christianity." It is contended in some quarters that congregationalism is a dangerous form of Church Government as regards Japan. As is doubtless known to our readers, congregationalism is purely democratic in character. The great principle on which it is founded, according to Mr. Henry M. Dexter, is that every Congregational Church is, by divine right, independent of all control from without, except that of Christ its Head. This, say some writers, accounts for the fact that it is possible for the pastors of certain *Kumfai* churches to become Unitarian or even Agnostic and still be supported by their congregations, no other church having the right to interfere. But there is evidence that signs of impatience of foreign control are one of the characteristics of modern Christian literature, and that the next ten years may witness some rather astonishing developments, from a foreign point of view. The general tone of numbers of Japanese articles on Christian doctrine and practice is decidedly anti-conservative and anti-dogmatic,

and the tendency of the age is to question the authority on which the time-honoured doctrines of the Christian Church rest.

The *Kirisutokyo Shimbun* recently published two articles on the Doshisha's connection with Christianity and its probable future. The first of these articles is devoted to a criticism of the leader published in these columns on May 23rd last, entitled "The Doshisha and Dogmatic Christianity." We give a short abstract of both the articles. In replying to the *Japan Mail*, the writer in the *Kirisutokyo Shimbun* observes that, though misrepresentations of the connection of the Doshisha with Christianity have been made for some time past, he has, for reasons of his own, forbore to notice them, but that since the publication of the commissioners' report, a very one-sided document has been made the basis of further erroneous notions, he has decided to place the facts of the case before the public and allow readers to judge for themselves. The article that appeared in the *Japan Mail* is wrong, says the *Kirisutokyo*, in two particulars. (1) It is wrong in saying that the main object of the Doshisha is an institution has undergone a change. (2) It is wrong in supposing that the Doshisha represents Christianity in any way.

(1) The main object of the Doshisha is the moral and intellectual education of youth. Though the constitution of the Society provides that moral education shall be founded on Christian principles, the Doshisha school is not to be regarded as a means of propagating Christianity. That view of the institution was held by many at the time of its first establishment, who maintained that education with it was a mere name, that its real object was Christian propagandism. At that time one of the officials of the Department of Education observed that it was a misnomer to call the Doshisha a *Gakko*; it should be called a *Gakurin*, or Theological Seminary. These assertions were stoutly denied by the founders and members of the Company, who have always maintained in a most public manner that the school is not a mere device for teaching Christian doctrine. In the face of this, how can it be said to-day that, for the sake of obtaining a grant from the American Board, the Doshisha professed its belief in Christianity and that it recently renounced the religion it once adopted. About the primary object of the founders of the institution and its existing educational principles there can be no manner of doubt. We cannot but regret that the institution and the Commissioners of the American Board were not able to understand each other better. The friction which has been caused is solely owing to failure on the part of each of the parties to comprehend the position of the other. But to attribute the misunderstanding to any change of religious views in the members of the company or the teaching staff is an egregious mistake. (2) The second contention of the writer of the article published in the *Japan Mail*, namely, that the Doshisha espouses the cause of a Christian sect or represents a set of Christian doctrines, is likewise incorrect. The Doshisha does not concern itself with sects, articles of faith, or religious principles, whether liberal or conservative; it concerns itself neither with dogma on the one hand nor with free criticism on the other, but simply aims at cultivating virtue in the minds of its pupils by means of universally acknowledged Christian principles. It makes no attempt to bind pupils and teachers to fixed articles of faith. The members of the Company, in their capacity of representatives of the body, refused to make any such public confession as the commissioners from America required, but they were perfectly willing as private individuals to express their faith in the personality of God, the Divinity of Christ, and the reality of a future life. There is great difference of opinion on religious subjects among the members of the company and the professors; hence was it not unreasonable to suppose that the Institution could profess belief in any fixed articles of faith? There are those who say that the demand for a pub-

lic confession of faith is to be traced to the fact that the Christianity of the Institution is no longer so pronounced as it used to be, and that hence earnest Christians were anxious to make sure that it had not renounced the faith it once espoused. But suppose the deterioration spoken of were an actual fact, does the responsibility of this rest with the Japanese teaching faculty alone? And how would the supposed situation be improved by a public confession of faith? The change in religious belief which is complained of is by no means confined to the Doshisha. All over the country young people are to be found in large numbers who have lost their faith in Christianity. The remedy for this state of things exists; but what grounds are there for holding the Doshisha professors responsible for the prevailing scepticism? There are those who maintain that what the Commissioners asked for was, not a Confession of articles of faith such as might give rise to great difference of opinion, but simply the acknowledgment of truths which no Christian denies. But is that so? How many are the questions, for instance, involved in the use of the word personality in reference to God? Does not the Divinity of Christ involve the whole question of the Trinity? And does not the doctrine of a future life include the eternal existence of the individual soul. These questions at first sight seem simple enough, but further examination shows that they are of a most complicated nature, a proof of which may be found in the controversies that have raged around them in Western lands. Had the professors subscribed to some simple confession of faith, no value could have been attached to it, for their differences of opinion would not have been affected thereby. Such a confession would have been a mere useless form. That a school whose chief object is to impart general instruction should be asked to give an exposition of Christian doctrine, seems to us a most unheard of proceeding. We fail to see that there is anything to complain of in the action taken by the Doshisha. We do not pretend to have any special knowledge of the religious opinions and beliefs of the members of the Doshisha staff, but we think there is no ground for asserting that their Christianity is of a rationalistic character. In reference to the changes to be introduced by the Doshisha, and the fortune of the Institution, we are informed, says the *Kirisutokyo Shimbun*, that the following resolutions have been adopted:—(1) That the Doshisha acknowledges with deep gratitude the support which the American Board of Missions has given them, in the form of men and money, from the time of the foundation of the Institution down to the present day; (2) that the Doshisha respectfully declines to receive help from the Board of Missions after the close of the present year; (3) that the Institution appeals for support to all who sympathise with its work, whether Japanese or foreigners, and trusts that by means of this support it will not only maintain its present position, but extend its operations. In order to show its appreciation of the liberality of the Board of Missions, the Doshisha has decided to leave to the Missionaries of the American Board, free of rent, the houses in Kyoto hitherto occupied by professors and others, for fifteen years; the Missionaries of the Board will also be allowed to make use of the Doshisha Library. The *Kirisutokyo Shimbun*, in its concluding remarks, observes that only two courses are now open to the Doshisha, either to mould itself into a shape that will satisfy the Foreign Board of Missions, or to strike out a new policy. Its refusal to make a public confession of faith may be taken as an indication that the latter course will be adopted. According to the present arrangements, some of the foreign professors connected with the Institution will have to leave for home in January next. That is a contingency which we very much regret, says our contemporary. The whole thing is far too sudden. It is said that there is no desire on the part of the managers of the Institution to deprive it of the services of the foreigners now employed, and that, provided the latter are prepared to recognise the altered character of the school, there is no reason why their

term of service should not be extended. We are informed that the members of the Doshisha have determined to show their respect for its past history by preserving its Christian character and the special type of education for which it has always been noted.

In the pages of the *Seikyo Shimpō*, an organ of the Greek Church, Mr. Ishikawa Kisaburo expresses the hope that the new Home Minister will exercise his influence in the direction of granting more religious liberty than is now enjoyed. It is not necessary, says Mr. Ishikawa, that Christians should attach themselves to any political party, but owing to the fact of the *Jiyu-to's* having been the steady advocate of general liberty, in which religious liberty is included, many Christians have joined that body and have always hoped to benefit by their connection with it. Since Count Itagaki has always been one of the chief promoters and supporters of constitutional government, and since a clause in the Constitution insures to Japanese subjects freedom of choice in religious matters, the Christians who belong to his party look to Count Itagaki, now that he is in power, to remove the obstacles to perfect religious liberty which exist in official circles. Though the written law allows freedom, the influence and acts of officials, which in the eyes of many constitute a kind of unwritten law, are opposed to belief in Christianity, are, in fact, agencies which form unbelief. Is this a state of things that the new minister can regard with indifference? Looking in another quarter, we find that the Government errs in the direction of excessive leniency, owing to a mistaken notion of the nature of religious liberty. When liberty becomes license, when it is interpreted as liberty to do as one pleases without regard to the standard of morals, it behoves a government, to which the safe-guarding of national interests has been committed, to step in and put its foot on the attempt to turn a privilege into an excuse for wickedness. In the case of the irregularities and pernicious practices of the Remmonkyō and the Tenrikyō sects, it was only after the newspapers had repeatedly called attention to the subject that the Police began to move, so that the credit of the interference belongs to the Press and not to the Government. The doctrine of non-interference in religious matters on the part of the Government is plainly one that cannot be maintained in the face of recent developments. It is most important that the administration should guard the nation from abuses and immoral contagion of all kinds. There are quarters where more liberty in religious matters may be granted than is now possessed, and there are quarters where curtailment is imperative; that the new Minister will exercise the necessary discretion is the earnest hope of the present writer and his fellow-thinkers.

In an article entitled, "Why do we not study Christianity a little?" a Buddhist priest, in the pages of the *Bukkyō*, urges on his brethren the necessity of paying more attention to the study of other creeds. The zeal of Christian teachers shown in the investigation of other faiths, says this writer, is most exemplary. Their object of course is to show that Christianity loses nothing and gains a great deal by comparison with other religions. In England there exists a Society whose object is the study of Oriental religions. Books on Mohammedanism, Buddhism, Confucianism, Taoism, and other creeds are collected and sold at reduced prices. More than this, comparative religion is a subject taught at all high-class Christian schools. In contrast to all this, we Japanese Buddhists are prejudiced and narrow-minded. How many are there of us that have read the four gospels? Mr. Lloyd, of the Keiogijuku, not long ago composed a beautiful poem in praise of Nichiren. How many of us are acquainted with the lives of St. Paul and St. Augustine? We live in a little, narrow world of our own. We undertake no extensive investigations, but simply content ourselves with doling out traditions received from ancestors. Hence

our influence in the world is very limited, and there is great danger of our religion's being superseded altogether. Since it is the plain duty of disciples of Buddha to show to the world the superiority of his teaching to that of any of the great authors of religion, and since that can only be done by a close study of the doctrines and history of alien faiths, I have asked in the title of this essay, why it is that we do not investigate Christianity. Christians know well that in order to outdo a rival, it is necessary that you should be acquainted with the strong and weak points in his character. Cannot we Buddhists take a leaf from their book?

In the *Shinri* (Truth), the organ of the German Protestant Church, Mr. Schiller traverses Dr. Kato Hiroyuki's views on the difference between the fundamental ethical principles of the East and the West. Dr. Kato's Essay was reproduced in these columns some months ago. Mr. Schiller is of opinion that Dr. Kato has misrepresented the sentiments and the practices of Occidentals in numerous particulars. The essay is too long for reproduction even in an epitomised form in this summary, but we may remark that to us it seems that Dr. Kato's comparison of Eastern and Western moral standards is characterised by many of the defects which Mr. Schiller has pointed out.

In a recent number of the *Shukyo*, a Unitarian organ, the part played by religion in social development is discussed in a liberal tone. The organisation of society, says the *Shukyo*, depends chiefly on government, law, education, and religion. These agencies all work in different ways, but they have the same end in view. Each of them supplies a felt want. Religion is designed to satisfy cravings which are as real as the desire for food or water. In what manner these cravings can be satisfied without involving the injury of other parts of man's complicated nature, is a problem that scholars are expected to solve. There are those who argue that in the choice of a religion and in the adoption of religious tenets, men should not be interfered with; that in such matters great liberty should be allowed. But that is not our view. The theory does not work, as is well illustrated by a recent occurrence. The *laissez faire* policy is to a large extent responsible for such abuses as have been developed by the sect known as the *Tenrikyō*, abuses that have called for police interference. In the notice lately issued by the police on this subject, attention is called to an improper mingling of the sexes, to the use of charms for the purpose of deceiving unsophisticated people, resulting in many instances in the recipients of these charms refusing to make use of medical aid when suffering from disease. This state of things is no doubt exceptional, but it is a proof that the masses cannot be allowed to choose their own religion. Such liberty in too many instances involves belief in superstitious teaching of the worst kind. Shintoism, Buddhism, and Christianity are all contributing their quota to the development and amelioration of Society, but it is a mistake to think that the doctrines of either of these creeds are free from liability to abuse and misapplication. In order to guard against this contingency, it behoves religious teachers to enlighten the uneducated by their instruction.

In connection with the above, it may be observed that no religious movement of modern days has taken greater hold on the ignorant than the *Tenrikyō* teaching. It is said that, not only in Tokyo, but in all parts of the country, thousands of houses are to be seen where, after the occupants' names, may be read the words "member of the *Tenrikyōkai* (the natural Religion Sect). In March, the Mishima branch of the sect held a giant meeting, extending over three days, which was attended by no less than 250,000 believers from all parts of the province of Yamato, and from other places. The strength of the *Tenrikyō* movement may be judged by the notice it has received in the vernacular press,

and at the hands of popular speakers. There seems to be little that is likely to be permanent in the tenets of this modern sect. Ten Shinto gods are special object of worship with the *Teurikyo* votaries, but there is a marked lack of system in the creed, and it appears to be rather of the nature of a device for deceiving the uneducated masses than an earnest and sincere attempt to arrive at religious truth.

The June number of the *Uchu Shukyo* (the Universalist), contains an article entitled "Christianity and Individualism," which deals with a question of great importance connected with modern ethical teaching. It is customary for Christian Japanese writers to lay stress on the fact that the new Civil Code is based on individualism; that it practically abolishes the time-honoured family relationships, and the responsibilities they involved, that is, as far as the law is concerned. That is used as an argument for the necessity of accepting Christianity, which, according to the authorities referred to, is the source of the principle of individualism. Hence many Christians regard with dissatisfaction the present tendency to revive Confucian moral teaching, the attempt to base morality on family relationship rather than on individual character. They predict that great evils must follow the endeavour to teach a system of ethics that is in opposition to the law of the land, as embodied in the Civil Code. This view was expressed by a writer in the *Kristokyo Shimbu* not long ago, who signed himself *Gokyo* (a defender of religion). The *Universalist* repudiates the notion that Christianity is on the side of individualism as opposed to a system of ethics founded on family relationships. It doubts whether individualism can be correctly considered to be a product of Christianity at all, but even if it be so, it is only one among many other doctrines: it is a part and not the whole of Christian teaching. The tendency of the age, says the *Universalist*, there is no denying, is all in favour of individualism. In politics, in education, and in ethical teaching, to the individual, rather than to the family or society generally, is the post of honour assigned. But is that a tendency to be encouraged? May not exclusive egoism become a source of great danger wherever it prevails? And is this a time to push the claims of individuals to the detriment of family relationships in Japan? We, says the *Universalist*, are in favour of steering a middle course between the old patriarchal system of ethics and modern individualism. A sudden change in favour of the latter would be fraught with numerous dangers. The connection of personal virtue with a man's family and public relations, so often insisted on by Confucius and Mencius, was a real connection, which no system of ethics can afford to ignore. It is quite feasible to blend the old teaching and the new in such a way that they will complement each other. This is the proper course to be adopted, instead of the practice advocated and followed by so many Christians.

The *Nihon Shinkyo* (Japanese Religion), in its eleventh number, recently published, invites all persons interested in religion to furnish the magazine with an expression of opinion on the following six questions. (1) What kind of a religion should be chosen? (2) What should be the attitude adopted towards existing religious sects in Japan? (3) Can the sacred writings and the articles of belief of existing religious sects be retained? Is it desirable that a religion possess such things? (4) How should religious bodies be constituted? And how should places of worship be erected? (5) What are the best methods of propagandism? (6) How best may households and society generally be taught and reformed? Replies to these questions may be looked for in the succeeding numbers of the *Nihon Shinkyo*. The May number of this publication, among other articles, has the following:—"Concord between Eastern and Western Religions"; "The Influence of Christianity"; "Religious Thought in Russia"; "On Answers to Prayer," in which the question of praying for rain in discussed and the subjective benefits to be derived from prayer insisted on.

The author gives it as his opinion that the most suitable places for prayer are the tops of high mountains and places calculated to awe and solemnise the worshipper, and adds that it is of no importance that the language used by the suppliant should be intelligible to others; all that is necessary is that it expresses his devotion to the object of worship. The author further holds that rain is procurable by means of prayer alone, provided the right kind of people pray for it, and he contends that the prayers of Buddhists, Shintoists, and Christians, irrespective of their various objects of worship, are on such occasions of equal merit in bringing about the desired result. He spurns the notion that there is no Divine interference with the world's affairs in response to the earnest entreaties of the world's devotees, but contends that even supposing that there are no such things as answers to prayer, the practice of praying should be retained on account of its beneficial effects on the mind of the suppliant.

An article entitled, "Changes in the Religions of Japan," by Mr. Togawa Ataka, demands fuller notice. The changes discussed are not retrospective, but prospective. The writer observes, at the outset, that it is extremely hard to predict the future of religion in this country, and then proceeds to observe that men like the prophets of old are not to be found, and even if they were there, the present age would demand more minuteness in their predictions than they were wont to possess. Events, however, usually cast their shadows before them, and keen observers of the signs of the times can usually foretell in a general way what is about to happen. First, as regards Buddhism and Shinto, their relation to each other is that of two allies pitted against a foreign foe. Though, owing to the influence of foreign creeds, there no longer exists an established religion, both the time-honoured creeds now mentioned may be regarded as constituent parts of Japanese nationalism and hence have retained their hold on men's minds. They have blended to a very large extent, but not so as to lose identity. Shinto may be said to have been swallowed by Buddhism, but the dose proved too much for the digestive powers of the latter, and hence the Shinto creed still exists as a distinct religion and Buddhism has desisted from vain attempts at assimilation and has rested content with its acknowledged supereminence. The Christianity that was brought to this country in the early days of the Tokugawa Shogunate met with reverses which would have been impossible had civilisation been as advanced in Spain and Portugal in those days as it is England and America to-day. Not all the determination of Iemitsu, or Japan's military resources, would have sufficed to stamp out the foreign teaching. Christianity is in essence an aggressive and exclusive religion. Its votaries have no desire to join hands with the representatives of other creeds. Christianity may be compared to a fire seeking to destroy all that comes into contact with it. But history has shown that there are substances that survive even after being reduced to ashes, substances the identity of which is never lost. There were elements in the national life and religion of the ancient Greeks and Romans that stood the test of the Christian fire to which they were subjected, and which in the Christian creed to-day, where they are embodied, have lost not one iota of their identity. If the Christianity of one country differs widely from that of another, is there any doubt that Japan will have a type of its own, a type which has been moulded by purely national agencies? The roots of the Buddhist faith descend deep into philosophic earth, and hence there is little fear of Buddhism being overthrown. She will retain her hold on the minds of the educated. But her methods of propagandism sadly need reform. She should learn from the Roman Catholics or the Protestant Episcopalians how to reach outsiders. Buddhists need to take more interest in philanthropic movements than they have hitherto done, to pay more attention to the inculcation of domestic virtue. Moreover, priests

in charge of parishes should be men of high character. One of the most conspicuous defects of Japanese Christianity is the low standard of learning among her missionaries. Most of these men condemn Buddhism without ever having read a Buddhist book. Of the real teaching of Buddhism they have no knowledge. The practices and doctrines on which they centre their attacks are no part of Buddhism, but abuses and irregularities that devout Buddhists deplore. Christian teachers in this country should be well versed in Buddhist doctrines, Japanese history and native customs; they should mix more with men of other creeds, they should be earnest students of comparative religion and be free to adopt and reject as they please. What we most earnestly recommend is that on fixed days Buddhists and Christians meet together, that the adherents of both faiths explain the doctrines which they believe to be true, that they unite their efforts in all benevolent works, and discuss in a friendly, loving spirit all that concerns society as a whole, and that they labour together to promote independence of spirit in religious matters. In conclusion, we may say that there are many evidences of the establishment of a universal religion in the not distant future, and young men, whether Buddhists or Christians, should see to it that their vessels are ready to rise and advance with the flood that will bear them to a new world.

In the same number of the *Nihon Shukyo*, from which we have quoted, Mr. Watarase Tsunekichi dwells on the importance of Christians striving for greater independence. (1) They must seek to establish independence of thought and opinion. If they do nothing but retail the doctrines learned from the missionaries, their teaching will soon become tedious and the churches with which they are connected, and they will fall into a dead, sleepy state. (2) The Churches must become independent. Where Christians are thoroughly united this can be effected without difficulty. (3) Japanese ought to be independent as regards the choice of methods of propagating the gospel. These three kinds of independence are earnestly desired by all Christians, but there are some who think that the time is not ripe for allowing native churches to become free from all foreign control. There is little to be said in favour of this view. It is certainly much easier for Christians and Churches to form habits of independence in their infant days than it is in later stages of development.

Among other interesting articles in the *Nihon Shukyo* which we have little space to notice, one entitled "The Present Religious World" gives in a condensed form the opinions of a variety of writers on religious subjects. The first view given is of a decidedly pessimistic character. Christianity is said to have lost its influence on men's minds, to be in a stagnant condition; Buddhism to be in a state of corruption and general deterioration; and Shintoism to be no less effete than lacking in intelligence. The writer next proceeds to quote from writers of different schools. The author of a recent article in the *Yui-itsu*, a Shinto organ, says that religion has reached such a degree of corruption that nothing but the appearance of some great religious teacher can save it from destruction. Earnest men should abandon their sectarian watchwords and combine their efforts in the promotion of the common cause of religion. A religious resolution is needed. The *Kyokai* has an article entitled, "The need of a great religious Reform," and the *Fiji Shimpō* not long ago published an essay entitled, "A great revival among religious believers is needed." Various other organs have expressed their dissatisfaction with the present state of religious belief and practice in similar terms. To many, says the writer whom we quote, the present aspect of the religious world resembles the chaos which preceded the evolution of the physical cosmos. That a new form of Christianity and a new type of Buddhism will replace the traditional forms of these two religions,

is confidently asserted by those who have watched the course of recent events in the religious world. The following is a brief account of religious sects as they exist to-day. There are some 10 Shinto sects. There are some 50 well-known Buddhist sects, and 13 less well-known bodies, making a total of 63, so that, if Christian sects be added, the number of sects will be considerably over a hundred. And many of these show signs of dividing up into still smaller bodies. The leading Buddhist sects, namely, the Shin, Nichiren, Soto, Tendai, Jodo and Ringai sects each possess from 4,000 to 19,000 temples and each have from 2,000 to 16,000 priests acting as rectors of temples. But the adherents of such obscure sects as the Ji-shu, Yuyunembutsu-shin, Hosso-shu and the Keyon-shu are too few to be worthy of mention. The question of the day is, will the mass of Buddhist believers, pressed by the exigencies of the time, combine and form one giant sect under the guidance of the writers and preachers known as the new Buddhist School?

NEGOTIABLE JAPANESE SECURITIES.

The *Kokumin* publishes an interesting list of Japanese public securities negotiable in the open market.

	Yen.
Old Public Bonds	5,705,817
New Public Bonds	4,173,200
Pension Bonds	30,211,120
Naval Bonds	16,950,000
Consolidated Bonds	170,472,450
Railway Bonds	6,000,000
War Bonds	109,124,000
Total	342,636,587
Local Loan Bonds	7,650,150
Railway Shares	112,768,000
Bank Shares	175,321,479
Company's Shares	179,991,992
Company's Debentures	6,954,300
Total	475,035,771

Grand total 825,321,508
The above figures, so far as they relate to securities of the Central and Local Governments, are in accordance with statistics corrected up to the end of May of the present year. The figures for railway and bank shares are corrected up to December of 1895; the figures relating to Companies are corrected up to the last day of May of the current year, and those relating to Company's debentures, up to the end of 1895. Companies that have received permission to undertake business but have not yet done so, are not included in the reckoning, and no distinction is made between the various kinds of companies.

THE STRONG FOREIGN POLICY PEERS & THE REVISED TREATY WITH GERMANY.

We read in vernacular newspapers that the so-called "Strong Foreign Policy Peers"—namely, the members of the *Sanyo-Kai*, the *Konwa-Kai*, and the *Chawa-Kai*—recently held a meeting and appointed a committee to investigate the question of the revised treaty with Germany. The Committee has concluded its inquiries, and the journals from which we quote say that it has been decided to make a strong appeal to public opinion on the subject, but no enumeration is given of the special points considered nationally hurtful by these gentlemen of the *Kyō-ha*. Presumably their objection is to the terms of the Consular Convention accompanying the Treaty, but it will be hard for them to found a case on that basis, seeing that precisely similar Consular Conventions exist between several of the Great European Powers.

THE SEISMIC-WAVE DISASTER.

We beg to acknowledge with thanks receipt of the following sums towards the relief of sufferers through the terrible disaster in Iwate, Aomori, and Miyagi Prefectures:—

Messrs. Sieber & Co.	\$25
Mr. C. Giusanni	25
Captain Brinkley	25
Marquis C. de Nembrini Gonzaga	10
C. R.	25
Mr. G. Lowther	25
Dr. E. Baelz	25
Mr. E. Chiossone	15
St. Andrew's House, Shiba, Tokyo	15
Lord Dormer	100
Mr. Gustave Gilbert	20

MR. LOUIS LOMBARD.

Mr. Louis Lombard continues to be quoted by Shanghai journals as a high musical authority. His second appearance in print is a species of rhapsody on the music in the Shanghai Cathedral. And not the music only:—"the edifice, the congregation, the playing and singing," he writes, "suggested the most advanced æsthetic culture." That is very nice for Shanghai. But with Mr. Louis Lombard's permission we should like to tell him what his own writing does not suggest, namely, the first element of true artistic spirit, modesty. Besides, by his own confession, his ears are singularly out of order. He declared in his first letter that he had to listen for a full minute to ascertain whether Japanese or western music was in course of execution by "the cracked military band of Japan." That is a damaging confession. Even if Mr. Louis Lombard never heard any better band in Japan than the Yokohama Town Band, he still should not have been perplexed to make so plain a distinction. But from a man who commits himself to the silly exaggeration that "no edifying music is heard from one end of the year to the other" in Yokohama, Tokyo and so forth, we should imagine that praise possesses no great value. The foreign communities in Japan were the victims of his prejudice; the foreign community of Shanghai is the victim of his partiality.

AN AMERICAN BOY'S VIEW OF JAMESON.

An American lad, æt. 12, whose forte, we are told, is mathematics, has embodied his views about Jameson ride in verse, which a friend sends us for publication. We need say nothing of the quality of the performance in the case of a boy so young:—

A REPLY TO ALFRED AUSTIN'S POEM, "JAMESON'S RIDE."

"Wrong were we?—Well may be." No "May be" about it,
'Twas a criminal deed in the eyes of the law;
But you Britons are always the people to doubt it,
A man such as you are 's the man they adore.
You thought you were adding to England's great glory:
You were pricking her honour through flesh and through bone.
What the mischief's the matter with Transvaal's old border?
Why can't they let peace-loving people alone?
Do you think you could alter a half inch of border
With twenty or thirty times as many men?
You're a crazy, conceited, and brutal marauder
And they welcomed you nicely at Krugersdorp's glen.
At the Judgment-day, well, at least God judges fairly.
No matter what Austin may think of your crime;
You must pay the dear price,
You must reap your own harvest
And your name as marauder go down to all time.
J. W. HELBURN.

"Aged twelve," 1896.

THE WATER-PIPE BRIBERY CASE.

The public examination by the Tokyo Local Court of Messrs. Kazama Shinkichi, Yamanaka Rinnosuke, and four others, charged with corruption in the Tokyo Water-pipe Scandal, having been concluded, judgment was delivered on the 22nd instant. The first two defendants were sentenced to major confinement, one for five months' and the other for three. They were also fined. The judgment, in part, runs thus:—Mr. Kazama was appointed, while a councillor of the municipality, to be a member of the Water-works Committee. In that capacity, he took part in the Water-works improvement affairs, and examined or determined drafts relating to the purchase of materials, or concluded contracts, before they were submitted to the City Assembly. In direct breach of his civic obligations, he secretly met, on March 18th, 1895, in a certain restaurant in Umicho, Kyobashi, Tokyo, Mr. Okada Kiyotaro, an employee of M. Raspe and Company, Yokohama, and was asked by him to have the Firm admitted on the list of bidders for the supply of pumps and other materials used in the Water-works; and also to act on behalf of the said Firm so that its bids might be accepted. This request of Okada's he complied with, and, when the former called at his residence in the latter part of April, he revealed official secrets to him and promised every possible advantage, on condition that he received a third of the profits that the Firm would derive from the transaction. Again, when, on the plea of difficulty in fulfilling the contract, the Nippon Iron Foundry repeatedly petitioned the City Council to have the contract nullified or the terms altered, the Defendant saw the President and Manager of the Company at his residence, and, in compliance with their request, promised, on condition of receiving certain compensation for his trouble, to exert himself so as to have the request of the company agreed to by the Council. As part of that compensation, the Defendant received at his own residence a piece of silk worth 12 yen and also a sum of 200 yen. The Court found the foregoing facts conclusively proved by the affidavits of several witnesses concerned in the affair, and also by a letter sent by Okada to one of the witnesses. The Court therefore sentenced the Defendant to 5 months' major confinement with a fine of 20 yen, together with the restitution of 212 yen, the bribe received. The finding against the other Defendant was somewhat similar. He was sentenced to major confinement for the space of 3 months' and fined 15 yen, together with restitution of 112 yen, the bribe received in goods and cash. The other four Defendants were acquitted on the ground that, though they had been appointed by the City Council as managers or assistant experts in the Water-works, and though they received gifts of money or articles, this did not constitute a crime, inasmuch as the City Council, according to the Organization of the Special Municipal System, had no right to appoint such functionaries as officials of the Municipality, therefore their actions in receiving money or articles in connection with the business entrusted to them by the Council could not be called into account.

CITY IMPROVEMENTS IN TOKYO.

In an editorial and subsequently in a note, the *Jiji* calls the attention of the Authorities to the question of improving the streets of Tokyo, work that is now carried on by a regular standing committee of the Municipality. The *Jiji* wishes to see the fund appropriated for improvements considerably increased; at present only 3½ million yen is set aside by the Authorities, and the work proceeds very slowly. Complaints are also frequently heard of ground having been purchased by the Municipality from private owners against their will and at prices far below the ruling rate. A case that lately happened at Ichibeicho, Azabu, affords a good example. The proprietor of a lot of ground at Ichibeicho bought the land in November, 1894, at rates ranging between 7 to 8.30 yen per *tsubo*.

The lot was originally divided into two parts, one covering 243 *tsubo* and the other 338 *tsubo*. He purchased the land for 4,500 yen, with the intention of establishing a weaving shop thereon. Last July, the Street Improvements Committee decided to cut a road through the lot, dividing it into two entirely distinct areas, and the original programme of the projector was thereby upset. Moreover, so cheaply did the Committee value the ground that the man was forced to sell 107 *tsubo* at rates varying between 1½ to 2 yen, and received in all only a little over 200 yen. This was the land's valuation according to the standard fixed by the Home Minister; and the proprietor has no appeal against it, although there is difference of no less than 3,460 yen between the price he paid for the land, and that which the Committee would pay. The *Jiji*, while printing the complaint, does not pretend to fully endorse the statement of the proprietor, but it cannot help thinking that in a few cases the Authorities must have resorted to rather peremptory measures.

CHINESE NEWS.

According to Mrs. Bishop, anti-foreign feeling is very strong in Szechuan. She reports that she was hooted and pelted with stones and mud in many places, and that whereas, on her former visit, she could go about without molestation, on this occasion she found it impossible for ladies to walk in the streets without being insulted. In short, she noticed a great difference for the worse in the attitude of the people. If this testimony be correct, it would seem that the methods adopted last year in the sequel of the Szechuan riots were not very successful.

Says the *North-China Daily News*:—

The eunuchs in Peking appear to be having a rather bad time of it at present. According to despatches received yesterday from the capital out of six eunuchs who had been engaged in a brawl over seats in a Peking theatre lately, and who accidentally killed a gendarme who came to stop the row, three are to be summarily executed and the remaining three exiled to a distance of 4,000 ft or 1,200 miles. Another eunuch who had the temerity to present a memorial praying for internal reforms in the central government was also executed, because by doing so he had broken one of the Sacred Edicts of the late Emperor Kanghsi (17th century) prohibiting eunuchs from interfering with state affairs. Another eunuch, the alleged sworn brother of the now cashiered Wen Ting-shih, one of the principal founders of the Reform Association and a devoted supporter of the Reverends Gilbert Reid and Timothy Richard, has also been summarily executed in Heilungchiang, to which city this eunuch had been exiled for the frivolous reason of being Wen Ting-shih's sworn brother. The cause of this eunuch's execution is stated to have been exciting the other convicts to mutiny, but his death was a foregone conclusion, and the same despatch to the Heilungchiang Tartar General consigning the eunuch to exile is said to have contained also the order for his execution "on any pretext."

"Captain Lake, of the *Eldorado*," writes a Shanghai contemporary, reports that on Wednesday, the 17th instant, while the ship was lying at Taku Bar, three distinct shocks of earthquake were felt, followed by a noise which he compares to the sparking of a dynamo, and which he believes to have been caused through the atmosphere's being excessively charged with electricity. The noise continued for about half an hour and caused some consternation among the Chinese members of the crew."

CHOLERA.

Between April 17th and June 28th there were 16 cases of cholera in Tokyo, 3 of which ended fatally. In Osaka, between April 26th and June 26th, there were 12 cases, 4 of which proved fatal. In Fukuoka Prefecture since the 29th of February there have been 6 cases. The *Miyako Shimbun*, from which we take these figures, adds that there are signs of an epidemic of cholera in Tokyo, but certainly no such signs can be inferred from the above statistics.

THE ECLIPSE OF THE SUN.

The French cruiser *Alger* started on the 1st of July for Hokkaido, having on board the astronomical mission sent by the French Government. The head of the mission is M. Besandres, of the Paris Observatory, well-known in the scientific world by his works on physical astronomy. M. Besandres was the head of the mission sent to Senegal to observe the total solar eclipse of the 16th August, 1893. The mission arrived lately in Japan, and a subsequent steamer, the *Ernest Simons* brought out a large amount of materials of all kinds for use of the expedition, besides three assistant-astronomers. It is on the northern coast of Yezo that the French mission will establish its observatory, the calculation being that that point will offer more favourable atmospheric conditions than the one chosen by the English mission. The Japanese and American missions also have chosen the same locality as the French.

The Nippon Yusen Kaisha are, we learn, doing everything in their power to assist the members of the scientific expeditions to observe the forthcoming eclipse of the sun. The company's steamer *Sakura Maru*, which left here on Tuesday last for Otaru, took as passengers to Hakodate, Professor Schaeberle and staff. At Hakodate the Professor and party will join the Company's steamer *Ise Maru* and proceed by her to Akkeshi, the Company having kindly consented to extend the steamer's voyage to that port from Nemuro for the convenience of the Expedition. Professor Tod, the head of the other observation party, left Yokohama by train on Wednesday for the north, and will join the *Sakura Maru* at Hakodate for Otaru, where he will tranship to the *Suruga Maru*, the steamer on the Soya line. The Company have also given permission for the *Suruga Maru* to extend its trip to Mombetsu, with the Professor and staff, while all the instruments and impedimenta of both Expeditions are being carried free, and if possible the Company will arrange to give the members of the party the same advantages on their return from the expedition.

JAPANESE ENTERPRISES IN KOREA.

A gold mine at Yong-dam, Kyong Sang-do, is reputed to be the best in Korea, occupying the same position relatively as the Sado gold mine in Japan. The charter for working this mine was granted to Mr. Maki Kenzo, a Nagasaki capitalist, who obtained it from the Korean Government a number of years ago. For six months, from July, 1892, Mr. Maki worked the mine in conjunction with Mr. Furukawa Ichibei, but this partnership was subsequently dissolved, and Mr. Maki was obliged to suspend mining operations. About a year after, a German Firm in Ninsen agreed to purchase the ore at the rate of 150 yen per ton, and work was resumed in April, 1894. The Tonghak insurrection and the outbreak of the Japan-China war again interfered with the business, and after two months working, operations were once more suspended. When order is restored in Korea, the lessee is determined to resume work for the third time, for the charter having been secured when the Mins were all-powerful in the Korean Government, he infers that the Government will not be so devoid of good faith as to invalidate it now, however much it may be prejudiced against Japan and her people. As a preliminary toward the resumption of the enterprise, Mr. Maki asked the Sado Mine experts to analyse a specimen of the Korean ores. The analysts experimented with 5 tons of ore, and their report reads as follows:—Gold, 1.24/10,000 per cent.; silver, 4.5/10,000 per cent.; lead 8.873/100 per cent.; copper, 4.03/100 per cent.; average value of one ton of ore, 93.843 yen. Such a result is considered very satisfactory, the output of the Sado Mine being generally estimated at 15 yen per ton. The cost of haulage, however, is very great in Korea,

the distance between the mine and Fusan being over 57 miles. The ore has then to be shipped to Ninsen. The *Yomiuri*, from which we take these facts, urges that the work be resumed as quickly as possible, lest delay afford the Korean Government an excuse to revoke the lease.

The matter of the Fusan-Sōul railway scheme, projected by Mr. Omiwa and other Japanese merchants in Korea, is extremely perplexing. Mr. Komura, ex-Japanese Representative to Korea, and now Vice-Minister of Foreign Affairs, alluded to this project in anything but favourable terms the other day. The *Shogyo* also wrote of it in an outspoken tone. Paragraphs that have subsequently appeared in the vernacular papers, the *Shogyo* included, are couched in a different vein. The latest news about the scheme is that it is now fairly matured. Mr. Omiwa first obtained the approval of several Osaka capitalists engaged in the Japanese-Korean trade, and then came up to Tokyo. He waited on the Premier and other Ministers of State, and was told, in the capacity of a private individual, that they were willing to approve the scheme. He succeeded in obtaining the support of Mr. Watanabe Koki, ex-Japanese Minister to Vienna, Mr. Inouye Kakugoro, M.P., Mr. Abe Hikotaro, Mr. Asano Soichiro, and so forth, and consulted with them. It was eventually decided to start the company with a capital of 7½ million yen. Mr. Omiwa is now in Osaka enlisting the support of capitalists in the scheme. He expects to submit an application before long to the Foreign Office, and then the matter will be definitely arranged between the Korean Government and the projectors, through the medium of the Foreign Office. It is stated that a German Firm in Ninsen, and Mr. Morse, who secured the concession to construct the Sōul-Ninsen railway, are agitating to obtain the Sōul-Fusan line concession.

INDUSTRIAL TOPICS.

It is interesting to know, writes a Tokyo paper, what kind of crops are attracting the chief attention of cultivators, in view of the gradual rise of their market values, and what kinds belong to the opposite category. These points became apparent when we consider the following comparative table:—

	Increase or decrease in 1895 as compared with 1884. Per cent.	As compared with 1887. Per cent.
Rice	5.70	4.50
Barley	16.90	9.2
Mulberry	174.20	93.3
Tea	111.00	38.2
Beans20	-4.9
Millet	3.20	-1.6
Hiye (kind of millet)	7.50	3.9
Kimi (kind of sorghum)	16.5	-0.3
Indian Corn	4.5	-3.7
Buckwheat	5.3	2.2
Sweet potato	37.0	9.8
Potato	118.5	33.2
Rape plant	7.1	2.7
Cotton	-25.8	-27.5
Hemp	35.6	7.5
Tobacco	19.4	33.3
Indigo	34.6	12.4
Sugar cane	13.5	6.9

It will be seen from the above that mulberry, tea and potato are the crops showing most marked appreciation, and that cotton, *kimi*, and *hiye* stand at the other extreme. The causes of the appreciation of mulberry and tea are easy to understand; that of potatoes is most likely due to gradual opening up of Hokkaido, where the root is cultivated extensively. The depreciation of cotton is owing to the home-grown variety's not being adapted to spinning purposes, and the depreciation of *hiye* and *kimi* may be accounted for by the advance of the standard of living, (these edibles being essentially in vogue among the poorer classes), and by increased facilities of transport, which bring the rice-producing districts into closer touch with the remote parts of the empire.

The activity of the spinning business in Osaka is attended by a serious trouble in the matter of procuring operatives. There has always been some difficulty of the kind. Formerly, a batch of, say, 150 operatives, engaged by a

factory on condition that travelling expenses and a commission to middlemen was paid, used to dwindle to less than a hundred before reaching their destination, owing to tempting offers made by rival factories. With the view of providing against that inconvenience, the spinners of Osaka, in 1893, organized themselves into a union, and resolved that a factory engaging an operative already pledged to another factory on specified terms, must pay a fine of 10 yen to the latter factory, and must, as a matter of course, give up the operative. This special arrangement proved efficacious so far as concerned the object immediately contemplated. But an objection was subsequently raised against the practice, on the ground that it interfered with the liberty of operatives, and checked the work of the factories. On these grounds, the Kanegafuchi Mill decided to sever connection with the Spinners Union at its last general meeting held in Osaka. Negotiations were afterwards opened between the Union and that factory on the point at issue, but no definite conclusion has yet been reached. The Union is ready to yield on one of the two original conditions, namely, the surrender of the decoyed operative, but asks in return, that the penalty be increased to 20 yen. The Kanegafuchi directors, however, think that sum too large and hold that the fine should be left as before. It is confidently believed that a compromise will be effected by fixing the sum at 15 yen.

The diminution of the export of tea this year as compared with the preceding year is significant. Here is a table showing the export of tea in two years from the beginning of the season to June 15th:—

	Quantity. Catties.	Price. Yen.
1895	14,183,700	4,495,305.50
1896	11,643,200	2,814,065.50

A diminution of over 2½ million catties in quantity and of over 1,680,000 yen in price, is undoubtedly a serious matter.

THE GREAT SEISMIC WAVE.

[FROM OUR SPECIAL CORRESPONDENT.]

Ono-mura, Fukuoka District, Iwate Prefecture.
Tuesday, 1.30 p.m.

Hachinohe was left this morning at 8 o'clock. Your correspondent greatly desired to set off at an earlier hour, but the *jinrikisha*-men proved intractable. Despite double wages, no three willing pullers could be found. At last the police—who have so far been exceedingly helpful and courteous—were compelled to interfere. It was not so much a question of the road, rough as that is in places, but of your correspondent's bulk, the men excitedly avowing that no "mortal" *kuruma* would carry me the 35 miles over the stony road without more or less severe injury to springs, shafts, or wheels. However, off we did get at the above-specified hour. The road led through a country of undulating hills, clad with verdure from base to summit, the valleys cultivated in every possible nook and corner, the road-sides redolent with wild and briar-roses—I counted four different species—and the scenery most beautiful and striking. Proud though the good people of Iwate Prefecture seem to be of this highway, it is a most fatiguing one; filled with ruts, fissures and boulders of all sizes, with an occasional smooth run of a quarter of a mile. The *kuruma* to which fate has this day consigned me, is an ancient one, with springs of adamant and no perceptible back. I am now only 23 miles on my way to Kuji, yet already feel fully prepared to condemn the maker of that *kuruma* in the strongest language at my command. I have tried leaning sideways, leaning forward, bending till my head nearly touched my knees; but in no position could I obtain the least physical relief. Singing, which I also attempted in the seclusion of these hills, soon changed to a melancholy strain, ending a minor quaver not unlike a groan. In fact, the only relief I have found was the occasional indulgence in profanity.

Tashiro-mura was reached at 10.30 a.m., ten miles from Hachinohe. This is a typical hill-village of the better sort, and has a prosperous look about it. My *jinrikisha*-men halted here for 15 minutes, to indulge in a bowl of bean-curd. Thereafter, without any halt, we pressed on, over a most trying road in places, to Akudo-mura, which was made at 1.05 p.m. A constable met here told me that this was on the northern boundary of

Iwate, or rather just inside the boundary line. He moreover stated that it was rumoured at Kuji that a French missionary had disappeared among the thousands who lost their lives at Kamaishi. At all events, nothing had been heard of the gentleman, he declared, since June 3rd, when he is known to have been in the neighbourhood of that fated town.

This Ono-mura is a rather pretty place. The inn where I am now resting boasts a neat little garden and an exceptionally neat-looking, dimpling Phyllis. I had not intended to lunch here, but—under the circumstances—how very pretty these country maidens sometimes are.

Kuji, 11.20 p.m.

This place was reached at 6.20 p.m., after a most exhausting journey over the hills. Leaving Ono-mura at 2.30 p.m., where, be it parenthetically stated, I enjoyed a most delicious lunch off a congener of the speckled trout, taken fresh from the hill-streams, the road led on to Futatsuyama and Odaira-mura. After Ono the road was villainous beyond description; indeed, in many places quite untraversable except on foot, and even then the greatest prudence had to be exercised, the path—for the highway had dwindled down to that—running often along the edge of very steep and ugly-looking precipices. From Odaira the road became impossible for *jinrikisha*, and the rest of the journey was made on foot; two stiff and most stony hills having to be climbed. Between the Odaira hills, and the next range lay a most beautiful valley: perhaps a mile broad by ten miles long. I have never seen any place which affected me so pleasantly. The guardian hills, clad with verdant, deciduous trees; the path lined on either side with hedge and briar-roses; and far below the smiling vale, with its hundreds of rice and wheat fields, glowing in the warm rays of the June sun. A most memorable picture, in very truth. On ascending the next hill, beyond which I was told that Kuji lay, I expected a repetition of this beautiful vista. But instead of verdant meads, an arid waste met my view, the rice-fields swept bare of vegetation, and for clustering hamlets only several unsightly plots filled with ruins. The town of Kuji itself was another Hachinohe, though on a smaller scale, and, if anything, still poorer-looking. Going at once to the Police District Office, I was told that a walk of three miles (both ways) would bring me to the worst of the ruined villages. *Kuruma* were impracticable, for no path worthy the name was left. This was unpleasant news to a tired man, but I had determined to see as much as possible while the daylight lasted; so at once set out, two constables acting as guides. And here I must again refer with warm approval to the courtesy shown me everywhere by the constabulary. The members of this well-drilled body have indeed rendered me the greatest service.

So soon as the broad street of the town was left, the signs of the terrible wave became very apparent. Bridges swept away; embankments torn down; trees uprooted; fields absolutely waste and looking like a freshly-drained swamp, without the least verdure to hide their ugliness. "There in that grove," said one of my guides, "we found a corpse to-day. It had been carried two miles inland by the wave." A little later, walking very rapidly, we came to the first of the villages. But what a sight! Out of a cluster of four or five thriving villages back of the crescent-shaped beach of Kuji Bay, two houses alone were left standing, and even these had a dangerous-looking sag on one side. How can I describe the scene of desolation? To me it looked like the sight after one of the Tokyo fires, only on a gigantic scale. Houses fallen in every conceivable shape; heaps of domestic furniture tossed carelessly hither and thither; spinning-wheels and lacquered trays, broken crockery and petroleum-tins, wrecked *shoji* and dilapidated water-worn *latami*—everything in a bewildering confusion, skitter-skitter, disorder, destruction, desolation! And this for two miles in succession. For here there was no low range of hills back of the beach. That surmounted, the whole valley lay at the mercy of the water. "I was in it all," said one of my companions, a dark, little man. "I was caught by the wave, floated off to the beach and then left stranded. It was horrible to see the hands of the drowning people stretched out for aid. I can't swim, yet I managed to save two. I was carried fully a mile in less than a minute, which may give you an idea of the great swiftness of this colossal wave. How high was it? Well, those telegraph poles," pointing to one side, "where completely covered. Telegraphic communication was cut off for two days." Making our way with the utmost difficulty over the broken road and through and over the debris of countless houses, we came finally to the *jinmusho*, or Inspector's Office, on the northern hillside, two peasant-houses having been requisitioned for this purpose. Here I met the Chief of the Kuji Police and several physicians, two coming from Tokyo. I was taken into some

wretched-looking houses near at hand, and there shown a number of the victims. In one word, horrible! Some were minus a leg or arm, most were severely injured about the head and eyes; while fractures of all sorts were to be seen. One man, with a broken jaw and four ribs crushed in, who could just speak in a whisper, told me that he had been walking in the village when the wave came. It had caught him up and thrown him with terrible force against the hillside, very near where he was then lying. A baby on its mother's back was minus a hand. A young and rather good-looking woman was totally blinded, and having a broken ankle readjusted as I came in. Withal the direst poverty, nearly all those under treatment being absolutely destitute. "Yes," said one of the physicians in answer to an enquiry, "we have medicines and doctors enough; but no money to feed the poor people and no clothes to give them. Help, pecuniary aid, is most urgently needed." After a prolonged survey, I questioned some of the survivors. They told substantially the same story that I had heard at Minato-mura. Only here the dreadful sound preceding the wave is said to have been like a discharge of artillery, peal upon peal, as if some great battle were being waged.

Kuji lies a little to the south-east of the vale, Osanai-mura being the southern seaward village, while Monzen-mura is the northernmost. Osanai suffered greatly; but Monzen and several adjacent villages, aggregating five hundred houses, are no more. Back of Kuji and at the western end of the valley lie the Kuji Coal Mine, of which M. Cottin is the foreign superintendent. Retracing my steps, saddened and sickened by what I had seen, I re-entered Kuji at 8 p.m., or just at nightfall. The first step was to call at the *yadoya* where M. Cottin is lodging; and there I met two other French residents of Yokohama, also interested in the mines, Messrs. Bickart and Becker. M. Cottin at once invited me to a most excellent impromptu dinner, and spoke in strong terms of the calamity that had befallen the place. He, too, affirmed that the premonitory sound was like a cannonade. On rushing out of his lodging he was surprised to find the street aswirl with salt-water. Be it said to M. Cottin's honour that he was the first foreigner to subscribe to the local relief-fund, \$200. From him I learned that at another place not far away in the valley, there was a small but paying gold-mine, worked by a Japanese syndicate. While standing on the ruins of Monzen-mura I caught sight of two men-of-war in the offing, at a distance of about 5 miles. They were, I was told, looking for floating corpses. Later in the evening, I again met with the Chief of Police, who had meanwhile prepared a very interesting statement, which I subjoin. Nearly all those found dead where, he says, killed by head-injuries; only a few were drowned outright. In Monzen-mura only 50 or 60 people were left alive after the wave had receded; and these saved themselves by catching hold of posts, pillars, or rafters. Monzen being a fishing village primarily, nearly all the men were absent when the terrible wave came. Those lost were principally women and children. The first intimation that the fishermen received of the calamity was at daybreak the next morning, when they were making for the beach. Some distance from the shore they met with numerous corpses floating on the surface of the sea, their own wives and children. Heart-rending scenes ensued. The police went at daybreak of June 16th to Monzen, and the sight was terrific. Yet at Samurahi-hama, five miles northwards and eastwards, there had been nothing more unusual than a sudden unaccountable swell that came lapping up the shingle, but without doing any damage. The next morning the fisher-people knew some strange convulsion under the sea must have taken place; for, remarkable to relate, their seines came floating to the surface, upside down, all the imprisoned fish having escaped. In Anomori Prefecture, I forgot to add in my last letter, fish are very scarce at present, the boatmen being unable to catch anything without using their deepest seines and going far below the usual depth. Even then the haul is scanty. The Kuji Chief of Police gave me the following statement of the result of the investigations up to to-day, emphasizing the imperative need of pecuniary aid:—

Name of Village.	Deaths.	Wounded.	Houses wrecked.
Monzen	198	28	90
Cho-kuji	4	—	2
Osaki	36	4	15
Heiguchi	4	1	—
Osanai	20	3	—
Ube	184	71	48
Noda	261	134	61
Tamagawa	—	—	—
Kita Samurahi-hama.	23	3	4
Shirama	—	—	—
Nakano, Uge, Kotonai.	67	14	14

Tane-ichi	182	34	45
Total deaths (or missing)	979		
Total wounded	287		
(20 of these are not expected to live.)			
Total houses destroyed	377		
Total godowns destroyed	34		
Schools destroyed	3		
Mills destroyed	7		
Boat and net-houses destroyed	129		
Out-houses destroyed	121		
Salting-houses destroyed	56		
Boats destroyed	904		
The bodies recovered so far amount to about 400 only.			

Hachinohe, Aomori Prefecture, June 24th, 7.20 p.m.

I should have preferred returning by any other road than the one I took in going yesterday, picturesque though it be. Yet there is only one way to get away from Kuji to civilisation; viz. Hachinohe. At all events, I arose with the dawn this morning, in order to take a brief look at the Red Cross temporary lazaret. This I found at Osanai-mura, about one mile away from Kuji proper, on the southern flank of the valley. Here were four physicians and ten trained nurses at work with nearly 80 cases, the houses taken for hospital purposes for the time being crowded to the uttermost. It was vastly different from what I had seen the preceding evening at Monzen; there, gloom and a good deal of unnecessary dirt; here order, quiet, cleanliness, skill. As for the injuries received by the patients they were mostly fracture of the upper or lower limbs, jaws, or head-wounds. Nearly all the patients are convalescent, although there are perhaps 15 cases whose lives still tremble in the balance. I was permitted to speak with one young woman, evidently a recent mother. Her face was swathed in bandages, and one arm in splints; yet she was sitting up and could and did talk. She had been nursing her baby, she stated, when the first artillery-sound of the great wave denoted some strange and unwonted convulsion of nature. The rest I give in her own words:—"My husband's house was not near the beach; fully half a mile away. His parents lived with us. We were married in the spring of last year and I had only"—and here her voice broke—"one little baby, born in February, a boy, and oh, so good! My husband was a fisherman and had gone to one of the houses where we stored fish and nets, in order to make ready for the next day's toil. Most of the Monzen fishermen were out after sardine, having gone round to the Hokkaido coast; but my husband had, unfortunately, not left with the rest. We were not poor; always had enough, and my husband was very diligent and kind to his parents. When I heard the awful noise, I snatched up baby and ran out. It was nearly dark, yet in a few moments I could quite plainly see a huge wall of black water, with a shining fringe or edge, coming up swiftly from the sea. It may have been 10 *cho* away when I first caught sight of it. I started to run back to the house and warn my husband's parents, but before I could get there—not more than 50 yards away—the water was upon us, coming with a great roar. There was a swirl and a wild struggle in the waves. I felt my head knock against something, and don't remember anything after that. It was long after midnight when I came to my senses. I had been thrown up on the hillside, a thousand yards or more from where I had been. I could not move, though I tried to rise, and heard people groaning all around me. Baby was still in my arms, but strangely quiet. I think I must have fainted again, for I remember nothing until I found myself here in this room. Yes, baby is dead; and my husband, too, and his parents, and mine also. I have an uncle living farther away up the coast, but no other relations left alive." One little boy of five years, close at hand, seemed to be mentally paralysed by the shock. He could not tell his own name, and nobody had come to ask about him. From his childish babble it was supposed that he was the sole surviving member of a once-numerous family. The scene and the stories I had heard saddened me so greatly that I was glad to retrace my steps. After a pleasant *dejeuner* with my French friends, I started once more for Hachinohe, but this time on a weird-looking steed, warranted to carry even my weight across the two steep and high hills—better, mountains—between Kuji and Ono-mura, 13 miles away. My Bucephalus was thin and scraggy, though sturdy; a stallion, yet rejoicing in the absurdly poetical name of *Ko-sakura*, or "Little Cherry." But I would say nothing in his disfavour, for he carried me bravely to Ono in three hours and a half, without a halt. He had good points unquestionably, on one of which I proceeded to hang my hat, in order to conform to the laws of equine symmetry. Climbing up the first hill, Naga-yama, which was very steep, *Ko-sakura*

would every now and then stop to look around reproachfully, as much as to say "Won't you please make yourself a little lighter?" I explained that "negative gravity" was a science of which I knew little beyond the works of Frank R. Stockton. After a moment's reflection *Ko-sakura* would struggle on again, but it was easy to see that his soul was far from being at peace. Ono-mura was reached at 11.30 a.m., and there my jinrikisha-pullers were awaiting me. The remaining 23 miles were done between noon and 4.45 p.m. When again I reached Hachinohe it was in a condition of physical distress that made rest an imperative necessity. On the road back I had better opportunities to note the luxuriant vegetation of these beautiful hills. Silver maples, and a peculiar kind of chestnut, were abundant. Hedge-roses (known as *utsugi* here) lined the wayside, with beautiful natural trellises of the wild honeysuckle, or *sui-katsura*. The atmosphere was redolent of their honeyed breath, and life was a pleasure in such idyllic surroundings. To-morrow morning early I leave for Morioka, the prefectural capital of this ill-fated Iwate.

Hachinohe, 6 a.m., June 25th.

I leave in two hours for Morioka, but must jot down what I have heard. Two Japanese men-of-war, the *Musashi* and *Tatsuta*, are in the offing searching for corpses. Up to midnight about 40 bodies had been recovered, all greatly decomposed and no longer recognizable. They were immediately put in quicklime. Women preponderated, the local police inform me. Representatives of the *Fiji Shimpō* and *Nippon* have passed through Kuji, while the editor of the *Chuo Shimbun* has just started for that sad place.

Morioka, 4.10 p.m.

Reaching this prefectural capital of Iwate, at 1.30 p.m. I repaired at once to the prefectal offices. The local Governor, Mr. Hattori, left yesterday for Miyako with Count Itagaki, the Home Minister. Up to noon to-day, the subjoined particulars had reached the office, from which it will be seen that the number of deaths is less than had been reported. Thirty-seven towns and villages report 22,947 dead or missing; 3,717 wounded; 79,910 uninjured; 17,476 houses wrecked; 930 houses partially destroyed. The towns or villages which suffered most were:—

	Deaths.	Wounded.	Houses destroyed.
Kamaishi (town)	4,700	500	1,223
Yamada (town)	1,040	150	782
Taro (vill.)	2,655	277	666
Shirota (vill.)	500	11	469
Ukashima (vill.)	1,069	190	511
Suizaki (vill.)	606	30	400
O-funado (vill.)	780	35	306
Akasaki (vill.)	448	68	389
Funakoshi (vill.)	1,327	701	474
Osawa (vill.)	550	59	109
Omoe (vill.)	700	33	236
Komoto (vill.)	367	257	386
Tanabata (vill.)	303	15	405
Fudai (vill.)	1,010	153	330
Ayasato (vill.)	1,458	59	451

It is now definitely known that the French missionary, Henri Lissard, was lost in the Kamaishi catastrophe. Père Lissard was attached to the Roman Catholic Mission here, was 29 years of age, four years a resident in Japan, and most ardently devoted to his cause. I found an entry at Ono-mura to the effect that he had stopped there with his guide and interpreter, Yoshida, on the night of June 2nd. On June 4th he met and conversed with Messrs. Cottin and Bickart near Kuji, these gentlemen being just then enjoying a walk in the neighboring hills. Two days later he was in Morioka, and left at once for Miyako and Kamaishi. One of the French fathers here, who has just this afternoon returned from a melancholy search at Kamaishi, supplies me with the following particulars:—"Père Lissard had passed through Miyako and, after a long and wearisome walk, reached Kamaishi at 20 minutes before 8 p.m., June 15th. He had changed his dusty *soutane* for another and was about to sit down to supper when the terrible wave came, carrying him, his interpreter, and thousands of others out to sea. Père Lissard was an expert swimmer and was thereafter seen by several, struggling manfully in the waves and swimming towards a little flight of steps near to one of the hills by the beach. But his long *soutane* must have prevented the exertion of his full skill, or else he may have been wounded. At all events he was seen to sink. Yoshida, the interpreter, had better luck, and managed to reach safety. Père Lissard's body has not been recovered, though the *soutane* he had taken off has since washed ashore. His death is profoundly felt by the native converts." The people of Kamaishi would not only have suffered from cruel water but from actual starvation as well—their granaries and

fields having been entirely destroyed—had it not been for a large quantity of rice which had just been sent to the town for the miners in the adjacent mines. It was three months' rice and has sufficed to keep the people from actual death by hunger. Help is pressingly needed.

But this letter must come to an abrupt conclusion, as the train is about to start for Tokyo. Would I were going with it!

I must add, in conclusion, that the Rev. Mr. Miller, a Morioka resident and of the American Mission Board, is now at Miyako, for which place he left 3 or 4 days ago. Père Rispal is the only foreigner who lost his life in the earthquake wave.

Morioka, Iwate Prefecture,

June 27th, 2 a.m.

Since last writing, I have been having interviews with several people from Kamaishi and Miyako, survivors of the cataclysm; Mr. Murakami, Secretary of this Prefecture; Mrs. Rothersey Miller; the Fathers of the local Roman Catholic mission, and several others.

In the first place let me refer to the wide-spread rumour—now proved to be without foundation—that an American missionary was among the victims of the great seismic wave. This report reached me first on the 22nd instant, while at Hachinohe (so pronounced; not Hachinoe), but in so vague a form that I refused to give it credence; besides, I was in Aomori Prefecture, and the story ran that the American missionary had met his death somewhere between Kuji and Miyako—or in a district more than 100 miles long. However, on the road to Kuji I met with some constables coming from that place, who stated that they also had heard of the matter, and that the American had been a resident of Hakodate and named something like "Wild" or "Wilds." This was pretty circumstantial evidence, but still unsatisfactory. At Ono-mura I questioned the two inn-keepers of the place, and both declared that an American, belonging to the Methodist Mission, had passed through the village between the 3rd and 5th of the month. In the registry of one of the inns I found the names of the late Father Henri Rispal, and his servant or interpreter, Yoshida, under date of June 2nd. At Kuji no one could supply me with any further information, though such an American gentleman was believed to have passed through. On reaching Morioka yesterday, my first act was to interview Secretary Murakami on the subject. He said that inquiries had already been made telegraphically from Tokyo; he knew of no such missionary, but would at once put me in communication with Kamaishi and Miyako. The vague particulars I had received were then telegraphed to these two towns and at 9 o'clock in the evening replies came in. Nothing, the local police inspectors affirmed, was known of such an American, nor had the corpse of any foreigner been discovered. In the meantime, I had called upon Mrs. Rothersey Miller and learned that no Hakodate missionary had been at Morioka within the month. The Rev. E. Rothersey Miller had left for Kamaishi on the 22nd instant and was expected to return within 24 hours. He would, I was told, give the *Japan Mail* full particulars of his journey. Kamaishi lies on the coast 24 *ri* from Morioka, or 20 *ri* from Hanamaki, the second station from this town on the way up. The road is a most trying one to travel on, for the most part too narrow for *jinrikisha*, and there is one *toge* or mountain pass most difficult to negotiate. Japanese pedestrians take, as a rule, three days for the journey, but it can be done in two. The Rev. Rothersey Miller, however, using a bicycle, had reached Kamaishi by noon of the day after starting, which is exceedingly good time. Père Rispal, leaving Morioka at dawn, had reached Miyako 40 hours later; but the late lamented Father was an extraordinarily swift pedestrian. On arriving at Miyako, where a native convert was in *extremis*, Père Rispal celebrated mass by the sick man's bedside; and at 2 a.m. of June 15th left for Kamaishi. The distance between the two towns is, the Fathers here tell me, *onze lieues*, over a very hard road. Yet Père Rispal and his interpreter had reached Kamaishi at 7.40 p.m. the same day: a prodigious walk. He had only halted for a brief lunch at noon, or at 3 p.m. to be exact, and was tired out, as one can easily imagine, on arriving at his destination. He had just changed his *soutane*, as related in my last letter, and was about to sit down to supper when the dreadful cannonade of the approaching seismic wave was heard. Yoshida and the inmates of the house in which the Father was, ran off at full speed, for the horrid wall of water was already distinctly visible. Père Rispal also ran out, but was seen to hesitate and is believed to have turned back for something he had forgotten, in one of the coast-villages. Though badly injured himself, he worked for three days with other volunteers in rescuing the wounded, drag-

ging people from under the débris of their houses, and working with most unselfish devotion. It was not until the third day had passed that he gave up, and promptly succumbed to what had, from the outset, been a mortal wound. Great praise is due to the police, moreover, for their almost superhuman exertions since the catastrophe. Many constables were drowned, and of the survivors several have lost their entire families; yet they have not flinched nor flinched from the fulfilment of their innumerable duties.

"What," I asked of a Kamaishi survivor, "was the condition of the townspeople on the morning after the cataclysm?" "One of utter stupefaction," he replied. "Many people completely lost their wits; others sat down by the ruins of their homes, or near where their houses had been, speechless with grief and horror. There they remained until we had to force them away and compel them to eat and drink, which they did mechanically and apparently without knowing what was going on. Several persons, principally women, became entirely demented, yet—would you believe it?—on the very night of the catastrophe a band of marauders came down from the hills, and committed many thefts." Think of it! These human ghouls prowling among the dead and dying, the ruined houses and sodden fields, and robbing the wretched survivors of what even the terrible wave had forborne to take! Some were captured red-handed, and if the scene had been America would have been given short shrift. Imprisonment for life does not, I hold, meet with the exigencies of such a case. But to continue. "Physicians from the garrison at Sendai," went on my informant, "were the first on the field and did yeomen's service. Had it not been for them I do not know what we should have done. Anyhow a number of people died before help could reach them, as some of our local practitioners on the coast had lost their lives with the rest. How did we do for food? Well, if it had not been for the Kamaishi Iron Mine, the greatest iron-mine in Japan, hundreds of people would have starved to death. The miners had just received a load of rice, and this was doled out in quantities sufficient to keep the people alive till other help came. But food is sorely needed, not to speak of clothes. Many who were, ten days ago, quite rich, are now the veriest beggars. Speaking of children, do you know that one little fellow was found alive, beneath the débris of a large house, fully four days after the catastrophe occurred? Well, it's a fact. Child of about five." "And how about the work of the Red Cross?" I asked. "Oh!" and his face lighted up; "they've done wonders. It isn't so much the doctors, for with the military surgeons we could have got along. But the nurses! The skilled, kind nursing; the unwearying service; the knowing just what to do and what is wanted—we should never have enjoyed this but for the Red Cross." I saw last evening a number of sufferers sent up here from Kamaishi and Miyako, *via* Hanamaki, by the Red Cross. All were convalescent, but pale and bore terrible marks of suffering. As at Kuji, I learn that most of the people killed must have died from head-wounds: the simply drowned are in the minority. And the force of the water must have been unimaginably great. Some victims were found without arms, or legs; some with their heads missing, or half the skull cut away as with a knife. Of course, such injuries are attributable to the wretched sufferers having been dashed furiously against the rocks and cliffs with which the Iwate littoral abounds. As I think I have already mentioned, there is a great lack of fish in the markets; and this not because of the want of fishermen but because there are hardly any piscine denizens left in the waters along this, so Rein calls it, *überans fische-reiche küste*. Either the fish have been killed in millions, or else, what is scarcely supposable, they have taken to greater depths and gone farther out to sea. While on this subject I must not forget to mention my discoveries concerning a most malodorous fish-compost I found first at Minato-mura. It consists of the partly-purified heads and tails of sardines, with a substratum of minute crabs, small sea-snails (*Rotella*, *Mitra*, *Conus*, *Murex*, etc.), and various *algae* or sea-tang. And the smell is, I do assure the readers of the *Japan Mail*, simply deafening. How the people manage to live in so vitiated an atmosphere, is to me absolutely incomprehensible. And nearly every house is surrounded by coarsely-plaited mats on which this wretched compost is slowly drying and tainting the air for miles around. I have tried by questioning many eye-witnesses, to ascertain the exact height of the seismic wave. Replies give various figures, from 20 to 30 feet. From what has been told me I am certain that the height must have varied with the locality, and that it depended largely on the depth or shallowness of the waters just off the beach. At Same-mura, for instance,

eye-witnesses said "Twenty feet," while my own measurements by the marks on the hillsides, made it a little less than 18 feet. At Kuji the answer was "Over 25—nearly 30 feet." I made it here nearly 22 feet. At Kamaishi they say it was fully 30 feet high. Again, the phosphorescent fringe was not noticed by many. One Monze-mura survivor said it "looked as if the moon were shining brightly on the edge," yet a Miyako man tells me that he saw no phosphorescence whatever. It was all black and horrid-looking. It was half-flood when the wave came, and some people in North-eastern Aomori noticed an unusually high tide, but nothing more.

I must note, before closing this letter, that Kuji and Hachinohe are, beyond all comparison, the poorest, dirtiest towns I have seen in Japan. The roofs of the houses, all of which look centuries old, are weighted down with large stones. On asking the reason of this, I was told that the singles were not nailed down and generally thrown on at random; so these stones served to keep the light pine-shingles in place. It is not a pretty habit and argues laziness on the part of the builders. But the country about these towns is delightful and picturesque to a degree. Most interesting to me has been the strange kind of chestnut, already referred to, which flourishes everywhere hereabouts in a wild state and is just now in flower. The fruit is, I am told, no bigger than a boy's marble, yet excellent in taste. So plentiful are these chestnuts in season that one *sho* may be bought for 8 *rin*, about two farthings! The food in the inns is far from good, a leathery species of *tofu* being the standard dish. It is wholly unappetising. And as to the language of the people, I confess having been at fault on several occasions. The dialect is guttural and not pleasing. The village of Shirinuchi, for instance, is locally known as *Suri-uji*; "8 o'clock," *hachiji*, become *hazu dzu*; the diphthong *ai* is invariably pronounced *é*, even by the better classes; *i* becomes *e*, and *e* becomes *i* as finals; the aspirated sibilant *sh* is unpronounceable to most people. They say *su*, instead.

But the day is breaking and the lamp burns low. Yet I cannot close without giving the text, verbatim, of the Kamaishi telegram announcing the death of Père Rispal. It came from the Inspector of Police and was addressed to the local Prefectural office. The date is "5 p.m. June 17th."—*Morioka Yotsuya no senkyoshi Futsu-kokufin Henri Rispal sakujitsu yahari tsu-nami no tame shibo su-shigai mienai.*

P. S.—Morioka people tell me that there was a continuous earthquake felt here and in the vicinity for thirty full minutes on the evening of the catastrophe. There was, however, no subter, ranean roar. The shock was light but distinct and remarkable for its great length.

The Rev. Rothersey Miller writes from Morioka:—Three places on the coast of Iwate were especially centres of the destruction caused by the seismic wave. These are Sakari, in the Kesen district, in the south; Kamaishi, in the centre; and Miyako, towards the north. Of these three places I selected Kamaishi as the most accessible as well as the one where most destruction had been wrought. Starting by the early train on Monday, the 22nd, with my wheel, I went by rail to Hanamaki, because the road that way is better than the direct one from Morioka. The first day I reached Tōno at 1.30 p.m., and though I could have gone farther, there was no place to spend the night this side of the Senin Toge, and to reach Ohashi would have involved travelling for six and a half *ri* more over a road that would make any good bicycle blush. The new road is in process of construction, and where a man takes the new road he wishes he had kept to the old, and where he steers between the boulders and sharp stones of the old road he wishes he had remained faithful to the bumps and stakes of the new. Then there is general up-hill work all the way, besides several considerable hills of more than a mile each. Of course it is simply impossible to ride over the Senin Toge. I was obliged to have a man to pull my wheel up one side and then change the rope to the back to keep it from running away while I guided it down the gulleys and among the rocks on the other side. From the foot of the *toge* to the town of Kamaishi the road is very good, and with a down grade I got in about one o'clock on the afternoon of the second day. I carried with me about twenty pounds of luggage.

The only reason for giving these details is lest someone else should think of going to Kamaishi on his wheel, or even doing it in one day from Hanamaki. It will not pay any one to try wheeling beyond Tōno, for the road, besides being up-grade, is simply indescribably bad, and on the only bit of good road, that between Ohashi and the

foot of the *toge* and Kamaishi, the Mining Co. run little cars, like those which used to be on the Karuizawa Toge, for the benefit of any wishing to take advantage of them. They leave Ohashi, however, only once a day at 2 p.m.; but as the clocks of the company seem to be between one and two hours fast, that must be taken into consideration by any one wishing to make connections.

Kamaishi is a town that has been visited by misfortune in the past. In 1882, the cholera swept the place, when 500 persons were attacked, 200 of whom succumbed to the disease: then in 1883, there was a fire which burnt 600 houses, among which were the town offices and public buildings. Three years later, in 1886, there was another outbreak of cholera, which fortunately was very light in the town itself, but some of the neighbouring villages suffered badly, as Toni to the south and Odzuchi to the north. Again, four years ago, in 1892, there was another fire in which 450 houses were burnt; and finally this year of 1896 will be ever memorable, for out of 1,105 houses 953 have been destroyed, and from a population of 6,529 persons 4,985 are dead and about 500 wounded, so that only about 1,000 of the former population are now strong and well.

A school-house has been turned into a temporary hospital where are surgeons from the Red Cross Society and from the Military Barracks in Sendai. They were, however, short-handed in both doctors and nurses, and asked for five of the former and 15 of the latter, and as I crossed the *toge* on my return on Thursday afternoon I met more military doctors and nurses making their way to the town. At present there are about 70 in-patients in the hospital, but the authorities are trying to get all the wounded into the wards, so that they may receive the attendance required. Those who are able to walk come each day and are treated outside of the temporary wards. Some few who were able to stand the journey have been taken to other places.

I can not do better than express here the obligation which I am under to the officials, especially to Mr. Yasutsugu Hattori, the headman of the town (*chocho*) for his courtesy in supplying all information I needed and giving all particulars which were in his power. The Iron Company too, placed at the disposal of those who came to investigate, their official boarding house, and supplied rooms, charging but a nominal price, and a gentleman, one of whose rooms I occupied, Mr. Takahashi Senzo, treated me as an honoured guest.

All the coast in the neighbourhood of Kamaishi is cut up into little bays and inlets by the sharp foot-hills which run out like fingers into the water, making beautiful and picturesque scenery, but at the same time greatly increasing the difficulty of travel. The towns and villages are built on the narrow open spaces at the foot of these hills, the beach being generally so confined that the houses have to run up into the little valleys, lying crowded together in a very different manner from the farming villages of the interior. Of course most of the people are fishermen: in one village they told me that out of 958 persons there were only four farmers.

The Rev. Rotherham Miller, describing the town of Kamaishi, says that there were two spots of high ground, one a little bluff under the cliffs, on which stood the Town Office and the other buildings huddled around it; the other a place where the road to the north winds up a little valley and so over the hills, the houses being built up closely for some distance on this road. The rest of the town was crowded between these two high places and the shore, while among the houses narrow streets or lanes seemed to wander at will. To the south of the town proper lay fields and paddy all the way to the foundry at Suzuko ("The Wind-Bell's Child," but why such a romantic name for the settlement of an iron foundry?) from the railway, is carried on an embankment along the edge of the fields to the jetty, built to facilitate the loading of ships with the iron.

On looking down upon Kamaishi, or any of the villages visited by the seismic wave, the first thing which attracted my attention was a queer brown look that covered everything. On examination I saw this came from two causes, one that the sun-browned house timbers were strewn over the waters, beach, village sites, and fields; the other that wherever the waves went over the crops or washed up against the sides of the hills all the grasses and shrubs were burnt by salt waves as in a prairie fire.

I am afraid that I can give but an inadequate idea of how the town of Kamaishi looks at present, for to say that the houses were crushed and piled one on another till they were a mass of kindling wood, and then were scattered over the neighbouring fields, is one thing, but to make one realize

all the desolation in those piled-up ruined homes, all the misery implied in those scattered timbers, as they lie drifting on the sea or bleaching in the sun, is something much more difficult.

The disaster came about eight o'clock in the evening, when, on account of the rain and the celebration of the *sekku* of the fifth month (old style), almost every one was at home. I was told that none were out fishing from Kamaishi, though some boats had gone out from other places. There were some slight shocks of earthquake, but they were so slight that many, if not most, persons did not notice them. I inquired particularly about the noises heard before the coming of the wave. Some say they heard distinctly noises as of guns discharged at sea, some as of thunder, and others as of strong wind blowing, while others say that they heard nothing but the terrible *gara-gara-gara-r-r-r* of the houses as they were swept down and dashed together before the advancing wave; but it must be remembered that just at that time the people, for the most part, had other things to think of besides listening to the sea. The time of these noises is put variously at from "five minutes more or less" to ten minutes. Some few report that they saw the tide recede, and the time of the recession is put at from five to ten minutes before the coming of the wave. When the wave did strike the beach and crush the houses to splinters before it, there was no time for any one near the water to escape to a place of safety, though some who were nearer the bluff managed to reach higher ground. Those who were finally saved were those caught in the falling timbers and carried up to the foot of the cliff, and after the waves had receded were extricated, or they were those who managed to catch on to some piece of floating wreckage and drifted about till they were stranded or were picked up by boats.

From the reports, it would appear as if the wave was of different heights at different parts of the coast, but this can be accounted for by the formation of the land. In places, like Kamaishi, where the flood had open ground on which to spread after the first crash, the houses were piled on top of one another, or were moved bodily from their bases, or so fell as to keep some semblance of shape, as where a two-storey house was tumbled into a tottering one-storey ruin, or where a roof still covered what was once a humble home; but where from the land formation the opening to the sea was wide but the ground on which the village was built ran up into a point or valley with most of the houses crowded on to the beach, there was nothing to show where houses had stood but loose timbers and scattered boards, nothing whatever left standing, because the water must have been piled up as it advanced up the narrow space, so that when it returned it swept everything away out to sea, the second wave carrying back again the light, loose pieces and scattering them in confusion over the empty space. This was the case at Toni. Then again, as at Rio-ishi (not Futa-ishi, the local reading of place-names being very strange all along the coast), there was nothing left to tell that a village had once stood on the little beach but the smooth foundation of a storehouse. It was as if "swept with a broom," as I heard it expressed several times.

At Kamaishi the present ruin extends from the beach all the way to the foot of the bluff, but as the waters spread out on either hand they carried the broken timbers and portions of houses, as well as household furniture, together with ties from the railway, parts of bridges and the pier, and boats in all stages of wreckage, and left them stranded all over the valley, so that at first sight one would suppose that the town covered four or five times the actual site of the houses. Boats of 50 and 60 *koku* are stranded half or three quarters of a mile from the water's edge, some slightly injured and others smashed almost beyond recognition, nothing remaining but a knee of timber, or some side or plank or rudder-post.

The force of the water may be judged from the fact that one of the monolith pillars to the *Torii* of the little *Miya* of Osaki Jinja, now lies about twenty feet from its foundation (it was not easy to step off the distance through the rubbish, and building that was going on), while the other pillar and lintel lay between. There were two foreign rigged vessels of 100 and 150 tons carried ashore. I went over to the larger of the two as she lay a half mile or more from the water in the middle of a wheat field. The cable had not parted, but she had dragged her anchor, which broke through and tore down the railway embankment and still lay towards the sea, showing that the receding wave had spread out, leaving her as she lay without washing her into the bay again. She had drifted side on because at the time she was down at the stern. There were three sailors in her, none of whom were injured in the least; the captain was on shore at the time but feeling anx-

ious about the weather ran to look out at the first sound of the crashing houses. The house he was in was left standing though those in front and on either side had fallen. One foreign rigged boat of about 50 *koku* was carried across the bay and landed in the little village of Matsubara beyond some of the houses which were left standing.

The full particulars have not yet been gathered, as it will take about another week before the names of all the survivors are obtained. When they are in, I am happy to say that the grand total will be slightly diminished—though sufficiently appalling any way—the reason being that when the first reports came in account was taken only of those who were on the ground at the time, but it was afterwards known that some were away on business or for other reasons at the time of the disaster and have since returned.

There were many hair-breadth escapes, some of which have been reported before, but I think they are of sufficient interest to bear repetition; they were told me mostly by Mr. Hattori, the Mayor of the town, or by the persons themselves who escaped. One of the most remarkable happened to Mr. Hattori himself. He had been invited to the house of Mr. Kogamui, a member of the standing committee of the Provincial Assembly, but had excused himself on account of the press of business; but after a while a special messenger came to urge him to come, as the chief of police was there, so he yielded, and the three gentlemen were in an upstairs room enjoying themselves, when a cry of "fire" was raised outside. The first rush of the waves as they tore down the houses on the beach sounded like the crackling of flames. The first instinct of the Mayor was to run quickly to the high ground so as to see in what direction the flames were likely to spread, and for this purpose he made his way out the back door and ran for the bluff, which was directly behind the house. On reaching high ground he turned and saw a dark mass rushing towards him, it was the wave bearing the broken remnants of the houses from the beach, and as he stood he saw the houses he had just quitted swept down before the advancing mass. The chief of police, who was but a step behind him, having stopped to pick up his tobacco-pouch, was caught between a falling roof and the stone wall at the foot of the bluff, and pinned fast so that he could not escape. He was under the water for a short time and was badly injured, but escaped with his life, while the unfortunate host, who had run to the front door instead of the back, was caught by the wave and overwhelmed and his body has not been recovered. The Mayor started out to go to his own house, which in a place of safety on high ground, but on account of the darkness and rain it was with difficulty that he could find the way, and before reaching there he was met by messengers from his wife, who had been sent to look for his body, supposing it impossible that he could have escaped. Forty-three years before there had been a tidal wave at Kamaishi which, however, had done but little damage. The people learned from their fathers that when a tidal wave came the thing for them to do was to go up-stairs, or get on the roof of the house, and they would be perfectly safe. Acting on this suggestion, there were many instances of persons running upstairs on the first indication of danger, some of whom were saved in consequence, as they were not crushed when the lower part of the house fell. This was the case of the telegraph operator, who, on the first alarm, ran up-stairs with his family, and although the house was carried away from its foundations and the lower part was crushed to pieces, yet he and all his family were saved. It was to his promptness that telegraphic communication was opened so soon with the outer world: he went to Suzuko, at the iron works, through which the telegraph line passes, and opened an office, getting an old machine from the operator in Odzuchi, whose office had been preserved intact, and with this machine sent a message to Morioka, which reached there about one o'clock the next day, and the Governor being absent in Tokyo at the time, one of the Sanjikan, Mr. Murakami, set off at once, and by travelling all night reached Kamaishi the next day and arranged for supplying the poor people with rice.

Mr. Kano Kyubei had a wonderful escape. When he knew of the coming of the seismic wave he sent his family to a place of safety and went upstairs himself to get something, when the house was struck and overwhelmed. Although unhurt he was washed out to sea, where at first he got on a piece of timber, and then seeing a roof about six feet square he got on it and picking up two *futon* which were floating by, wrapped them around him. He was washed by the second wave just under the town offices where, leaving his raft, he clung to a tree till the water subsided, when he went to a place of safety.

Mr. Asano, the head of the police, was washed away with his house, and after getting on a floating roof, was carried clear across the bay to the village of Urei-shi, where he arrived unhurt.

Mr. Motoki, Secretary of the Registry Office (Tokijo), told me that he was in the habit of taking a walk on the beach in the evening about dark, but on that eventful day he was in the house on account of the rain. Hearing the crackling of the houses as they were broken up and driven together, he at first thought it was a fierce wind, but then recognizing something in the noise different from the sound of wind, he went to the window and opened the *shoji*, when he saw a dark mass coming towards him and realized that it was a seismic wave. Speechless with horror he rushed back, and catching up his baby in his arms and his wife by the hand, without stopping to explain, hurried with them up the hill at the back of the house into the darkness and rain. Fortunately his office, which was in the house where he lived, was just outside the edge of destruction, although he did not know this at the time. Leaving his wife and child he went back to see if he could not save his legal papers. On all sides could be heard groans and cries of *Tasukete kurete*, but he could see nothing in the darkness and as the rain was pouring he could not keep a lantern lighted.

There was also a remarkable case of a little girl, only 11 years old, who was found on the third day under a fallen house, where she had been wedged in between a *fansu* and a fallen beam, which rested on the *fansu*, so that it protected her from the rest of the debris and she was taken out unhurt.

In the principal hotel of the place there were eleven guests at the time of the calamity. Of these all escaped but two, one, a man in the employ of the telegraph department, and the other, the lamented Rev. M. Henri Rispal, who, as one gentleman expressed it, "had but come to die," for he had hardly arrived from an evangelistic tour when the wave struck the house. His companion, the evangelist from Yamada, Mr. Yoshida, escaped. On the other hand, of the 14 composing the family of the innkeeper, only three escaped.

On my way to Kamaishi, while stopping the first night at Tono, I called on a gentleman there and was told that a relative of his, who had been injured at Kamaishi, desired to see me, as he had lived with Mr. Hoy of Sendai and was a Christian. I was very glad to see him, and learned that he had been badly hurt, having been caught between two large beams of his falling house, so that he could not move, and in that position had been washed under the cliff, where he lay for some time unconscious, but after a while he could make out that a man was passing with a lighted torch, and calling to him, the man asked who he was. This he thought a remarkable question at such a time, but on telling the man his name it turned out that the man had lived just back of his home. The man removed the accumulated rubbish, but found that he could not move the beams without assistance, so he told Mr. Chiba to be patient while he went for help. He soon returned with his father, and they together managed to take away the timbers and help their friend to a little hut, as he could not walk, where he remained till another friend removed him to his own house and nursed him, while word was sent to Mr. Chiba's relatives in Tono, who came and took him home. His wife and his four servants, in a butcher-shop, which he kept, had all been killed, and the bodies of only two were found. Being anxious to have a Christian funeral for his wife he asked me to stop, if possible, on the way back, which I did gladly. To be sure the costume of the officiating minister was rather unclerical, for I stood with a beard of a week's growth, wearing white flannel knickerbockers—that is, they were white when I left home—and a black knitted jacket. The singing was done by myself and the young daughter, who had just arrived from her school in Hakodate. Her voice was sweet and clear, but once or twice she was almost overcome, for she had but heard of her mother's death, a few days before, when she had been summoned by telegraph. I must say, however, that I rarely have had a more attentive audience, which was composed of relatives and friends. They asked me to speak again in the evening, which I did to a smaller but no less attentive company.

Before closing what I have to say of Kamaishi, I would note that during the short time I was there a change had taken place. The first afternoon the people seemed still dazed and apathetic, those who were at work putting up their houses, did it in a half-hearted way, but before I came away they were recovering their spirits and working like the light-hearted Japanese they are.

CRICKET.

A. TO K. VERSUS L. TO Z.

A match was played, in somewhat overcast weather, on Saturday afternoon between alphabetical teams, twelve aside. The L. to Z. contingent went in first to bat, sending out the two Tyngs to face the bowling of Bugbird and H. S. Goddard. The Rev. T. S. Tyng was bowled by Bugbird in his third over, when the score stood at 13; these figures had just been doubled when Tyng jun., was stumped by Dickinson, off Bugbird. The retiring bat had contributed 11 runs. White was then joined by Duff, but the latter made but a short stay, being dismissed by Goddard after compiling three. Schurr stayed much longer, the total being taken to 88 before he succumbed to E. B. S. Edwards's bowling. White was then paired with Walford and the runs came merrily, till at 136, the former was neatly bowled by H. S. Goddard—136-5-53. Two balls later in the over Goddard sent Dr. Todd's balls flying, nothing having been added to the score. Porch filled the vacancy but only to lose his partner, Walford being caught and bowled by Edwards. Then Lias came in. He started with two fours, a single, a couple, one more boundary for four, another couple, and then Goddard found his stumps. His contribution brought the score up to 162, Porch having meanwhile been stumped by Dickinson after compiling 3. The last four men, Libeaud, Showler, McGerrow, and Smith made 2, 11, 4, and 2 respectively, the innings closing for 180.

Dickinson and Kenyon opened for the A. to L. team. At 6, Kenyon was bowled by White: then Crawford joined Dickinson, who continued to score. Crawford managed to break his duck, and then was bowled by Lias—15-2-1. Edwards filled the empty crease and made the hit of the day, off White, in the twelfth over, sending him out of the ground for six. Edwards was the fifth wicket down for 71, Bugbird was the next at 78, and Cocksedge seventh at 127. Mr. Dodds and Allcock then came together and the former had put up 23 and the latter 5, when the waning light put an end to the game. Score:—

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SEISMIC WAVE RELIEF FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Being myself a member of what you term the apparently indifferent or uncharitable majority who have not subscribed to the above fund, I strongly object to the tone of the remarks in your leader of this morning. Whilst the whole community is shocked by the appalling nature of the calamity in the North, there are some of us who believe that the extent of the pecuniary aid required is not in proportion to the magnitude of the disaster. It appears to us that where property has been destroyed the owners have for the most part also perished, and that where the workers have been swept away those who were dependent on them have not in many cases survived. We are waiting for more information, and perhaps our previous experiences have taught us not to yield to the first impulse of charity.

What the people want at the moment is evidently not money so much as the quick transportation of food, and necessities, and labourers, to the afflicted districts. That is a matter within the competence of the Japanese authorities, and they have not been as prompt as could be wished.

A large sum has been already subscribed, but if further details show that more relief is necessary, and that for default of Japanese sympathy and aid the sufferers remain dependent on the charity of foreigners, the money will be forthcoming.

I am Sir, Yours, &c.

FOREIGNER.

June 30th, 1896.

[If "Foreigner" refers to our article he will see that its comments can not possibly be read as relating to him.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the name of all those missionaries who have preferred to send their contribution directly to the Committee of missionaries in Sendai, which made an appeal to us, I beg to state, that not all who do not appear in your list, belong to the "indifferent or uncharitable majority," as you seem to suggest.

I enclose my card and remain, dear Sir,

Yours truly, A MISSIONARY.

Tokyo, July 1st, 1896.

[The missionaries were explicitly excluded from the scope of our remarks. It seems a pity that correspondents will not read more carefully the matter they undertake to criticize. Ed.—J.M.]

Correct answers from W.H.S., Shogi, W.D.C., J.D., and W.d.H.

PROBLEM NO. 237.

By A. G. FELLOWS, Wolverhampton.

White to play and mate in two moves.

This problem won the first prize in the recent tournament of the *Irish Weekly Times*, and is the work of a young composer of exceptional ability. Although only 18 years of age he has already competed successfully in 9 tournaments, winning 6 first prizes. His first prize was won when he was only 13 years of age.

SHOWALTER VERSUS BARRY.

The elder man has been doing good work lately, our last news, per steamer *Peru*, giving the score:—Showalter 4, Barry 1, Draws 3.

The *San Francisco Chronicle* discourseth as under on the match:—

Showalter, according to present appearances, will make short work of his opponent, Barry, and again demonstrate to the chess fraternity that he is a player not to be trifled with and that he is a worthy holder of the championship of the United States.

The fourth game of the match was played on May 23rd last, and resulted in a win for the Kentuckian after a well-contested fight.

Showalter opened with P to K 4, while Barry adopted the Petroff defence and selected the same variation as Kemeny did in the third game of his match against the same player.

In the fifth game, played May 25th, Barry opened with P to K 4 and Kt to K B 3, to which Showalter interposed the Petroff and played with such excellent judgment that his adversary was compelled to relinquish the game.

The sixth game, in which Barry declined to accept a queen's gambit offered by the Kentuckian, was begun last Saturday and was finished early on Sunday, the game ending in a draw after sixty-two moves.

Showalter played another Russian defence in the seventh game, played on Monday. The Bostonian again conducted a spirited attack, in the course of which he sacrificed a piece. This manoeuvre proved to be unsound, as Showalter easily neutralized the attack, and after thirty moves, when an adjournment was taken for dinner, had virtually won the game. Nine additional moves were made in the evening, when Barry resigned.

The eighth game, played on Wednesday, was a queen's gambit declined, the Kentuckian having

the move and forcing a win after forty-six moves by a very clever play.

This makes the score: Showalter 4, Barry 1, draws 3.

Barry has made a thorough study of the openings, and has put in a lot of practice over the board, successively meeting, as he advanced in skill, a better and a better grade of players. For two years past he has had to go out of Boston to get on a hard game, and most of the New York players have had a taste of his strategy, and for the same period he has been deeply engaged in chess analysis, concerned in the compilation of Howells and Young's "Minor Tactics of Chess," in the course of which several new schemes have been devised and old schemes revived, notably the real strength of the Petroff defence that Pillsbury made such good use of abroad.

Although chess matches have become fairly common in New York there has never been a match arranged and played in Boston for anything like the stake in this contest, and there has, perhaps, never before been a Boston player, thoroughly identified with the city, strong enough to enlist the attention of a first-class master.

Mr. Showalter was a chess master of the first rank as far back as 1885, and has successively beaten about all the American players except Pillsbury and Steinitz during the past decade. He made a creditable showing in the sixth American chess congress, and now by reason of defeating in turn whoever cared to discuss the American championship at the game, is in first place. He has just concluded a match in Philadelphia with Kemeny, that he won.

GAME NO. 515.

AUSTRALIAN CHAMPIONSHIP.

The following is the score of the ninth (and final) game:—

THE CENTRE GAME.

WHITE. Mr. Wallace.	BLACK. Mr. Hodgson.
1—P to K 4	1—P to K 4
2—P to Q 4	2—P takes P
3—Q takes P	3—Kt to Q B 3
4—Q to K 3	4—B to Kt 5 ch.
5—P to B 3	5—B to R 4
6—Q to Kt 3	6—Q to B 3
7—B to Q 3	7—P to K R 3 (a)
8—B to K B 4	8—P to Q 3
9—Kt to B 3	9—B to Kt 3
10—Castles	10—P to K Kt 4 (b)
11—B to K 3	11—K Kt to K 2
12—B to Q Kt 5	12—B to Q 2

19—Q to R 5	19—K to Kt 2
20—Kt to B 5 ch.	20—B takes Kt
21—P takes B	21—K to R 5 (g)
22—P to B 6 ch.	22—K to R 2
23—Kt to B 3	23—Q takes K P (h)
24—Kt takes Kt	24—P takes Kt
25—Q to B 5 ch.	25—K to Kt sq. (70m.)
26—B to Q 3 (40m.)	

And Mr. Hodgson resigned.

NOTES.

(a) Weak. 7..... K Kt to K 4 was the proper move.
(b) The K Kt ought to have been developed at K 2.
(c) This capture shows bad judgment. The proper move was 13..... Kt to K 4.
(d) 15..... Castles (Q R) was far better than 15..... Castles (K R).
(e) The position suggests 16..... Kt takes Kt (threatening ... Kt to K 7 ch), 17..... P takes Kt, B takes B &c., with probabilities of a drawn game. Black might also play 16..... P to Q R 3, and if the Knight be not captured, ... Kt to K 4.
(f) Obviously threatening Q to R 5.
(g) 21..... Kt to R sq was better as a defensive resource.
(h) If, instead, 23..... Kt takes Kt ch, then 24—R takes Kt, with an easily-won game.

NORTH V. SOUTH LONDON.

A match between teams of 100 a-side, representing London North and South of the Thames—the first of its kind—was played recently in the Cannon Street Hotel. The North won by 57½ games to 42½. A repetition of the match on a larger scale is in contemplation. The following are two of the games played:—

GAME NO. 516.

QUEEN'S GAMBIT DECLINED.

WHITE. Carr (North).	BLACK. Howell (South).
1—P to Q 4	1—P to Q 4
2—P to Q B 4	2—P to K 3
3—Kt to Q B 3	3—Kt to K B 3
4—B to Kt 5	4—B to K 2
5—P to K 3	5—Castles
6—Kt to B 3	6—P to B 3 (a)
7—R to B sq.	7—Q Kt to Q 2
8—B to Q 3	8—R to B sq.
9—Castles	9—Kt to K sq.

10—Kt to K 5 (b)
 11—B takes B
 12—P to B 4
 13—Kt to B 3
 14—Kt to K 5
 15—Kt to K 2
 16—R to B 3
 17—B takes Kt
 18—B P takes Kt
 19—R to Kt 3 (c)
 20—Kt to B 4
 21—Kt to R 5 (d)
 22—Kt to B 6
 23—R to R 3
 24—Q to B sq. (e)
 25—Kt takes K P
 26—Kt to B 6
 27—Q to B 4
 28—Q to Kt 3
 29—R to R 4
 30—R to B sq.
 31—P to Q Kt 3
 32—P to K R 3
 33—R takes P (R 6)
 34—Q to B 4
 35—Q to Kt 5
 36—P to K 4 (f)
 37—R takes R P
 38—Kt to Q 6 ch.
 39—Kt takes Q
 40—Q to Q 8 ch.

(a) 6..... P to Q Kt 3 is preferable.
 (b) The Knight's occupation here is a strong point in White's game.
 (c) The freedom of action of the White pieces is in marked contrast with that of the Black.
 (d) If 21..... P takes Kt, White makes in 5 moves. The Kt gets immovably posted at B 6, and decides the game.
 (e) The object has apparently been overlooked by his opponent.
 24..... Q to K B 2 was the only reply.
 31..... A fine preparatory move for the catastrophe which follows.
 37..... B takes R would be more suddenly disastrous.

 29—R to B sq. (f)
 30—B takes R
 31—Kt to Q 2
 32—K to K sq.
 33—R to R sq.
 34—Kt P takes P
 35—Resigns.

(a) The points in favour of developing this Knight on Q 3 in preference to Q B 3 are as follows:—It gives the Black Q B a chance to obtain an active range on Q Kt 3. It enables Black, if necessary, for the defence of his king's side, to play R to K sq. and Kt to B sq. It supports the K Kt necessary for the defence of the K R P. It leaves the Q B file open for the better development of the Q R, &c.
 (b) The consequence of this capture is a strong king's side attack. If the knight had been on Q 2 it would not have been necessary for Black to take the knight, but he could have continued with his development on the queen's side.
 (c) This capture is not favourable to Black. In view of the coming king's side attack B to B 4 would have been a better move, as White's Q B is in a very threatening position, and should be disestablished if possible. The move also would enable Black subsequently to play P to B 4, and then R to R 3 for the better defence of his king's side.
 (d) Kt to K 5 seems better, if White then plays (sp) P to B 3. Black could still play B to B 3 or Kt to Q 3, with Kt to B 3 or 4 to follow.
 (e) R to B 2 might enable him, if followed up by Kt to R 2, to make a laborious defence, though the chances are very much against its success.
 (f) White is taking advantage of the position with such good effect that there hardly seems a move by which Black can escape the action of the two rooks and the bishops so admirably placed. Perhaps K to K sq. might have been tried here, or even Kt to K 4.
 (g) This forms a fine ending to a well-played game. If Black had replied K P takes P, then B takes P would have been equally fatal.

GAME No. 518.

CHESS AT DUNDRE.

Played in the Tournament for the championship of Scotland on 6th April last.

VIENNA OPENING.

WHITE. G. B. Fraser.
 1—P to K 4
 2—Kt to Q B 3
 3—P to B 4
 4—B to B 4
 5—P to Q 4
 6—K to B sq. (a)
 7—Kt to B 3
 8—P takes B
 9—K to B 2
 10—Kt to Kt 2
 11—Kt to K 2
 12—Q to K sq.
 13—R takes Q
 14—P to B 3
 15—P to Q Kt 4
 16—P to Q R 4
 17—P takes P
 18—R to K B sq.

 28—P to K R 3
 29—Kt to Kt 6
 30—R to Q 2
 31—Q R to Q sq.
 32—P to Q Kt 3
 33—P takes R
 34—R takes P
 35—K to Kt 2

(a) 6—K to K 2 is preferably.
 (b) White should rather have played 25—P to K 6.

NOTES FROM HOME.

PARLIAMENTARY CHESS TOURNAMENT.

A contest between players on the two sides of the House of Commons is in progress—one team representing the Government, the other the Opposition. Lord Randolph Churchill used to be one of the keenest and strongest players in Parliament. The champion of the House now is, it is said Mr. Horace Plunkett, by whom the tournament has been started. The teams are as follows:—Government—Horace Plunkett, Bonsor, Seton-Karr, Sir E. Ashmead-Bartlett, Colonel Sidebottom, George Whiteley, Sir Herbert Maxwell, and Vicary Gibbs. Opposition—J. Parnell, Atherton Jones, Dr. Clark, W. Wilson, C. Shaw, W. Allen, M'Kenna, and Bryn Roberts. The strongest player on the Opposition is Mr. Parnell. Each player has to meet his opponent three times, and the contest was to be concluded on 15th June. Seven of the first eight games have been played. Dr. Clark beat Mr. Seton-Karr, Mr. Wilson beat Sir E. Ashmead-Bartlett, Mr. Shaw defeated Mr. Sidebottom. Mr. M'Kenna beat Sir Herbert Maxwell, and Mr. Bryn Roberts won against Mr. Vicary Gibbs. Only one Unionist victory has been scored—viz., Mr. Whiteley against Mr. W. Allen.

MR. A. L. JORDAN.

This strong player from Nagasaki duly arrived on 26th ultimo and (the local clubs not being in session) has been entertained by the President of the Yokohama Club. On Saturday, 27th June, a visit was paid to the Tokio Chess Club, informally, at the Rokumeikan. So far, Mr. Jordan has won all his games over the board against local players, which is a good record.

BISSET & URE'S SHARE REPORT.

Yokohama, June 29th.

Mail advices from Hongkong with dates up to the 20th instant, report the following changes in the share market since the 17th instant:—

17th June.	20th June.
Union Insurance	\$230 Buyers. \$235 Sales.
North Chinas	Tls. 198 N. Tls. 200 S.
Yangtze Insurance.....	\$130 N. \$147 50 S.
H. C. & M. Steamboats..	\$34 25 S. \$34 B.
China & Manilas.....	\$72 B. \$75 S.
Luzon Sugars	\$69 S. \$68 B.
Punjom Mines Pre-	
ference	\$3.70 Sa. \$3.90 Sa.
Raub Mines	\$5 50 S. \$5 25 N.
H. & K. Wharfs	\$54 S. \$53 Sa.
Wanchai Warehouses...	\$40 B. \$45 N.
Kowloon Lands	\$18.50 B. \$19 S.
Hongkong Hotels	\$29 S. \$26 Sa.
H. G. Browns	\$5 50 B. \$5 25 B.
Geo. Fenwick	\$28 B. \$27.50 Sa.

Shanghai stocks have undergone the following changes:—

17th June.	20th June.
Indo-Chinas	Tls. 47.50. Tls. 47.
Yangtze Insurance.....	Tls. 130. Tls. 135.
S. & H. Wharfs	Tls. 125. Tls. 123.
Shanghai Tugs	Tls. 200. Tls. 210.
Perak Sugars	Tls. 45. Tls. 44.50.
Shanghai Lands (Tls. 50) Tls. 82.	Tls. 81.50.
Shanghai Lankats	Tls. 675. Tls. 625.

At a third meeting of the H. & K. Wharf Co. the terms of the lease of the Wanchai Warehouse Co., as originally proposed, were accepted. The lease extends to ten years.

Some doubt exists as to the accuracy of either the translation or the despatch of the telegram regarding the sale of the 'Olivers' Freehold and New Balmoral Mines. The transfer of the properties presumably has not yet been effected, and the general managers have come to the conclusion that the meaning of the wired message is doubtful.

Local stocks remain unchanged, with the exception of Club Hotel, which are offering at \$75, and Japan Breweries, which are wanted at \$200. A trifle over this sum might be paid on an offer of the latter stock.

Yokohama, June 30th.

Hongkong quotes the following as the closing quotation of yesterday:—

H. & S. Banks 188 per cent. premium Sellers; Hongkong Lands \$72.50 Buyers; China Fires \$97 Sales; H. & W. Docks 183 per cent. premium Buyers; Douglasses \$65 Sales; H. C. & M. Steamboats \$34 Sales; Punjom Mines \$13.75 Nominal; Raub Mines \$5.50 Nominal; Balmoral Mines \$3 Sales; National Banks \$29 Nominal; Indo-Chinas \$65 Sales; Straits \$29 Sellers; Unions \$237.50 Sales, and Sales of China Traders at \$79.

It will be noticed from the above that the tone of the market is weak, due, no doubt, to the settlements to-day; and we may mention in support of our supposition the fact that whereas all the stocks which have been dealt in for forward clearances show signs of weakness, those which have been purchased for cash, notably Hongkong Lands and Union Insurance, are firm and quoted at a point or two higher.

As some doubt exists as to the price of H. & K. Wharfs, which are either \$52 or \$57 Buyers, we do not include them in our list of quotations, but we shall be in a position to state the price accurately to-day.

Yokohama, July 1st.

As referred to in our share report of yesterday, we now learn that there are sellers in Hongkong of H. & K. Wharfs at \$52.

Local stocks remain unchanged. Langfeldts are wanted at \$180.

THE GREATEST WONDERS OF MODERN TIME**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

**SIMPLE, SAFE, AND CERTAIN.
HOLLOWAY'S OINTMENT**

Is certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1890

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 11TH, 1896.

BIRTH.

At Karuizawa, on the 2nd July, the wife of J. H. GUBBINS, Esq., of a son.

SUMMARY OF NEWS.

H.M.S. *Edgar* has left Hakodate, homeward bound.

THE Dean of Macao, in a fit of despondency, has committed suicide.

THE British Fleet has been assembling at Hakodate during the week.

SHANGHAI is collecting a fund for the relief of sufferers in the north-east of Japan.

THE insurgents in Crete have repulsed a large force of Turks, killing over two hundred.

THE *Teikoku Maru* has been sunk in collision by the *Ise Maru*, near Hakodate this week.

SIR HERCULES ROBINSON, Governor of the Cape

and High Commissioner for South Africa, has been raised to the Peerage.

It is said that most favourable verdicts have been obtained for Japanese canned fish in Italy.

A 24-CENTIMETRE cannon has been presented to the Shrine of Ise. It was captured during the late war.

THE Republican ticket is Mr. W. McKinley for President, and Mr. Garret Hobart, of New York, for Vice-President.

A SMALL insurrection has broken out in Formosa and troops have been dispatched from Japan to reinforce the garrisons there.

DISASTROUS floods are reported from Toyama and Shiga in consequence of the recent heavy rains. No lives are reported lost.

It is reported that the Yellow River—China's Sorrow—has again broken its banks, spreading destruction over many hundreds of miles.

THE dispute between Messrs. Vantine & Co. and Mr. Kamiyama over some silk business, has been arranged through the efforts of the Guild.

THE tone of the Berlin Press in the farewell notices to Li Hung-chang is markedly cool, disappointment being expressed at the absence of orders.

MISS MATSUMOTO AIKO, of Osaka, now in Tokyo, is trying to raise one million yen with which to purchase a cruiser that is to be presented to the State.

HIS EXCELLENCY the Hon. Col. Denby, U.S. Minister to China, occupied a seat on the Bench of the U.S. Consular-General Court for Japan, on Friday.

THE American Minister's Cup and the Western Challenge Shield, have been won this year by Mr. G. H. Seidmore's *Daimyo*, with a minute and a half to spare.

PERMISSION has been granted by the Supreme Court at Hongkong to the Yokohama Engine and Iron Works Company, Limited, to reduce its capital by one-half.

THE concession of the Sôul-Wiju line has been granted to French capitalists, the agreement being signed this week by the French Representative and the Korean Court.

THE scheme recently devised to utilize the celebrated Nachi Waterfall (one of the biggest in Japan) in Kii province, to drive the motors at Osaka, has fallen through.

THE Friendlyties at Buluwayo are becoming restless and it is feared that the country will again become in a disaffected state. Many of the white settlers are quitting Matabeleland.

THE *Kobe Maru*, of the Nippon Yusen Kaisha, scraped a rock when leaving the Shimonoseki Straits last week, and her repairs at Shanghai are expected to take fully three weeks.

COLONEL PLUMER's column has defeated the Matabele rebels after seven hours' fighting, with a loss to the enemy of one hundred killed. The British loss was twenty-three killed and wounded.

THE Yokohama baseball team won the match against the Tokyo Higher School, played at Yokohama on the fourth of July, by two points. The trophy was a gold cup presented by Mr. Denison, of the Foreign Office.

It is proposed to spend the money subscribed by foreigners in Yokohama and Tokyo and

placed in the hands of a Committee for distribution, upon providing new boats and hemp for making fishing nets.

A PROPOSAL has been made to the Korean Court to prosecute on a charge of high treason the *Tai Wôn-kun*, Pak Yong-ho, and others implicated in the *emeute* of October 8th. It is doubtful if the scheme will carry.

H.M. THE EMPEROR WILLIAM, in a speech at the launching of the new battleship *Emperor Frederick*, said the vessel was the forerunner of many others of the same class and would inaugurate a new era for the Germany Navy.

It is announced that Li Hung-chang will visit the Marquis of Salisbury at Hatfield, and inspect Armstrong's works at Elswick. He is also to visit Portsmouth, where one hundred and seven men-of-war will be assembled after the manoeuvres.

On the 28th ultimo, the Tokyo Education Council decided that fencing lessons should be given in the common schools. The Department of Education objected to such exercises being included in a school's curriculum, and the proposition will not be adopted.

THE exports of camphor from Kobe for the last few years is as follows:—1892, 3,983,220 *kin*, 1,657,168 *yen*; 1893, 3,233,730 *kin*, 1,701,193 *yen*; 1894, 2,692,791 *kin*, 1,331,143 *yen*; 1895, 2,892,084 *kin*; 1,975,557, and totals, 12,801,825 *kin*; and 6,665,061 *yen*.

THE Committee of the Chicago Democratic Convention has drafted a platform which is certain of adoption. It demands free and unlimited coinage of silver at a ratio of sixteen to one, and condemns the revival of the McKinley tariff. The planks regarding Cuba and the Monroe doctrine are at present unsettled.

OWING to an employé at the Central Observatory mistaking the nature of some experiments that were being undertaken there, he spread a report on the 2nd inst. that a great seismic disturbance had been foretold, and for a while much consternation prevailed in certain parts of Tokyo, and more especially at the Palace, a Court official having carried the rumour thither.

THE Import trade is not brisk, though there is some enquiry for Yarns, and there would be more doing if buyers would stretch a point as to price. The market for Grey Goods is improving, but Fancy and Coloured Cottons continue quiet. Woollens are only in small request at about recent rates. There are no sales to report in the Metal trade, and only few deliveries, but arrivals continue on a liberal scale. The only business done in Kerosene has been for present requirements, and holders talk of higher values. In the Sugar trade, sales have been about on a par with arrivals, consequently the stock remains much the same. Manila sorts have been mostly in request, and in general recent prices have been paid. Formosa Sugar has been entirely neglected, but there has been a fair amount of business in Whites, which have fully maintained late values. With the exception of one bargain in fine new filature Silk, the trade has seen a blank week. New crop is coming in, there being 1,000 piculs now on the market, and 6,000 piculs of old left over from last season. In Waste Silk nothing doing. The Tea trade is behind, the export figures to date being much below those of last season. The leaf taken is mostly Good Common to Medium grade, and settlements scale about 1,000 piculs daily. Exchange has seen another week of absolute stability, though there has been a slight rise in the value of silver.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Events worthy of notice during the week were the results of the Imperial Cortège incident, the return of the Premier and the Minister of the Navy from their inspection tour to Formosa and Amoy, the outbreak of a local insurrection in the new dominion, and the floods in Toyama, now known, however, not to have been of such magnitude as was originally supposed.

The rice exchange presents a very abnormal aspect, especially in Osaka, where engrossment has been effected by a party of speculators taking advantage of the continued unseasonable weather, with the result that quotations have been pushed to a point not reached for 16 years. The latest intelligence, is that, notwithstanding repeated interference on the part of the authorities, the price has risen to 12.60 yen per koku. The Stock Exchange, on the other hand, has been very dull during the week.

The Opposition papers, as we stated at the time, have laboured to make capital out of the Imperial Cortège incident. Both the Household Department and the Metropolitan Police Board have been charged with negligence of duty. The *Kokumin* observes, that the unpopularity of the Household Department, owing to the sale of the mines and the smelting-works, has been aggravated by this railway incident. The question resolves itself into this—is the Minister of the Department competent or not? With the Ministers of State rests the responsibility of answering. The Metropolitan Police Board is considered by the *Nippon* to be more or less blameworthy. Since it confined itself to giving notice of the passage of the cortège to the Station-master at Shibuya, whereas it should have known perfectly well that a station-master has no power to change the times of the service of trains.

The *Mainichi* seizes the occasion to roundly charge the Nippon Tetsudo Kaisha and other private railway companies with want of system in the management of their business, and want of punctuality in the departure and arrival of trains. The company can not pretext ignorance that the route of the Imperial cortège lay across the track at Shibuya, for the route had been notified in the columns of the *Official Gazette* a day or two in advance. Hence the Nippon Tetsudo Kaisha and other companies must take warning from this incident and endeavour to place their business on a more trustworthy and sufficient basis.

The brief time devoted by the Premier and the Minister of the Navy to inspecting Formosa and Amoy has evoked some sarcastic comments from the Opposition papers. Cautious editors marvel whether anything can have been observed or investigated in the course of such a hurried visit. As yet they confine themselves to that broad criticism, probably reserving fuller comments for the moment of the Ministers' return to the capital.

In connection with the hearty welcome extended by the citizens of Osaka to the Premier during the few hours of His Excellency's sojourn en route for Tokyo, a short explanation may be given. The Osaka folks recently made a new departure in their treatment of statesmen and politicians. They used to be noted for coolness towards personages of that type, but they have now become very courteous, if not enthusiastic, in their attitude toward them. That is considered a new manifestation of their shrewd business spirit. Having decided to reconstruct their harbour, they are desirous of obtaining a subsidy from the State. Hence their warm reception of influential officials and politicians, whether the latter be in the Government or not. To that motive is referable their cordial treatment recently of Counts Okuma and Itagaki, and subsequently of the Premier. It is curious to observe that this zeal on the part of the Osaka

citizens to conciliate the favour of great men, has drawn from their habitual seclusion millionaires of the old school, like Messrs. Sumitomo and Konoike, who have hitherto persistently avoided appearing in public, but are now at the head of the Committee of reception.

The outbreak of a fresh insurrection in Formosa has furnished the *Fiji* an opportunity for reverting to its favourite argument about the administration of the island. It condemns the Government policy as too lenient, a contention that it bases primarily on the decision in the matter of opium-smoking, and it observes that in view of the natural obstinacy of the natives of Formosa, and considering the island's proximity to China, the new dominion must be controlled in the strictest manner. Otherwise the day when it will be possible to strengthen the defences of the island and open up its resources, must be indefinitely distant. Can capitalists venture to invest their money in Formosa when an insurrection may be expected at any time? Let really coercive measures be adopted and let natives convicted of insubordination be driven out of the island.

The *Nichi Nichi*, which observed strict reticence while its contemporaries loudly discussed the Opium problem, has now broken silence, and declares itself dissatisfied with the present gradual suppression policy of the Government. It entertains doubts about one of the chief grounds that have led the Authorities to adopt a comparatively lenient course, namely, the danger to which the life of confirmed smokers might be exposed were they suddenly obliged to abandon a habit of old standing. Against this contention our contemporary adduces the case of several natives who were able to endure compulsory abstinence, without injury to their health, while confined in prison. Not merely did no danger result to their lives, but they were reported to have gained in health, and to have been much gratified by having their evil habit incidentally cured in that fashion. At any rate, the problem is worth investigation by competent experts, and the Government ought to consult the Central Sanitary Association, or appoint a special committee to examine the question. The *Nichi Nichi* endorses its contemporaries' apprehension as to the danger of the evil's spreading to other inhabitants of the island, and also to Japanese emigrants, and hold that this latter peril is more real and ought to be more strenuously guarded against than the hypothetical danger to which total prohibition might subject the lives of a limited number of natives. Besides, would it not be better for the permanent welfare of the island that the enforcement of strict prohibition should compel habitual smokers to leave the place altogether? The *Nichi Nichi* hopes that the recent journey of the Premier and the Minister of the Navy, as well as the Chief of the Sanitary Bureau, through the new dominion may have furnished materials for the better solution of the opium question.

The *Mainichi* wonders how Marquis Ito and his colleagues will feel when a letter from the Anti-opium Society, congratulating them on supposed total prohibition of opium smoking in Formosa, reaches them from London, as rumour says that it soon will? The Society is sure to revoke its congratulations when it discovers its delusion. Speciousness without substance is indeed the chronic defect of the Ito Cabinet. This opium affair furnishes a striking illustration.

There is at present a dearth of good novel writers, whereas the public demand for works of fiction is on the increase, says the *Kokumin*. Indeed, so keen is the cry for good stories that writers of prominence are pressed by publishers, and the latter are obliged to meet the needs of the moment by publishing serials that have already appeared in dailies or periodicals. This is a great change compared with the state of affairs that prevailed formerly, when authors could barely find publishers. We (*Japan*

Mail) take occasion to refer briefly to Miss Higuchi "Ichijo," a lady novelist of the highest class. Not only among authoresses, but even among authors, she has been placed in the first rank by general public consent. Evidently she is a most painstaking writer, for since the close of last year when her name became first known, she has composed only three or four magazine stories. Short stories they are, too, yet prominent characters figuring in them are so powerfully depicted as to become real, living personages to her readers. She is specially excellent in portraying the miseries and vices of society, having, it is said, long acted the part of a cool and careful observer in social circles. Though not much above 20, she is already the novelist par excellence of the day.

The *Fiji* thinks that the opportunity to inaugurate an Augustine age for Shinto and Buddhism presents itself. The war has strongly reinvigorated the faith of the masses, and strengthened their reliance upon Divine assistance. That might have been anticipated, it being a common practice with the people to pray for supernatural aid whenever any extraordinary crisis occurs. The recent war was such a crisis. Hence the number of persons visiting temples and shrines for the purpose of rendering thanks for their glorious victory achieved through the help of their patron deities, has greatly increased since last year, and offerings are abundantly made. The *Fiji* urges the priests not to miss this splendid opportunity of rescuing their religion from decay, and tells them, at the same time, that they are doubly bound to keep their own conduct pure and unimpeachable, their immorality and corrupt manner of living being one of the most potent factors promoting the decadence of the creeds they inculcate.

The *Mainichi* hails with unreserved pleasure the prospect of Japanese Consolidated Bonds being regularly quoted on the London Exchange, and of the rate of interest on money becoming in consequence much lower in Japan. The Government Loans will soon reach 500 million yen, and the interest on them, at the ruling rate of 5 per cent., will aggregate 25 million yen a year. Should the rate be reduced to, say 3½ per cent., in consequence of foreign capitalists investing their money in Japanese Bonds, the Treasury will find its revenue increased by 7½ million yen a year. The question is, will foreign capitalists purchase the bonds of a silver-using country, and especially of Japan. As to the former point, the *Mainichi* does not see any particular difficulty, for it believes that silver has now fallen to its lowest possible limit and that any future fluctuation must be in the direction of appreciation. As to the latter point, the *Mainichi*, being an Opposition paper, feels compelled to make some caustic allusions to the financial policy of the Cabinet. Having referred to the ignorance of foreigners about the real condition of Japanese finance—ignorance assumed, of course, by the *Mainichi* itself—and their consequent hesitation to invest money in Japanese bonds, our contemporary says that, unless the Government, while striving to remove that ignorance, exerts itself also to arrange its post bellum financial affairs in a more intelligent manner, there will be much difficulty in getting Japanese bonds extensively purchased in London.

The *Fiji* is inclined to believe that there exist in Korea materials out of which a sound and respectable State might be organized. It refers to the fidelity and integrity of the lower orders of the nation, adducing two typical examples: one a servant of the late Kim Ok-kyun, and the other an equally meritorious servant of Sō Kwang Pōm, a partizan of Kim's, who fled to America after his leader's abortive attempt in Sōul some years ago. Kim's servant continues to tend the murdered politician's aged father with the same constancy as in the days of the family's prosperity, and Sō's servant is behaving similarly towards his master's wife and children. The *Fiji's* contention is borne out by the statements of a certain gentleman who acted as

adviser to the Korean Government in financial affairs; namely, that the common people in Korea are upright, unselfish, and punctual in discharging their public obligations. It is the officials standing between them and the Government that are chronically dishonest. The *Yiji* thinks were the officials cured of their vicious propensities, Korea, having such an excellent national substratum, might develop into a bright and flourishing country.

The *Shogyo* has a timely article headed "Calamity and State Aid." There is a special fund, we read, furnishing relief to sufferers from famine or any other extraordinary calamity, the object of the fund being to provide them with food, and also with allowances of money to erect temporary shelter and procure farming implements. This fund aggregates, throughout the whole country, 19,800,000 yen, that is, an average of 440,000 yen per prefecture. It is clear that such a sum is totally inadequate to meet catastrophes of serious dimensions. Hence a provision exists that when a case can not be sufficiently dealt with by appropriating 5 per cent. of the fund belonging to a locality overtaken by disaster, aid from the Central Relief Fund may be applied for. The Central Relief Fund amounts to only 1,820,000 yen, and is plainly inadequate to satisfy extraordinary demands. It follows that some special resources must be held in readiness. Such resources are the Second Reserve, destined to be used for unavoidable expenditures over and above the Budget. But as the Second Reserve aggregates only 1,000,000 yen, of which about 300,000 yen has already been paid out, the amount actually remaining does not exceed 700,000 yen. The Governors of the three districts lately devastated by the Seismic Wave have applied for 270,000 yen in all, to satisfy requirements of an urgent nature that will present themselves on the expiration of the term of one month covered by the Relief Fund Regulations. The *Shogyo* greatly doubts whether the remaining 430,000 yen of the Reserve will be enough to supply the further requirements of the three northern prefectures, as well as of the more recently afflicted Toyama and Shiga, and other cases that must be anticipated before the fiscal year expires. Our contemporary advises the Government to lay aside in future a larger sum on account of the Second Reserve.

EDITORIAL NOTES.

ETHICS IN PUBLIC SCHOOLS.

THE recent re-action against the general laxity of school-morals and the oft repeated demand for better ethical culture in public schools, have, we are gratified to note, borne excellent fruit. Principal Sugihara, of the Shizuoka Middle School, is doing good work in that direction. Not only do the students read the ethical books prescribed by the Department of Education, but the Principal frequently assembles the classes to lecture on some moral theme in a very sincere and earnest manner. The instructors of the school have sworn in a body never to enter a tea-house, *machi-ai-jaya*, or place of ill-repute, believing, and with reason, that their conduct will have directly beneficial effect on the students. In Nagoya, Prof. Matsudaira lectures on ethics, and his classes are well attended. Moreover, Principal Shibata assembles the students once a week in the lecture-hall and there talks in a homely yet ruggedly eloquent manner with the young men, his theme being invariably an ethical one. Sometimes the Principal has nothing particular to say, and then the students sit in meditative and decorous silence for half-an-hour, the time being supposedly devoted to the forming of good and nobler resolves for the future. At all events, the plan has worked most excellently, the moral reputation of the students being enviably high. In Kochi, that prolific home of hot-blooded politicians, Prof. Ohara has been delivering an interesting series of lectures on the comparative morals of Japan and the West, the lectures being given to the local Middle School students. Part

of Prof. Ohara's addresses has already appeared in print, and the essays, carefully and learnedly written, fully merit the praise which Prof. Matora, the well-known psychologist, has bestowed upon them. These are, however, only a few out of numerous instances; similarly encouraging reports come from half-a-dozen other localities. It is a great work, and one on which Japan may well come to be congratulated in future years.

MRS. DRAPER'S BLIND SCHOOL.

THE annual summer exercises of the Blind School conducted by Mrs. Draper, took place at the Van Schaick Hall on Wednesday afternoon. The Rev. H. Loomis presided, and there was a fair attendance. The proceedings opened with a pianoforte duet by the Misses Moulton and Griffin; then the Rev. G. M. Meacham offered up prayer. Dr. Whitney read the report of the school for the past year. He said that the scholars now totalled 27, and the average daily attendance was 20. The subjects taught included reading and writing by the Braille system, mental arithmetic, history, geography, botany, geology, anatomy, acupuncture, physiology, music—including *koto* and *sho*—singing, etc. There were something like 800 blind people in Yokohama, and roughly about 150,000 throughout the Empire of Japan. The school for the Blind in Yokohama was just the thing that was most needed, and he thought that the scholars would be the bringers of a better and a higher hope to their afflicted brothers and sisters. In the olden times in Japan, the blind were better looked after than now. They were taught and helped, and many rose to such a degree that they received ranks of nobility. Many were money-lenders and men of wealth. With the change of régime they were practically left to look after themselves. After a while, a sort of normal school was started in Tokyo, and since Mrs. Draper's school was instituted another school for the Blind had been started in the South. Bishop Joyce, of the American Methodist Church, gave a short address in which he wished all success to the school. It was but another illustration of the many paths of relief that lay open to those who would but seek them when setting out to help mankind. The school should become a centre of an influence that in the future years would greatly benefit the blind of Japan. Miss Thomas and Mrs. Jas. Walter sang several beautiful songs during the afternoon, and the blind boys and girls gave recitations, songs, and exercises on the *koto* and organ that reflected great credit on their self-denying teachers.

INCIDENTS OF AN ALL-NIGHT SITTING.

MR. BALFOUR, Lord George Hamilton, Mr. Curzon, Mr. Stuart Wortley, and Mr. Chamberlain were among the occupants of the Treasury Bench who remained in close attendance at the all-night sitting of the House of Commons on the 22nd May. The Secretary of State for the Colonies continued at half-past ten in the House, and was still in the evening dress which he wore at the South African dinner, and so also were his Parliamentary Secretary, Mr. Cochrane, and several other members who had been out the previous evening at that or other dinner parties. The only occupants of the Front Opposition Bench who sat through the sitting were Sir William Harcourt, Mr. Mandella, and Mr. Thomas Ellis. The Chairman of Committees, Mr. Lowther, was on duty the greater party of the night, but obtained occasional relief for brief intervals. Four ladies remained in the Ladies' Gallery all night. Becoming tired with their long attendance, some members left the House about eight o'clock in the morning and went home for a short rest, but within an hour received urgent telegrams recalling them, and a fresh batch of telegrams was sent to members who had been absent paired. Several of the members who did not very closely follow the slow course of Parliamentary business occupied some of their abundant leisure in sending telegrams to their wives or in writing letters to friends and committees descriptive of the extraordinary incidents of the protracted sitting. The Press

Association learns from Mr. Moss, the recently appointed manager of the refreshment rooms at the House of Commons, that the all-night sitting imposed an extraordinary and unexpected strain upon that department. The coffee-room has not been cleared since eleven o'clock the day before, when the Committee work began. All night long suppers were in progress, and in the morning there was a large demand for breakfasts. At five o'clock Mr. Moss went out and bought up the entire contents of a fish shop, which he brought to the House of Commons in a cab. Subsequently he brought other cabs full of loaves and other provisions. Perhaps the most curious incident connected with the protracted sitting is that narrated by Mr. T. P. O'Connor in the *Weekly Sun*. The hero was Mr. Wootton-Isaacson, whose experience, it seems, would go to show that had the Leader of the House so desired, it was perfectly possible to have had his bath within the precincts of the House. His official position, however, may have magnified the fear of the division bell, and thus saved him from the predicament in which Mr. Isaacson found himself. Under the régime of Mr. Herbert Gladstone, when he was First Commissioner of Works, excellent bath rooms were erected in the subterranean parts of the House, and many members availed themselves of this accommodation on Friday morning. Mr. Wootton-Isaacson was actually plunged in a bath when the division bell rang. There was nothing for it but to jump out and hurriedly put on all the garments he had time to get, which consisted of his dress coat, his trousers, and his shoes. He had not time even to put on a shirt or a pair of stockings. Stretching his coat across his breast, and putting up its collar, he was able to hide his forlorn condition from the House; he was accommodated with a seat in Mr. Balfour's room before a fire until he was able to get back to his bath, and so scored a division under circumstances of greater difficulty than ever a member experienced before. It appears that Mr. Wootton-Isaacson was not the only member who during the all-night sitting was caught tubbing when the division bell rang. Mr. Chamberlain was also in one of the bath-rooms, according to the *Daily News*, and rather astonished the House by his smartness as a quick change artist, for having left in evening dress he hurried into the division lobby in morning dress. It may readily be believed that in the interval there had been some exciting moments, but certainly there was nothing in Mr. Chamberlain's appearance to denote the fact. Lord Valentia was not so fortunate. With dripping hair and loose clothes, he arrived at the door of the division lobby only to find it closed against him.

THE "KOBE MARU'S" ACCIDENT.

THE account given by the *Nagasaki Shipping List* of the accident to the *Kobe Maru* is as follows:—At about 7 a.m. on the morning of Saturday last, just as she was leaving the Straits of Shimonoseki, the steamer *Kobe Maru* struck upon a sunken rock and scraped over it, doing considerable damage to the plates in her bottom. The shock was so violent that many of the passengers and crew were thrown off their feet. On her arrival here a diver was sent down to examine her bottom and report upon the damages which were found to be scarcely serious enough to warrant the vessel's detention. She accordingly proceeded on her way to Shanghai on Sunday afternoon. We understand that the rock upon which she struck is marked upon the charts but is very difficult to locate in wet or foggy weather.

THE ATAMI JINRIKISHA TRAMWAY.

RECENT advices from Odawara emphasize the growing disrepute of the Atami jinrikisha tramway. Only recently put into running order, misfortunes seem to have been of frequent occurrence. It is claimed that in several places the gradients are too steep, while the pullers are often reckless. Two accidents occurred in the first week of the present month, in one case the arm of a passenger being badly fractured, the tram having been derailed and overturned. In the other, one of the pullers was knocked down and the car passed over his body, killing him.

instantly. In April a first-class car, one or two foreigners being among the passengers, was similarly overturned, several bad bruises being fortunately the only untoward result. It seems that some radical changes are imperatively called for. In the first place, the human locomotors must be compelled to exert greater prudence; then the grades will have to be made easier in several cases; and finally the overcrowding of the trams must be avoided. It is asking too much of a first-class passenger to expect him to be cooped up with five others in a box with hardly room for four all told. Japanese travellers are, we understand, falling back on the old jinricksha road, preferring comparative discomfort, long hours, and safety to great comfort, shorter travel, and positive danger. And in this, we think, they are wise.

THE DEATH OF MR. ROSENFELD.

AN inquest was held on Friday by Mr. Hunter-Sharp, Vice-Consul of the U.S. at Kobe, into the circumstances attending the death of Mr. Samuel Rosenfeld. It was ascertained that the deceased fired two shots from his revolver, one being found in the ceiling of the room, the other passed through his head and fell on to the floor. The evidence also disclosed that deceased had been in low spirits for some time and complained of bad pains in the head, while he had worried over business matters. Some years before he got up early one morning to drown himself in the Bay, but then thought better of it. The coroner found as follows:—"Having viewed the body of Samuel Rosenfeld, an American citizen, who died on the 2nd day of July, 1896, at the International Hospital, Hiogo (Kobe), Japan, and having heard the evidence as to the cause of his death, I am of the opinion that the said Samuel Rosenfeld died from the effects of a bullet wound in the brain, self-inflicted, while under mental depression, on the morning of June 27th, 1896." The funeral took place on Friday evening, and was largely attended, Mr. Hermann Marcus and Mr. Taylor being the chief mourners.

JAPANESE TEA IN CHINA.

We take the following from the *Kobe Chronicle*:—

According to the *Kwansat Shogyo Nippo*, a new market for Japanese tea has been discovered, giving good promise. The tea trade this season has been poor, and the quotation of best leaves at Kobe is much cheaper than in last year. But the middle and lower grades are dearer by some 30 per cent., and their supply at Kobe is very scarce on account of the opening of sales in North China of the common tea produced in Kiushiu, especially in Chikuzen and Chikugo provinces. The export to China has continued to grow year after year. The exports of tea to Tientsin and thereabout from Kobe and Nagasaki four or five years ago were no more than 600,000 cattie, which rose to 1,400,000 cattie last year. The area of consumption in China is getting wider and wider. It is anticipated the export this year will reach some 2,000,000 cattie. This strange development of the export of Japanese tea to north China is explained by the fact that no tea is produced there and it is cheaper to import Japanese tea than Chinese tea produced in south China. If the exports to China grow at the present rate, China will become one of the best customers of Japanese tea. Now all the common tea produced in Kiushiu has begun to go to Nagasaki and thence direct, resulting in scarcity of stock of common tea at Kobe.

H.M.S. "GRAFTON."

THE Chatham correspondent of the *Naval and Military Record* writes under date of 19th May:—"The alterations which are being made on the *Grafton* to suit the requirements of Rear-Admiral Oxley will cost a good deal of money. She is quite a new vessel and has been fitted as a flagship, and the fact that the Port Admiral complimented the Dockyard officials upon the efficient manner in which she had been finished, when he officially inspected and received the vessel into the fleet reserve, is a proof that the work had been properly performed, and no great alterations in the accommodation were required. It would seem, then, that the alterations in the ship's fittings are being effected merely to suit the taste of Admiral Oxley, and most of them

might have been dispensed with and the expense saved; while the men could have been better and more profitably employed upon other work on hand in the yard. Moreover, the delay in the departure of the *Grafton* to relieve the *Edgar*, which has completed her three years' commission, would have been avoided.

NAVAL NEWS.

THE *China Mail* of June 29th, says:—"Several changes are to take place shortly amongst the vessels of the China squadron. H.M.S. *Undaunted* sails on Sunday next for Yokohama and Hakodate to join the flag of the Commander-in-chief. Lieutenant James, late of H.M.S. *Eolus*, now doing duty as Senior Lieutenant of the *Victor Emanuel*, will shortly be relieved by Lieutenant Plumer. He will then proceed to join H.M.S. *Centurion*, as a supernumerary for disposal. H.M.S. *Eolus* will return from the Cocos and Christmas Island about the 8th July, and will then proceed to Hongkong and Yokohama. The *Porpoise* will assume the duties of Senior Officer in the Straits and Malacca Division after the departure of the *Eolus*. The *Linnet* leaves Chemulpo for Yokohama on 1st July, en route to Behring Island. On the 1st July the *Redpole* leaves Hongkong for a short cruise, calling at Macao, Swatow, and Amoy, and then returning to port. Sub-Lieutenant Compton is in charge of the relief men to arrive by P. and O. steamer *Borneo* next week. He has been appointed to the *Centurion*. The relieved men will probably return to England at an early date by freight ships.

THE LOSS OF THE "DRUMMOND CASTLE."

As reported by Reuter, the *Drummond Castle*, Capt. N. W. Pierce, bound from Cape Town to London, struck the reef between Ushant and Molene, on the 16th June, shortly before midnight, and sank with 247 souls—144 passengers and 103 officers and men. From telegrams that appear in Vancouver papers, we gather that one of the survivors relates that the night was not foggy, but that a drizzling rain was falling, and he attributes the disaster to the weather preventing Capt. Pierce from seeing the light at Ushant. He therefore passed inside instead of outside the island and thus came by his doom. The vessel sank in two minutes after striking the reef.

SUICIDE OF THE DEAN OF MACAO.

THE Rev. Nestor de Castilho, Dean of the Cathedral at Macao, committed suicide on the morning of the 27th June in his room at the Deanery by hanging himself. The deceased gentleman had been unwell for some time past, but appeared perfectly sane, and there was no suspicion that he had any design on his own life. He was an old man and had held the appointment of Dean of Macao for ten years, but did not come out until a year ago, when he received orders from the new Minister that he was to do so. It is said he never liked the place and only came out in compliance with official orders.—*Daily Press*.

SALES OF BRITISH SHIPS.

DURING 1895 no less than 343 British-built vessels, of a gross tonnage of 359,137, were sold to go under other flags. Norway took 32 steamers and 34 sailing vessels, aggregating 63,117 tons. Japan took 25 steamers, aggregating 68,083 tons. Italy took 16 steamers and 12 sailing craft, aggregating 42,668 tons. France took 28 steamers and 8 sailing vessels, aggregating 36,060 tons. Germany, Spain, Holland, Sweden, Denmark, and Austria followed in the order named, each taking upward of 10,000 tons. The United States got 11 steamers and 4 sailing vessels, aggregating 9,097 tons. The vessels were old ones and the average price paid was \$20 to \$25 per ton.

A LONG DROP.

THE *China Mail* reports that whilst the China pony Torchlight, belonging to Mr. G. C. C. Master, was being taken along the pathway from the Mount Austin Hotel to Mountain Side, recently, it (the pony not the Mountain Side) became refractory, backed though the wire

fence, and dropped over the embankment. The pony must have fallen nearly 100 feet, but, strange to say, does not appear to have sustained any serious injury. It was lowered down to the Peak Road, an operation which occupied some hours, and was walked home. Torchlight ought now to score as a steeplechaser.

U.S. SQUADRON CIRCULAR.

OVER the signature of Rear-Admiral F. V. McNair, the following has been issued bearing date, U.S. Flagship *Olympia*, Yokohama, Japan, July 4th, 1896:—

By authority of the Honorable the Secretary of the Navy, the following values are announced for the quarter ending September 30th, 1896:—

Imperial Japanese Yen, Silver.....	\$0.536
Mexican Dollar	0.540
Tael, Shanghai	0.735

THE KOBE LIBEL CASE.

THE action for libel instituted by Mr. P. Mackenzie Skinner, Editor of the *Hyogo News*, against Mr. Alfred W. Curtis, Editor of the *Kobe Herald*, heard by his Honour Judge Mowat, in part with a jury and in part as a submission to his arbitration, on June 18th and 19th, has been settled by the following award, dated the 3rd instant:—"I find for the Plaintiff with costs, but without damages—the Plaintiff having assented to my suggestion, at the close of the hearing, to forego that part of the claim.

(Signed) R. A. MOWAT.

—*Hyogo News*.

SERIOUS RIOT AT COLOMBO.

ON June 7th a most unprecedented scene was witnessed at Colombo. Some sailors from H.M.S. *Redbreast* got into trouble with a native woman in the Pettah and a mob collected. Very soon the sailors fled and the crowd pursued them into the Hotel de l'Europe, which was speedily wrecked. Then the military were called out—two companies of the Royal Artillery proceeding straight to the scene, the rest being held in readiness—and peace was eventually secured.

HONOURED DEAD.

SIR JAMES BROWNE, K.C.S.I., British Agent in Beloochistan, died of fever at Quetta on the 15th June. He is the third British Agent there who has literally died in harness. The death is announced of Professor Sir George Johnson, M.D., F.R.S., Physician Extraordinary to the Queen, aged 78. Signor Ernesto Rossi, an Italian tragedian, who was styled the "Italian Talma," is dead. Signor Rossi was in his 67th year.

HARTMANN'S "RELIGIOUS-PHILOSOPHY."

SEVERAL Japanese scholars are, we note, engaged in translating Hartmann's great work on the "Philosophy of Religion." Part has already appeared in the *Tsushigaku Zasshi*, the organ of the Philosophical Society, and has met with universal approval. The translation is exceptionally fine, while true to the original.

VAGRANTS.

DURING the past few days two suspicious-looking beach-combers have been wandering about the Bluff and pestering house-servants for food. They generally go round to the kitchen after breakfast or in the early afternoon, when they know that the coast is clear of the master of the house or other male residents.

H.M.S. "TAMAR."

H.M.S. *Tamar* is to go into Kowloon Dock to have her boilers and heavy weights taken out of her, after which she will be fitted up to take the place of the *Victor Emanuel* as receiving ship in Hongkong.

NEW STEAM LAUNCH.

MR. SIM, with his new launch, the *Glenearn*, and Mr. Head, as passenger, left Kobe for Yokohama about half-past five o'clock on Tuesday evening. This is the second launch Mr. Sim has navigated between the two ports this year.

SHANGHAI'S GENEROSITY.

UP to July 4th, the residents of Shanghai had subscribed \$2,600 for the relief of sufferers by the great seismic wave.

RAILWAY AFFAIRS.

One of the most noteworthy features in connection with private railways in Japan is their tendency toward amalgamation. Negotiations for this purpose have long been carried on between the Ryomo and the newly established Tobu Railway Company. The latter, however, would not consent to certain concessions proposed by the old company, so the Ryomo has given up the idea altogether, and a similar negotiation is now taking place between it and the Nippon. The Tokyo papers say that the scheme will probably assume practical shape when the two companies enter into competition with the Tobu.

Concerning the Bu-So (Musashi-Sagami) Central Railway and the So-O (Hachioji-Aibara) Railway, which latter is to be constructed in the two provinces of Musashi and Sagami, the project of uniting the two into one concern is said to have been broached by the respective projectors. The Railway Bureau is advising them to that end. Indeed, says the *Shogyo*, our authority in this matter, there are strong reasons that recommend the scheme. Between Yama and Isehara, a distance of 10 miles, the two railways, according to the original programmes, are to be laid along exactly the same route. However, the prescriptive right belonging to the So-O, the other, should it refuse to coalesce, must mark out a new route. It is said that the owners of land in that particular section are resolved not to part with their property to either, unless the two lines be amalgamated. If the prospects of the two lines are considered, the Bu-so is relatively better than the other, for while the first is to extend between Shibuya Station, of the Nippon Railway Company, and Matsuda Station on the Hakone Section of the Government Railway, and therefore may be regarded as one of the most promising lines in the suburbs of Tokyo, the latter extends only for a distance of 21 miles, of which 10 miles are to run side by side with the other line. Still, though the distance is short, the So-O commands this advantage, that it will draw the pilgrims to Oyama, and is therefore expected to prove a profitable investment.

A similar scheme between the Mo-Bu and the Bushu is also likely to succeed, if they really consider their own interests. The Isominato and the Jyogan have already decided to combine, and the projectors have submitted an application to the Authorities to obtain sanction. In the Kwansai districts the same idea is on the *tapis* among various railway companies, the most noteworthy being the cases of negotiation between the Kwansai and the Naniwa, the Taisha and the Ryozan, the Kishiu (Himeji-Tsuyama), and the Chugoku (a railway starting from Okayama and terminating in a certain town in Hoki), and so forth. The amalgamation proposed between the Hoshu and the Kyushu appears have been broken off.

The Sei-Wa (Ise-Yamato) Railway Company's scandal is now a matter of notoriety in railway circles. The trouble began with the chief of the originating committee, a speculator with no property of his own. Having incurred the suspicion of the shareholders, who charged him with peculation, he was obliged to resign the office. The shareholders can not publicly call him to account, although a considerable sum of money has disappeared in his hands, for he threatens to disclose the names of persons to whom, he alleges, he presented gifts to facilitate the granting of the charter. The permanent charter having been obtained in May, the Company ought to start the work of construction in earnest; but the disappearance of a sum of about 80,000 *yen* that the Company received in the form of security from its shareholders, and the troubles that have ensued, are said to be fatal obstacles. The last extraordinary meeting held at the beginning of the month at Tsu was a scene of indescribable tumult when the two rival factions came together. The upshot of a heated discussion was that the two factions elected their own chairmen, and then carried on the deliberation side by side but in diametrically opposite senses. The box that held the

proxies of absentees became a prize around which the struggle was fiercely waged, each party doing its best to carry it away. The police interfered, and the box was taken under their escort to the railway office in the town. The box is at present guarded, night and day, by a number of watchmen hired by the rival parties.

THE HIGHER COMMERCIAL SCHOOL.

The Graduation Exercises of the Tokyo Higher Commercial School took place on the 6th inst. in the spacious hall of the institution. In spite of the unfavourable weather there was a large assembly of invited guests, among whom were H.E. Viscount Enomoto, Minister of Commerce and Agriculture; H.E. Sir Ernest Satow, H.B.M.'s Minister; Their Excellencies Messrs. Makino and Komura, Vice-Ministers of Education and Foreign Affairs, respectively; Mr. Kinoshita, Chief of the Special Schools Bureau; Mr. Koba, Chief of the Ordinary Schools Bureau; Messrs. Watanabe Koki, Shibusawa Eiichi, Ando Taro, Kondo Rempai, Abe Taizo, Nagai Kynichiro, Prof. Wadagaki, and many others. Forty-five graduates were awarded diplomas. We are told that so great is the demand for graduates of the school this year that nearly all are already engaged to take up active work in business firms, companies, government offices, &c. After the address by the Director, and a reply to the same by one of the students, other addresses were given by H.E. Vice-Minister Makino, H.E. Viscount Enomoto, and Mr. Shibusawa, one of the Board of Council of the School, and others.

Sir Ernest Satow, spoke as follows:—"Your Excellencies and Gentlemen:—It is a source of unmixed pleasure to me to be present at this graduation ceremony, and to have the opportunity of tendering my congratulations to the young men who, after completing their studies at this institution, are about to go forth into the world, and devote themselves to one or other of the varied callings for which they have been prepared. If the lamented founder of the Commercial School, my friend the late Viscount Arinori Mori, from whom this institution took its origin, were present here to-day, he could not fail to be gratified at the development which has been reached by commercial studies in this country, and at the success which has attended many of those whose education has been completed within these walls. It appears from the lists appended to the Calendar of the Higher Commercial School for this year, that no less than 350 past students of this school, besides at least 100 graduates of the former Accountant's School, are now actively employed, some as merchants in business on their own account, or as managers of well known firms in Japan, or at their foreign branches, others in banks, on railways, in mines, in insurance companies, as teachers in commercial schools, and in various other important positions. A very large proportion indeed, more than a fifth, appear to have obtained appointments under Government, whether at the capital or in other parts of the country. These facts furnish eloquent testimony to the wide character of the teaching imparted and show that the curriculum fits young men for a most varied choice of careers in after life. The principal object of the School, I take it, is to train men for the calling of merchants. It has been the fashion in many countries and in all ages to depreciate this calling, and we know of one country at least where the merchant is in theory placed at the bottom of the social scale. In Japan, at any rate, the existence of this institution is a proof that such a view finds no favour. What is the truth of the matter? The merchant, with his allies the banker, the ship-owner, and the railway director, perform for the body politic functions similar to those of the blood in the human body, putting in circulation the elements which nourish the whole frame in all its parts. They are in fact the life-blood of the State, conveying to every portion what is necessary for its maintenance and so keeping the whole in a condition of the

highest efficiency. And as every article produced by man is of most value in that place where it can be best utilized, the organization of the machinery of distribution is a principal factor of wealth. Hence, it is not too much to say that the welfare of the State depends upon the activity, the energy, and the capacity of its merchants. Look over the whole world, consider its past history, and you will find that those have been and are the most powerful States, actually or potentially, whose commerce has been most flourishing. So much is this truth recognized in these days that the principal pre-occupation of modern governments is how to develop their commerce, and the chief object of rivalry amongst modern States is the protection by means of commercial treaties of the freedom and facility of the exchange of national products and manufactures. To the young men whose student life is now over, and who are about to commence their active careers, and especially to those who may be called on to take a share in the direction of the foreign commerce of their country, I should like to speak one word of counsel. It is this: that in business relations, as in all the other relations of life, the main thing to strive after is the creation of mutual trust and confidence between all the parties to a transaction. Let them recollect that in the long run no business can be really beneficial which does not bring advantage to both sides, and that justice in the highest sense, not mere legal justice, but the justice of the ethical philosopher, is the only sure foundation to work upon. They should bear in mind that the best calculation will sometimes prove fallacious, and that loss must be cheerfully met when our provisions are disappointed. Riches are far more often the reward of integrity and fair dealing than of ambitious speculation: the consciousness of right is worth more than all the gold that was ever minted, and the highest praise that can be uttered of a merchant is that "his word is as good as his bond." I have only to add the expression of my wishes for their future success and prosperity in whatever positions they may hereafter be called upon to occupy."

After the exercises, cold refreshments were served to the guests in one of the fine rooms of the school.

CURRENT TOPICS.

The transfer of the Business Tax to the category of Direct Taxes has resulted in extending the scope of the franchise and of the right of citizenship. Imperial Ordinance No. 263, recently issued, provides that the Business Tax shall henceforth come under the term "Direct Taxes" mentioned in the Law of Election of the two Houses of the Diet, whereas hitherto only the Land Tax and the Income Tax were thus designated. Up to the present, the number of persons enjoying the franchise aggregated 464,277, throughout the whole empire, but it is estimated that the total will now reach 571,965. The Budget puts the average payment of Business Tax at 13.20 *yen*, and consequently a third of the number of tax-payers may be expected to become entitled to the franchise. In other words, about 190,000 (?) franchise-holders will be newly created. However, as the franchise can not be exercised until after the lapse of a year from the day on which the Electors' List is compiled (three years in the case of income tax), and as the Business Tax is to be levied from the beginning of next year, the new holders of the franchise will not be entitled to vote until 1898, at soonest. The right of citizenship has hitherto been enjoyed by persons paying above 2 *yen* of Direct Tax, in the form of either Land Tax or Income Tax. But according to the new law, a payment of that amount of Business Tax will confer the same privilege.

The accident that happened to the Imperial cortège at the Shibuya Station—already referred to in these columns—has been magnified to serious dimensions by the chauvinist papers. It would appear that the fault lay with both the Household Department itself and the Station-master at Shibuya. Contrary to previous usage, the

Department did not send notice to the Central Office of the Nippon Railway Company, but simply conveyed instructions to the Shinjuku Police Office. The latter, in turn, gave warning to the Shibuya Station-master, who neglected to convey sufficient information to the Shinjuku Station and to the Central Office, thinking that the situation could be dealt with when the cortège came in. But when the conductor of the train just then arriving became cognizant of the danger signal, he could not stop the engine in time. Hence no blame can be attached to him, roundly as he was originally accused by the *Asahi Shimbun*. But the Directors of the Railway Company are resolved to dismiss the Shibuya Station-master on the ground that he acted *ultra vires*. The opposition papers, however, seek to place the responsibility on the shoulders of the Minister of the Household, their evident motive being to satisfy their old grudge against him in connection with the sale of the Sado and Ikuno Mines and the Smelting Works.

The Committee appointed to investigate the question of the sale of the two mines and the Smelting Works, has concluded its work, and has decided that the three properties shall be put up to public tender unconditionally.

The Imperial Court was thrown into some confusion on the 1st instant, owing to a stupid blunder on the part of one of its officials. Preparations had been made that day at the Central Observatory, located not far from the palace, to conduct some experiments on earth tremors at the dead of night. The official mistook these preparations for a warning that a severe seismic disturbance was expected in the middle of the night, and conveyed tidings in that sense to his superiors, not one of whom seems to have had sufficient scientific knowledge to recognise the absurdity of such a forecast. They all took the news seriously, and hastened to make preparations for the safety of the Emperor and Empress when the dreaded phenomenon should occur. No intelligence coming from the Observatory though the evening was far advanced, a messenger was specially sent thither, and the absurdity of the whole business was then for the first time exposed.

The Tokyo City Assembly is now engaged in prosecuting inquiries as to two questions; one, to determine whether the Water-works committee ought to be continued; the other, to decide whether the application from a number of capitalists of Tokyo to make use of the headwaters of the river Tama for the purpose of generating electricity should be granted. The two problems are likely to lead to tumultuous scenes in the City Assembly, the two parties concerned in their solution being pretty evenly balanced.

More than 2,000 fishermen of Iwate, Miyagi, and Aomori who, as usual every year, go to Hokkaido to find employment during the herring season, have returned, upon learning the alarming intelligence of the seismic wave, and each is bewailing the loss of one member or another of his family or even of the whole. Still, the return of so many stout bread-winners will prove beneficial both to the broken-hearted survivors and to the devastated districts.

The Home Minister returned to Tokyo late on the evening of the 4th instant, and has since been busily engaged in elaborating measures for the relief of the sufferers in the north. The magnitude of the disaster is, contrary to what might have been expected, greater than the amount of relief needed, the mortality having far exceeded the number of persons wounded, and the list of survivors requiring assistance being small. We read in the *Tokyo Shimbun*, the most trustworthy source of information in connection with the result of the researches conducted by the Home Minister and his suite, that the sufferers needing aid from the State do not, thus far, exceed 8,600 persons throughout the desolated districts, and that, therefore, the case may be met by defraying from the Second Reserve Fund all that is needed after the relief period covered by the

Relief Fund Regulations expires. Over 700,000 yen remains to the credit of the Second Reserve Fund. Outlays needed for repairing roads, embankments, and so forth will not amount to much, for with the exception of the embankment in Miyagi, there are no particular repairs to be undertaken along the devastated coast. The chief items for which relief will be appropriated consist in the maintenance of orphans and the disabled, and in furnishing fishing gear to survivors.

The accident to the Imperial cortège has led to the officials concerned being punished. On the part of the Household, it has been decided to subject Mr. Sakurai, a secretary of the Department who had charge of all matters relating to the Emperor's visit to Meguro, to disciplinary punishment and to fine him by administrative process. On the part of the Railway, the station-masters of Shibuya and Shinjuku, and the conductor of the train, have been dismissed.

Great hope is entertained for the future of the recently established Oriental Kerosine Company. Mr. Ishizaka Kumazo, now serving an apprenticeship at a kerosine well in Pennsylvania, is to superintend the business. The Company has sent to America for plant of the latest construction.

INDUSTRIAL AND ECONOMIC TOPICS.

According to inquiries carried out by the Department of Agriculture and Commerce, this year's sericultural prospects are far from re-assuring. In Yamanashi the crop is expected to be 15 per cent. below that of an ordinary year. In Miyazaki, Ibaraki, Saga, Hyogo, Tottori, Ruki, Ehime, and Shimane, it is estimated that the crop will not fall below that of an average year. In Miye, Kochi, Nagasaki, Tochigi, Tokushima, Kagawa, and Hiroshima, the average will be exceeded. In Oita, Gifu, Gumma, Chiba, and Yamaguchi, it will be from 30 to 40 per cent. below the average. In Kagoshima, Kanagawa, and Ehime, it will be below an average year. In Niigata the crop is expected to exceed an average year by about 15 per cent. Reports have still to come in from 17 places, including Nagano, Tokushima, and Aichi, but it is generally believed that the result of the year's yield will not exceed 60 per cent. of an average year's. The silk market presents an extraordinary aspect, prices for silk being lower, relatively, than the quotation for cocoons. Some merchants of Yokohama, instead of exporting silk, are devising means for reimporting bales already sent to America. Mr. Tanaka, for instance, has given an order to the Doshin Kwaisha to purchase for him in New York a certain quantity of hand-reeled Japanese silk. He can actually buy silk at New York for 615 yen, including cost of transportation to Yokohama, while here he can sell the same silk at 700 yen. We (*Japan Mail*) find this statement very flighty.

The development of the weaving trade in Kiryu during the last few years is astonishing. Kiryu is behind Kyoto in the production of fine art fabrics, but though the output is somewhat inferior in quality, the lower prices its goods command is steadily helping to push them. Last year, for instance, goods turned out from the looms aggregated about 12 million yen, as shown in the following statistics prepared by the Kiryu Weavers and Merchant's Guild.

	Quantity (hiki)	Value yen.
Export Goods	1895 ... 292,876...	6,485,051
	1894 ... 132,067...	2,483,133
Goods for Domestic Use	1895 ... 3,177,513...	5,411,441
	1894 ... 1,601,348...	2,085,015

It will be seen that last year the output exceeded that of the previous year by 1,736,774 pieces, and the value by 5,328,344 yen. The statistics of looms and mechanics are as follow:—Ordinary looms, 16,202; Jacquard looms 1,360; iron looms, 140; total, 27,702. Male weavers, 1,938; female weavers, 18,132; total, 20,070. The statistics of various artisans and

merchants engaged in the industry are:—Proprietors of weaving shops, 1,115; persons engaged in softening and rolling the fabrics, 14; dyers, 25; crest-men, 23; reed-makers, 33; loom-makers, 95; brokers, 28; yarn merchants, 105; mercers, 10.

Mr. Kawamura Jun, editor of the defunct *Choya*, who was despatched to Formosa by the projectors of the Formosan railway, in the suite of the Premier and the Minister of the Navy, has sent some information as the result of his inquiries. The projectors estimated the capital needed for carrying out the scheme at 12 million yen, but Mr. Kawamura's researches have convinced him of the insufficiency of that sum. He thinks that owing to the higher market prices of commodities and also to the difficulty in obtaining a supply of sleepers in Formosa, the undertaking will require a capital twice the size previously estimated. The only timber available for sleepers in Formosa is camphor wood, but as the trees generally grow in places not easily accessible, they are practically useless for railway work. Sleepers must be transported from Japan, and this would necessitate heavy transport charges. The wages of workmen and prices of commodities are higher in Formosa by 50 to 200 per cent. than in Japan. Coal is found at Kelung, but it is not fit for engine furnaces, nor is the output sufficient to meet present requirements. Coal would therefore have to be imported from Japan. The contemplated route of the Formosan Railway Joint Stock Company measures 270 miles, starting from Kelung and terminating at Taku, *via* Taiwan, Taihoku (Taipei), Shinchiku, Kyoritsu, Taichu, Jynrin, Kagi, Tainan, and Hozan. A branch line of 19 miles is to be built between Tainan and Anpei (Anping). Between Kelung and Shinchiku, *via* Taihoku, the existing line of 60 miles owned by the Government is in operation, but if the Government has really resolved, as it is generally believed, to allow private capitalists to undertake the work of railway construction in Formosa, then the application already submitted for taking over this line will, it is expected, be granted within this month. This existing line, however, requires thorough reconstruction, which alone will involve the investment of between four and five million yen.

TREATY REVISION WITH SIAM.

We read in the *Yiji Shimpō* that the number of Japanese subjects residing in Siam having become very numerous, the advisability of establishing a Japanese Legation and Consulate there has been urged upon the Tokyo Government. Before taking any step of that nature, however, the Foreign Office in Tokyo has intimated to Siam that revision of the Treaty between the two countries is desirable, and the Siamese Government has given its consent. As to the place for carrying on the negotiations, Tokyo has been chosen, and it is expected that, within a brief period, a plenipotentiary envoy will come from Siam.

ENGLISH LITERATURE IN THE IMPERIAL UNIVERSITY.

We understand that the chair of English Literature in the Imperial University is to be filled by Mr. Lafcadio Hearn, Professor Wood, its hitherto occupant, being about to return to the United States. The University is very fortunate in obtaining the services of a literary star like Mr. Hearn. Our readers may not be aware that Mr. Hearn is a naturalized Japanese, and that, in the country of his adoption, he is known as Mr. Iwazumi Yakumo. It will, perhaps, be referred to by and by as a singular fact that whereas the chair of Japanese Literature in the University was, until recently, filled by a British subject, Mr. Basil Hall Chamberlain, the chair of English Literature is now to be occupied by a Japanese subject.

INSURRECTION IN FORMOSA.

It appears, from intelligence just received in Tokyo, that an insurrection has again broken out in Formosa. The first symptoms of disturbance made themselves apparent in the middle of June, and precautionary measures were accordingly adopted. But, on June 29th, some thousands of rebels attacked Yuen-lin, a town almost exactly in the centre of the island, and succeeded in capturing it, the Japanese casualties being one officer and five men killed and seven men wounded. The nearest military station of importance is Taiwan, 40 miles distant. Thence four companies of infantry were immediately despatched for the scene of disturbance, together with one company from Loking, and one, as well as a battery of artillery, from Nanchi. Further, as soon as the news reached Taipeh, the Head-quarters of the First Brigade embarked, on the 2nd instant, from Keelung, with the object of proceeding to Taiwan. It is also reported that a British merchant named Densho (?) was killed by the insurgents.

Major-General Tachimi, telegraphing on the 4th instant, says that he has sent two battalions of the Eighth Regiment to Taichang, to assist the Second Brigade, and that, according to circumstances, he will himself proceed, with the two remaining battalions of the Seventh Brigade, to the seat of disturbance, and will assume the command-in-chief. He adds that there is no appearance of any disquiet in the Taipeh district.

The insurrection in Formosa is evidently an affair of some magnitude, though no doubt can be entertained that it will speedily be quelled. We have already stated that, according to official intelligence, several thousands of rebels attacked Yuen-lin, a town lying some 50 miles to the south-east of Taiwan, and captured it after a severe struggle, in which the Japanese casualties were an officer and five men killed and seven men wounded. Since the receipt of that news, four telegrams are to hand:—

Taipeh, 2.10 p.m. 3rd July.

The insurgents in the vicinity of Yuen-lin are developing strength, and have obtained possession of that town. The central districts are in a disturbed condition. The troops despatched by the officer in command of the Second Brigade to the scene of disturbance, up to the 2nd instant, are, one company each from Chia-i, La-king, and four companies, with half a battery of artillery, from Taiwan.

(Signed) Major-General TACHIMI.

Taipeh, 5.11 p.m. 4th July.

Yesterday, the 3rd instant, several hundred insurgents attacked Taiwan, but were temporarily repulsed. On the same day, Hu-lu-tun fell into the hands of the rebels. (This part of the message is unintelligible). Two companies of the Nan-tou infantry are surrounded by the rebels in strength. The troops sent out from Chia-i have come into touch with the insurgents at Ta-pu-lin, and the company of infantry and half battery of artillery under Lieut.-Col. Imahashi's command, are advancing towards Nan-tou. Telegraphic communication southward of Peh-tou and with Puli-sho is interrupted. The third battalion of the Eighth Regiment ought to reach Miaoli to-night, and the second battalion of the same Regiment is proceeding by railway to Hsin-chu.

(Signed) Major-General TACHIMI.

Taipeh, July 4th, 7.25 p.m.

Insurrection has broken out in Peh-tou, Tsz-tung-hiang, Yuen-lin, Lin-chi-pu, Tzu-tsi-chie, Nan-tou, Tai-chang, and Hu-lu-tun. The rebels are in force. Our troops are divided, and since this morning have been acting on the defensive, three companies being at Tai-chang, for example. A state of disquiet is also reported from Chia-i, Chang-hua and their vicinity. Colonel Takenouchi entered Tai-chang on the 3rd instant, and two battalions have just now reached that place from Taipeh.

Taipeh, July 5th, 11.50 a.m.

Lieut. Colonel Imahashi's force reached Nan-tou yesterday (4th instant), and effected a junction with Major Matsui's troops (i.e. the troops reported as being surrounded by the rebels in strength on the 3rd instant). Steps are being now taken to drive the insurgents from the vicinity of Nan-tou. Peh-tou has been attacked by the rebels, and the gendarmes by whom it was garrisoned have retreated to Chang-hua.

A telegram from Taipeh, dated 3 p.m. on the 4th instant, says that the casualties on the Japanese side at Yuen-lin and in its vicinity up to that day were 3 officers and 13 non-commissioned officers and men killed; 18 non-commissioned officers and men wounded, and 4 men missing. Evidently there must have been severe fighting. Nothing is said as to the casualties on the side of the insurgents; silence easily understood when we remember that the Japanese were obliged to evacuate Yuen-lin.

Another telegram from Taipeh, dated 3.05 p.m. on the 6th instant, reports that the patients in hospital at Peh-tou were successfully removed at the time of the retreat from that place to Chang-hua.

From the same telegram we learn that the railway, which has hitherto been used for official purposes only, has now been fully equipped, and will be opened immediately for general traffic.

The *Nichi Nichi Shimbun* gives expression to the surprise and dissatisfaction caused among the public by these constant insurrections in Formosa, but nobody supposed that the island would be reduced to tranquillity at once. The French still have trouble in Tonquin, though eleven years have passed since the place came into their possession. It will be a question for the Japanese Authorities to consider whether a winter campaign should not be undertaken in the mountainous regions on the east of the island, to hunt down, and, if necessary exterminate, the rebellious Chinese lurking in the recesses of the hills. Such an operation would doubtless be attended by immense difficulties, but probably it would pay best in the long run.

It was expected that the re-inforcements sent from Taipeh, namely, the Third Battalion of the Eighth Regiment and the Second Battalion of the same Regiment, would reach Taichung and Miaoli, respectively, on the 6th instant.

In the fight at Peh-tou, Captain Miyana Keida, a sergeant, and a private were killed. The *Nichi Nichi* puts the total casualties, reported up to date, at 40, but according to the details given above, the aggregate is 41.

We may refer here to a statement advanced in quarters where every contemporary happening is exaggerated to a laughable extent—a statement that the insurrection is wide-spread. There seems to be no warrant whatever for such an allegation. Yuen-lin is a little town in the hill country, only 30 miles from Taiwan, and up to the present the area of disturbance has not extended beyond the vicinity of the latter place.

MARQUIS ITO IN FORMOSA.

The Minister President, during his sojourn in Taipeh, is said to have invited the Japanese merchants of that place to the store of Mr. Sameshima, where His Excellency addressed them on the subject of trade in the new dominion. The gist of Marquis Ito's speech, as reported by the *Yomiuri Shimbun*, was that the chief problem to be solved in connection with the development of Formosan commerce is that of communications. At present, facilities for importing Japanese products into Formosa or exporting Japanese products to Japan, are so defective that it paid better to send goods round by Hongkong or Amoy. So long as that is the case, Marquis Ito sees no prospect of the development of the island's trade in Japanese hands, and is not surprised that the merchants of his country should suffer defeat in competition with foreign merchants. His Excellency referred also to Formosa tea, which, he said, had to be sent to Amoy and there prepared for export, whereas, if the work were done by Japanese in Formosa, considerable outlay might be saved.

Mr. Aruga Nagao, while on a recent tour through Europe, collected the opinions of many jurists concerning the late China-Japan war. Nearly all were unanimously in favour of Japan. The opinion of one member of the *Académie Française* is most interesting, and it will be translated into Japanese and presented to the Emperor.

SPECULATIVE TRANSACTIONS IN SHARES.

There is something like a mania for speculation in bonds and shares at present. A table has been drawn up of certain stocks constantly changing hands, though the shares themselves are not actually in existence, but the right to purchase them has been conceded:—

	Concession obtained yen.	Quoted at yen.
Sango Railway new shares	1.00	4.0
Kinki Railways	1.00	4.4
Sakata Railways	1.00	1.1
Kanabe Railways	1.00	9.5
Seiwa Railways	1.00	2.4
Kyohoku Railways	1.00	4.4
Omi Railways	1.00	3.1
Taisha-Ryozan Railways	.50	2.5
Tokyo Electric Railways	.25	4.0
Teikoku Beer Company	1.00	3.0
Tokyo 12 Staples Exchange	1.00	15.0
Toyo Sekiyu (kerosine)	1.00	2.5

If a right to purchase a share can be sold to speculators at a large profit, it is not strange that men are rushing at various enterprises in order to realize big profits on transfer transactions, though they care not a straw whether the work they have started will pay or not. An interesting judgment has been delivered in the Supreme Court in connection with the sale of concessions. Last year, a certain speculator of Okayama bought a large number of Osaka Guano Exchange concessions from three merchants of Osaka. The market fell, and the concessions subsequently became worse than waste paper. Thereupon the Okayama speculator brought a suit in the Osaka Local Court, claiming that the transactions should be nullified and that the defendants should be made to return the money received in exchange for the concessions. The Court found that the contract was invalid, but that the plaintiff had no right to claim the refunding of the money he paid to the parties. This judgment was not entirely satisfactory to the plaintiff, and he therefore appealed to the Osaka Appeal Court. The judgment of this Court was as follows:—The transfer of concessions in the shares in question having been accomplished prior to the registration of the Company which issued the concessions, such transfer was entirely null and void, according to the provisions of Art. 180 of the Commercial Code. The defendants therefore had no right sell or transfer their shares, and as the price which they received from the invalid transfer must be regarded in the light of illusory profits, the defendants must comply with the claim of the Appellant and must refund the sum they received. Dissatisfied with the decision of the Osaka Appeal Court, the defendants carried the case to the Supreme Court. The latter, however, has approved the award of the Osaka Court and pronounced substantially the same judgment.

COTTON GOODS FOR EXPORT.

The *Osaka Asahi* says that the export of cotton twilled goods in 1895 totalled 469,595 pieces, valued at 400,519 yen; in other words, there was a diminution of over 430,000 yen as compared with the previous year's export. The goods go mostly to Hongkong and India, next to which come the United States of America and China. The articles are principally produced in Awa, Suwo, Jyoshu, and Tokyo. Cotton flannel is chiefly exported to China, Hongkong, Korea, India, and Vladivostok: the two provinces of Shantung and Chili being the best markets. The termination of the late war gave a strong impetus to the export of these goods, so that the total trade of last year amounted to 1,329,511 yen. The goods were chiefly produced in Kii and other districts adjoining Osaka, and 80 to 90 per cent. of the gross export passed through the hands of Osaka merchants. At present the goods are almost exclusively made from home-spun yarns. Other cotton goods shipped abroad are towels—over 22,000 yen worth last year being chiefly sent to southern China—white and black calico, and figured cotton cloth, these going mostly to Korea.

THE DISPOSAL OF RELIEF FUNDS.

FROM the letter of the Rev. J. G. CLEVELAND, published elsewhere in our columns, it will be seen that close attention has been given to the question of how best to dispose of the funds charitably contributed by foreigners in Tokyo and Yokohama for the relief of the sufferers by the seismic wave. Three points have been definitely established by the Committee that proceeded specially to Iwate and Miyagi Prefectures for the purpose of investigating the question. The first is that, owing to prompt measures taken by the Local Authorities and to the helpful spirit displayed by the people living just beyond the line of devastation, there is no such thing as actual destitution to be relieved: all the survivors are sheltered and fed. Secondly, the living being few as compared with the dead in the most heavily visited places, the timbers of ruined and now ownerless buildings constitute ample material for constructing new edifices to house the survivors. Thirdly, the great and pressing need of the moment is to provide boats and nets so that the fishermen may be enabled to resume their bread-earning occupation. The members of the Committee found that the Local Officials are thoroughly in touch with the people and fully understand the latter's wants. As to gifts of money, the unanimous verdict was that they should be avoided. In cases where help is really requisite, the people are not accustomed to have command of any considerable sum, and would probably misapply funds placed at their uncontrolled disposal. Bedding will certainly be a difficulty in many instances, and it may be found advisable to employ some portion of the relief fund to procuring wadded *futon* and *yagu*. But transportation is a serious obstacle in that matter, and closer inquiries must be made before any definite step is taken. Besides, the quality of the bedding used by fisher folk in Japan is such that perhaps the business of providing it had better be left to themselves. On the whole, the wisest and kindest plan that suggests itself is to devote the greater part of the fund to furnishing boats and nets, so that the people may resume their regular occupation. Every day lost at this season tells against their chances of laying in bread for the winter. The programme recommended by the Committee is to authorize the immediate building of a certain number of boats, and the purchase of hemp, the latter to be placed in the hands of the fishermen themselves, most of whom understand net-making. Nets are very expensive things: the largest seines cost as much as two thousand *yen*. The limited funds entrusted to us for relief purposes are evidently inadequate for supplying such

implements. But material for smaller nets can be furnished, and, above all, the building of boats can be at once commenced. The Local Officials offer every possible assistance in discriminating between the degrees of need, and in order that our duty, as well as that of the Committee, should be properly discharged, receipts are to be obtained from all persons that receive assistance of that nature. Boats can of course be built on the spot, and timber as well as labour being cheap, they will not average more from 35 to 50 *yen*, according to localities. Evidently a couple of thousand *yen* promptly spent in that way may prove most serviceable, and we think that subscribers to the fund will be pleased to think that the proceeds of their generosity have been put into a comparatively permanent form, and become tools of trade to enable the unfortunate fishermen to earn their livelihood once more. There is a minor need in connection with the hospitals, and some prompt assistance has been rendered there. Boat-building and net-purchasing, however, constitute the chief features of the programme seemingly most desirable from every point of view, and by pursuing it there will be the satisfaction of knowing that the money given by charitable members of the community has not been made practically valueless by infinitesimal division, or dissipated on account of temporary needs, but has rendered really efficient aid and conferred lasting benefit.

THE LATE WIND-STORM AT ST. LOUIS.

THE wind-storm that visited St. Louis on the afternoon of the 29th May, touched, in its path of destruction, but a fraction of that great city. All its finest buildings were left undisturbed, and even the damage to the great Eads Bridge was comparatively trivial; indeed the regular railway traffic was interrupted on this route for only one day. And yet the amount of destruction was enormous. St. Louis is a city of close upon 700,000 inhabitants; its houses extend along the river bank for seventeen miles, and the city limits stretch inland for seven miles. If we take the Eads bridge as a centre from which to describe the city, the main thoroughfare, running north and south, parallel with the river, and known as Broadway, lies a few blocks off and is really Fifth Street. The river makes a bend eastward at St. Louis, so that Broadway, being parallel to it, lies like an arc to the straight chord of Grand Avenue, or Thirty-Sixth Street. The main artery east and west is Olive Street, a few blocks south of the Eads Bridge. This runs out to the West End, and the point where it crosses Broadway is the business heart of the city. A few blocks south of Olive Street the ground begins to fall away to the Mill

Creek Valley, which serves as a bed for the railway-track of all the railroads that enter the city. The great new Union Station, possibly the finest on the continent, is built to the north of this valley, between Eighteenth and Twentieth Streets. Almost all the destruction wrought by the wind-storm lay in the triangle, or half-segment, formed by the Mill Creek Valley on the north, and the point on the south where Broadway and Grand Avenue, described already as chord and arc, come together. It will be seen, then, that the busiest portion of the city was not touched. But along the west of the southern bank of the Mill Creek Valley the houses were fortunate which did not escape. And the busy thoroughfare of Chonteau Avenue, at the foot of the slope, with its cheap stores and saloons, was shattered almost from end to end. At St. Louis, this year the warm spring weather came late, but in the three weeks it more than made up for its lateness by high temperature combined with considerable moisture. Few residents ever remember seeing vegetation spring up so rapidly and with such luxuriance. Towards the middle of May, the weather became broken, and a large amount of rain fell. For the past three years there has been a scanty rainfall, and the rainy weather excited much comment. The Wednesday of the storm opened fair, but about ten o'clock the sky began to present an appearance which suggested some peculiar disturbance. The clouds were packed together like lumps of cotton wadding—some one compared them to a flooring of great white shells. Off to the north-west there was a lurid set of black thunderclouds, and eastward rose another black wall of cloud. About five o'clock the storm burst, after a short period of lull. On the western portion of the city the rain-storm broke in whirling sheets of water; but round by the southwest, entering the populous portion at Grand Avenue, about a mile south of the bridge where it crosses the Mill Creek Valley, a tornado entered, scattering ruin in its course. Between Grand Avenue or Thirty-sixth-street, and Jefferson Avenue or Twenty-sixth, it wrecked whole streets of fairly well-built residences. Then it came to churches, halls, public schools, clubs, and poorer-houses. These it treated with very little ceremony, sending the roof into the cellar, as in the Church of the Unity, or into the street, as in Calvary Church. The substantial one-story Power-houses of the Scullin Lines and the People's Railway went down. Here the loss of life was not great, as the houses and buildings were not crowded, and people could fly from one room to another. But in the factories farther down town, and in the slim tenement houses, the effects of the tornado were more fatal. It seemed to spread out a little towards the South, and then turning off north-east it jumped the river, tore the upper masonry

at the eastern abutment of the Eads Bridge, and made a clean sweep of the river side of East St. Louis, known as the Island. Elevators, hotels, cattle-sheds, railway offices were all knocked over like a pack of cards. About six miles due east, in a hollow, lies the little village of Birkner; this was also wrecked.

All communication for the time was stopped, but before long the cars began to run again. The Suburban, which goes due west, with a bend to the north down in the city, was practically uninterrupted. The Olive Street cable-line, running west to Forest Park and passing close to the Union Station, was also suspended only during the actual fury of the storm. Next morning a visitor arriving in the city could have entered the Station and gone by car to any of the principal hotels without knowing that any catastrophe had happened. The pluck shown by the people was extraordinary. The machinery at the Power House of the People's Railway, buried under a mass of wreckage on the evening of the 27th, was at work in the open air by the evening of the 29th. Power was transmitted from one electrical railway to another, and soon all the derelict cars, seen here and there over the city, began to be set in motion once more.

That the loss of life should have been limited to less than 200 in St. Louis, where the houses of probably 70,000 people were rendered uninhabitable, and many positively levelled with the ground, is extraordinary. The number of hair-breadth escapes, well authenticated, is astonishingly great. It must be remembered that merely escaping outside, as in an earthquake, was no safeguard, as bricks and other débris were flying, and trees and telegraph poles were falling on the sidewalk. One explanation must be that the people are so accustomed to take care of themselves, their instincts led them into safe positions behind doors, close to heavy furniture, or into a safe corner of the cellar.

It has been denied by one of the Weather Bureau officials that the storm was a tornado, but no one who witnessed its doings at Lafayette Park could doubt for a moment that it must have gyrated like a spinning-top. The old trees in that Park are twisted, and barked, and splintered in a way that requires a tornado to explain. Besides, on the ceilings of many of the wrecked houses black mud was scattered, different from any soil known to exist in the neighbourhood. The tornado seems, indeed, to have been accompanied by a downfall of mud rather than of rain.

It seems as if a tornado in visiting the city should prefer a certain route, for twenty-five years ago such a storm ran down the Mill Creek Valley, jumped the river, and, in East St. Louis, carried great locomotives fifty feet from the tracks.

Probably this storm will check the growth of St. Louis on the South, and help its growth to the West, now the fashionable quarter. Twenty years ago Lafayette Park was the centre of possibly the most fashionable quarter, and Compton Heights, further west, is a new and fine residence district. Beyond lies Tower Grove Park, the trees of which suffered, and close by it Shaw's Garden, the Botany School of Washington University, and possibly the most complete Garden of the kind on the continent. The plants there have suffered badly and it will take three years to recover from the injuries inflicted. Possibly the Victoria Regia, the glory of the place, which attracted so many visitors last summer, may have received permanent injury, as the structure protecting it was blown down, and the plant exposed to the blinding rain.

In East St. Louis the disaster has had a much more depressing effect on the community than on the West side. The funerals of the victims were thirty times more numerous compared with the population; the class rendered homeless are less able to bear loss or to move elsewhere; and the numerous cattle and hogs whose carcasses lie pinned under sheds and débris are causing a stench that may induce a pestilence. In the great city what strikes a visitor to the wrecked districts is the wonderful power of initiative and organizing energy of the people which will soon wipe out all signs that anything unusual has happened.

KOREAN AFFAIRS.

CONTEMPORARY history, it has been said, is seldom trustworthy because the force of prejudice that presides at its compilation distorts it far more than the inaccessibility of materials in later eras. The fact is illustrated by Korea's case. To this moment the public is confidently assured by various writers, at whose heads stands Bishop CORFE, that the hair-cutting edict, which is supposed to have created so much commotion, was suggested, if not dictated, by the Japanese. But the truth is that, so far from suggesting or dictating anything of the kind, the Japanese Representative in Söul strongly urged the inadvisability of such a step. That to replace by Western modes the troublesome, time-wasting, and comparatively costly Korean fashion of wearing the hair would be a reform, no one might deny. But in every country sumptuary interference calls for the greatest caution, and that is eminently true of Korea, where conservatism clings strongly to the old fashions in costume and head-gear. In Japan the queue was abandoned very quickly after the Restoration. But the aid of legislation was never invoked. The leading men of the time set the example, and the people followed it readily. So, too, in the matter of female apparel. Quite

recently, it was asserted by a Yokohama English newspaper that the adoption of foreign costume by Japanese ladies had been inculcated by Imperial Edict. That is incorrect. No edict ever appeared on the subject. What happened was that ladies attending at Court were requested to wear either the approved Court costume of Japan, or Occidental dress. The impracticability of the conventional Court costume, with its long crimson *hakama*, has been adduced by way of proof that this order amounted to an interdict against female garments in Japanese style. But how much more impracticable are the *hakama* than the train worn, *de riguer*, by ladies at a Drawing-room in England, and how can Court costume be regarded as setting a compulsory example for every day use? Ladies in Europe do not wear trains in domestic life because that barbaric appendage has to be worn at Court, and ladies in Japan need not wear either crimson trousers or balloon-like sleeves because one horror or the other is necessary when attending at Court. In fact, there never has been any legislative interference with the costume of the Japanese people in general since the Restoration, and the Representative of Japan strongly opposed anything of the kind in Korea. But, as ought by this time to be well known, the queue-cutting edict had a motive much deeper than the mere question of a fashion of coiffure. It was a political scheme. Certain Korean statesmen conceived it as a means of marking the men on whom they could count as allies, and then, believing that any short-haired person must become an object of suspicion and dislike to the conservatives, they pushed their programme to the extent of forcibly lopping off top-knots *malgré* the owners. All that, we repeat, is perfectly well understood by every earnest observer of events. It is inexplicable that the theory of Japanese inspiration should be so persistently maintained by some writers. Further, there is no longer any ground for alleging that the hair-cutting edict or the murder of the QUEEN were the real reasons of the recent disturbances in Korea: they were mere pretexts. To discover the true causes, we must look in a different direction. When Count INOUE went to Söul, he found there many crying abuses, but none called for speedier remedy than the system of hereditary office-holders. The oppression and corruption resulting from that system in the provinces were incalculable. The privilege of holding this or that official position descended from father to son in absolute entail. Incompetence, extortion, dishonesty—nothing interrupted the succession. Governors of provinces, indeed, were appointed by the Central Government, and the small suites that accompanied them found employment within their districts. But, for the rest, the whole provincial administration was in the hands of hereditary office-holders, with

results probably never surpassed in any part of the world. This flagrantly evil state of affairs was among the first that Count INOUE endeavoured to correct, and it may well be imagined that every family deprived of such a valuable heirloom became bitterly hostile to reform and its representatives. Another sweeping but most necessary change was the disbandment of the *Kogun*, a force organized originally by the TAI WUN-KUN after Admiral ROZE's repulse in 1866. It numbered over a hundred thousand men, who, though scattered throughout the provinces, preserved their military organization and constituted a perpetual menace to the peace of the Kingdom, as well as a powerful weapon in the hands of intriguing politicians. The breaking up of this force was, of course, widely resented, not merely by the men composing it, but also by those that counted on it as an instrument for furthering their schemes.

There can be no doubt that the consummation of these two reforms engendered great discontent in the provinces, but since neither of them could be employed as a popular pretext for insurrection, public tranquillity remained undisturbed. A pretext alone was needed, however, and it was furnished by the hair-cutting edict and by the assassination of the QUEEN. Outsiders were puzzled to understand why the insurrection continued after liberty as to coiffure had been restored, and despite the fact that the overthrow of the QUEEN'S enemies might be expected to restore to power the family proverbially associated with oppression and corruption. But these things were quite secondary considerations in the eyes of the agitators that fomented the disturbance. If comparative quiet has now been restored, it is not because the Government's authority has been re-asserted or the discontent of the hereditary officeholders and the provincial troops allayed, but because the resources of the insurgents have been temporarily exhausted, and to obtain supplies of food even has become a difficulty to them. A period of tolerable tranquillity is now anticipated by those best acquainted with the circumstances. The contemporary history of Korea does not seem, after all, to defy intelligent scrutiny, if critics will only take the trouble to look below the surface.

HISTORY OF THE IMPERIAL IRON FOUNDRY.

THE necessity of establishing a steel foundry in Japan was long talked of among Military and Naval men, and several wealthy merchants were invited by the Authorities, at different times, to undertake the work as a private enterprise. But no one was found willing to respond. Finally, before the second session of the Imperial Diet, the Naval Department submitted estimates bearing

upon this affair. Admiral Count KABAYAMA, then Minister of the Navy, made an earnest attempt to have the programme approved by the Diet, and delivered, in support of it, a long speech in his usual outspoken manner. An allusion that he made in the course of the speech to the meritorious services rendered by the Satsuma and Choshu clans to the State before and after the Restoration, caused much excitement among the members of the House of Representatives, and a tumultuous scene ensued, with the result that both Radicals and Progressionists combined to reject the programme. This opposition constituted one of the causes that led to the dissolution of the Lower House that session. Nevertheless, next session, the Government again submitted estimates covering an appropriation of 2,750,000 *yen* for the proposed foundry, but the same fate befell the Bill. Mr. OOKA IKUZO, who, as a member of the Budget Committee, had charge of the Naval section, reported that the information furnished by the Government with regard to the foundry was not sufficiently explicit in respect of the amount of raw material available in Japan, and added that, the Authorities being unable to guarantee the work, the appropriation ought to be struck out. The House adopted this report, and the Government's programme was once more defeated. The House of Peers, however, entertained a different opinion on the subject. Soon after the Lower House had declared against the scheme, Viscount NAITO, supported by Prince KONOYE and 36 others, presented a Representation urging that the Government ought to appoint a special committee to thoroughly collect the necessary information, after which the consent of the Diet should be sought. This Representation was passed unanimously on June 8th, 1892. Acting upon the prudent advice of the Upper House, the Government organized a Committee, appointing as members General MAKINO, the Director of the Imperial Military Arsenal; Mr. ARISHIMA and Professor WASEDA, ex-Directors of the Bureaus of National Debts and of Mining, respectively; Professor NORO, now a victim of the notorious iron pipe scandal, Viscount NAITO, mover of the Representation, and Dr. HASEGAWA, of the Mitsu Bishi Co. After having held meetings during some ten days, the Committee presented a report to the Government, stating that before they could arrive at any definite opinion on the subject, they considered it necessary to conduct investigations into the following points; namely, first, the amount of iron contained in the mines of Japan; and secondly, the method of organizing, the location of, as well as the outlay connected with, an iron foundry. The Committee were also of opinion that the affair should be considered from the standpoint of the national defences, as well as from that of economy, and that the Department of Agriculture

and Commerce, rather than that of the Navy, as the Government proposed, should undertake the conduct of the enterprise. The Government acted upon this advice, and transferred the affair to the Department of Agriculture and Commerce, which caused the Committee, assisted by experts, to carry on experiments and investigations. The result of their work, so far as these experiments and investigations were concerned, was decidedly encouraging. But Count GOTO, then Minister of the Department, thought it expedient, before taking any definite step, to appoint another committee with the object of further investigating matters relating to organization and management, and determining the quantity of plant and accessories required for the work. He asked the Diet, in its fourth session, to appropriate a sum of 24,900 *yen* for that purpose, but before proceeding to consider the Minister's request, the two Houses invited the Government to inform them about the results of the experiments and investigations conducted by the Committee previously appointed. This request was readily complied with, and the reports, given elsewhere, in an abridged form, were laid before the Houses. The documents so far satisfied the House of Peers that they suggested the advisability of the Government's placing before the Diet, in the shape of a supplementary budget, estimates providing for the establishment of a foundry. But considering the scheme still premature, the Government did not adopt the advice of the Upper House, but appointed, in August, 1894, a second Committee composed of 25 members, to carry out investigations with special reference to the work of iron-foundries in Europe and America and the circumstances existing in Japan. The Committee was to investigate the quantity of iron ore procurable in Japan, as well as the method of mining and transportation; was to make experiments with pig and wrought irons produced in Japan, and so forth. From the magnitude of the scope of the investigations and the limit of available funds—which had been largely reduced by the House of Representatives—the second Committee failed to achieve any particular results, and, on the other hand, Count GOTO himself declared it advisable, in his opinion, to have the work undertaken by private capitalists. However, in the meanwhile, the attitude of the two Houses of the Diet towards the affair underwent a radical change, so that Representations urging the establishment of a steel foundry were submitted, in the fifth session, by the National Unionists in the Lower House; in the sixth session, by Viscount NAITO and Baron OZAWA, supported by Prince NIJO and 70 others, in the Upper House; and in the eighth session, by both the Radicals and the National Unionists in the Lower House. Count GOTO was no longer at the head of the Department of Agriculture

and Commerce, having been succeeded by Viscount ENOMOTO, a zealous advocate of the establishment of a steel foundry in Japan. Soon after Viscount ENOMOTO'S assumption of the portfolio of the Department, he caused a trial manufacture of steel to be made at the Yokosuka Naval Arsenal under his personal supervision, and succeeded in obtaining the metal according to a plan of his own. Last year, the Diet approved, with only a slight reduction, an appropriation of a little over 39,000 *yen*, for the purpose of carrying out experiments in the manufacture of steel under a third committee. General experiments were undertaken by the Viscount himself at the Military Arsenal in Tokyo, always with satisfactory results. To still further confirm those results, the enterprising statesman, accompanied by Prof. NORO, went, last fall, to Kamaishi, where he stayed about a month and undertook various experiments at the Tanaka Iron-works established there. The third Committee, presided over by His Excellency Mr. KANEKO, held several meetings at the Noshomusho, and resolved, among other things, that it would be advisable to have the business undertaken as a State industry, instead of leaving it to private capitalists, as Count GOTO had recommended. Inquiries into the technical and business features of the question having been satisfactorily completed, the Government finally submitted, in the last session of the Diet, a Budget of 4,095,700 *yen* for establishing a steel foundry, the sum to be spread over four years and applied for the construction of a foundry, the purchase of ground and machinery, and so forth. The Bill obtained the consent of the Diet.

According to the Government's programme, the foundry is to manufacture yearly 60,000 tons, consisting of 35,000 tons of Bessemer steel, 20,000 tons of Martin steel, 4,500 tons of wrought iron, and 500 tons of crucible steel. In March last, the organization of the State Steel Foundry was promulgated by Imperial Ordinance, the staff being composed of a President; a Chief Engineer, two Managing Directors, Eight Engineers, two consulting Foreign Engineers, and a number of assistant engineers and clerks. Several gentlemen were proposed as candidates for the posts of President and Chief Engineer, but finally the choice fell on Mr. YAMANOUCHI TEIUN, originator of the Hokkaido Colliery Railway, and Dr. OSHIMA, an ex-Chief Engineer of the Ikuno Silver Mine. Judging from the wide experience and knowledge possessed by both gentlemen, it is confidently hoped that the new enterprise will be successful.

The relief provisions drawn up by the Home Office will be submitted to the Cabinets for approval immediately on Marquis Ito's return to Tokyo, on the 9th or 10th inst.

THE SEISMIC WAVE.

The *Asahi* has received a letter from Iwate intended to throw some light on the difficult question of the centre of the recent seismic disturbance. The writer thinks that the centre may be assumed to have been at the bottom of the sea not far from the coast of Komoto-mura, Kita-Hei District, Iwate. In support of this hypothesis several facts are adduced. Thus, at a distance of over 1,000 yards from the shore of the village, a rock used to project from the surface of the sea. On the evening of the disaster, this rock was transferred, amid a deafening din, to the mouth of the river called after the name of the village, and in its new position the rock projects more than 15 ft. from the surface of the sea. At the same time, the mouth of the river, which had been from 35 to 40 ft. deep before the phenomenon, became suddenly so shallow that a portion of the bed is now above the surface. Another rock, previously standing some 80 ft. from the shore of another hamlet, also in the same district, was thrown out of its original position so that it now points to the south, and a portion of its base is exposed. A third rock, situated not far to the north of the latter, was broken in two, and one half was hurled some 400 yards northward. About 1,200 yards farther seaward from this second rock, stood a fourth rock, some 12 yards long. This was turned upside down.

The latest official statistics from Aomori are as follow:—Number of houses in the two devastated Districts before the disaster, 2,350; number of people, 14,911; deaths, 142 males and 147 females; wounded, 113 males and 101 females; missing, 20 males and 15 females; cattle drowned, 12; number of houses and other buildings swept away, 589; number wrecked or submerged, 313; cultivated fields, building sites, and other land devastated, 122.95 *cho* (305 acres); bridges wrecked or swept away, 5; embankments injured in 1,300 places; bales of grain or fish-guano, and number of fish-curing pans and nets carried away, 1,739, 30,257, and 193,909, respectively; ships and boats swept away, 379, and wrecked, 218.

The medical men and nurses despatched from the Red Cross Association to the regions of the disaster are 10 physicians, 2 compounders, 25 male nurses, and 24 female nurses. Assisted by a party of succour despatched from the Local Branches of the Society, they are tending the wounded survivors in about 20 hospitals temporarily established in the various devastated districts. The patients under treatment aggregate 756 in Miyagi, 172 in Aomori, and about 2,000 in Iwate. It is said that most of the patients are suffering from inflammation of the lungs or stomach, caused by drinking fish-oil while they were struggling for life in the wave. A letter received by Surgeon-General Baron Ishiguro from one of the surgeons engaged in treating the wounded at Kamaishi, describes the privations to which both the patients and those looking after them are exposed. Though in the immediate vicinity of the sea, fish is unprocurable; and owing to defective means of communication the available diet consists only of rice and pickled radish. There is absolutely no supply of nutriment for the patients, and as for the surgeons and nurses, they are barely able to keep body and soul together.

A news agency supplies information to the Tokyo journals as to the plan entertained by the Home Office with reference to relief for the three devastated districts. Already in Miyagi and Aomori Prefectures the money procurable from the local taxes has reached its limit. There is still a portion of that fund available for Iwate, but the damage there being exceptionally serious, the money in hand can not suffice to meet it. It is evident that subsequently to the 15th inst., when the relief period covered by expenditures from the Famine Fund will expire, some measures must be taken by the Central Treasury. The moneys that the three Prefectures are entitled to receive from the Central Relief Fund aggregate about 1,000,000 *yen*, and there is also a sum of some 900,000 *yen* from the

Second Reserve Fund available for the purpose. These two sums are thought sufficient to meet the worst cases in the three districts, and no extraordinary outlay from other sources will be necessary. The question of furnishing fishing gear to the survivors is still unsettled, pending the return of the Home Minister from inspecting the devastated districts. In this respect, the towns and villages in the old Nambu fief are considered to be in a fortunate position, for the fishermen's nets and other gear are supplied by capitalists who receive payment by installments. That method may be resorted to in the case of the sufferers by the wave.

Contributions sent to the vernacular journals for purposes of relief are steadily growing. The *Yiji's* list has risen to above 40,800 *yen* and that of the *Nichi Nichi* to more than 35,000 *yen*. The *Osaka Asahi* has received some 23,000 *yen*. Thus the three journals aggregate about 100,000 *yen*. The sums obtained by others are far smaller, none being above 5,000 *yen*.

THE SEISMIC WAVE IN THE BONIN ISLANDS.

Official information from the Bonin Islands necessitates some modification of the views recently expressed by us, on the strength of information contained in a private letter, which, as our readers will remember, was very vaguely worded. The letter indicated that the force of the seismic wave, by the time it reached the Bonins, had become so insignificant as to be virtually incapable of harm, the only damage recorded being the loss of a turtle pen. The exact time of the wave's advent was not recorded, but the tone of the letter suggested early morning on June 16th as the probable date. That inference, at any rate, proves correct. The official account says that at 4 a.m. on the 16th June, the water at Futami harbour, in the island called Chichi-shima (the main island of the group), showed signs of disturbance, and an hour later there was an extraordinary tide, the water rising suddenly from three to four feet, and its inflow and outflow being very violent. In the port of Miya a boat was swept out to sea, but no injury was suffered by either man or beast. On the western coast, also, strong tidal disturbance was felt, and some fishing gear was carried off, but no other harm resulted. From Ototo-jima similar phenomena are recorded: a wave three or four feet high; the breaking of a plank-bridge in Okimura port, and general commotion of the sea, but no injury to life or limb. It is now certain that the time of the seismic wave's arrival at the coast of Miyagi Prefecture was 8.30 p.m. on the 15th of June. Hence, if it reached the Bonins, 700 miles distant, at 4 a.m. the following morning, its average rate of translation must have been about 93 miles an hour. On the other hand, the records obtained from the tide-gauges at Ayugawa, in Miyagi Prefecture, and Hanasaki-mura, in Nemuro Prefecture, show that the wave reached the former place at 8.30 p.m., and the latter at 8.50 p.m., and as the distance between them is 350 miles, approximately, we have here, apparently, a velocity of transmission equal to 17 miles a minute. That, of course, assumes that the direction of translation was from one place to the other, whereas all that we can say definitely is that Ayugawa, in Miyagi Prefecture, was 20 minutes nearer than Nemuro to the centre of the disturbance. But there is another perplexing factor: the tide-gauge at Misaki, in Kanagawa Prefecture indicated the presence of the disturbance at ten minutes past eight on the evening of the 15th, or fifteen minutes earlier than the time of the first indications in Miyagi Prefecture. Yet Misaki is 320 miles south of Ayugawa. It is difficult to reconcile these records with any conceivable theory, especially when we remember that the wave traversed the Pacific, a distance of over 3,000 miles, in 7 hours.

THE DISASTER IN THE NORTH.

The Rev. Rotheay Miller sends us the following returns, up to the 28th ult.:-

Villages.	Population.	Deaths.	Injured.	Uninjured.	No. of buildings.	No. of buildings swept away.	No. of houses partially damaged.	No. of houses undamaged.
Kesen District—

H.M.S. "EDGAR" AND THE SEISMIC WAVE.

The following letter has been handed to us for publication:-

COPT.
H.M.S. *Edgar*, June 30th, 1896.
DEAR BARON SANNOMIYA—I am sending you, through Mr. Hall, our Consul at Yokohama, the sum of 230 dollars, as a contribution, though a small one, from myself, the officers, and ship's company of the *Edgar*, towards the relief of the sufferers by that disastrous seismic wave.
Will you please turn it over to the Japanese fund which is being raised for their relief.
Sincerely yours, W. H. HENDERSON.
I am sailing to-morrow morning for Hakodate, where I shall be till the 7th.

This, being the first instance on record of such action on the part of a British man-of-war, has attracted considerable attention, and been much appreciated by the Japanese. We learn that His Excellency Baron Sannomiya brought the fact to the notice of the Emperor, and that His Majesty graciously expressed his sincere pleasure at such an evidence of kindly sympathy.

THE DOUBLE SUICIDE IN OSAKA.

The particulars of the recently reported double suicide in Osaka are now published. On the afternoon of June 30th, a young man and a girl, apparently newly married, came to the five-storeyed pagoda in the enclosure of the Shitenno Temple, and having paid a few *sen* to the door-keeper as admission fee, left their umbrellas and purses in his charge and ascended the ladder. About half an hour afterwards, something heavy fell from the pagoda,

and the door-keeper, hastening out, saw the same couple bound together with a sash and girdle. They had evidently precipitated themselves from the highest storey. The old man at once carried information to the nearest Police-station, and constables, presently arriving, summoned a doctor living in the vicinity. By the time he reached the spot, the woman had expired, but the man was still alive, though evidently moribund. He was carried on a shutter to the Doctor's house, where he lived for about half an hour. It turned out that the unhappy couple had been operatives in the Hirano Mill. They fell in love, but marriage was impossible, the man already having a wife and a child. So they determined to die together, in order that they might "live as man and wife in the other world," a delusion commonly entertained by infatuated lovers among the lower orders. A *post mortem* examination showed that the man's spine had been broken just above the hips, and he had received several wounds on the face. As for the girl, the bones of her thighs had been crushed by the fall, but no other injury was visible. It is said that a man tried to commit suicide by throwing himself from the same place some forty years ago, but that he sustained no fatal injury, and is still alive. This instance is the only one of the kind that has happened at the pagoda within the memory of the present generation. The youth was 24 and the woman 21.

We commend this incident to the notice of writers who affirm that love does not exist in Japan. Cases of *shinju*, or dying together in the hope of re-union together for all eternity, have been common in this country since records began to exist. Can love demand any stronger proof than such sacrifices? But the Japanese do not wear their loves upon their sleeves. Flirtation is not a prime element of their social habits; a newly married couple cannot be recognised by their mutual demeanour; husbands and wives do not kiss each other in public; youths and maidens do not make marriage the open end of existence. Yet that love has its kingdom here as elsewhere can not be doubted. To infer the absence of a sentiment because its outward expression is controlled must be pronounced a fallacious method of reasoning. We make no comparison between the two systems, but merely invite attention to facts.

TEA.

As already mentioned in these columns, the depression in the tea market has resulted in many tea-growers resolving to abandon this year the picking of second crop leaves. Such a resolution on the part of manufacturers is said to be inevitable, for present quotations really entail loss. A report forwarded from a district in Shizuoka in the middle of last month to the Central Guild in Tokyo, puts the situation thus:

ESTIMATED COST OF MANUFACTURE PER KWAMME.	
Raw leaves, 4 <i>kwamme</i>	792
Picking expenses	372
Cost of curing	680
Total	yen 1,821

Tea of a given quality is now quoted at 1.50 *yen* or so, hence in manufacturing one *kwamme* of this tea, manufacturers are actually losing .321 *yen*.

In a previous issue we noted how markedly the quantity of tea exported has fallen this year compared with last season. The *Kokumin* says that the attention of the Authorities has been drawn to the matter, and they have caused inquiries to be made into the subject. According to their investigations, one of the causes that has resulted in the diminution of export is believed to be the over-abundant stock held in New York and Chicago. Another is the gradual encroachment in the American market of the Indian teas. British tea-merchants in India are sparing no pains to push their product in America. In the press, in social conversation, and in almost every conceivable way, the British-Indian merchants are speaking ill of Japanese tea, and are doing their utmost to ex-

pel it from the markets of America. Japanese tea-merchants are entirely indifferent to, or ignorant of, these things. The moment they deliver goods to resident merchants in Yokohama or Kobe, they consider their interest closed, and they do not even take the trouble to ascertain the destination of their goods, or whether they are favourably received or not in foreign countries. Under the circumstances, the gradual ousting of Japanese tea by Indian in the markets of America is not strange. Another point which Japanese tea-merchants and manufacturers ought to bear in mind, is this. They must distinctly understand that cheapness is the only quality that recommends Japanese tea to American consumers. Therefore, when Formosan or Indian tea, which generally command higher prices in the American market, can be sold as cheaply as Japanese tea, the middle and lower classes of America, the principal buyers of Japanese leaf, at once transfer their patronage to the products of India or Formosa. In this respect, Japanese tea-growers are placed in a very painful situation this year, for while the cost of production has risen considerably, market values have moved in a contrary direction. Any temptation towards deterioration in quality must be resolutely faced, otherwise Japanese tea will be speedily driven from America by its Indian and Formosan rivals, and then its fate will be sealed. The prospect of the election of Mr. McKinley as President of the United States, must place Japanese tea-growers more on the alert, for, with his election and the imposition of a higher protective tariff, the inspection of imported tea will become more stringent.

THE SCHOOL OF THE MORNING STAR.

The annual commencement exercises took place yesterday (7th instant), at the well-known and popular institution, the School of the Morning Star, in Tokyo. S.G. Archbishop Osouf and Their Excellencies the French and British Representatives attended, and the hall was crowded with spectators. It is to be hoped that the new buildings of the School will soon be in complete occupation. The apartments now available are quite disproportionate to the large number of students receiving instruction, and to the public interest that draws together such assemblages as that of yesterday. The programme—given below—was well chosen, and excellently rendered. The earnestness and spirit shown by the students, as well as the evidences they gave of patient and skilful training, showed that the faculty of the School have relaxed nothing of the indefatigable care to which the institution owes much of its high reputation. We make no reference to individual achievements, but confine ourselves to saying that the instrumental, vocal, histrionic, and recitative performances were all worthy of the school. An interesting incident occurred during the progress of "Le Médecin Malgré Lui." Master A. Jourdan, who had met with an accident the previous evening, and had been obliged to undergo somewhat severe surgical treatment, nevertheless appeared to play his part as *Valère*, a display of pluck that won him a burst of hearty applause from his fellow-students. It had been announced that a collection would be made for relief purposes in connection with the Seismic Wave Disaster, and most prettily the thing was managed. Three tiny lads appeared upon the stage holding silk bags, and having addressed a gracefully worded appeal to the audience, the first speaking in Japanese, the second in English, and the third in French, walked round from seat to seat soliciting subscriptions. At a later period the three graduates of the year announced the result, three languages being again employed, when it was learned that 113 *yen* had been taken, and that the pupils had independently subscribed 65 *yen*. At the distribution of prizes, each fortunate lad was allowed to make choice of the hands from which he should receive the reward of his work, and it was significant to observe that though some few indicated their own fathers, and others the French Representative or the much-revered

The *Asahi* infers, from the absence of any reference to casualties to life in the official messages and from the distinct assertion of its own correspondent in that sense, that none of the citizens of Toyama was lost. Moreover, from the close agreement between the number of houses flooded, as given in the two messages—1,800 in that of the *Asahi's* correspondent and 1,500 in that of the Governor—and also from the correspondent's failure to make any mention

of houses washed away, the probability is that no such disaster occurred, though a message from the Kencho puts the number of houses carried away by the flood at 2,831.

KOREAN TOPICS.

The Japanese Chamber of Commerce at Ninsen has compiled a valuable report, giving a concise exposé of the relative position of Japanese and Chinese commerce in Korea during the last ten years. For the five years between 1885 and 1889, inclusive, exports and imports by Japanese merchants far exceeded those of their Chinese rivals. In other words, whereas the volume of commercial transactions that passed through the hands of Japanese merchants totalled between 1,000,000 and 1,400,000 yen, the Chinese trade fluctuated between the two extremes of 200,000 and 700,000 yen. However, with respect to the later progress of these two currents of Korean commerce, that under the control of the Japanese merchants now falls far short of the other. The comparative table shows that the rate of progress of Japanese business during the specified period was 62 per cent. and that of the Chinese 216 per cent. Consequently, Chinese merchants were more successful in pushing their trade with Korea than Japanese. During the four years ending 1893, the relative positions of the rivals presented the following aspect:—

	By Japanese Merchants. Yen.	By Chinese Merchants. Yen.	Difference. Yen.
1890	1,259,218	1,312,614	53,386
1891	1,426,463	1,738,044	331,581
1892	1,318,707	1,712,272	393,569
1893	845,349	1,589,126	743,777

Since the war, the relative ratio that the commerce of the two nations bears to the sum total, has again changed, with the significant exception of the two months of March and April of the current year, up to which period the survey furnished by the report extends, and also to two other months in last year. To be more explicit, the volume of Korean commerce carried on by Japanese merchants during 1894 totalled 3,088,000 yen, as against 1,874,422 yen by the Chinese. This relative discrepancy was maintained during 1895 up to the month of August. But coming to September and also to November, the Chinese merchants passed their rivals, and did so again in March and April of the current year. It is apprehended, therefore, that the Korean market may again fall into the hands of the Chinese.

The most important questions of the day in Korean politics, writes the *Fiji*, from which this news is taken, are the return of the king to his palace and the entry of Min Yong-chu into the Cabinet. A recent rumour from Seoul reports that the Korean Government intend repairing a detached palace situated close by the Russian Legation, at a cost of about 40,000 yen, so as to make it suitable for the residence of the king. The *Fiji*, however, can not readily credit this news, and thinks that it may be a subterfuge wherewith to quiet local agitators who declare themselves dissatisfied with the continued residence of the king at a foreign legation. The entry of the head of the Min faction into the Cabinet is still problematical, chiefly because he maintains a prudent hesitation at coming forward. It is evident, however, that he must be ready to place himself at the head of the Government when the opportunity arrives. His adherents are exerting themselves to create that opportunity, but it is, of course, impossible to predict when it will happen.

A Chinese official is now in Ninsen with the avowed purpose of conducting preliminary negotiations for a renewal of the Treaty between China and Korea. He has told the Japanese Consul in that port that he carries with him a draft of the Treaty, and that he is going to see the British Representative in Seoul and the Korean Cabinet upon the matter.

The problem of creating a central bank to facilitate the circulation of money in Korea, is in a fair way to consummation. An Kei-su and a few others are the principal promoters of the

scheme. Preliminary arrangements having been completed, the prospectus has been issued over the joint signatures of the Ministers of Finance and of Foreign Affairs, and six others. The main points in the prospectus are to this effect:—

- 1.—To limit the capital to 100,000 yen.
- 2.—To call the Bank the Great Korean Bank, and to open it as soon as a third of the capital has been raised.
- 3.—To make use of the new coins.
- 4.—To undertake matters relating to the Revenue and Expenditures of the Government, and the collection of the land tax throughout the country.
- 5.—Not to issue paper notes.
- 6.—To raise funds as much as possible from Koreans, to avail of American capital should any deficiency occur, but not to permit Japanese to become shareholders.

Chhun-chhon and Kan-neung, in Kang-wō-do, and Chhung-ju in Chhung-chhōng-do, are now infested by mobs. The first town is besieged; at the second, the Government troops have sustained a disastrous defeat; while in the vicinity of Chhung-ju the insurgents are spreading disorder with impunity.

The correspondent of the *Asahi* describes the devastation wrought by the mobs in various localities of Kyōng-Kwi-do, based on the information supplied by a Japanese who lately returned to Seoul after travelling through those localities. The most extensive damage was in I-chhōn. This town contained over 700 houses, but all, with the single exception of the District Office, have been burned, together with the stores containing provisions. The inhabitants, reduced to the verge of starvation, are barely keeping body and soul together by picking the ears of green barley. The Japanese troops despatched to I-chhōn when that place was menaced by mobs, returned when the telegraph line was cleared of the troublesome pests, and now Japanese gendarmes and troops stationed at distances of 12 to 13 miles, guard the wire. They suffer great hardships. It must be remembered that they are only a handful of men, but are often obliged to deal with mobs numbering several hundreds. At present it is almost impossible to distinguish lawless marauders from peace-abiding farmers, for not a few of the latter are prone to join a pillaging party on occasion. They work in the field, but have arms secretly concealed about them. Whenever a small party of Japanese or Korean merchants happen to pass through a place inhabited by such people, and when the latter think that they can easily put them to the rout, the farmers suddenly take up their guns and fire upon them. They then rob them of their goods. Consequently, it is dangerous to travel through such places in small numbers. The Japanese troops guarding the telegraph line are doing inestimable service to wayfarers. They patrol the line every day and are generally followed on such occasions by a number of Japanese or Korean travellers, who are thus enabled to proceed on their journey unmolested. It is owing to the protection thus afforded by the Japanese troops that Korean merchants are enabled to go to the vicinity of Changho-won, noted for the production of rice and other grain. However, the towns and villages along the highway connecting Fusan and Seoul have been desolated by the mobs, and in almost every place the people are on the verge of starvation.

CHINESE ITEMS.

The Korean correspondent of the *North China Daily News* continues to disgrace that journal by his displays of shallow prejudice and singular gullibility. In the sequel of various remarks not worth detailed reference, his latest letter says that, were the king to return to his palace, "he would be killed (unless he had a strong foreign guard) by some fanatical *roski*, if not by an agent of the Japanese Government, as was his consort." No person of the most ordinary honesty can any longer pretend to think that Viscount Miura acted as the Japanese Government's agent in the events culminating in the Queen's assassination. It is strictly consistent with the extraordinary prejudice shown

by the *North China Daily News* from the outset of the war between China and Japan until the present moment, that it should continue to publish the letters of a correspondent who long ago became a by-word in the East for untruthfulness, silliness, and exaggeration. We doubt whether any one of the ignorant Chinese that spread among their countrymen such strange stories of foreign doings and habits, has ever been so conspicuous for perversion and distortion of the truth as the leading Shanghai Journal's Korean correspondent.

The railway between Tientsin and Peking is progressing rapidly, and is expected to be in operation next year. It is to run along the eastern side of the Peiho, that is to say, the opposite side from Peking and Tientsin. The Peking terminus, which, according to the original plan, was to have been some 16 miles from the capital, is to be carried to within 3 miles, an immense improvement. Where the Tientsin station is to be we have not yet learned, but the natural supposition is that the line will form a junction with the present Tongku-Tientsin road, in which case the station will be opposite the lower part of the foreign settlement.

In the last annual report of the Indo-China S. N. Company, we find this clause:—

The Directors very much regret having to report that their claim for the destruction of the steamer *Kowshing* still remains unsettled. Correspondence is going on between the Foreign Office and the Chinese Government, but no final decision has yet been arrived at. The Directors still look for suitable compensation being made, and they have used every effort in their power to urge increased expedition on the authorities having charge of the case.

It is plain, from the language here employed, that the question lies entirely with the Chinese Government, and that the terrible breach of international law—apart, of course, from the offence against humanity—laid to the charge of the Japanese, has not been supported by juriconsults.

Concerning the new German Minister to Peking, the *North-China Daily News* translates the following from the *Neue Freie Presse*:—

It is learnt by wire that the German Envoy to Morocco, Baron Heyking, before taking up his post, received the appointment as Minister to Peking. Great political importance is attached to this change. It has long been a matter of surprise that the present German Minister to China kept himself so much in the background in the discussion of the Far Eastern Question, and that in Berlin the advice of the former Envoy to Peking, Herr von Brandt, should have been so constantly sought. The explanation of this is that Herr von Brandt was in Germany when the question reached an acute phase, and that there was no one in all Europe better acquainted with the state of affairs in Peking, from both their political and economic points of view. Baron Heyking has never previously been in the Far East; but he is said to take with him to his new post—besides a thorough acquaintance with the economic situation in China and a certain degree of acuteness in business matters, which he has already displayed at Chicago, Valparaiso, Calcutta, and lastly Cairo—a complete knowledge of the Russian language and relations, as he was a Russian subject before entering the German diplomatic service. In view of the part which has fallen to Russia since the recent occurrences in the Far East, and in view of the importance to German export trade of the opening of the enormous Chinese market, the utmost demands will be made on the German representation in the Far East, and to fulfil those demands Baron Heyking, to judge by his former record, seems to be the right man in the right place.

The project of permitting the Chinese Government to raise the duties on imports from a basis of 5 per cent. to one of eight per cent., is supported by the *North-China Daily News* on the ground that it will be impossible for China to find, in any other source of taxation, an equivalent for the loss of customs revenue to which she is now subjected in connection with the loans for paying the Japanese indemnity. Our contemporary's contention is that any attempt to impose a new tax or to increase an already existing tax would lead to rebellion. The inference, then, is that China's only elastic factor of revenue is her customs dues. That is an exceedingly straitened condition. On what

security, we should like to know, is she to raise her third loan for paying the Japanese indemnity, or, supposing it raised, what means has she to discharge it?

Shanghai has lost one of its "old residents" in the person of Mr. William Brand, who expired at Royat, in France, on the 26th of June, after a brief attack of dysentery. Mr. Brand was a general favourite, and his death at the early age of 58 is most painful news.

We referred recently to a riot raised by the silk-weavers at Soochow, who objected to have the loom tax imposed on the actual number of looms at work instead of the much smaller number that they represented as being at work. It now appears that this tax was originally a voluntary contribution made by the weavers, after the Taiping Rebellion, to aid in maintaining military and naval guardians of the peace, towards whose support the other inhabitants of the city and its environs were too poor at the time to contribute. The contribution was to be paid for ten years only, but at the end of the decade (1874), it was not only contributed but increased from 500 cash per loom monthly to a somewhat larger figure not mentioned in the correspondence from which we take these facts. At the end of a second decade, the thing had become "old custom" and the weavers found themselves saddled to all eternity. What made matters worse was that it had become habitual for the foremen of factories to deduct 20 per cent. from the workmen's daily wages (averaging 25 cents. daily), a sum that left a large margin for squeezing. However, the official fiat has gone out against the workmen. The tax must now be paid on 2,300 looms, instead of on 1,500 only. The total involved is only \$15,505, not a very great contribution after all.

The passage, through the sluice at Tsing-kiangpu into the Grand Canal, of the prescribed fleet of 950 boats bearing tribute rice to Peking, was attended this year by the usual snake worship at the Taiwang temple. It is taught that the deities of the Grand Canal come down that big ditch in the form of water snakes, in order to be caught, put into glass cases, and worshipped with prayers and theatrical performances, whereat there is large occasion for the consumption of pea-nuts and tobacco.

THE SEISMIC-WAVE DISASTER.

We beg to acknowledge with thanks receipt of the following sums towards the relief of sufferers through the terrible disaster in Iwate, Aomori, and Miyagi Prefectures:—

DEATH OF SIR JOHN PENDER.

We are informed by Mr. J. P. Mollison that he has received a telegram announcing the death of his uncle, Sir John Pender. The sad event, which occurred on the 7th instant, was not unexpected, Sir John having been in a precarious condition for some time past. We take the following notice of the deceased from *Men and Women of the Time*:—

[PENDER, Sir JOHN, K.C.M.G., F.R.S. (Edin. and London) F.S.A. (Scotland) J.P. D.L., second son of the late James Pender, of Vale of Leven, Dumbartonshire, was born in 1816. Sir John had the advantage of early education, and of good Scottish parents, who passed him on expeditiously from the school of his native place in the Vale of Leven to the High School of Glasgow, where he may be said to have had a free choice of any profession or trade to which chance might lead him, and to which learning was a necessary passport. While at the High School he was observed to occupy much time in drawing, and on an occasion of free competition, submitted a design for which he was awarded a Gold Medal. On leaving school he went into the accounting branch of a factory, and in two or three years (about the time he had attained majority) he was general manager of the business. The life of Sir John divides itself from this point into two parts:—(1) as a merchant in Glasgow and Manchester, and (2) as introducer, executant, and extender of submarine and sub-oceanic telegraphy. In Manchester Sir John rose to the front rank in the export trade of that vast emporium of manufacture, and there laid the foundation of his still more conspicuous course in telegraphy; not only as regards ample personal means for a work that was to task the richest men, but also a thorough commercial knowledge of India, China, America, and the colonies, combined with lofty faith in the possibilities of British enterprise. When the immense Atlantic project was undertaken he was one of the 35 who contributed £1,000 each to let the experiment be tried. His name appears from that time in the list of directors of the Atlantic Company over seven or eight years, during which cable after cable had failed. The final crisis of Atlantic prospects came when the ship "Great Eastern" steamed out, with capacity far greater than any other ship before or since, and a cable more nearly perfect than had before been made; yet the great ship parted with this precious cargo in mid-ocean, and the Atlantic Company was financially ruined. Its appeals to the public for subscription of capital had hitherto fallen flat; they were now utterly useless. But not so thought Sir John Pender, and others like him, as to the attainable undertaking, and the Anglo-American Company (of £600,000) was then formed to lay a new cable and to recover the former if possible. Negotiations with Glass, Elliot and Company, and the Gutta Percha Company, therefore had been under arrangement. But difficulties arose between the two manufacturing Companies. The Gutta Percha Company found that it was surrendering its accustomed business in favour of a supreme object, and in the failure of that one purpose might lose all. It was here that the genius of Sir John Pender rose to heroism. Delay would have been fatal to an Atlantic cable, and to all the capital, approaching two millions, that had been expended. The Gutta Percha Company were asked by Sir John what amount of guarantee they required. A quarter of a million sterling was the answer. "Will you take my personal guarantee for that amount?" "Yes," "Well, you have it." And in a few weeks more, Glass, Elliot and Company and the Gutta Percha Company were formed into the Cable Construction and Maintenance Company with Sir John as chairman. The cable was not only laid successfully—luckily for Sir John and the world—but the same expedition that laid it, recovered the one that had been lost; and the two companies, Atlantic and Anglo-American, were brought back successfully to life and land. This result would have been enough to crown the adventures of any one man, but Sir John had no sooner seen the Atlantic cables established than he proceeded to work indefatigably in the organisation and development of the Mediterranean, Eastern (Indian and China), Australian, South African, and direct African cables—in short a world system, of which the American is now but a segment. Sir John is now at the head of the Eastern, the Eastern Extension, the Cape and others systems outside the Atlantic—in fact, he is virtually the dominant spirit of all submarine telegraphy. He is chairman of the Direct Company, having a cable across the Atlantic also, and his influence is present in all directions where submarine telegraphy is active, and in these days it is difficult to say where it is not active. Sir John Pender was a merchant in London, Glasgow, and Manchester; he is a D.L. for Lancashire, and Middlessex, a J.P. for Middlesex, Manchester, Lancashire, Denbighshire, and Argyllshire. He published in 1869 "Statistics of the Trade of the United Kingdom with Foreign Countries from 1840," was member for Totnes 1866, and was first returned for Wick Burghs in 1872, which he represented in three Parliaments. Sir John has shown great interest in technical education, and gives a Medal annually to be competed for by the students at the College of Science, Glasgow. On the occasion of quite a recent visit to Constantinople, Sir John Pender was sent for by the Sultan, and in recognition of the great part he had played in connection with submarine telegraphy, his Imperial Majesty presented Sir John with the Grand Cordón of the Medjidieh. This is a highest honour the Sultan can grant to an alien. Sir John, years ago, was the recipient of the Knight-Commandership of the St. Saviour of Greece, and has also the Order of the Rose of Portugal. He is also Knight Commander of the Order of St. Michael and St. George. He married, first, 1844, Marion, daughter of Jan. Cairns Esq., second, Emma, daughter of the late Henry Denison Esq., of Daybrook, Notts.]

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE SEISMIC WAVE FUND COMMITTEE.

SIR,—In accordance with your request of this morning, permit me to make the following statement in regard to what has been, and is being, done, by the Committee that went from Yokohama to the region devastated by the recent Seismic Wave:—

We visited all that part of the devastated region lying between Shizukawa, in Miyagi Prefecture, to Kamaishi, in Iwate Prefecture, and spared no pains in trying to get at the true situation. We visited the hospitals and conversed with those in charge, talked with people by the wayside, questioned the local officials, learned what was being done by the neighbours of the suffering, and then asked ourselves the question, "How can we best administer the aid we were sent to administer?" Some one may exclaim, "But were the people not starving while you were investigating?" In reply, I would say that the first thing that struck us was the spontaneous way in which local aid was being sent in. At Shizukawa there was an abundance of provisions, and they were being sent out systematically and rapidly, and this we found to be the case as we advanced. Further than this, the Government has undertaken to feed the sufferers for some time, and they are housed in the hamlets and villages back from the sea.

The question now arose as to what form of relief would be best. Should it take the form of gifts of money to restore homes for the survivors? Household goods? Or boats and nets for them to return to their work as fishermen? We canvassed the whole matter carefully, and arrived at the conclusion that the best assistance we could render would be in the form of boats, with hemp for nets where the men are able to make their own nets. Their fishing season is now on and will last till winter, and if the men have their boats and tackle they can return to their occupation, and thus provide for the winter.

Now as to the method of providing the boats. It was quite obvious that the boats could be built there much cheaper than anywhere else, as the timber is there. We were able to fix, with a fair degree of accuracy, the amount that it would cost (differing slightly in different places), to build the kind of boats needed.

Again, it was clear that we would be at a disadvantage if we endeavoured to oversee the building ourselves, and here we felt obliged to call in the aid of the officials. We have asked for a list of the names of those, in the villages we are aiding, who are deserving, and we say to the local officials "Our funds will permit us to furnish so many boats." We deposit the amount necessary to build them at the Kencho, and they go forward at once with the building so that the men may have the boats as soon as possible. When the boats are ready for delivery, they will be handed over to the men, who will give a receipt for them, the same being our vouchers to those who sent us that the money has gone where your subscribers intended it should go. After talking with some of the men themselves, the local officials, and also with some of those that have subscribed liberally, we have yet to find the first dissenting voice to this method of relief. All say that it will be permanent and practical. The great obstacle in the way of any other form of relief is the difficulty of transportation. Take Kamaishi, which all know suffered so much. It is sixty miles from the railway, and everything must be carried on pack-horses. The nearest point in Iwate to the railway is about forty-five miles. Then the transportation by water is slow and very unsatisfactory, while what we purpose doing can be done on the spot with no cost for transportation, and at the same time is the most acceptable form of relief we can offer.

Besides the boats and hemp, we shall provide cases of canned milk for the hospitals, and the members of the committee still in the field will purchase and forward some bedding which was asked for, and is needed at certain points.

Not having seen the local papers since I left for the North, I do not know what may have been written in regard to the devastated region, but take it for granted that your readers have had a surfeit on the matter. Starting out to make but a simple statement of what the committee has been doing, I forbear from anything more for the present; but if there is anything that I have seen that would be of interest to your readers I shall be most happy to furnish it for them.

Trusting that our methods will meet the hearty approval of all, and standing ready to answer any

questions that may be asked or give any information that may be in my power to give, I remain, yours very truly,

J. G. CLEVELAND.

Yokohama, July 6th, 1896.

PRAYER AND OBJECTS OF WORSHIP.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the Monthly Religious Summary published in your columns a few days ago, a Japanese writer is represented as holding that the efficacy of prayer is not affected by the object of worship. It may interest some of your readers to know that an eminent Boston lecturer, the Rev. G. E. Winchester Worrald, Rector of Trinity Church, gives expression to the same conviction in a course of Lectures on "The Expansion of Religion," delivered before the Lowell Institute, a few sentences from which I append:—"I am glad to believe, and I do believe, that the idolator, kneeling in blind hope or stupid terror at the feet of his hideous or fantastic idol, is as truly religious as the Romanist, hushed and awed, at the Elevation of the Host, or as the Liberal, passionately moved by the splendid utterance of the great divine truth of the Fatherhood of God. I can imagine myself kneeling in a great temple of Buddha, in Japan, or in the magnificent mosque of St. Sofia, by the side of the Buddhist or the Moslem, sure that my prayer and theirs reach the listening ear of the one Father which is in heaven, and that God answers us both. It has ever seemed to me," he goes on to say, "a bit of logical folly to point to the universal belief in Deity as proof that there is a God, and in the same breath declare that the god of the pagan and heathen is no god at all. Abruptly to convince the heathen that his idol god is nothing, is to do one's best to plunge him into atheism, and not to lift him up into Christian theism." "I think," he further says, "if I were a missionary in Japan, I should begin my work of unfolding Christianity by worshipping Almighty God, Maker of Heaven and Earth, in a temple of Buddha, and I should explain and defend my act by quoting the words of Jesus: 'I am come not to destroy but to fulfill.'"

I am, Sir, yours faithfully,

COSMOPOLITAN.

July 3rd, 1896.

DR. KATO'S DOUBTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is surprising that ere this no communication has appeared in your columns concerning the remarkable deliverance of Dr. Kato, referred to in your issue of June twenty-second.

I shall not take space to attempt an answer to his answers to the reasons commonly adduced when prostitution is condemned. I find it hard to believe that any one could find such answers satisfactory to himself.

He is reported as saying that "no affair either tacitly or implicitly sanctioned by law can be absolutely wrong." Why not? We can admit only the converse, that no affair absolutely wrong ought to be sanctioned by law. That is the position taken by the British Government, and may dear old England hold by it, how great soever be the pressure brought to induce her to legalise vice.

To us who come from the West, the feeling after reading the article referred to must be one of bewilderment, as we become conscious of the moral standards around us. As one breathes the pure air of his native hills and does not think of it, until introduced to air which is impure, so by such an article we begin to realize somewhat of that which we owe to the Christian civilization in which we have grown up. And when one holding so high a position in the intellectual world of Japan gropes in doubt upon such a question, we are led to ask if, outside of Theism, it can be proven that what in Christian lands is esteemed the grossest of vices is really wrong. It comes back to the question: if no personal God, what are right and wrong? It might be thought that the moral instinct would be sufficient, but it is evident from the article under consideration that it is not. Is there any other sure support than that which held Joseph in the hour of stress; "How then can I do this great wickedness and sin against God?"

I hope I misunderstand, but it is a fair inference from the *Japan Mail's* synopsis that the ex-President of the Imperial University of Japan, in a *Woman's Magazine*, says to her, of whom the Bible says, "Remove thy way far from her, and come not nigh the door of her house," that, so far as he now sees, her occupation is not wrong; and as "in the twilight, in the evening, in the black and dark night," the student class, who

throng by tens of thousands the Latin Quarter of Tokyo, go "the way to her house," they still the voice of conscience by saying to each other as they go, that one whose name commands so great respect, has publicly written that, so far as he now sees, not only can their conduct not be proven to be wrong, but that it *cannot* in itself be wrong since it has Government protection. Heaven knows, and all good men ought to know, that the young men who reside under the shadow of the University do not need any such easy grading of the road to hell.

In the book of Proverbs we hear one mourning at the last when flesh and body are consumed and saying, "How have I hated instruction, and my heart despised reproof; and have not obeyed the voice of my teachers." But, whatever be the physical and moral wreckage, the young man who has come under the influence of such teaching cannot upbraid himself by saying, "I have disobeyed the voice of my teachers."

During seven years of service in Japan, I have not met a stronger argument for the continuance of schools permeated with Christian instruction than this bewildering deliverance of the Imperial University's ex-President.

I am, your obedient servant,

B. CHAPPELL.

Aoyama, Tokyo, July 2nd, 1896.

REUTER'S TELEGRAMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your Reuter is a peculiar sort of telegraph agent: he never sends a telegram to your paper which contains anything good with regard to Germany, whereas you are provided by him with plenty of despatches of the most unfavourable character. These news are partly true, partly not. Of course, if they are true, we can only say *shikotaganai*, but in case they afterwards appear to be wrong, I scarcely remember that they have ever been corrected. Among many other cases I shall take the liberty to mention only the last one. In the days of the 25th anniversary of the 'Frankfurter Frieden' you published a telegram saying that a great many people (I forget the number) were imprisoned during the ceremonies on a charge of *lesa majestas*. Will you allow me to correct this false news by the following translation which I take from the *Vöglische Rundschau* May 17th, 1896:—

"The *Volksstimme*, a social democratic paper in Frankfurt-on-the-Main, published on the 13th of May the news, which entered also into other papers, that during the days of the celebration 40 people were imprisoned on the charge of *lesa majestas*. The official police report states that, during that whole time, not one single case of that kind took place, and that therefore the report of the *Volksstimme* is a mere invention from beginning to end with the apparent aim to bring subsequently a disharmony into the celebration, which in fact went on in a perfectly undisturbed manner."

There are some wicked tongues which say that every newspaper has the news agent it deserves, but since I can not assume that you are so partial as to favour such a system of telegrams, I, with many other readers of your valuable paper, should be very glad if you would instruct your agent to be either more careful in selecting his news or at any rate more inclined to correct them afterwards if necessary. For though I can not expect that you take any consideration of your many German subscribers, still I think that your English readers prefer to hear also with regard to Germany, the truth, and the whole truth, and nothing but the truth.

I beg your pardon for trespassing on your space, and remain, Sir,

Yours truly,

DR. M. CHRISTLIEB.

Tokyo, July 4th, 1896.

(Dr. Christlieb is mistaken if he thinks that we have no consideration for our German subscribers. Nothing could be farther from our wish than to publish anything unjustly derogatory to the credit of Germany or the Germans. It is exceedingly difficult, however, to exercise such supervision as would meet the views of our correspondent, and as to arranging that only true and well authenticated intelligence shall be sent over the wires, we fear the thing is hopeless. We thank him for the correction he has made, and shall be always grateful to have attention drawn to such errors.—*Ed. J. M.*)

Reuter's Telegram Company, Limited,
Yokohama Agency, July 9th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Dr. Christlieb appears to labour under the impression that all the telegrams appearing in the columns of your paper are supplied by Reuter. As you, Sir, and the majority of your readers very well know, this is not the case, and the telegram to which Dr. Christlieb refers was not furnished by Reuter, but was reproduced by you from an American paper.

Yours truly,

J. K. TRAFFORD,
Reuter's Agent.

FOURTH OF JULY IN YOKOHAMA.

Saturday was a dull, overcast day throughout, and old residents declare that it was the coldest Fourth of July that they remember. The temperature at one time fell to 61°, but later in the day, when the drizzling, dreary rain had ceased and the sun tried to struggle through the heavy rain-clouds, the thermometer rose again, and 72° was reached. This is an exceptionally low temperature record for July. Owing to the rain, the baseball match between the Tokyo Higher School and the Y. C. & A. C., arranged for 10 o'clock in the forenoon, was postponed till 3 in the afternoon, by which time the Cricket-ground had dried considerably. The game attracted a large number of spectators, among whom much excitement prevailed, especially towards the finish, when fortune still hovered but half determined over the two teams. The victory of the local nine was received with rousing cheers. During the morning, Admiral McNair and Staff were at home on the U.S.S. flagship *Olympia*, as were also the Commanders of the U.S.S. *Machias* and *Detroit* on their respective vessels, and most of the American community made calls upon them. A series of boat-races and other sports between the members of the various U.S.S. ships' companies took place, and some of the contests were most keenly fought out. Of course fire-crackers and bombs were exploded everywhere throughout the day, commencing at a very early hour and finishing about midnight, while the American warships kept up a continual hooting, shrieking, and howling on their fog-horns, sirens, and steam whistles, making a most discordant din. The yacht-races attracted a good deal of attention during the latter part of the afternoon. Mr. Scidmore's *Daimyo* won the American Minister's Cup and the Weston Challenge Shield; the *Sodeska* won the 26-raters' race, and *Eclair* was the winner of the B division contest. Towards dusk, the Grand Hotel, the American Naval Hospital, and several private houses belonging to American citizens, were illuminated, and crowds began to gather along the Bund to watch the display of fireworks. Two out of the three U.S. warships were beautifully illuminated, and each had their search-lights in play, adding greatly to the success of the evening's pyrotechnic programme. A drizzling rain set in about half-past nine, developing into a heavy downpour by ten o'clock, and this drove many people home, though the fireworks continued for another hour. The display was finer than in former years, and it was a pity the rain came on again to mar the conclusion of what, despite the climatic conditions, proved an enjoyable day.

THE BASEBALL MATCH.

The game commenced at 3 o'clock, instead of 10 a.m., owing to the heavy rain of the early morning making the ground too swampy for play. In the meantime, the Tokyo players had been entertained to lunch in the Pavilion, the repast being furnished by Mr. W. N. Wright. A large number of spectators were on the ground when the game began and they increased considerably as the afternoon wore on. Yokohama went in first to bat and made 5 runs; the Tokyo Higher School failed to score that innings, but in the next drew level. In the third innings, Yokohama made two runs, and Tokyo only one. A change came over the play in the next innings, the Tokyo lads, by excellent fielding, putting out the home side for one run. Then they went in and scored 5, the game thus standing, Yokohama 8, Tokyo 11. From then on the game grew more and more exciting, neither team letting a chance go by. Abel made some pretty catches in the right field, while Church, a naval player, relieving Eckhardt as pitcher, made things more lively for the visitors, whose propensity for stealing bases he greatly checked. At the close of the sixth innings, Yokohama had made 10 runs and were two behind the Tokyo Higher School's score. In the seventh and eighth innings neither side managed to get home, the men being either struck out or put out on 1st and 2nd base. Excitement became intense when Yokohama went out to begin the 9th and last innings. They had to make three runs to win, and when two men were caught out without scoring it looked all over but the cheering. Then Dame Fortune went boldly over to their side, and with the assistance of an error or two by the Japanese fielders they managed to get four runs, thus passing their opponents' score by two runs. Still the Japanese had another innings to play and the possibility of a tie was very imminent. But the home team, pulling themselves into better combination than before, prevented the visitors from scoring another run: the game thus ending in a victory for Yokohama by two runs. The applause—supplemented by many fire crackers—

that greeted the hoisting of the telegraph, was frantic; then the Yokohama captain called for cheers for the Tokyo Higher School. These were given in right good earnest. Competent critics agree that the Japanese team played a neater and better game in the field than did their opponents—the combination produced by constant practise being pretty to watch; but the home team beat them easily in batting, sending the ball further afield with the greatest ease. Mr. W. S. Stone was umpire, and Mr. Geo. E. Rice scored. The following is the detailed score:—

GREAT SEISMIC WAVE.

In a third letter from Morioka, the Rev. Rothe-say Miller writes:—While at Kamaishi I learned that the villages of Toni, 3½ ri towards the south, in the Kesen district, and Riotsi, 1½ ri north of Kamaishi, had been almost obliterated. Although it seemed difficult to realize that any place could be in a worse plight than Kamaishi itself, I determined to go and see for myself. At present there is no way of getting along the coast road except by walking, for the horses are used in transporting baggage. It will be useless for any one who is not a good walker to attempt any distribution of charity or examination of the devastated districts.

The coast scenery is very beautiful. When I set off for a ten ri walk to these places, everything was so bright and calm, with hardly a ripple on the water, that it was hard to realize that this same water had within so short a time risen in angry flood against the land, and even now hid so much of death and destruction in its bosom. I went directly from Suzuko, where I was staying, through the villages of Matsubara and Urei-shi, crossing the little stream, which empties into the bay under the railway bridge. The whole way was lined with evidences of the flood, stranded boats, wrecked houses, and broken timbers. One part of a rice cleaning mill had been carried under the railway bridge and deposited in the field beyond, while the little tumbledown houses, which were only across the stream hardly four feet wide, were left standing. The very chickens were running in and out as if nothing unusual had taken place so lately. In one place I was obliged to go around the prow of a large Japanese boat which was pointed up the mountain as if it too wanted to try the ascent; in another, a foreign rigged boat was landed among the houses which were still left standing. The paddy and wheat fields were beaten down and burnt brown with the salt water, generally covered with shingle or filled with black mud and brine. The people were half-heartedly gathering the floating roof-shingles or pieces of wreckage, evidently on some principle of selection, but what it was I could not discern. I was impressed with the indifference of the fishermen in regard to the wood washed up on shore, though generally they are so eager to secure every stick of timber which can serve them as fuel, and here was enough timber to supply them with fuel or building material for years.

The first climb is from the little village of Oreishi, over the hill to Heita. All these villages are included in the town of Kamaishi. I reached Heita in about an hour, and walking across a wide gravelly beach, and then over what had been grain fields, sat down for a few minutes beside some men who were putting up houses or sheds. One old man had a jagged wound over his left eye as if made by a three-cornered stone. He seemed to have some impediment in his speech, for although I have been 24 years in Japan, and eight in Morioka, yet this old man's language was utterly beyond my comprehension, I could not make out but one word

in a sentence. However, from what the younger man said who was with him, I understood that the *oji san* was the only one left of his household. They showed me a tree where two men had taken refuge when washed out by the returning tide. The lower limbs of the tree were wrenched off and it was evident that the water had been ten or twelve feet high; the men, however, said that farther up it had certainly been 20 feet, because it had covered the top of some building of that height. Out of the little village of 40 houses only 13 were left. They could not give me the number of people lost, but there had been 70 bodies buried. There seemed to be more houses here than in some of the other villages, as they were built on the high bank of a little brook which ran through the place.

From Heita the road goes up over a second hill much higher than the first. It is supposed to be two ri to Toni, but the ri seem very long as one wanders through the valleys and over the hills. On descending to the village of Toni, a gruesome sight greets the traveller. At the entrance to the village, on the bank of a little stream, there had been thrown right across the road the remains of a house, under which were the decaying bodies of some of the villagers, and as it blocked the way it had been burned, and there were the bones lying among the ashes. From here all the way down the stream were scattered boards and timbers, but no parts of houses which kept their shape. A heavy stone, "god" they called it, but it was only a stone inscribed with the name of a local deity or guardian of something, that had been tossed away from its pedestal and carried up stream some twelve feet; beside it in the stream an oil-can had been completely flattened against the stones by the water in its backward rush to the sea.

As I turned to the right, up the open valley, around the rock against which the water had broken and divided in its path of destruction, there was a little hill which jutted out some fifty feet high from the water line. Ascending this were steps cut in the rock winding up to a little *tera*. This was the only house left in the village, and to this I was directed for information of what had happened. On ascending the platform I saw in a little shed outside the house several men, women, and boys sitting round a fire where mochi was steaming. In the house an old man was giving the details of his experience to two reporters, Mr. Yokokawa, of the *Asahi*, and Mr. Ikegami, of the *Chuo*. I joined the group and sat down on some straw bags. The old man said that on the evening of the 15th, he had gone up to the temple to have a game of go with the priest there; they had played one game and were at the second when they heard the noise of the waves crashing down the houses. Opening the *shoji* he saw that the water had risen to the platform of the temple. Between the coming of the first and second waves he remained in the house, so he knew that there were two. The second was, he thought, about 30 minutes after the first and was not so high, not coming quite up to the platform of the temple. He thought there was also a third wave. Hearing calls for help he took a lantern, and holding over it an umbrella to keep it from the rain, he went round the edge of the hill through the bamboo and trees, trying to find those who were calling; not discovering any one he returned to the house. Again hearing a voice, and this time right under the temple at the back, he went out and found a young woman and her child, who had managed to climb up the perpendicular bank. This young woman was some sort of connection of his and used to call him "father." On speaking to her afterwards we learned that she was the daughter of the keeper of the hotel which was situated on the beach, and at the time of the flood was lying down with her child but had not yet gone to sleep. The house was crushed, and she, still holding the child, was swept some distance out to sea, but where it was or how long it took she could not say. She thinks her head was knocked against a rock, as her ear was slightly injured. It seemed a very long time before the second wave carried her in again and landed her behind the temple. She saw the light, knowing where the old man had gone, and she cried out, "O To San, tasukete kuree!" There were some few others who were washed up to the edge of the trees. One little child of five years was found at the head of the valley "ki no uchi," which the old man, who did not see where the child was found, says may mean either "in the branches of the trees," or "among the trees." I think it was the latter from the formation of the ground.

There were 154 houses in this village of which this one temple remains. Out of 859 persons only 24 were saved. Of these 5 died of their wounds, 6 others were taken to the hospital for treatment and 13 are safe. Those rescued from the water were only 7 or 8. There were three boats containing 12 men, each away looking after the

nets. One of the men who had been in the boats said that they had noticed nothing remarkable till he saw that the light, which was in a basket on a pole at one end of the net, had gone out; they immediately started towards it. When they saw the great wave coming, their first thought was to make for land, but recognizing that this would not do, and as they could not go against the wave, they took a slanting course across the bay, where there was plenty of sea room. They shipped some water but were not damaged in the least. The man said he noticed three waves, and the intervals between them were about the same as those given by the old man: thirty minutes between the first and second, and more than an hour between the second and third.

While we were talking and asking questions it had grown towards noon, and the old man prepared for us *cha-tsuke*, which we ate standing in front of the little house, all that was left of the once prosperous village.

I returned to Kamaishi about 2 p.m. having promised to take a cup of tea with a gentleman in the town, but as I made my way through the ruined fields and debris I wondered whether I should be able to make the other three *ri* to the village of Riioishi and back before night, since I was already somewhat tired and had ten *ri* to ride next day, besides crossing the Sennin-toge. Mr. Motoki, however, said he should like to go with me as he had been wishing to visit the village, it being in the district with which he was connected, and so we started off over the hills.

Just before reaching the village of Riioishi proper, we passed through what was called Midzumi, a little place of only about six houses, which belonged to the hamlet of Riioishi. All the houses had disappeared, but we afterwards heard that one house was left, away at the head of the bay beyond the curve, which hid it from view. On coming down the hill to the place where Riioishi had been, there was nothing to indicate the great destruction to life and property which had taken place. The edges of the bay were burnt brown by the sea water, but that might be attributed to high tides. The village had been literally swept into the sea, there was hardly a stick to show where the place had been. There were, to be sure, two houses standing near the foot of the bluff some forty feet above high water, but there was nothing remarkable in their appearance, except that many things were lying in the sun, quite a number of large tubs, some mats, &c. Here a village of 140 houses containing 958 persons, had been completely blotted out, for the two houses left might be taken for tea-houses built for the convenience of travellers going along the coast road. The village was one of fishermen, there being only four farmers all told. Out of 58 boats belonging to it 54 were carried away and the remaining four were badly damaged, so that it was with difficulty they could get one ready the next morning to go out to the open sea and look for those who were drifting on the roofs of houses. A considerable number of persons belonging to the village were absent at the time of the catastrophe, either fishing or otherwise employed, so that the number of those alive are 111 males and 83 females, including the children.

Some five minutes before the flood came, some men who were standing on the beach saw the tide recede and heard what they took for thunder out at sea, but when they saw the wave coming there was hardly time to cry out, "Tsunami, tsunami!" before the wave swept down upon them, along with the falling houses. Of the 194 who are alive belonging to the village, only 22 were home at the time; eight of these were taken from the water, some few escaped to the mountains, and the remainder were in the two houses. Of the 750 who are missing only 80 bodies have been found. The water rose two feet in one of the two remaining houses, so that the wave must have been about fifty feet in height.

Here too there were remarkable instances of escape. A little girl, ten years old, called Sakamoto Kiku was found the next day, about 11 o'clock, floating on the roof of a house at sea. She had climbed through the window made for the escape of smoke in the kitchen, after the house was washed away. She was the only one of the family saved.

Naka Tomogoro, a boy of 15, was washed out to sea on a roof and then drifted back again by a subsequent wave. When he got near shore he jumped off and swam ashore and climbed the mountain, where he crouched under a tree, naked, and waited till he was found next morning.

Dr. Shiokizawa with his wife and one child were found on the roof of his house out at sea the next morning, but sad to relate, the other child, who had given them warning of the coming of the seismic-wave so that they had time to run upstairs, was lost.

Returning, we reached Kamaishi in a shower of

rain, which rendered everything drearier than before. After a hot bath and some supper, I slept well and long, as I was in no hurry to get off next morning, preferring to let the roads have a chance to dry somewhat from the drenching they had received. Next morning I started off in a blaze of sunshine for the pass at Ohashi, where I took lunch, hiring a man to pull my wheel up and down the pass as before, reaching Tono at five. When I say that it took two hours and a half to do four *ri* on a down grade with my wheel, any one can imagine the condition of the roads, not on account of the rain, however, for they were perfectly dry. I spent a day longer than I had expected at Tono, waiting for Mr. Chiba's daughter to arrive from Hakodate to attend the funeral of her mother. I left there at half-past one the next morning and made the ten *ri* in time to catch the early train from Hanamaki to Morioka. The first part of the road was so rough that it shook my light out some half a dozen times, and then I gave it up and went by the light of the moon, which was fortunately full. Still I was obliged to go very slowly and carefully to avoid the stakes in the new part of the road and the stones in the old. By half-past three I found I had gone not much over two *ri*, but the worst part of the road was passed and it was then light enough to see obstacles, so that I got into the station about ten minutes before the train started.

The Rev. J. P. Moore, writing from Shizukawa, says:—To state a few facts, and relate a few of my experiences, with the view of helping to awaken, if possible, still greater sympathy in behalf of the sufferers of this part of the "Seismic Wave" district, is the object of this letter. My wife and myself, accompanied by a trained nurse, and one other Japanese attendant, have been on the field now for five days. We obtained letters of introduction from the *Kencho* to the persons in charge of relief and hospital work in the stricken places, and have had ample opportunity of visiting all the hospitals and places desirable, getting the facts in each case. After two weeks, the work of clearing up the debris is still going forward, and, in a number of places, only just begun. One hundred and forty coolies from Sendai City, a detachment of eighty soldiers from the same place, besides some four hundred men from three of the neighbouring *gun*, have been sent to engage in the work of finding and burying the dead, and of clearing up the wreck. These men, working for the most part under the direction of the policemen and *Kempei* detailed for this purpose, have already done much in the time, but several more weeks will be required to bring order out of the confusion and desolation that exist in such large measures.

In many places the scenes that meet our eyes is that of houses, partially wrecked, piled on top of one another; or turned over and up side down, pushed into, and against, each other. Here and there one sees a thatched roof, intact, amidst broken fragments, with several holes at the top which, on inquiry, I found were made to search for the missing; remove the living who saved themselves by clinging to the inside rafters and timbers, and take out the dead who were buried under them. Broken furniture, stranded boats, washed far inland, uprooted trees, masses of wreckage, and debris, with smoke rising in volumes from the numerous fires by which the refuse matter is being burned, these are on every hand.

Where the wave struck with full force, nothing in the way of ordinary building could stand against it. The only exceptions noticed were several *Kura* which rose from amid the general ruin, solitary and alone, proving that they were strongly built and able to stand a heavy shock without yielding.

The village of Tanomura, in the Utsu district, consisted of fifty-five houses, and of these only three remain, these being on an elevation. And out of a probable population of three hundred and twenty-five, two hundred and eight met their death, and twenty were wounded. This place, as I saw it, is a scene of complete destruction. At Shizuhama, in the Shizukawa district, only six houses, out of the sixty-five before the wave, remain. The number of the dead and wounded aggregates two hundred and eight. If one takes up the official statistics, the figures run like this: in such a district there were four hundred and twenty-eight houses, and eighty-five were destroyed. Population, three thousand and nine, deaths, four hundred and twenty. In another district the number of houses is reported at seven hundred and seventy-two, and the number destroyed, at two hundred and sixty-two. Population, five thousand seven hundred and ninety-two, deaths, eight hundred and twenty-three. But these figures are misleading, in so far as they refer to districts, and not to the towns or villages inundated. If referred to these latter, the percentage of houses wrecked and of lives lost is much

greater, as seen in the villages already referred to.

The sick and wounded are well cared for. In the Motoyoshi district there are nine (9) hospitals in charge of competent physicians, sent by the civil and military authorities at Sendai. The work of caring for the sick and wounded in the hospitals and outside is under the supervision of the Red Cross Association of Miyagi Ken. It furnishes the physicians, nurses, medicines, garments, and food. This Association is proving itself a most useful auxiliary in the relief work of this overwhelming calamity, and is adding to its previous good record. In such a calamity as the present, the work of providing for the destitute is the most important, as it is the most difficult. This work taxes the utmost energies of the authorities, and should call forth the most liberal aid of the people.

In Miyagi-ken alone, the number of destitute families is 3,000, and the number of individuals in want, 20,000. What must it be in the Ken to the south of us, where the disaster was so much greater? The work of relief is going on in noble contributions of money, and provisions are flowing in freely. Present want, in the way of clothing and food, is well supplied, and there is provision in this Ken for a month ahead; so I was told by those in authority. But what of the future? There is a plan on foot by which to give to every family a sum of ten *yen* for putting up a temporary building in which to house themselves, and a sum of from 10 to 15 *yen* for boats and implements with which to carry on their business. To do even this much, and at the same time support these destitute ones until such time as they can help themselves, will require a large sum of money. And unless there is widespread charity and a most liberal response to the appeals sent out, there will be, during the coming months, great suffering.

THE RELIEF COMMITTEE.

The following letter has very kindly been placed at our disposal:—

The Rev. Albert A. Bennett, writing from Mizuno-Yokichi (Hotel), Sakari, Iwate Ken, June 30th, 1896, says:—We—Rev. J. G. Cleveland, Rev. W. S. Woden, and Rev. A. A. Bennett—have passed over the whole of the distance of Miyagi Ken north of Shizukawa, gaining all the information we could from every source, and endeavouring to utilize it for the purpose for which we have been sent. A summary of our present convictions, both negative and positive, may be interesting to those for whom we are acting. Let me say, however, that we are now examining Iwate Ken, where some of the conditions widely differ from those of its neighbour, and it must not be concluded that the favourable conditions of Miyagi extend across its borders. There is no need of rice or other food just now—Government now supplying its people in that line, and probably will continue to do so until they are able to shift for themselves. The sick and wounded are being well cared for in hospitals specially erected, or in the treatment there administered to patients coming from their own homes. These hospitals are under the care of the Red Cross Society. Perhaps one-third of the cases treated are pneumonia, resulting from the water taken into the lungs at the time of the flood. The other cases are mainly bruises and fractures. Many of the cases were unfortunately not reported for treatment till several days after they occurred, retarding, if not preventing, complete recovery. We saw one case of lock-jaw resulting from a wound that had not been cleansed of sand and other foreign matter. Both sexes and all ages are in the hospitals, one little child we saw there had lost every relation she had. At present, household utensils are being sent in from all parts of the Ken. The destruction of houses had been great, as all know, but the main timbers are left, and are usually quite sufficient to build again for the diminished population, although they are so far removed from their true sites, and so mixed up generally that it is hard to tell to whom they respectively belong. The loss of boats is sometimes less in proportion than the loss of life, so that they are not much needed. It is an interesting fact, and one bearing on the scientific investigation of the tidal wave, that fishermen far off from shore did not severely feel the convulsion of nature, and did not know till their return to the shore that there had been a tidal wave. This looks as if there had been some vast upheaval of the bottom of the sea rather than the eruption of a submarine volcano. Soldiers have repaired, or are repairing, the roads everywhere, and coolies are removing debris, searching for the dead, &c., &c. The well-nigh perfect system of Japanese registration, enables officials to know the name and age of every one

who is missing, and also what relatives, if any, may be called upon to care for the helpless. Bodies that have sunk are coming to the surface, and to-day we saw some that had just been found, and also groups of people watching the water where it was supposed their lost ones would rise. In some places every house has been broken down, and the wide-spread desolation is rendered more dismal by the smoke from burning thatch, which is also sometimes funeral-pyres of bodies calling for speedy cremation. The height attained by the destructive wave greatly varies, owing to the conformation of the coast. At times a funnel shaped inlet has forced the water with increasing speed and momentum to a vast height, as boats far inland testify, and as strong buildings would testify were there anything left of them beside broken timbers and dislodged foundations. At other times a narrow opening in the coast communicates with a much wider expanse of water between the village and the sea, and then the wave was not much higher than ten or twelve feet. Many sad cases are daily brought to our notice. One young man we met had lost fourteen relatives, of whom the bodies of only four had been recovered, told us that in addition to his house he had lost his wife, his father, and his daughter. One man, who escaped by climbing to a high place, tells of looking down and seeing the lanterns of the people on the house-tops and hearing them talk to each other when the first wave came in, but when the second came the lanterns all went out, and the voices were all silent, while the sea rolled away with its struggling captives. We have not yet given anything, preferring to survey the whole field first. Our present impression is that Iwate Ken is far more needy than Miyagi. We also now incline to a large donation of hemp from which fishermen can make their own twine and construct their own nets. Fishermen are the main sufferers; the fields of the farmers are not much damaged. The difficulties of transportation to this district are great. High mountain roads are not open to any kind of vehicle, and some of them not to a horse even. Still, there are roads from some of these towns to the railroad, and occasionally the Yusen Kaisha boats come to one or more of these ports. The towns which have suffered most loss of life are not those needing most, for they are gone whose goods are gone also. We may yet find places where boats are needed or where farmers should be aided, but our present opinions are the result of thorough investigation under official aid. We are expecting to start to-morrow for Kamaishi, which will probably be our furthest point. Between here and there are two of the worst places, and we may find it necessary to add to our list of things to purchase. Should nothing be needed but hemp (which the officials say the fishermen can make up for less than one-third the cost of nets) thousands of dollars might profitably be spent.

EXPERIMENTS FOR THE IMPERIAL IRON FOUNDRY.

REPORT BY DR. TAKAYAMA.

The object of the present experiments was to ascertain whether Japanese clay could be used in the manufacture of fire-bricks, and of what quality these would be, and also to test their adaptability for the various purposes connected with an iron foundry. The defects of bricks thus far produced in Japan are, first, insufficiency of heat-resistance; secondly, defective burning; thirdly, their comparatively porous nature. The experiments were principally confined to the improvement of these defects. The material used was the fire clay called Kibushi of Owari, Naigo clay of Iwaki, and pulverized "Roseki" (Kaolinite) of Mitsuishi, Bizen, their mechanical and chemical composition being as follows:—

VELOCITY OF WATER IN SCHÖNE'S ELUTRIATING APPARATUS.

Kaolinite	58.10	31.59	0.84	trace	0.27	0.61	0.35	9.09
Roseki	70.30	21.97	0.45	trace	0.47	0.06	0.30	4.55

Moisture deducted, the results were as follows:—

	Silicic acid.	Alumina	Ferric oxide	Lime	Magnesia	Potash	Soda	Loss on ignition.
	SiO ₂	Al ₂ O ₃	Fe ₂ O ₃	CaO	MgO	K ₂ O	Na ₂ O	
Kibushi	56.31	40.96	1.50	0.33	0.07	0.17	0.46	4.32
Naigo	60.73	35.13	2.44	0.46	0.11	0.33	0.79	1.1
Roseki	69.07	34.10	0.86	trace	0.30	0.07	0.80	3.81
Roseki	73.96	23.52	0.47	—	0.18	0.06	0.11	3.83

When conducting the experiments mentioned above, the clays were first elutriated and separated from foreign ingredients. One part thus purified was then calcined and this was mixed in certain proportions. In order to make the brick as fine as possible in texture, the proportion of calcined clay was somewhat increased. After the mixture had been placed in the mould and modelled into the ordinary shape, a pressure of 15 tons was applied to the surface with a hydraulic machine. The results of these experiments were as follows:—

Description.	Kibushi, light-yellow color, very dense at broken section, and no pores.	Naigo, light-yellow color, dense, tendency to brittleness.	Roseki, pure white, dense, tendency to brittleness.
Dimensions.. {			
Length	22.2	22.2	22.6
Breadth	11.0	11.1	10.1
Thickness	6.1	6.1	6.1
Weight of bricks	26.57	29.86	28.13
Absorption of water, per 100 of weight	13.09	10.05	12.41
Crushing strength	52.9	119.1	51.0
Contraction	No contraction	0.54 traction	No contraction

Action of Slags.. Not corroded.. Slightly corroded.

In the above experiments the measures used were in centimeters; weight, kilograms; crushing strength, kilograms per square centimeter.

The results of the chemical analysis were as follows:—

	Kibushi.	Naigo.	Roseki.
Silicic acid	59.72	59.15	61.72
Alumina	36.13	34.92	36.18
Ferric oxide	2.23	3.27	0.63
Lime	0.24	0.30	trace
Magnesia	0.57	0.72	0.29
Potash	0.84	0.86	0.98
Soda	0.32	0.82	0.10
Refractory quotient	2.04	1.35	4.41

SILICIOUS BRICKS.

Silicious sands of superior quality are not found in Japan. Those found on the shores of Kii and Izu can be used in the manufacture of glass, but not for bricks. Silicious rocks are, however, found in abundance, particularly in the vicinity of Mikawa and Owari. In former times these rocks were pulverized by water power and were used in the manufacture of pottery, and their use has recently become more extensive. These powders are very pure and can be used for bricks, but their cost is prohibitive. Still, compared with silica bricks imported from abroad, they are, to a certain extent, cheaper. According to the experiments carried on at the Arsenal, Koishikawa, Tokyo, in connection with manufacture of steel, silica bricks made of pulverized silicious rocks at the Shinagawa White Brick Factory, compared well with the silica bricks made in England, and were not at all inferior in respect of efficiency. The Shinagawa bricks were made of silicious powdered rocks from Ibaraki Prefecture.

The experiments at the Department of Agriculture and Commerce on the two kinds of bricks were as follow:—

	Shinagawa bricks, of white color, bear dark red spots, very dense at broken surface, and do not contain pores, sufficiently burnt, but are somewhat brittle.	English bricks, of yellowish color, are very dense at broken surface, and very firm in texture.
Dimension {		
Length	23.1	22.6

Potash	0.80	0.14
Soda	3.14	3.87

Basic Bricks.—Magnesia has not been found in Japan so far as known, but lime-stone containing

more or less magnesia is abundant. The following kinds of lime-stone may be used in making basic bricks.

Producing districts... MgCO_3 ... CaCO_3 ... Fe_2O_3 & Insoluble matter.

	MgCO_3	CaCO_3	Fe_2O_3	Insoluble matter.
Aso-gun, Shimozuke	40.88	55.89	0.78	2.41
Do	39.40	57.72	0.42	2.80
Do	38.86	60.90	0.66	0.76
Do	37.48	61.20	0.33	0.27

In consequence of the absence of available magnesian rocks in Japan, magnesia was produced artificially by the following processes, when conducting the experimental manufacture of magnesian bricks. The first process was to procure magnesia from magnesian limestones, and in the second the mother liquor of common salt was used. The first process need not be described here. Analysis of the mother liquor of common table salt as made in Japan:—

	Na Cl.	K Cl.	Mg Cl.	Ca SO ₄	Mg SO ₄	Total.
No. 1	8.27	8.67	29.93	0.02	7.75	48.64
No. 2	14.53	1.03	7.21	trace.	1.08	23.85
No. 3	8.93	3.47	29.45	1.01	10.43	43.89
No. 4	12.98	1.78	12.45	—	11.33	38.54
No. 5	15.91	2.48	2.26	trace.	7.39	37.00

The above table shows that the mother liquor of Japanese common salt contains an abundance of magnesia. From this, caustic lime, or magnesian lime, when added, can easily produce magnesia. The magnesia bricks made with magnesia produced by the above processes showed the following results:—

Description.	Length.	Breadth.	Thickness.	Weight of Brick.
Bricks made for trial	23.3	11.1	6.0	31.27
Dark in colour, somewhat brittle				
Absorption of water per 100 per cent.	11.54			
Crushing Strength	86.6			
Contraction	No contraction			
Action of Slags	Slight.			

Description.	Length.	Breadth.	Thickness.	Weight of Brick.
Foreign bricks. {				
Dark in colour, very dense in texture	23.8	11.3	6.6	46.81
Absorption of water per 100 per cent.	6.21			
Crushing Strength	302.8			
Contraction	No contraction			
Action of Slags	Slight.			

Analytical Result.

	Bricks made for trial.	Foreign Bricks.
Magnesia	85.98	82.89
Lime	3.16	3.17
Manganese oxide	—	0.50
Ferric oxide	1.24	8.01
Alumina	—	1.86
Potash	0.12	0.02
Soda	0.30	0.11
Insoluble matter	9.14	3.30

CHROME IRON ORE. The chromite, or compound of chromium and iron, is a species of heat proof material. The ores are found in Bungo and Hokkaido, and on analysis proved to be of the following composition.

	Bungo.	Hokkaido.
Chromium oxide	45.82	58.94
Ferrous oxide	16.31	14.42
Aluminium	20.42	11.06
Magnesia	16.46	15.64
Silicic acid	0.53	0.20

In summing up the results of the experiments, it may be affirmed that not only can heat-proof materials be abundantly produced in Japan, but their adaptability for the manufacture of special kinds of bricks can be declared excellent. In carrying out the experimental manufacture of bricks with clay, special attention was directed towards providing against defects that have hitherto disqualified home-made bricks for iron foundry work. That the bricks thus obtained were perfectly adapted for the purpose in view admits of no doubt. There being work-shops in Japan capable of manufacturing an excellent kind of silicic brick, no need existed to specially conduct the experimental manufacture of that particular brick. As for the material to produce magnesia bricks, the mother liquor of common salt and magnesia limestone seemed the best materials available in Japan, being very cheap and abundant everywhere.

REPORT OF ASSIST. EXPERT KANEKO.

The experiments carried on by Mr. Kaneko, an assistant expert of the Department of Agriculture and Commerce, were to prove whether iron sand could be substituted for wrought iron in the manufacture

of Martin steel. The use of iron sand both by Mr. Kaneko and Prof. Noro in the trial manufacture of Martin steel was based on the same important principle. Iron sand is a kind of magnetic iron, and therefore free from obnoxious foreign ingredients commonly present in ordinary iron ores. Iron sand ores are pure, native, ferric oxide, and are found in great quantities in Japan alone. Now, although experiments have been carried on in Europe and America to apply iron ores direct in the manufacture of steel, the result thus far obtained is unsatisfactory, owing to the inferiority of the ores. On the other hand, iron sand ores are abundant in Japan and were from olden time used as material for direct manufacture of steel of excellent quality—steel used in making swords and other sharp instruments. When so much could be accomplished by the old process, far better results, it was anticipated, could be obtained, provided a more perfect process was adopted, so that iron founders of the West might envy the naturally more fortunate experts of Japan in the matter of steel founding.

The process adopted in the present experiment was to fuse pig-iron and iron sand in the Siemens-Martin furnace and thus convert them into wrought iron by chemical action. The oxygen in the iron sand combined with carbon in pig iron and wrought iron was produced. Then manganese-ferrous-iron was added and the result was expected to be the formation of fused steel. The experiments were conducted on six different occasions between the 7th and 31st of March, a petroleum furnace being used, and 6 tons of steel were manufactured.

Proportions of raw materials and flux; the figures being in kilograms:—

	Pig-iron.	Iron sand.	Man.	Time	Clay.
1st.....	1,000	455	35	33	—
2nd.....	1,000	500	35	10	30
3rd.....	1,000	400	60	10	—
4th.....	1,000	300	25	23	—
5th.....	1,000	505	32	56	—
6th.....	1,000	525	35	60	—

The manganese iron used in the experiments was obtained from abroad and contained 77 per cent. of manganese.

Analysis of steel manufactured:—

	Carbon.	Silica.	Copper.	Manga.	Phos.	Sul-
1st.....	0.29	0.02	0.25	0.12	0.17	0.08
4th.....	0.27	0.04	0.66	0.12	0.16	0.10
5th.....	0.23	0.04	0.26	0.09	0.17	0.09
6th.....	0.20	0.02	0.24	0.06	0.22	0.07

The presence of copper, phosphorus, and sulphur, was due to the previous existence of such ingredients in the pig-iron used.

Result of experiments to ascertain the strength of the steel produced:—

	Malleability (per 100).	Tenacity (per 1 inch square).
1st.....	21.50	36.05
4th.....	10.50	34.70
5th.....	11.00	35.05
6th.....	20.00	32.15

The foregoing results proved that the iron sand, so easily procurable in Japan, could be substituted for wrought iron in the manufacture of Martin steel. One grave difficulty was experienced in the course of the repeated experiments, namely, the formation of silicate of iron; iron sand, which has a strong basic reaction, combining with silica in the acidic bricks used in the oven. The question was, therefore, not whether iron sand could be used in the manufacture of Martin steel, but whether bricks, either of basic or neutral reaction and capable of withstanding the corrosion of iron sand, could not be manufactured. It was upon the result of the brick question that the fate of the steel foundry in Japan depended.

EXPERIMENTS.

The experiments, as conducted by the Assist. Expert, were of two descriptions: three were in accordance with the ordinary process in vogue in Europe and America, and eleven were experiments with a Martin oven. The composition of materials used in the first series of experiments was as follows:—

	Kitchen-knife iron (produced in Izumo).	Izumo iron.	Mangan- ferrous iron.
	Kilograms.	Kilograms.	Kilograms.
1st.....	810	197	40
2nd.....	350	700	94
3rd.....	690	700	7

Kitchen-knife iron and white pig-iron produced from Izumo were both manufactured from the same iron.

In each of the three experiments a satisfactory result was obtained, soft steel of good quality being produced. This steel was sent to Kamaishi, to be made into steel plates and rails. The chief reason that in the three experiments the proportion of kitchen-knife iron and white pig-iron varied so much, was that the compositions of the gases

changed on each occasion, neutral oxydizing gas being used on the first occasion, and acid oxydizing gas on the second and third.

Of the series of experiments conducted with the Martin furnace, the first three ended either in complete or partial failure, the chief trouble being corrosion of the magnetite bricks piled around the bed of the furnace and the defective action of the manganiferous iron. In the 4th experiment both the defects were greatly minimized, soft steel of tolerable quality being produced. At the same time the following three points were verified:—

1. A low heat should be maintained until the iron sand has amalgamated and in that case the magnetite bricks would not be much corroded.
2. Before manganiferous iron is run into slags it should be exposed as much as possible, allowing the manganese to complete its action.
3. When iron sand is put in, care should be taken not to allow the fused mass to solidify, the mixture should be repeatedly agitated, so as to facilitate the action of the iron sand.

Further experiments proved that agitation not only enabled pig-iron and iron sand to maintain their scientifically proper proportions, facilitated the action of iron sand, and economized it, but also effected a similar action to that obtained in the puddling process. It was further proved that agitation enabled iron sand to make a perfect alloy in the proportion of 39 kil. of the former to 1,000 kil. of pig-iron.

In the subsequent four experiments, though the defects that appeared in the preceding experiments were much lessened, the steel produced was rather harder in texture, probably owing to the greater presence of manganese. In the last three experiments softer steel was produced, but the quantity of manganese used was extremely large. The following table shows the composition of raw materials used in the different experiments:—

	Kamaishi white pig-iron. kilo.	Iron sand. kilo.	Mangan- ferrous iron. kilo.
1st.....	1,200	380	36.0
2nd.....	1,200	350	78.0
3rd.....	1,200	350	54.0
4th.....	1,200	200	36.0
5th.....	1,500	200	63.0
6th.....	1,500	140	52.5
7th.....	1,500	130	52.5
8th.....	1,500	165	45.0
9th.....	1,500	200	25.5
10th.....	1,500	196	127.5
11th.....	1,500	230	60.0

The physical and chemical qualities of the steel produced are yet to be proved. The steel was forwarded to the Kamaishi Foundry to be made into various articles.

FIRE-PROOF BRICKS.—As above stated, the question whether fire-proof bricks can be made in Japan being vitally related to the foundry question, it will not be waste of time to enumerate briefly the results obtained in regard to the present experiments, fuller explanation on the subject being reserved for Dr. Takayama.

SILICA BRICKS.—The walls and dome or roof of the Martin furnace, that is the portion of the furnace that does not come into contact with slags and is exposed to intense heat, must be formed of silica bricks, which, however, could not be produced in Japan in the early stage of the experiments. The Shinagawa White Brick Factory undertook the work of making the new kind of bricks, after the French silica pattern. After repeated failures the Factory produced bricks which proved far superior in fire-proof quality to the original French bricks, and were not easily distinguishable in this respect from the English bricks of the same kind. Thus one of the most important facilities for foundry work in Japan has been secured.

"ROSEKI" BRICKS.—The regenerators of the Martin furnace were constructed with Mitsuishi "Roseki" bricks made by Kato Ninkuro, and they were found, after a series of experiments, to be excellently adapted for the purpose, their cheapness and fire-proof quality being special merits.

MAGNESIA BRICKS.—Magnesia bricks made in Germany were used in the experiment. It was discovered that though in intense heat they were considerably corroded by slags, they could stand the pressure well when the heat was lowered: one piece, half a brick thick, stood six experiments; that is, one ordinary brick could be used more than ten times.

Magnesia bricks made by Dr. Takayama were proved to resist corrosion just as well as the imported bricks. They lacked definite shape, however, and were in small pieces.

Even when magnesia bricks can stand more than ten experiments, the necessity of their being renewed after 10 to 12 operations of the furnace must involve a large waste of fuel, for the furnace must be cooled down when the old magnesia bricks

are replaced. Therefore, it may be useful to construct the bed of a Martin oven after the style of the Pernot oven, so that it may be detached from the rest and be more easily renewed. This would to a large extent economize fuel.

The present experiments, though sufficient to prove the merit of the new process of manufacturing steel, are still incomplete, and must be followed by another series of experiments, to determine the question more in detail. The points to be investigated would be:—

- 1.—To reconstruct the oven to facilitate the outflow of slags, with a view to enabling manganese to complete its action.
- 2.—To investigate the length of time in which magnesia bricks could be used.
- 3.—To test the efficiency of magnesia bricks produced by Dr. Takayama.
- 4.—To try whether such cheaper stuffs as dolomite or chromite could be substituted for magnesia.
- 5.—To use iron sand reduced by Prof. Noro's process.

(TO BE CONTINUED.)

LETTER FROM AMERICA.

(FROM OUR OWN CORRESPONDENT.)

Ithaca, June 3rd, 1896.

I must take, as my occasion of a letter, the correspondent's query and editorial note in the *Japan Weekly Mail* of April 4th, 1896. Your correspondent "M." inquires concerning a certain "Martyr Statesmen" who is referred to in "the report of a lecture delivered recently in Boston," by the undersigned, as having been "the first man who dared lead for freedom of religious belief in their [the Japanese] Parliament, and who was assassinated within three hours by ruffians who did not want Christianity." The editorial note stated that the undersigned (rather than the hasty reporter) had been "sadly misled."

The reference of the lecture in Boston was not to the Imperial Diet, nor to anything under the Constitution, nor to any event since the year 1869. It is very hard, indeed, for those who do not know the Japan of the Tokugawa era or of the early Meiji days to realize how things went in the days when all the gentry wore two swords, and Christianity was banned and outlawed throughout the Empire. My reference was to the event of Feb. 15th, 1869, when Yokoi Heishiro was assassinated by six ruffians in Kyoto as he was returning from Court. Yokoi was an elderly adviser of the new Imperial Government, and a member of the Higo Clan. The reason of the assassination, as given in the Japanese histories, especially the Kinse Shiraku, is that "the opponents of the constitutional changes which he constantly advocated had falsely charged him with professing evil opinion, and the Ronins believing this had acted in consequence." Those who know of Yokoi, through his Life and Letters, published a few years ago by his son, and those who knew of him as I did through his week as lecturer, scholar, and reformer at Fuku, Echizen, and in Yedo, know that he believed in the toleration of the Christian religion in Japan, and indeed in the right of men to think for themselves provided they kept within the bounds of peace and righteousness. Yokoi was the far-sighted Japanese who sent the first Japanese students directly and purposely to America for systematic study. He thus began that long procession of seekers after knowledge, who at American schools, colleges, and Universities have been, on the whole, so diligent and shed honour on their own country. No intelligent man who knows the present state of things in Japan would make the assertion credited to him by the hasty reporter of a Boston newspaper.

When Yokoi Heishiro lay headless in the street of Kyoto, there was, at his home near Kumamoto, a son then ten years of age, who has since made a name for himself, becoming a Christian, a graduate of the Doshisha University in the same city where his father was murdered, and afterwards pastor of Christian Churches in Tosa and Tokyo. As editor, writer, and thinker his reputation extends beyond Japan. He has twice been in the United States for study, this last time spending two years again at New Haven. This month he and the Rev. K. Tsumashima return to Japan. With such an intellectual inheritance and experience in travel and study, Mr. Yokoi may fulfill even the highest expectations of his friends.

The future of Christian theology and of Christianity in Japan, is one that perplexes a great many people in the United States, and especially those who contribute to the "The American Board of Commissioners of Foreign Missions," and who are most interested in the *Kumi-ai*, or Associated churches in Japan. These American Christians constitute the body of Congregational Churches in the United States, for there is no such thing as

THE TOTAL SOLAR ECLIPSE OF AUGUST NINTH.

To-morrow (says *The Times* of May 27) will see the first flight of English astronomers to view the important eclipse of next August. Professor Turner, of Oxford, and Captain Hills, R.E., leave Liverpool for Japan via Canada, expecting to reach Yokohama on July 6. They take with them not only their own instruments, but those of the Astronomer Royal, who cannot leave England so soon owing to the necessity of being present at the visitation of the Royal Observatory, which is fixed by Royal Warrant for the first Saturday in June. He will follow three weeks later, in time to complete the work of preparation for the eclipse which the other two members of the expedition will have conducted through its preliminary stages; and should the weather be propitious, some valuable photographs of the corona and its spectrum ought to be secured by the party. Astronomers of other nations will also be present in Japan, besides the Japanese themselves; Prof. D. P. Todd, of Amherst, U.S.A., who went to Japan for the eclipse of 1889, is to be there again on the present occasion. Indeed, he is well on his way already, in a private yacht which has been placed at his disposal for the expedition. Professor Todd has shown himself an adept in managing an immense mass of apparatus on such occasions, and his equipment was piled on board this yacht several months ago, and carried from the East to the West Coast of the American Continent by a voyage round Cape Horn. Recent American eclipse expeditions have owed much to private benefactions, and the present one is apparently to be no exception. In England we look to Government aid, which, if it is not always so lavish as that accorded by private individuals in America, is at least always given ungrudgingly, and in a form which contributes in no small degree to the success of such enterprises. The funds for preparing the special instruments and for paying the expenses of the observers come from the Government Grant Fund, administered by the Royal Society, while the Admiralty generally places at the disposal of the expedition one of her Majesty's ships, which conveys them from the nearest large port to the special station selected, assists the observers in countless ways during the preparations, and through its officers often takes a considerable share in the observations themselves. On the present occasion, for instance, the observers will be conveyed from Yokohama to Kushi-iro, the selected station in Yezo, by a man-of-war; and but for this promise of help it is doubtful whether any British expedition to Japan could be undertaken at all.

Besides Professor Todd, there will be in Japan M. Deslandres, with two assistants from the Paris Observatory. He left Paris for Kushi-iro on May 16th, and will probably arrive before the English observers; so that there will be a goodly assemblage of observers in this neighbourhood, and probably very close together. The points of vantage available for observing a total solar eclipse are theoretically distributed along a narrow belt something like 100 miles wide and a few thousand miles long. Practically the choice is more restricted, for this belt crosses sea and land impartially, and observations of value can only be made on terra firma and at a spot conveniently accessible with heavy baggage. The desirable stations in Japan seem to be limited to the neighbourhood of Kushi-iro. But the belt sweeps across northern Siberia, cuts Nova Zembla, and the north of Norway, terminating, however, before reaching the British Isles. In England we shall see nothing of the eclipse even in its partial phases, for it will be all over by sunrise, and even in Norway the sun will not have risen very high at the time of the eclipse, which will occur in the afternoon to those in Japan. Favourable stations in Siberia are to be occupied by Russian astronomers, but in Norway there will be a large assemblage of Europeans. A British Government expedition will proceed thither as well as to Japan under the joint direction of Professor Norman Lockyer (to whom the assistance of a man-of-war has been promised), and Dr. A. A. Common, the President of the Royal Astronomical Society. There will also be a large party of English astronomers organized by the British Astronomical Association, as well as others unattached to any special expedition. Of these Norway expeditions, which will not start for another six

weeks, more may be said later. We may, however, here remind those whose summer holiday is not already arranged that the present opportunity for seeing a total solar eclipse is not one to be lightly disregarded. The spectacle is a magnificent one, worth travelling thousands of miles to see; and unfortunately it is in general really necessary to travel these thousands of miles. No total solar eclipse has been visible in England this century, and it is but rarely that the track of one crosses Europe. In 1887 there was a chance to see one by going to Russia, but clouds hid the spectacle from view. Those who go eclipse hunting in the next few years must go at least as far as Norway this year, or India in 1898, or Spain in 1900; and of these journeys that to Norway is perhaps the simplest.

There are two points of special interest in the programme of work arranged by the British expeditions for this eclipse. In the first place there are to be two expeditions, one to Japan and one to Norway, as has already been mentioned. Now the total phase will not occur simultaneously to these two parties. As the moon passes slowly in front of the sun the shadow cast on the earth sweeps along from Norway over Siberia to Japan, and by the time it reaches Japan the sun will be some hour and a-half older than it was when it was eclipsed to the Norway party. Thus if the corona shows any appreciable change of form in an hour and a-half the photographs taken at the two stations should on comparison show the change. We know that the corona does alter in form completely between one eclipse and the next, but we do not know how rapid the alteration is, for the glimpse of it caught every couple of years or so, when there is a total eclipse, is insufficient to give us this information. As far as we know at present, the change of form goes on too slowly to be noticeable in such a short interval as an hour or two; this, at least, was the conclusion arrived at by Mr. Wesley after a very critical examination of the photographs taken at the eclipse of 1893, when expeditions were sent from this country to Brazil and South Africa. But it is eminently desirable to make the experiment again on the present occasion, when the circumstances are even more favourable than in 1893. There must be some change in the corona even in an hour; if not a real physical change, then at least a change of aspect due to the slow rotation of the sun on its axis; and it ought not to be beyond the power of our present instruments to detect it. The second point of interest concerns the instrumental equipment, the form of which has been changed since the 1893 eclipse. Instead of pointing the photographic cameras and telescopes to the sun directly, most of the observers will employ some forms of heliostat, and three of them will be using the special form called the celeostat. In all heliostats there is a mirror which is so rotated by clockwork that the sun's rays are reflected in a fixed direction and can thus be observed in the fixed telescope; and for photography it is a great advantage to be able to fix the telescope instead of having it in motion to follow the sun. But with most forms of heliostat, when the telescope has been placed in position to receive the sun's reflected image, although this image will constantly remain in the field of view, it will be seen on close observation to be gradually rotating about its centre, and this motion is sufficient to prevent a good photograph from being taken. It is only in the celeostat that this motion of rotation is eliminated. With this instrument (a plane mirror rotating once in 48 hours about an axis in its plane parallel to the earth's axis) any portion of the sky viewed by a fixed telescope pointed to the mirror remains absolutely the same; and a photograph may be taken of it with the same convenience as though the sky were rigidly attached to the earth. The instrument was designed many years ago, but its importance for eclipse work has only recently been realized, and its trial on the present occasion is looked forward to with very great interest.

The eclipse is still so many weeks and even months ahead that few save actual astronomers will at present concern themselves seriously about it. At a later date we shall have something to say of the Norway expeditions and more especially of the spectroscopic work to be undertaken by Professor Norman Lockyer. For the present we will wish a pleasant voyage and good luck to the observers who are leaving us for the other side of the world on the chance of seeing the sun eclipsed for two or three minutes. To some it may seem a long way to go for such a brief entertainment, but when little is to be had a little must suffice; and there is no way of multiplying or extending total solar eclipses.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, July 6.

The Friendlies at Bulawayo are becoming restless, and it is feared that the country will again become in a disaffected state. Many of the white settlers are quitting Matabeleland.

It is believed that a dark horse may win at the Chicago Democratic Convention. The Goldites maintain a strict reserve, hoping to gain something from the chaotic condition of the party.

London, July 9.

The Committee of the Chicago Democratic Convention has drafted a platform which is certain of adoption. It demands free and unlimited coinage of silver at a ratio of sixteen to one, and condemns the revival of the McKinley tariff. The planks regarding Cuba and the Monroe doctrine are at present unsettled.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

Hakodate, July 4, 8.20 a.m.

H.M.S. *Edgar* and *Alacrity* arrived here yesterday; and the *Idsumi Kan* left for Yokohama.

Hakodate, July 7.

Her Majesty's ships *Centurion*, *Narcissus*, *Immortalité*, *Rainbow*, and *Pique* arrived here yesterday. The *Spartan* leaves this for the Behring Sea to-day.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, July 4.

Replying to a question in the House of Commons, Mr. Curzon stated that negotiations continue regarding the French claim to establish a protective tariff in Madagascar.

A resolution authorizing an outlay of three millions sterling on the Uganda Railway has been carried in the House of Commons by a majority of two hundred.

H.M. the Emperor William, in a speech at the launching of the new battleship *Emperor Frederick*, said the vessel was the forerunner of many others of the same class and would inaugurate a new era for the German Navy.

The insurgents in Crete have repulsed a large force of Turks, killing over two hundred.

London, July 7.

The tone of the Berlin Press in the farewell notices to Li Hung-chang is markedly cool, disappointment being expressed at the absence of orders.

Sir Hercules Robinson, Governor of the Cape and High Commissioner for South Africa, has been raised to the Peerage.

London, July 8.

The Chicago Democratic Convention has been opened. Mr. Daniels, the Silverite nominee, has been temporarily elected President of the Convention by a majority of two hundred over Mr. Hill, the Goldite's candidate.

Colonel Plumer's column has defeated the Matabele rebels after seven hours' fighting, with a loss to the enemy of one hundred killed. The British loss was twenty-three killed and wounded.

(FROM THE "N.C. DAILY NEWS.")

June 30.

So far, twenty white persons have been murdered, and fifty-nine are killed, wounded, or missing in Mashonaland.

The Rt. Hon. J. Chamberlain, Secretary of State for the Colonies, states that Government propose to keep the Cape garrison up to its full strength, hence a battalion of the King's Rifles has been ordered to the Cape.

H.E. Li Hung-chang has been visiting Essen as the guest of Herr Krupp.

July 2.

It is announced that Li Hung-chang will visit the Marquis of Salisbury at Hatfield, and inspect Armstrong's works at Elswick. He is also to visit Portsmouth, where one hundred and seven men-of-war will be assembled after the manoeuvres.

London, June 16.
Emperor William, plainly promoting a renewal of the *entente* [between England and Germany], has sent to the Regiment of Royal Dragoons, of which he is an Honorary Colonel, a wreath with which to decorate the colours on Waterloo Day.

London, June 27.
The Venezuelans have released Mr. Harrison.

June 29.
At a banquet in Berlin given by the leading merchants to H.E. Li Hung-chang, Dr. von Boetticher, Secretary of State for the Interior, made a speech, in which he dwelt upon the importance of H.E. Li Hung-chang's visit. Admiral Hollmann proposed the health of the Emperor of China.

(FROM "LE COURRIER DE SAIGON.")

Paris, June 18.
A rumour from Tunis is to the effect that Marquis Morès and thirty-five companions have been massacred near Chadamès by Sénoussi.

Paris, June 19.
The Marquis Morès and four Tunisian servants were killed on the 8th June in North Chadamès by an escort of Touareg Chambaas recruited on the previous day in the village of Elaoutia.

(FROM "L'AVENIR DU TONKIN.")

Paris, June 20.
General Brière de l'Isle is dead. The French squadron has received a warm welcome at Corunna.

Paris, June 21.
The Chamber has adopted the proposal declaring Madagascar a French Colony, and has invited the Cabinet to take the necessary measures to abolish slavery as soon as possible.

Paris, June 22.
Forty thousand workmen are on strike in St. Petersburg, but there have been no outrages.

(FROM "LE COURRIER D'HAIPHONG.")

Paris, June 23.
The Chamber, by 341 votes to 74, has adopted the vote of 4,500,000 francs in order to meet the expenses incurred by the expedition against Siam.

(FROM "BANGKOK OBSERVER.")

London, May 21.
The Governor of Damaraland will have a thousand troops at his command when the reinforcements arrive. The organ of the Colonial Party in Berlin says that Germany will thus acquire in South Africa a position the influence of which will be felt in Capetown, while at the same time the Boers will receive an indirect support whereof time will plainly display the effects.

(FROM THE BANGKOK PAPERS.)

London, June 15.
The English Mediterranean Squadron being at Civita Vecchia, 400 of the sailors attended Mass at the Sistine Chapel. The Pope, who was present, blessed the congregation, and, as His Holiness left, all rose, cheering and waving their hats. A dinner was afterwards served in the corridor adjoining St. Peter's, the English sailors being specially invited to partake of the good things provided.

(FROM THE JAPANESE PAPERS.)

Shanghai, July 4.
In the northern part of the province of Kansueh a fortnight ago, a mob broke into and destroyed some Christian Churches. They murdered some German missionaries and many native converts.

Söul, July 4.
The rebels of Chhöl-wön are surrounding Kai-söng. The government has despatched reinforcements.

It has been decided that the King will remove from the Russian Legation when the palace of Kwang-hwa-mun, near the Russian Legation, is repaired. The cost will be yen 70,000.

Mr. Hillier, British Consul-General, left for Japan this morning.

Otaru, July 4.
The *Alger*, the French first-class cruiser, with

the French astronomical party on board, arrived here at 7 o'clock this morning, and left at 5 p.m.

Bakan, July 4.
Marquises Ito and Saigo left in the *Foshino* this morning for the eastward.

Kobe, July 4.
Lieut.-General Katsura, Governor-General of Formosa, arrived last night, and left for Nagoya. He will await there the arrival of Marquis Ito and his suite.

Li Sun-yong has arrived here, and left for Suma.

Nagasaki, July 5.
The Russian man-of-war *Manjour* has arrived from Vladivostock.

Nagasaki, July 4.
The French man-of-war *Isly* has arrived here from Ninsen.

Hakodate, July 6.
H.M.S. *Centurion* and five other British men-of-war arrived here this morning.

Osaka, July 6.
Lieut.-General Okubo and 14 other officers, 63 sub-officers and men of the 7th Brigade of 4th Division, bound for Formosa, arrived at Umeda (Osaka) Station, at 7.30 a.m. to-day. They were received by the citizens with much enthusiasm. Fireworks were displayed and national flags hoisted.

Aomori, July 5.
Viscount Higashizono and suite left Hachinohe for Tokyo to-day.

Nagano, July 6.
A violent storm has been raging since the morning.

Matsumoto, July 5.
The regular meeting of the local Branch of the Japan Red Cross Association, was held to-day. About 4,000 persons were present.

Söul, July 4.
Behind the Russian Legation is an old ruined summer palace, the grounds of which are used for raising vegetables. The *Independent* of this morning says that the new palace will be built there.

Osaka, July 5.
A correspondent writing from Shanghai under date the 2nd inst. says that Choshi-do is arranging to start the electric light and establish a telephone in Kohoksho.

Li Hung-chang had a long interview with Prince Hohenlohe at Berlin, the main object of which was to obtain Germany's aid in resisting the pressure of Russia.

Dr. Yersin, the distinguished French bacteriologist, has succeeded in curing the black plague by inoculation, the experiments being conducted at Canton.

A Chairman in Singapore has raised Taels 10,000,000 for the projected railway between Hankow and Peking, and has sent the sum to capitalists in Peking.

Söul, July 5.
Mr. Hara Kai, Japanese Minister to Korea, has arrived at Ninsen, and will leave for Söul to-morrow.

Nagano, July 7.
H.I.H. Prince Komatsu arrived here from Uyeda to-day; he had dinner at the Shiroyama Kwan, and left for Naoyetsu.

Gifu, July 7.
Continued rainfall has caused all the rivers to overflow in the district of Ikeda, and postal communications are interrupted.

Söul, July 7.
The contract for the Söul-Wiju railway has been signed by the Korean Government and the French representative. The work is to be commenced within three years, and completed with in nine. The other provisions are identical with those of the Söul-Ninsen line.

Söul, July 7.
The rebels around To-saw have retreated to Hwang-hai-do. Kai-söng is tranquil.

Kyoto, July 7.
A feeble shock of earthquake was felt here at 11.38 p.m., on the 6th instant.

Söul, July 8.
Li Seung-kiu has brought forward a proposal to punish the Tai Wön-kun, Pak Yong-ho, Kim Hong-tsub, and U Kil-chun for high treason, along with others who were concerned in the

emeute of October 8th. The Korean Government has accepted the proposal, and issued warrants for the arrest of those concerned. Liu Sé-nan, many army officers, and the Tai Wön-kun were arrested.

Later.
Yu Sé-nan has tendered his resignation, but it has not yet been accepted, nor has he been arrested.

The proposal of Li Seung-kiu is under discussion at the Korean Court. The arrest of the Tai Wön-kun and members of his party is doubtful.

Tottori, July 8.
The *Matsushima* arrived at Sakai yesterday. Thirty-nine persons were attacked with camp fever to-day.

Kyoto, July 9.
At Miyadzu, Tango Province, on the 8th, from 5 p.m. an unusually high tide, rising from 5 to 6 feet above the normal, rolled in upon the town.

Hiroshima, July 9.
H.I.H. Prince Kikumaro Nashimoto has invited the military officers to dine with him to-day.

Nagoya, July 9.
Marquis Ito, the Premier, arrived here this morning. He leaves for Oiso to-morrow.

Osaka, July 9.
Lieut.-General Baron Kodama, Vice-Minister of War, who arrived yesterday, left this morning for Tokyo.

Hiroshima, July 9.
Mr. Yamanouchi, President of the Iron Works, left this morning for Tokyo.

Nagano, July 9.
Small-pox has broken out at Shimotsuwa, and shows signs of spreading.

Aomori, July 9.
A slight earthquake was felt this morning.

Nagano, July 9.
The mountain railway over the Usui Pass has been damaged, and trains are temporarily stopped.

Mitajiri, Suwo, July 9.
An earthquake was felt here this morning early. The accompanying noise was very loud.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday-season; it will reopen on Friday, the 2nd of Oct.

SOLUTION OF PROBLEM No. 236.

WHITE.
1—Q to K Kt 7
2—Q to Q Kt 7
3—Kt to Kt 3, mate

BLACK.
1—K takes Kt
2—P queens (ch.)

if 2—K to Kt sq.

3—Q to Kt sq., mate
1—K to B 8
2—Kt (R sq.) to Kt 3 ch.
3—Q to R sq., mate.

Correct answers from W.H.S., W.D.C., J.D., W.d.H., and A. L. Jordan.

PROBLEM No. 238.

By I. IVERSEN, of Copenhagen.

BLACK.

White to play and mate in three moves.

ERRATUM.

About thirty years ago in England we had occasion to call a printer over the coals for not

following our copy. His reply was "These type-stickers of mine invent such a lot." The same trouble seems to prevail in Japan; for we have received remonstrances about the wording of our paragraph in last week's column about Mr. Jordan's visit to Tokyo. Now what we wrote was this:—"On Saturday, 27th June, a visit was paid to Tokyo, where Mr. Jordan met a few members of the Tokyo Chess Club, informally, at the Roku-meikan." How it got changed into what really appeared, the "comps" and proof-reader only know. On their behalf we apologise to those members of the Tokyo Chess Club, who feel aggrieved at our former statement.

SHOWALTER-BARRY.

We give two more games in this contest, which are good and show that the Kentuckian was coming out in his old form once more.

GAME No. 519.

PETROFF'S DEFENCE.

WHITE. Showalter.	BLACK. Barry.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to K B 3
3—P to Q 4	3—P to Q 4
4—P takes Q P (a)	4—P to K 5
5—Kt to K 5	5—Kt takes P
6—B to Q B 4	6—B to K 3
7—Q to K 2	7—P to K B 4
8—Castles	8—Kt to Q 2 (b)
9—B takes Kt	9—B takes B
10—Q to Kt 5	10—P to B 8
11—Q takes Kt P	11—Kt takes Kt
12—P takes Kt	12—B to B 4 (c)
13—P to Q B 4 (d)	13—B takes P (e)
14—Q takes P ch.	14—K to B 2
15—P to K 6 ch.	15—K to Kt 3
16—Q takes B (f)	16—B takes R
17—Kt to B 3	17—B to R 3 (g)
18—Kt to Q 5	18—K to K sq.
19—Kt to B 4 ch.	19—K to B 3
20—Q to B 3 ch.	20—K to K 2
21—Q takes P ch.	21—K to Q 3
22—B to K 3	22—K to B 3
23—R to B sq. ch.	23—K to Kt 4
24—Q to K 5 ch.	24—K to R 5
25—P to Kt 3 ch.	25—K to R 6
26—B to B 5 ch.	26—K takes P
27—Q to R sq. ch.	27—K takes P
28—R to B 3 mate.	

NOTES BY EMIL KEMENY.

- (a) Black adopted the same defence as Kemény did in the first game against Showalter. The latter replied then 4 P takes K P. The move adopted in the present game seems superior.
- (b) P to Q B 3 or B to K 3 was the proper play. Black failed to observe the power of White's combination B takes Kt followed by Q to Kt 5.
- (c) R to Kt sq. or Q to B sq. was necessary, in order to have Q B guarded. Black, it seems, did not observe the threatening P to B 4 move, which leaves the Q B P unprotected.
- (d) Q takes Kt P would have given Black a powerful, if not winning attack, if he had continued R to Kt sq. followed by P to K 6.
- (e) Had Black played now R to Q Kt sq., then White could capture the K Kt P. R to Kt sq. would be less threatening now, since Black could continue P to K 6, his Bishop being attacked.
- (f) P to K 7 dis. ch. would have been bad. Black would have answered Q to Q 3, and gained a pretty good position. White's attack is most powerful and the sacrifice of the exchange is perfectly sound.
- (g) Premature play: Black overlooked entirely the force of White's move, Kt to Q 5. He should have played R to Q B sq. followed by R takes Kt. Black, though a Pawn behind, had excellent chances for a draw, the Bishops being of different colours. After Black's present move his game becomes hopeless.

GAME No. 520.

PETROFF'S DEFENCE.

WHITE. Barry.	BLACK. Showalter.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to K B 3

55—Resigns.	

CHARACTERISTICS OF CHESS.

In chess there are, to narrow our notice to its more salient properties, four characteristics, which, when taken in their combination, separate it from all other games, and indeed from all other exercises that are supposed to be merely recreative.

First, it is a game without chance, in its ordinary sense, as chance is found in cards; and a game of skill in a peculiar sense—that is, of skill exclusively intellectual, and not such as allows a sound calculation to be overthrown by any material or physical circumstance, by the eye, for example, or the hand, or the table. We might add that the degree of intellectual skill which it admits is so high that Leibnitz declared it was far less a game than a science.

Secondly, it is a game—since that is the received term—a game affording to the player so much proper, or intrinsic interest, that it is if not the only game, at least the best and most satisfactory one to play without pecuniary stakes, and has actually been so played to a far greater extent than all other games put together.

Thirdly, it has been for a long succession of centuries pre-eminently the game of great men and of celebrated characters, both civil and military, both secular and clerical. We may add here that it is surrounded by a host of associations, that it is suggestive of a pleasant mass of memories, anecdotes, manners, and incidents such as no other game, and hardly any science, may presume to boast.

Fourthly, it has that which no other game has, and which can avail itself of all the preceding circumstances, that, in truth, which from those characteristics derives its existence and receives all its force and all its attractions; a literature properly appertaining to it and arising as its own actual creation; a contribution which no philosophical critic can ignore to the humanities, civilities, and amenities of peaceful life, and of social or sociable refinement.—Staunton.

PROFESSIONALS VERSUS AMATEURS.

A very interesting match was played last Friday at the City of London Chess Club between eight of the Club and a team of eight first-class players, members of the newly formed Divan Association. The players were, on the one part, Messrs. Lasker, Gunsberg, Teichmann, Mason, Van Vliet, Tinsley, Guest, and Fenton. And these were opposed by the following City players:—Lawrence, Dr. Smith, Physick, Bellingham, Wagner, Dr. Ballard, Tietjen, and Cole. Mr. Lasker, through an indifferently played opening, obtained an inferior game, but managed to draw after very careful play. Mr. Gunsberg, on board No. 2, also played the opening rashly, and was less fortunate than Mr. Lasker. Dr. Smith winning through a powerful attack. Mr. Teichmann proved steady and reliable, as usual, and beat his opponent. Mr. Mason's opponent went wrong in the opening of a French defence, and resigned on the eleventh move. Mr. Van Vliet had the best of the game, but his opponent drew by careful play. Mr. Tinsley outplayed Dr. Ballard in a queen's side opening and won. Mr. Guest missed his way in a Ruy Lopez, and his opponent, Tietjen, won by very pretty end-game play. Finally, on board No. 8, Mr. Fenton got played in the middle game by Mr. H. H. Cole and lost. The result, a most surprising one, was received with great excitement, each side winning 4 games. The match was drawn. There was a dinner after the match, in which all speakers expressed themselves very enthusiastically about the play.

We transcribe the following game (with notes from Gunsberg) in which the Champion Lasker could only escape with a draw against Mr. Lawrence.

GAME No. 521.

RUY LOPEZ.

WHITE. T. F. Lawrence (City.)	BLACK. E. Lasker (Divan.)
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—Kt to B 3
4—Castles	4—B to K 2 (a)
5—Kt to B 3 (b)	5—P to Q 3
6—P to Q 4	6—P takes P
7—Kt takes P	7—B to Q 2 (c)
8—B takes Kt	8—P takes B

15—Q to Q 3 (g)	15—B to Kt 2
16—Kt to B 3	16—Kt to Kt 5
17—Kt to Q R 4 (h)	17—B takes B
18—Kt takes B	18—R to Kt sq. (i)
19—Kt to B 4	19—P to B 3
20—Q to Q 4	20—Kt to K 4
21—K Kt takes Kt	21—B P takes Kt
22—Q to Q 3	22—Q to B 3
23—Kt to K 3	23—K to K B sq.
24—P to K B 3	24—K to Kt 2
25—P to Q B 4	25—R to B 2
26—Q to B 3	26—Q to K 2
27—P to B 5 (k)	27—R to B 3 (l)
28—Kt to B 4	28—B to K sq.
29—P to B 4 (m)	29—R takes B P
30—P takes P	30—P takes P
31—R takes P	31—R to Q Kt 4
32—Q to R 3	32—R to B 3
33—R takes R	33—Q takes R
34—R to K B sq.	34—Q to K 2
35—Q to K B 3	35—B to B 2
36—Kt to Q 6 (n)	36—Q takes Kt
37—Q takes B (ch.)	37—K to R 3
38—Q takes Q R P	38—R to B 4
39—K to R sq. (o)	39—R to B 7
40—Q to K 3 (ch.)	40—K to Kt 2
41—P to Q R 4	41—R to Q 7
42—P to R 5	42—P to B 4
43—R to R sq. (p)	43—R to Q 8 (ch.) (r)

Drawn game.

(a) It has been established that the order of moves between this and Kt takes P cannot be reversed, and that it is necessary in this defence to play Kt takes P before playing B to K 2.

(b) The proper reply which compels Black to content himself with an inferior defence by P to Q 3.

(c) It is curious that Mr. Lasker, who has done so much to punish the P to Q 3 defence to the Lopez, should, in spite of himself, be forced into these disadvantageous lines merely through reversing the order of moves.

(d) This is the unkindest cut of all, and Mr. Lasker himself recommended this as an effective move in this position.

(e) A move showing good judgment. White is evidently determined that Black's belated Q P shall get no further than Q 3, if that can be prevented by pressure of pieces.

(f) This is of doubtful value.

(g) White shows discretion in bringing the queen back without wasting time and opportunity in the capture of the R P.

(h) Again well played. This move compels the exchange of bishops, which is always advantageous whenever Black has adopted the B to Kt defence, as the absence of the bishop leaves the king somewhat exposed.

(i) Black could not yet carry out his intention of playing Kt to K 4, for, after (19) Kt takes Kt, the rook must retreat, then (20) Kt to K 4 was threatened.

(j) White at last reaps the reward of his efforts. The K P is now almost doomed.

(k) If Black had played P takes P, White could continue either with (26) R to Q H sq. or (28) Kt to 4, R to K sq.

(l) A fine supplementary move to the whole combination which forces the break up of Black's centre.

(m) An effective move which brings about a simplification of position in White's favour.

(n) B to R 3 would have been much more useful at this stage, as it would give White a chance of employing his rook, and remove the inconvenience arising from the White king having no move. After P to K R 3, White threatens at once to win by R to B 7. The omission to play this move has deprived White of a well-earned victory.

(o) P to R 3 was still available, for if Black then played R to Q 6, (44) Q to B 3, and Black cannot take the Kt P.

(p) (44) R takes R, Q takes R (ch.), (45) Q to Kt sq., Q takes P, (46) Q takes P, Q to Kt sq. (ch.), (47) Q to Kt sq., Q takes P, (48) P to R 6, K to B 2, (49) P to R 7, K to K sq., (50) Q to R sq., Q to R sq., (51) Q takes P (ch.), K to Q 3, (52) Q to Kt 8, Q to Q 4, (53) P to R 3, and wins. This is a likely line of play, which, of course, might be varied, and we merely give it to show that White even then had some winning chances. The following, perhaps, was Black's best:—(44) R takes R, Q takes R (ch.), (45) Q to Kt sq., Q takes P, (46) Q takes P, Q to Kt 8 (ch.), (47) Q to Kt sq., Q to R 7, (48) Q to K sq., K to B 3, (49) P to R 3, K to K sq., (50) Q to Kt 4, and again White has winning chances.

CHESS AT DUNDEE.

The two following games were played in the Championship Tournament of the Scottish Chess Association held recently at Dundee:—

GAME No. 522.

RUY LOPEZ.

WHITE. W. N. Walker.	BLACK. D. Y. Mills.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Kt 3
4—P to B 3 (a)	4—B to Kt 2
5—P to Q 4	5—P takes P
6—P takes P	6—Kt to K 2
7—Kt to B 3	7—Castles
8—Castles	8—P to Q 4
9—P takes P	9—Kt to Kt 5
10—Q to Kt 3	10—Q Kt takes Q P

11—B to Q B 4
12—R to K sq.
13—B to Q 2
14—Kt to K 4
15—Q R to Q sq.
16—P to K K 3
17—Kt to B 3
18—B takes Kt
19—Kt takes Kt
20—Q to R 3
21—Kt to K 5
22—Q to K Kt 3
23—P to R 3 (b)
24—B to B 3
25—Q to Q 3
26—Kt to B 3
27—Kt to Q 2 (c)
28—Kt to B sq.
29—Kt to K 3
30—Q to B sq.
31—P to K Kt 3 (d)
32—Kt to Q 4
33—R to Q 3
34—B takes R
35—Kt to K 3
36—R to Q sq. (e)
37—K to R 2
38—P to Kt 4
39—Q to K sq.
40—Q to Kt 2
41—K to Kt sq.
42—B takes P
43—Kt takes Q
44—Resigns.

(a) This leads to an isolated Pawn later on, and is therefore considered inferior to either 4 P to Q 4 or 4 Castles.
(b) For now Black could play 23..... B takes Q R P, and be able to retire the Bishop in safety.
(c) Better to have returned to K 5 and allowed Black to take the initiative if he desired more than a draw.
(d) The game is very interesting from this point. Black has got an advantage in position and makes the most of it in very few moves.
(e) 36 R to Q 4 would have given Black greater difficulty in winning.
(f) A well played end game.

GAME NO. 523.

RUY LOPEZ.

WHITE.	BLACK.
D. Y. Mills.	G. B. Fraser.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—K Kt to K 2
5—P to Q 4	5—P takes P
6—Kt takes P	6—P to K Kt 3 (a)
7—B to K 3	7—B to Kt 2
8—Kt to Q B 3	8—P to Q 3
9—Kt takes Kt	9—P takes Kt
10—B to Q 4	10—Castles (b)
11—B takes B	11—K takes B
12—Castles	12—B to K 3
13—P to B 4	13—P to K B 4 (c)
14—Q to Q 4 ch.	14—K to Kt sq.
15—B to Kt 3	15—B takes B (d)
16—R P takes B	16—P takes P
17—Kt takes P	17—P to B 4
18—Q to Q 3	18—Q to B sq. (e)
19—Kt to Kt 5	19—Q to B 4
20—Q to B 4 ch.	20—Q to Q 4
21—Q to B 3	21—Kt to B 4 (f)
22—Q R to Q sq.	22—Kt to Q 5 (g)
23—Q to R 3	23—P to K R 4
24—Q to Q 7	24—R to B 2
25—Kt takes R	25—Q takes Kt
26—Q takes Q ch.	26—K takes Q
27—R to B 2 (h)	27—R to K sq.
28—K to B sq.	28—K to B 3
29—P to Kt 3	29—K to B 4
30—P to Q Kt 4	30—Kt to K 3
31—P takes P	31—Kt takes Q B P
32—R to Q 5 ch.	32—R to Q Kt sq.
33—R to R 2	33—P to R 4
34—P to Kt 3	34—K to B 2
35—R to Q 4	35—P to Q R 5
36—P to R 3	36—R to Q R sq.
37—P takes P	37—R takes P
38—R to K 3	38—Kt takes R
39—R takes R	40—Resigns.
40—R to R 3	

NOTES BY MR. HOFFER.

(a) Steinitz's defence here is 6 Kt takes Kt; 7 Q takes Kt, P to Q Kt 4; 8 B to Kt 3, P to Q 3, threatening to win a piece with P to Q B 4. &c. This line of play is preferable to that in the text, as Black avoids getting a double Pawn.
(b) If 10..... P to E 3, then 11 Kt to Q 5, Kt takes Kt; 12 P takes Kt, winning a Pawn. Black being compelled to give up the B at Kt 5 weakens his King's position; therefore the defence up to this point is proved inadequate.
(c) If 13..... P to Q B 4, then 14 P to B 5, P takes P; 15 P takes P, Kt takes P; 16 Q to Kt 4 ch, K to R sq; 17 R takes Kt, Q to B sq; 18 Q R to B sq, having gained two minor pieces for a R-k.
(d) The alternative would be 15..... B to B 3, thus avoiding the pressure upon the isolated R P.
(e) Now he has to defend the Q R P, which he does ingeniously enough; but his game is inferior.
(f) He cannot exchange Queens, because 22..... Q to Q 5 ch, 23 Q takes Q, P takes R; 24 Kt to K 6, winning a Pawn.
(g) This move loses the exchange eventually. He had therefore nothing better than 22..... Q to B 3.
(h) The remainder is easy. Mr. Mills played this game very well.

LASKER VERSUS STEINITZ.

A match between these players for the world's championship has been arranged to be played at Moscow in September. The conditions are a prize of 2,000 roubles to the winner and 1,000 roubles to the loser, and all expenses paid to both parties in addition.
Lasker and Steinitz have contested a total of 26 games, of which six have been drawn, six won by Steinitz, and 14 won by Lasker.

BISSET & URE'S SHARE REPORT.

Yokohama, July 6th.

Below we append our Hongkong agent's circular reporting the movements in the share market during the week ending 27th ult.

Hongkong, Saturday, June 27th.

Banks.—Hongkong and Shanghai remain dull with no business. Shares are obtainable at 189 or probably 188 per cent. prem. cash, and at equivalent rates on time. Nationals have remained on offer at \$29 without leading to business.

Marine Insurances.—China Traders have ruled weak and small sales have been effected at \$79 and \$78 1/2. Unions have further advanced with small sales at \$237 1/2. Cantons are enquired for and have changed hands in small lots at \$200. Straits have ruled weak at \$28 1/2. North Chinas are offering from the north at Ts. 200, and Yangtszes are wanted at \$145 after futile efforts to obtain shares at \$137 1/2 and \$140, to which rates they nominally fell in the early part of the week.

Fire Insurances.—Hongkongs have remained at \$337 1/2 with small sales. China Fires have found buyers in fair quantities at \$97, closing with sellers.

Shipping.—Hongkong, Canton, and Macao have changed hands at \$34, Douglasses at \$62 1/2 and \$63, and \$64 closing in with sellers at the latter rate. Indo-Chinas have been negotiated to a considerable extent at \$66 and \$65, closing quiet. China and Manilas continue to be enquired for, and have changed hands at \$74; more shares could be placed at the rate, notwithstanding the fact that 15 days guarantee has been imposed on the Company's steamers at Manila.

Refineries.—China Sugars are still out of favour, and although sellers (chiefly from the north) are willing to accept \$112, no transfers have been made. Luzons have changed hands in fairly large quantities at \$68, \$67, and \$66, Shanghai being the chief seller at the lower rates. At time of writing market is steadier with no sellers under, but with no buyers at \$67.

Mining.—Punjoms have ruled weak with sales at \$15 1/2, \$15, \$14 1/2, \$14, and \$13 1/2. The result of the May cyanide clean up gave 293 oz. (assay value of £1 18s. od. per oz.) from 680 tons of tailings. This result is not considered satisfactory by the generality of shareholders. Raubs have been done at \$5.50 in small lots, Jebeus at \$3, Olivers at \$8 and \$3.75, and Balmorals at \$2.75.

Docks, Wharves, and Godowns.—Hongkong and Whampoa Docks have ruled more or less neglected but shares are now in request at \$182. It is very unlikely, however, that any will be obtainable under the rate quoted. Kowloon Wharves, after further small sales at \$55, quickly fell to \$54, after intermediate sales at \$53 and \$52. At time of writing shares can be placed at the last rate, but not many are obtainable. The small enquiry that exists for Wanchais is still unsatisfied.

Lands, Hotels, and Buildings.—Lands continue in demand at \$72 and several sales have been

effected at that rate. Hotels, owing chiefly to the failure of negotiations for the purchase of or an amalgamation with Mount Austin Hotel, continue quiet at \$26. West Points have been enquired for in a small way at \$18, but I hear of no sales. Humphreys continue neglected at \$9 with sellers. **Miscellaneous.**—With the exception of small sales of Electrics at \$7.10 ex dividend, Watsons at \$12.50 and \$12.25, and of Ewo Cotton mills at \$85, I have nothing to report under this heading. Local stocks continue unchanged. Grand Hotels have been placed to-day at \$165.

The following changes have taken place in the Hongkong share market during the period from the 27th ultimo to the 1st instant:—

	27th June.	1st July.
H. & S. Bank	189 1/2 S.	186 1/2 S.
China Traders	\$78.50 Sa.	\$79 S.
Yangtze Insurance.	\$145 B.	\$147.50 S.
Straits Insurance ...	\$29 N.	\$28.50 N.
Douglas Steamships	\$63 B.	\$65 S.

China Sugars.....	\$112 S.	\$110 N.
Luzon Sugars.....	\$67.50 S.	\$68 S.
Punjom Mines	\$14 N.	\$14.25 Sa.
New Balmorals	\$2.75 Sa.	\$2.50 B.
Jebeu Mines	\$3 Sa.	\$3.10 Sa.
Raub Mines	\$5.50 N.	\$2.5 Sa.
H. & W. Dock.....	\$183 1/2 S.	184 1/2 S.
Hongkong Lands ...	\$72 B.	\$73 Sa.
Kowloon Lands.....	\$19 S.	\$18.50 S.
Hongkong Hotels ...	\$26 N.	\$25 Sa.
A. S. Watsons	\$12.25 Sa.	\$12.50 B.
H. G. Browns	\$5.50 B.	\$6 B.
Hongkong Electrics.	\$7.10 ex div. N.	\$7 ex div. N.
Geo. Fenwicks	\$28 S.	\$27.50 S.

Hongkong Fires have been purchased locally from Hongkong at \$350 for the 31st December delivery. Club Hotels have changed ownership at \$75. Grand Hotels are wanted at \$165, Japan Breweries at \$215, and Debentures of all kinds at quotations. Langfeldts are enquired for at \$185. Oriental Hotels are offering at \$140.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARRA, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1896

"NEW CODES AND OLD CUSTOMS."

YOKOHAMA: SATURDAY, JULY 18TH, 1896.

DEATH.

On July 11th, at Kobe, after a long illness, EDWARD HUNT, in his sixtieth year.

SUMMARY OF NEWS.

THE disturbance in Formosa has been put down.
H.M. FLEET has left Hakodate for ports further north.
Most of the schools have now broken up for the summer vacation.
THE French Chamber of Deputies has rejected the Income-tax Bill.
THE French Senate has passed the Bill making Madagascar a French Colony.
A BALKAN alliance has been formed between Servia, Bulgaria, and Montenegro.
THERE are now eight different schemes for providing Tokyo with overhead railways.
THE scheme for building a palace at the back of the Russian Legation in Sôul has been tem-

porarily suspended through the intervention of Kim Heung-shi and Chheung Heun-sei.

MARQUISSES ITO and Saigo were received in Imperial audience on the 13th inst.

THE Y.C. & A.C. were beaten at cricket on Thursday by a team from H.M. ships.

LI HUNG-CHANG has been decorated with the Grand Cross of the Lion of the Netherlands.

KANG KEUN-KI, and other members of the Tai Wên-kun's household, were arrested on the 10th instant.

LI POM-CHIN, the once all powerful Premier of Korea, has fallen, and all his dependants are in disgrace.

M. HITROVO, Russian Representative to the Court of Japan, died suddenly in Russia during the week.

In the race for the Grand Challenge Cup at Henley, the Leander Club crew beat the Yale crew easily.

THE "fourteenth of July" was duly celebrated by the French community, with fireworks, dances, and other festivities.

THE last two sailing races had to be abandoned owing to lack of wind. In consequence four races have to be sailed this afternoon.

MR. OZAKI SABURO left Tokyo on 12th inst. for a tour through Korea. He is a member of the committee for the Sôul-Fusan Railway.

THE Rickmers liner *Maria Rickmers* was thrown open to inspection on Friday, and was visited by a large number of Yokohama residents.

MR. HOSHI TORU, the new Minister from Japan to Washington, has been wine and dined at San Francisco, where he made several speeches.

THE Rt. Rev. Bishop Bickersteth dedicated the steam-launch *Gleaner* to the service of the Missions to Seamen, at Yokohama, on Thursday.

HEAVY rain, accompanied by thunder and lightning, swept over Yokohama on Wednesday evening. The weather has now become very hot.

FARMERS in the northern districts of Japan complain of the continuous rain. At Takasaki and Matsuyama locusts are doing much damage to crops.

SIR AUGUSTUS BERKELEY PAGET, the well-known Ambassador to the Court of Vienna, is dead. Mr. Ralph Paget, of the British Legation, Tokyo, is his son.

THE British Parliamentary Secretary of the War Office has stated that no British regiment has been ordered to advance to Dongola, but the garrison is available if so ordered by the Sirdar.

THE Tsuruga and Fukui railway inaugurated its business on the 13th inst., at 7 a.m. Over 400 passengers travelled by the company's trains by 4 p.m. The line was opened for public traffic on the 15th inst.

THE sub-marine cable between Okinawa (Liukiu Island), and Nagasaki is making progress, the shore work being nearly finished. The whole line is expected to be completed in September, or a little later.

THE hearing of the charge against Judge Besho, for breach of discipline, has concluded in the special Disciplinary Court, and he has been dismissed from his position. He will now bring forward a suit in the Court of Cassation.

A NUMBER of notable Democrats, being alarmed

at the decision of the Chicago Convention in nominating Mr. Bryan, who is an extreme silverite, are rallying to the support of Mr. McKinley, and the latter now declares strongly in favour of gold.

AN attempt was made on the life of President Faure, on the 14th July. Whilst driving through Longchamps, two revolver shots were fired at his carriage, but the President escaped unhurt. The assailant was arrested.

MR. BRYAN of Nebraska, a former Congressman, has been nominated by the Chicago Convention as the Democratic candidate for the Presidency of the United States, and Mr. Sewall, of Maine, for the office of Vice-President.

THE rising in Matabeleland is increasing. Earl Grey, Administrator of Rhodesia, has now accepted the Cape Government's offer of a transport corps which he had previously refused, the Chartered Company bearing the cost. The corps proceeds at once Beira.

THE Government proposes to double the Tokaido line from Tokyo to Kanagawa, and then branch off to Hodogaya, thus eliminating Yokohama from the purview of the scheme. The project has aroused a good deal of objection among Yokohama residents of all classes.

THE Emperor's silver *saké* cups, made in commemoration of the invasion of China, were distributed on the 11th instant, to members of both the Upper and Lower Houses that attended the session at Hiroshima. These *saké* cups are in sets of three, and are valued at yen 60 each.

THE following sums have been collected by the vernacular press for the relief of sufferers by the Seismic disaster in the Sanriku district:—
Yiji Shimpô, yen 47,499.40; *Tokyo Nichi Nichi Shimbun*, yen 41,131.88; *Osaka Asahi*, yen 33,720.26; *Osaka Mainichi*, yen 17,303.55; *Hinode*, yen 12,589.44; *Kobe Fushin Nippo*, yen 9,059.76; *Miyako Shimbun*, yen 7,158.92; *Tokyo Asahi*, yen 5,703.45; *Fuso Shimbun*, yen 5,227.32; *Chuo Shimbun*, yen 4,875.83; *Shimodake Shimbun*, yen 4,759.33; *Shin Aichi*, yen 4,452.62; *Yorodau Choho*, yen 4,369.09; *Gifu Nichi Nichi Shimbun*, yen 3,272.24; *Mainichi Shimbun*, yen 3,607.26; *Geibi Nichi Nichi Shimbun*, yen 3,390.56; *Yomiuri Shimbun*, yen 3,382.78; *Shidzuoka Minyu Shimbun*, yen 3,210.49.

THERE is no great alteration to report in the Import trade. Though Yarns have been taken to a fair extent, at present prices business can hardly be called remunerative to importers. Grey Cottons continue to command some attention, but Fancy and Coloured goods are very dull, and the Woollen trade is lifeless. There is nothing to report in Metals but an access of stock, which is now heavy in nearly all lines. The Kerosene market gives signs of weakness though no absolute cheapening of Oil has occurred. Buyers hold off, but it can only be a question of time with them, for the stocks in the interior are small. The Sugar trade has toned down to dullness, a gulf existing between buyers and sellers as to value. The Silk trade is very quiet, and the business done has not been sufficient to make quotations. With nothing doing and new Silk tumbling in on a large stock of old, the outlook is not bright. Nothing to report in Waste. In the Tea trade, a large business continues to be done in Medium and Good Medium leaf, and prices are about the same. Exchange may be said to have remained unchanged for another week, and rates are apparently firm at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The alleged elimination of the industrial clause from the draft of the Treaty of Commerce now in process of negotiation between Japan and China, evokes much comment from the vernacular press. The Opposition papers' criticism lacks coherency, for while admitting that the clause never appeared in the Japanese draft, and that it made its *début* in counter proposals advanced by China, they complain that the disappearance of the clause must be regarded as a concession made by Japan with the view of facilitating the conclusion of the Treaty. Certainly that way of stating the matter leaves much to be desired in point of intelligibility.

The *Nichi Nichi* bears out the view advanced by us, for in the latest article penned by it on this subject we read that special inquiries show that the Japanese Plenipotentiary caused his Chinese colleague to withdraw the clause in question, and that the unusual delay in concluding the Treaty was occasioned by disputes over other clauses also, as, for instance, the enforcement of extraterritorial jurisdiction over Japanese subjects in China while requiring that Chinese subjects in Japan should be judicable by Japanese tribunals, and the claim that Japanese should have freedom of travel in China, whereas the corresponding privilege is denied to Chinese in Japan.

The *Mainichi* gives an incredible piece of news in this context, alleging that it emanated from Mr. Oishi, an ex-Japanese Minister to Korea. It is to the effect that, owing to repeated petitions "on the part of China for the abrogation of the clause granting to Japanese subjects the privilege of carrying on industrial undertakings in China, the Japanese Cabinet, when the matter was communicated to them by Baron Hayashi, decided to leave the question entirely to the discretion of the Baron. Count Mutsu, then at the head of the Foreign Office, held an entirely different view, and this incompatibility of ideas between him and the rest of the Ministers led to his retirement from the Cabinet. We (*Japan Mail*) may add here that the *Mainichi's* story is pure fiction.

The *Kokumin* and *Mainichi* raise a combined clamour of dissatisfaction about the recent trip of the Premier and the Minister of the Navy to Formosa and Amoy. The *Kokumin* wishes to know why their tour was not more thorough and careful, and why they did not extend their inspection to the vicinity of Yuen-lin, notorious as a hot-bed of disaffection. Had they visited that place, the result might have been the adoption of measures for the more efficient control of the malcontents and the consequent prevention of the recent outbreak. This most captious *Kokumin* next wishes to know why the Premier did not hasten back to Tokyo as soon as he received at Nagasaki news of the seismic disaster in the Sanriku districts, instead of prolonging his journey by visiting Sasebo, staying at Shimonoseki, and so on. While he spent no less than 13 days between Nagasaki and Osaka, the sufferers in the afflicted districts were weeping over and bemoaning the dire calamities that had overtaken them. Even apart from that terrible calamity, he ought to have hastened back promptly to report to the Throne the result of his inspection, for the Emperor was much concerned about the fresh outbreak of insurrection in his new dominion, and grieved to hear of the casualties that had befallen a number of his officers and troops in Formosa.

The *Mainichi*, not less wildly censorious than the *Kokumin*, is surprised at the failure of the two Ministers to foresee the danger of an insurrection and concert measures to prevent it. Naturally, the *Mainichi* has learned that signs of the coming trouble were visible while the two Ministers were engaged in their inspection-tour through the island. The reckless eagerness of the Opposition

journals to clutch at any straw likely to discredit the Ministers of State has become quite ludicrous, and has brought them into well and deserved discredit. They recently stooped to circulate a monstrous story that a woman of questionable character was on board the war-vessel *Yoshino* when she carried the Premier and the Minister of the Navy to and from Formosa, and they even made this scandalous falsehood the subject of leading articles. Mr. Kote-gawa, an officer of the Nippon Ginko, who accompanied the Ministers, was naturally indignant at the wretched conduct of these journals, and sent a letter to the *Yiji* protesting against the villainous story and pointing out to the reckless journals that they were not only disgracing themselves, but also grossly insulting the Imperial Navy. Indeed, we read in another paper that the Naval Authorities are highly indignant about the matter, as well they may be.

The *Yiji* thinks it necessary to adopt some special procedure with regard to Peers engaged in business, for, as matters stand at present, the advantages they enjoy are quite extraordinary. In the first place, there is the Hereditary Property Law, in virtue of which a Peer is secure from having his inherited possessions distrained or brought to the hammer, even though he fail in business and incur heavy liabilities. In the second place, even when a peer contracts a loan on the security of the full profits accruing from this property, he is not legally liable for more than a third of those profits every year. Thus his privileges as a peer are incomparably greater than those enjoyed by any untitled business man under similar circumstances. Either the Peers, in the same manner as Government officers, must be precluded from going into business, or the Hereditary Property Law must be amended.

The *Mainichi* urges that the problem of street electric railways in Tokyo must be promptly dealt with. The Home Office's opinion is said to be that an undertaking of a public character such as street electric railways, should be carried out by the city itself. The *Mainichi* doubts whether the contention of the Home Office in the matter of this special question is tenable, and whether the undertaking could be successful as a municipal concern. It points out that the Home Office's position depends on the adoption of extreme nationalistic views such as are advocated by Wagner of Germany, views not carried into practice in Europe; and that a public corporation, like a municipality, is not adapted to conduct with success a business so troublesome and complex as the undertaking in question. The case of lighting the streets by gas is a good example: the business did not begin to become profitable until after its transfer to private capitalists. Moreover, the city having already many affairs of importance to manage, as the construction of water-works, the improvement of the streets, and the reconstruction of the harbour, has no capacity to attend to anything else. At all events, the question must be promptly settled, and street communication facilitated as quickly as possible.

The *Shogyo* wishes to direct the attention of railway projectors and experts to China, believing that they ought to divert their capital and energy towards the construction of railways in that big country. With the exception of rails, almost everything needed for the building of railways can be supplied by Japan. Hence, instead of exhausting their capital and their energies in constructing railways in Japan, the returns from which are in many cases problematical, they should try to engage in lucrative railway enterprises in the neighbouring empire. Otherwise all the profits accruing from Chinese railways will fall to foreigners.

The people are labouring under a delusion, writes the *Yiji*, when they imagine that the steady increase of imports over exports since the termination of the war must prove disastrous to the economy and prosperity of the country. To

undeceive them, the *Yiji* gives two tables, intended to show that the increase of imports is chiefly due to augmented demand for raw materials to be employed in manufacturing enterprises, and that the import of articles contributing to habits of luxury shows considerable diminution. Here are the tables:—

Table showing Total Increase of Imports, and Increase of Articles of Consumption.

	Total Increase of Imports, Per Cent.	Increase or Decrease of food stuffs, liquor & tobacco, Per Cent.
From 1890 to 1894	43	57
From 1894 to 1895	6	—4
From Jan. to Apr. 1896 as compared with the corresponding period of 1895 ...	36	+5

Table showing Total Increase of Imports and Increase in the Import of Raw Cotton, Hemp, Yarn, Iron, Leather, and Hides, Wool, and Woollen Fabrics.

	Per Cent.	Per Cent.
From 1894 to 1895	6	44
From Jan. to Apr. 1896 as compared with the corresponding period of 1895 ...	36	67

An increase in the import of raw materials being indicative of the expansion and development of Japan's industries, the public need not be at all disturbed about the figures, but must, on the contrary, welcome and strive to take advantage of a state of affairs calculated to promote the commerce and industry of Japan so as to convert her into a world centre of manufacturing enterprise.

The revival of rumours about alleged points of difference in the Treaty between Japan and Germany as compared with the revised Treaties concluded with other Powers, causes the *Kokumin* much uneasiness. Those points, according to the *Nichi Nichi Shimbun*, are as follow:—

1. That the subjects of either High Contracting Party shall enjoy the same rights and privileges with regard to inventions, models, trade-marks, and other marks as the subjects of the other, provided that the subjects of each shall observe the laws relating thereto enforced in the dominions of the other: this clause to be put into operation simultaneously with the exchange of ratifications.
2. That the hypothecation of land and the loan of money on such hypothecation shall be permitted.
3. That the renting of land or buildings for purposes of manufacturing industry shall be permitted.

The *Tokyo Shimbun* adds a clause relating to the sanction of mining industry. The *Kokumin* considers all these things a great concession on Japan's part, compared with the terms of the revised Treaties concluded with other Powers, and avers that the rights and interests of Japan are seriously affected. It scoffs at the contention advanced by some that as the provisions are equally binding on the subjects of the two Powers, no concession on Japan's part is involved. Do these theorists believe that the results arising from such provisions will really be reciprocal, asks the *Kokumin*. Nothing is further from the truth: any benefit accruing from them will be enjoyed by Germany alone. In fact, enforcement of such clauses will cripple Japan's industry, the products of her manufactures being, in great measure, imitations of those of Europe and America. The *Kokumin* is eager to have the text of the treaty published, so that the people may be enabled to pronounce judgment upon it.

The Formosan problem still occupies the attention of the *Yiji* and the *Mainichi*, the former writing about the tardiness of the Government in the matter of taking steps for opening up the island and developing its resources, and the latter about the arbitrary and lawless conduct that many Japanese and not a few Government officials are reported to be pursuing towards the natives.

Tom Sharkey, an ex U.S. blue-jacket, fought Jim Corbett, at San Francisco on the 24th June, in four rounds, and had the best of the bout. Corbett was thrown twice, but the fight was declared a draw. They will now fight for \$10,000 to the finish.

EDITORIAL NOTES.

THE RICE EXCHANGE.

THE late unseasonable weather and the influence of speculation in Osaka, raised prices in the rice market beyond their normal level, and the Authorities thought fit to interfere and suspend transactions on the Osaka Exchange. Quotations in Osaka had never been so high since 1880, and the managers had lately confined transactions to transfers and buying back stock. When the "bulls" learnt that this limitation had been brought about in consequence of a petition which the "bears" had presented to the Exchange, the local, and central Authorities, they became indignant and resolved to persecute their rivals, even if they lost profits amounting to over 200,000 yen which they would have realized from pending transactions. Their schemes succeeded so well that on the 4th inst. the quotation rose by 60 sen, and the "bulls" once more carried the day. The Authorities thought that the only way to stop the recklessness was to entirely suspend the Exchange, and the *flat* went forth on the 6th inst. That quotations at Osaka were entirely artificial may be seen when prices at other places are compared. Quotations on the 2nd instant were lower than at Osaka by 1.32 yen in Tokyo, 1.695 yen in Kobe, 1.50 yen in Kuwana for July, and 1.78 yen in Tokyo; 2.120 yen in Kobe, 2.12 yen in Kuwana for August. When transactions were resumed on the 7th inst. at Osaka, quotations were quickly pushed up to 12.34 yen, that is about 40 sen above the prices quoted when the Exchange opened. On the 7th, the Tokyo Exchange opened transactions at 10.25 yen, which was carried to 10.35 yen, but fell to 10.17 yen at the close. On the 8th, quotations ranged between 10.32 yen and 10.41 or 10.42 yen.

FOURTEENTH OF JULY.

THE anniversary of the taking of the Bastille—the French national holiday—was duly observed in Yokohama on Tuesday. The day was overcast, with occasional rain-showers, but comparatively cool for the time of year. In the forenoon a reception was given at the French Consulate, that was largely attended. At noon a salute was fired by the U.S.S. *Olympia* and *Machias*, that were both dressed, but through somebody's blunder, the British ships did not participate. In the afternoon a race for the 26-raters was attempted for the French Resident's Cup, but owing to an absence of wind was not completed. The M.M. steamer *Salasie* came in shortly before noon with her masts dressed rainbow fashion. The office of the big M.M. Company, at No. 9, Bund, was tastefully decorated with lanterns and bunting, as were also the French Consulate, Dr. Möcck's house on the Bluff, the Club and Grand Hotels, and the residences of several French citizens. A good deal of bunting was also hung out in Main Street and other parts of the Settlement. In the evening there was a display of fireworks, from floats moored off the Club Hotel, and the Imperial Guards Band discoursed a splendid selection of music at that hotel throughout the evening.

RECEPTION ON BOARD THE "MARIA RICKMERS."

ON Friday afternoon, Capt. Berg, of the Rickmers' liner *Maria Rickmers*, and his officers, were "at home" to the mercantile community of Yokohama. The day was gloriously fine and most of the German residents availed of the invitation. Among those present we noticed Mr. and Mrs. Grosser, Mr. E. Leopold, Mr. O. Kiel, Mr. Kallen, H.I.G.M. Vice-Consul, Mr. F. McNab, Capt. Forbes, Capt. and Mrs. Efford, and Miss J. Booth, Mr. O. Voigt, Mr. Paul Schramm, Mr. G. Mitsui, Mr. M. Mitsui, managing directors of the big firm of the Mitsui Bussan Kaisha, Mr. Y. Uyeda, manager of the foreign department of the M.B.K.; Mr. K. Hasegawa, manager of the Kobe Branch of the M.B.K.; Mr. A. C. Sim, Mr. S. Odagaki, Mr. K. Fukui, Mr. A. Hofmann, Mr. Unger, Mr. Nabholz, Mr. Brennwald, Mr. Kaufmann, Mr. Weinberger, Mr. J. R. Merian, and many others. Steam launches were waiting at the *hatoba* to take off the guests, and from three

o'clock till seven they were kept constantly employed. The *Maria Rickmers* was most artistically dressed in evergreens, flags, and flowers, and a prettier sight has seldom been seen in this harbour than was presented yesterday when the spacious promenade deck was crowded with the delighted visitors. Rows of tables were set out with refreshments for the inner man, and the officers did their best to make the visitors at ease, in which they succeeded admirably. The Yokohama Town Band was in attendance, playing a nice selection of music, and towards the end of the function, dancing was indulged in. The *Maria Rickmers* was built at Sunderland for the well-known Bremen firm of Rickmers, and is intended for service to the Far East. She is a finely modelled vessel of 5,000 tons register, and is 427 ft. long; 50 ft. 6 in. beam; 30 ft. 6 in., moulded. Aft, she has a big poop, and amidships a bridge-house and promenade deck over 100 feet in length. Attention has been paid on this deck to the requirements of Mecca pilgrims and special sanitary arrangements introduced. In addition, accommodation is provided for twelve first class passengers, who are housed in spacious cabins. The officers' quarters are wide and airy, their comfort being attended to in every way. Cargo can be speedily taken on board or discharged by the aid of nine steam winches and an equal number of steel derricks. Water ballast is carried in the cellular double-bottom. In this connection we may mention that by a simple arrangement the officer in command can close all the dropping water-tight doors automatically without leaving the bridge, that invention belonging to the Superintending Engineer of the company. By an electric signal all the men below can be warned, and can leave the portions about to be closed, then the doors drop down in their proper places and the ship can float for days without any apprehension of danger. The engines of the *Maria Rickmers*, of triple-expansion type, are driven by four multitubular boilers, and all the latest improvements are introduced in the engine room and stoke-holds. Altogether, she is a vessel that any company may well be proud of.

THE HUNGARIAN MILLENNIUM.

ON May 1st, Budapest, the capital of Hungary, and in fact the whole Kingdom, witnessed the beginning of the Millennium Celebration. This marks an important juncture in the history of one of the most interesting nations in Europe. In a brief survey of the history of the Hungarians, the *National Zeitung* says:—It was in the year 890 that this strange people came like a flood into the Pannonia, which was formerly a Roman province, and where they found ruins of the Roman Empire, and of Germanic and Slavonic migration. The Hungarians were a nomadic people, and are descendants of the Finn-Ugrarian family, whose customs of life they observed even after they had established themselves in their new possessions. Their repeated raids into German provinces and their barbarous depredation and pillage reminded the Germans of the frightful deeds of the Huns, and many of the common people regarded them as none other. This, however, was stopped by the German victory on the "Goldenen Aue," in 933, and "Lechfelde," in 955, under King Henry I., and Emperor Otto the Great. These "restless attacks" and invasions of the Hungarians had the effect of bringing about a better organized system of government among the German tribes, the building of castles and fortified cities, and a more elaborate military system. In Hungary the German victories produced a very similar effect and culminated in the introduction of Christianity. From the time of the conquest to the year 1,000, Hungary was ruled by dukes, the regal title being first assumed by Vaik (afterwards Stephen I., the Saint). The introduction of Christianity paved the way for Western civilization. With reference to this very interesting historical event, a writer in the *Nation*, Berlin, says:—It was of vast importance that Stephan turned to Rome rather than to Byzantium. He thereby turned Hungary into a breastwork against the

invasions of the East. The Hungarians opposed the advances of the Tartars and the Turks at tremendous odds and terrible sacrifice. In the war against the Moslems, the Austrians came to their assistance but only to destroy the national independence of Hungary and to exterminate Protestantism, which had already become so well established in the country that Calvinism was regarded as the national religion. Revolutions followed but were crushed, and yet the Magyars could not be kept subject, the energy of the people was such that they gained their independence as soon as Constitutionalism was established in Austria. Since the reconciliation of the Magyars with the Hapsburg dynasty, both parties have sought to throw a veil over the past by mutual concessions. On the 8th of June, 1867, the Emperor and Empress of Austria were crowned King and Queen of Hungary at Budapest, and a complete pardon was proclaimed to all political offenders at home and abroad. To-day Hungary is not only completely independent but is in fact the predominant member of the Dual Monarchy. This is all the more remarkable as the Magyars do not even constitute a majority of Hungary itself. Out of the seventeen and a half millions, only seven and a half millions are reported as Magyars. About two millions are Germans, two and half Roumanians, two Slavonians, one and a half Croats, one Servians, and in smaller numbers Italians, Slovenes, Armenians, Bulgarians, Czechs, Gypsies, and other strangers. In the Hungarian capital where the German was formerly predominant, the Magyars now take the lead. Ever since they have effaced the intellectual difference which formerly existed between them and the Germans, the German element is blending with the Magyar into compact nationality. The Slavonic races are more difficult to manage in this respect. The Germans of Hungary, it is reported, have heartily joined in the Millennium celebration.

MR. GEO. W. TRACY.

THE many friends of Mr. Geo. W. Tracy, who spent some time in Yokohama as the Japan representative of Hayes and Tracy, wholesale dealers in Japanese goods, Chicago, will be interested in the following item clipped from *The Standard*, of Chicago:—"Mr. George W. Tracy and Miss Susan Pope were married in London, on May 19th, and have now proceeded to their future home in Odessa, Russia. Mrs. Tracy is a daughter of Mr. and Mrs. Pope, of the First Baptist Church, Chicago. Congratulations are extended by many friends, congratulations which are hearty enough to reach from Illinois to Russia." It may not be generally known in Japan, that Mr. Tracy came near returning to this country as U.S. Consul to Hyogo by appointment of Pres. Cleveland, but finally decided to remain in the United States. We are not informed as to his business in Odessa.

JAPANESE PROVERBS.

IN the *Deutsche Révue*, we find a contribution from the pen of Reinhard von Bibra on Japanese Proverbs, viewed from a German standpoint, from which we reproduce the following: In the Land of the Rising Sun, the Land of the Chrysanthemum, the language has an abundance of gay leaves and flowers, the most charming of which are the proverbs. These must interest us, because they are so nearly related, and have such a marked similarity, to our German proverbs, both when treating of the most serious affairs of life or the more cheerful phases. All vicissitudes of human life, joy and grief, life and death, in fact everything from the cradle to the grave, is reflected in the Japanese proverbs. With "One is the beginning of all things," we can begin with a Japanese, who advances the good advice before the new citizen of the world makes his appearance, to "Have the swaddling-clothes ready before the child is born." Scarcely has this taken place than a proverb says, "The child of a warrior awakes at the sound of the sword, that of a merchant at the rattling of the abacus, and that of the beggar at the sound of the alms-plate." "Love

to children makes some dumb,"—is to teach us that parents will deny themselves everything, even speaking—a great sacrifice to Japanese women—if it can benefit the child. Foolishness on the part of children is excused. The child knows not the heart of the parents. To the old that think themselves wise, it is said: "Some are old at the age of three and some are children at the age of one hundred years." The frivolous are exhorted: "When one wishes to fulfill his duty towards parents there are no more." "Love lies outside of deliberation," thus, love is blind there as with us here. That girls regard marrying as a serious affair, is shown by the proverb: "Man is man, though he were made of straw." And of men: "To the eye of the lover, even small-pox scars are laugh-dimples." Parents complain that, "As soon as the bride assumes the name of her husband, she becomes a stranger to her parents." Presently it is said: "Daughter-in-law and mother-in-law are like apes and dogs," and the husband is advised:—"Entrust your wife with no secret, even if she has born you seven children." Several proverbs refer to feminine loquacity and tea-gossip. "The tongue goes like a mill-wheel," just as with us, and "A scandalous tongue separates relatives quicker than a sword the head from the body." This is saying a great deal in the land of *harakiri*. Grief is frequently demonstrated by women: "Weeping, as though the eyes would melt." Jealousy is to be expected: "A woman that is not jealous is like a ball that does not bounce." The proverb, "One's own Buddha is beautiful," serves the same purpose as our "every fool is pleased with his cap." The sword occupies a prominent place in Japan: "A costly sword is given the distinguished warrior, cosmetics and powder to pretty women." "Under a brave general there is no cowardly soldier, none that eats wind" (runs away). The coward is also scoffed at in the following proverbs: "He trembles like one walking on thin ice." Therefore he will come to grief for "fish-fool will be made of him." The brave are honoured; they are advised: "First bind fast the six parts of your armour and then go on the battle-field;" he then hastens, "like a flying arrow," in order to "Wash blood with blood," or to "Make an air-passage through the body of the adversary" (pierce the body). The national drink is not forgotten; saké plays a rôle that reminds one of Mirza Schaffy's drinker's-humour (Zecherhumor): "Saké is the first among a hundred medicines." And as with us, appetite comes by eating, so the Japanese with regard to drinking: "After the first cup one feels thirsty." That there is truth contained in rice-wine, is shown in the following proverb: "A great drinker shows his true character." What more saké can accomplish is stated in the following: "With the first cup man drinks sake, with the second cup saké drinks saké, with the third cup saké drinks the man." Distrust is a prominent characteristic of the Japanese. I find expression in the following: "To hear a hundred times is not as good as seeing once," and "Rather copy once, than read ten times." In Japan not only have the walls ears, but "the doors have eyes," and a "spectator has eight eyes." To be careful against losses, the advice is given: "Even though the thief be resting, the watchman dare not rest." With regard to physical health the Japanese says: "Health is money," and in ordinary life, "Medicine costs ninefold," but "Men are vessels of ailments." Therefore the physician is to help: "The physician heals the sick that die not," that is, if the patient does not die the doctor gets the credit. In Japan things sometimes go the wrong way also: "When the stone swims the leaf of the tree will sink." But one should not ask for the impossible: "From a non ask no comb," as their heads are shaved in Japan. Nor is one to undertake too much: "He that endeavours to catch two hares at once will get none." The animal world has also its proverbs: "Give food to the bad falcon," that is, get rid of your enemy the cheapest way possible. "When the cow drinks water, she gives milk, when the serpent drinks water, it makes poison;" or as the

Latin says: *Si duo faciunt idem, non est idem*. There is no lack of rules concerning the seriousness of life: "The course of water and the future of man is uncertain." While we sing: "Ah, how changeable are the hearts of women!" the Japanese say: "The heart of man and the sky in autumn are both changeable." Here follows fittingly: "Whether we pass through life weeping or laughing, there is but one life," less sentimentally and more briefly we say, "One lives but once!" Here also the following: "To wait for fortune is the same as to wait for death." Instead of, silent as the grave, the Japanese says: "The dead have no mouth." Many proverbs treat of the final home for all: "The new year's tree (our Christmas tree) is a mile-stone on the way to the grave." Among the luxuriant vegetation of Japan there is also no herb against death: "There is help for everything, death excepted." When death approaches, the Japanese laments, "My life is broken like a cup that is smashed on a stone." Death makes all alike: "On the way to Hades there are no old or young." "He has disappeared like water in sand." In the foregoing only some of the usual proverbs have been given. All such as are too intimately entwined with Japanese conceptions and circumstances have been left out. However, those given here furnish us a true mirror of the original Japanese characteristics. We see that the inhabitants of this island empire are disposed to be cheerful and courageous, that they are of a social disposition, but cautious to the extent of being suspicious; that in religious matters they are indifferent, and that concern about the beyond disturbs no one.

HON. GARRETT A. HOBART, OF NEW JERSEY.

As the Republican candidate for Vice-President is not a very well-known man, it may not be out of place to quote here some facts about him as reported to the *Chicago Record* by Mr. Wm. E. Curtis:—

Mr. Hobart is a native of New Jersey, a graduate of Rutgers' college in the class of '65, and went to Paterson to study law with Socrates Tuttle, who for a time was the leader of the bar in the northern part of the state. He soon became a partner, married Mr. Tuttle's daughter, and took the corporation business of the firm in his hands. As counsel he naturally became a director in various companies, and when they did not pay he generally was appointed receiver or manager, so that after a time he drifted out of the law into the active charge of manufacturing establishments owned by his clients. He was receiver and afterward president of the New Jersey Midland railway, the New York, Susquehanna, & Western the Montclair railroad, the Jersey City and Albany road, and other small lines at one time or another, and has reorganized them and put them on their feet or sold them out to other and stronger associations. He is at present a director in several railways, including the Lehigh Valley, and last December was selected as an arbitrator to settle the differences of the Joint Traffic Association. He is president of the local gas company, the water company, a street railway company, and the First National Bank, and is a director in the great Barbour Thread Company, the Pioneer Silk Company, and various other manufacturing corporations. As one would naturally infer, the people of Paterson regard Mr. Hobart as an uncommonly fine business man; his reputation in that respect is not confined to New Jersey. There are very few men in New York or Pennsylvania who would make a stronger canvass for vice-president in either or both of those States than Mr. Hobart, and he would be acceptable to Mr. Quay, Mr. Bliss, Gov. Morton, Speaker Reed, and to all the other leaders of the Republican party in the east regardless of their factional differences. I wrote from Washington several months ago that Mr. Hobart had been selected as the candidate of the anti-McKinley combine for vice-president, but his state went for the Ohio man and he cheerfully fell into line. I therefore think Mr. Hobart will be nominated. He seems to suit the conditions better than any one who has thus far been suggested, and his selection would leave no scars. He is an ardent "gold" man.

THE STANDARD LIFE ASSURANCE COMPANY.

AMONGST the giants of the Life Assurance world of Great Britain, says a writer in a London paper, must be reckoned the Standard, an Edinburgh Company, which came into existence seventy years ago, and which has been growing and expanding ever since. I think I am right in saying that last year the Company beat all its previous records in respect of volume of new assurances, policies being issued for the large total of £1,943,475, at new premiums amounting to £77,714. The Standard thus takes the premier place amongst the great Scotch Offices, and is third in the list of British Offices in respect of this particular feature. Last year its net premium income rose to £786,246, an increase of over £50,000 for the year, while

£68,496 was received as consideration for annuities granted. Yet the addition to the funds was only about £24,000, raising them to nearly eight millions. The increase would have been largely in excess of £200,000 but for a circumstance incidental to the Indian business, which might, perhaps, be regarded as the skeleton in the Company's cupboard. The Company does a very large business in our great Oriental empire, and the steady depreciation in the exchange value of the rupee appears to have wrought havoc with that department of its finances. For the directors, after long consideration—at the end of which they had lost hope of any improvement in the rate of exchange—have adopted what appears to me the only sensible course, in writing down the value of the Indian assets, an operation which has involved the debiting of the revenue account with the large sum of £194,614. After this has been done, however, the total of the funds is within easy distance of eight millions.

MRS. LYNN LINTON AND CYCLING.

In the *North American Review* Mrs. Lynn Linton goes for some "cranks and crazes," among these being cycling. "Walking, riding, skating, and dancing," says Mrs. Linton, "we can understand as fit exercise for the vigorous and young; but cycling seems to be such a doubtful kind of amusement—such a queer cross between the treadmill and the tight-rope—demanding such a constant strain of attention to keep your balance, with such a monotonous and restricted action of the limbs as to render it a work of penance rather than of pleasure. . . . To the uninitiated, the craze which has swept over England seems inconceivable." Mrs. Lynn Linton is also down upon "the modern craze for missionary work in unlikely and unsympathetic countries, where the lives of the missionaries are in danger, where the converts they make are for the most part unredeemed scoundrels, and where the civilisation of the people is older and more compact than our own, better suited to the needs of the people," and so on.

INTER-UNIVERSITY CRICKET.

THE Inter-University cricket match finished on Saturday, July 4th, Oxford winning a brilliant victory by four wickets. Cambridge, whose side was mostly favoured by the betting men, won the toss, and, going in first, scored 319. Oxford only put together 202 in the first innings. Cambridge then knocked up 212, leaving the Dark Blues 330 to win. Oxford gallantly accomplished the required task with the loss of only 6 wickets, thus winning with four stumps still to fall. One of the Oxford men succeeded in passing the century.—*China Gazette*.

CHUNGKING.

PRESIDENT CLEVELAND has appointed Mr. George F. Smithers, Deputy Consul at Kobe, to be the United States Consul at Chungking, in Szechuan, on the Yangtze river. Mr. Smithers, the *Kobe Chronicle* learns, will in all probability proceed to his new post in the course of a month. Chungking was opened nominally by the Chinese Government at the demand of the British and French after the Yangtze riots in 1891, as a penalty for several murders and violent outrages. Since then nothing whatever has been done with Chungking except the establishment of a British Consular agent.

THE DOSHISHA.

IN a letter to the Rev. H. Kozaki, President of the Board of Trustees, of the Doshisha University, Kyoto, the Rev. M. L. Gordon and the Rev. D. W. Learned, state that the American Board cannot advise the missionaries under its care, to continue at the University, and they therefore resign their posts.

THE P. AND O. COMPANY.

AN Indian contemporary, referring to the last report of the P. & O. Company, remarks that there has been an increase of 33 per cent. in the gross tonnage, and nearly 40 per cent. in the horse-power since the Jubilee boats were built. Moreover, whereas they were 16·6-knot

boats, the *Caledonia* does her 18 knots, and the four latest steamers now being built are to be 19-knot boats.

PRESENTATION.

At last evening's meeting of the Yokohama Lodge, Wor. Bro. E. Flint Kilby, W. M., was presented with a handsome silver card tray, of rich Japanese workmanship, the decoration being an open-work design of chrysanthemums. Wor. Bro. R. N. St. John, I.P.M., made the presentation, and said that it was a small token of the Brethren's high regard, and also a memento of the W.M.'s recent wedding. Wor. Bro. Kilby made a suitable reply.

DEATH AT SEA.

THE American ship *Abner C. Coburn*, arrived in Yokohama from New York on Monday after a passage of 155 days. She met with continued bad weather all through the passage, and four days out from New York a sad calamity befel. Her mate, Mr. Hugh Nicholls, the only son of a former master, and a most promising young fellow, was washed overboard by a heavy sea. He was never seen again.

TUESDAY NIGHT'S FIRE.

THE loss occasioned by the fire on Tuesday evening is estimated at \$10,000. The Hongkong Fire Insurance Company lose only about \$50 from damage done to the roofs of two godowns in the vicinity.

DEATH OF MRS. H. LUCAS.

THE death is reported, by telegram, of Mrs. H. Lucas, of Kobe, the sad event occurring at Folkestone on the 11th inst. She spent over twenty years of her life in Kobe, and her loss is greatly deplored.

SHANGHAI'S CONTRIBUTION.

SHANGHAI had subscribed \$3,85 up to the 9th inst., for the sufferers in the north-east of Japan. The fund is to be handed over to the Kobe committee for distribution.

ELEVATED RAILWAY SCHEMES FOR TOKYO.

Eight schemes are already afoot for providing Tokyo with elevated railways, one of which is official, the rest private undertakings. The official plan, approved in the last session of the Diet, is to construct a line between Shimbashi terminus and the site of the Central Station at Yairakuchō, Kojimachi. This elevated railway will be two miles long. The work is to begin in 1896 and to be completed in 6 years, the cost being estimated at 3½ million yen. The track will be constructed over a series of arches, and four sets of rails will be laid, two serving the purpose of a connecting link between the Tokaido railway and the Nippon Railway Company, while the others will be used for providing inter-city communication.

The private elevated railway scheme of most importance in Tokyo is that of the Nippon Railway Company. The original programme was to construct an elevated railway, 3 miles and 50 chains in length, between Ueno station and Shimbashi terminus, the route lying along the Kanagura moat *via* Tamachi, and then effecting a junction with the Government Central Station within the precincts of the castle grounds. The cost was estimated at 5 millions, the designs being supplied by a German expert, who was, at one time, consulting engineer to the Kyushu Railway Company. His scheme does not differ much from the official elevated railway plan. The estimated net profit accruing from traffic alone is put at 4½ per cent. on the capital, but the rental of warehouses that will be fitted up under the arches will cause the profits to greatly exceed that figure. The Company forwarded its application in August, 1893, but as the Government had decided to construct an elevated railway between Shimbashi and the Central Station, the scheme of the Nippon Railway Com-

pany will be cut down to the construction of a railway from Ueno as far as the Central Station. The second private scheme is projected by Messrs. Honma Yeiichiro, Iwata Sakubei, M.P., Morioka Shozun, member of the House of Peers and ex-President of the Yusen Kaisha, and a few others. Their plan is to join the Misakicho terminus of the Kōbu Railway with the terminus of the Tobu Railway, lately chartered, at Makurabashi, beyond which the river Sumida flows. The distance is 3 miles and 60 chains, and the estimated cost is three million yen. Their object is to effect a junction of the Kobe, the Nippon, the Tobu, and the Government railways. The line would proceed underground through Hongo, but then emerge and be carried on iron trestles, a system that commends itself on the score of cheapness. The third scheme is an undertaking by the So-bu Railway Company that intends to construct an elevated railway, 2 miles long, between its Honjo terminus and the vicinity of Bansei Bridge, at a cost 2½ million yen. The embankment system would be adopted between the Honjo terminus and the river Sumida, but it is not clear yet whether the American trestle style or the arch system is to be adopted beyond the river bridge. As the main object is to effect a junction with the So-bu Railway, the Nippon, and the Government lines, the exact site of the terminus may undergo revision according to the possible alteration of the other schemes. The Tokyo Central Elevated Railway is to join the Kōbu with the Government line. It is to branch from the contemplated Government Elevated Railway in the vicinity of Dobashi, Shiba, and to terminate at Yotsuya Station on the Kōbu Railway. It will pass along the side of the moat. A tunnel is to be constructed through Kinokuni-zaka, and the rails between the tunnel and the terminus will be laid level with the ground. The system of construction for the other portion will be that of elevated trestles. The distance is 2 miles and 15 chains, and the estimated cost 1½ million yen. Another rival scheme is projected by Messrs. Kato Tokuzo, Tsuji Shinji, and three or four other capitalists, and is known by the name of the "Castle Southern Elevated Railway." It starts from Shimbashi terminus, and, after passing Atagoshita, Tamuracho, and along the outer moat at Kojimachi, Akasaka, and Yotsuya, is to terminate at Yotsuya Station, Kinokuni-zaka being tunnelled as in the previous scheme. The embankment system is to be made use of for the portion passing along the moat at Akasaka, but the American trestle system will be adopted for Shiba. Though the distance to be covered is 2 miles and 60 chains, the cost is estimated at only 720,000 yen. The Tokyo Bay Elevated Railway is projected by Messrs. Kawasaki Yoshinosuke, Matsumoto Renzo, and 10 others, the scheme being to construct an elevated railway from the vicinity of Koishikawa Arsenal to the Central Station, and thence to Echu-jima, close by Susaki, the two lines aggregating 3 miles and 70 chains. The capital is 3½ million yen. The object is to connect the Kōbu Railway, terminus at Tomizaka, Koichikawa, and the Tobu Railway which is to come to Echu-jima. The two railways are to be constructed in both the trestle and arch style. Another elevated railway scheme to be projected, starting in the vicinity of the Rokumei-Kan, and passing through the outskirts of Shiba and over the moat, crossing the Parade Ground at Aoyama, and terminating at the military station, Sendaki. The line is intended to afford a link between the Central Bu-So and the Kōbu, and also to shorten communication between them and the Government Line. The distance is 3 miles, and the capital 2,200,000 yen. A portion of the line is necessarily competitive with the "Castle Southern" and the "Central Elevated Railways." These are the eight elevated railways already planned, but another may be added to the list. Some time ago the Kōbu Railway Company applied for permission to prolong its line from Misakicho to the vicinity of Bansei (Megane) Bridge. No notice having been taken of the application, the Company has once more

forwarded it, stating that if the Authorities are disinclined to give it sanction on account of the prolongation being along level ground, the Company might change its scheme into an elevated railway. These details are taken from some notes in the *Shogyo Shimpō*.

MR. ITO HEIZAYEMON THE ARCHITECT.

The *Yomiuri* gives a brief biography of Mr. Ito Heizayemon, the celebrated architect of Nagoya. Architecture has been a hereditary pursuit in his family for over three centuries. The founder of the house was chief architect to Tokugawa Yoshinao, a son of Iyeyasu, who received the fief of Owari in 1609. From the time of the 3rd Heizayemon, the fame of the house was widely spread, he having determined to undertake the building of temples and shrines not in the fief of his liege lord alone, but in all other places. The construction of the Higashi Hongwan Temple at Nagoya was his first great work. The porch (*sanmon*) of that temple, the mausolea of the Emperors Saga and Kameyama, and also the Hokkedo, in the premises of the Tenryu Temple, Kyoto; various edifices in the premises of the Chionin, Kyoto; the Tsushima Shrine, Owari; and also the superintendence of the erection of the Higashi Hongwan Temple, were the principal architectural works undertaken by the predecessors of the present head of the family, the 9th Heizayemon. Mr. Ito Heizayemon, born in 1830, was initiated into the art when young, under the direct guidance of his father. At the age of 18, he accompanied his father to Koya, where the latter was entrusted with the building of a certain temple. From 15 to 20, he devoted himself exclusively to the practice of wood modelling, and then he was promoted to be a draughtsman. For six years he and his father remained in Koya, and then he went to Kyoto, where he stayed for more than a decade, studying and investigating the architecture of the old religious edifices in the city and its suburbs, and also assisting his father in architectural work. The eighth Heizayemon died in 1877, and Mr. Ito succeeded to the hereditary honours, changing his name to Heizayemon. The works which he has undertaken are too numerous to be given in detail. Suffice it to say that all the important official buildings in Nagoya, the Kencho of Miye, the new edifices of the Higashi Hongwan Temple, Kyoto; the Branch Office of that Temple at Shanghai; the State Shrine at Yoshino, may be given as some of the noteworthy works constructed by this unique artist of Japan. The *Yomiuri* says that he has built already 43 temples, 36 shrines, 11 government offices, 15 school-buildings, and 47 residences or other miscellaneous buildings. He once travelled through a particular locality of China with the express purpose of investigating Chinese architecture. Rewards and certificates of merit have been frequently received by him, for he has exhibited models at several local and national exhibitions. The people of Hokkaido are very greatly indebted to him for the improvement he effected in their dwelling houses, for when he proceeded there, some eight years ago, to erect temples in various districts by special request of the Central Office of the Hongwan Sect, he was so much struck with the rude and unsightly appearance of the buildings in Hokkaido, that he spared no pains to transmit a knowledge of architecture to the carpenters of that northern district. Besides his central office in Nagoya, he has branch offices in Kyoto and Hakodate. The central establishment is composed of three buildings, one, 7 x 14 ken; another, 5 x 12 ken; and the third, 4 x 8 ken. He employs over 120 artisans. He is now engaged in designing or superintending the construction of nine buildings, the chief of them being the main edifice of the Houn Temple, Kyoto; the main edifice of the Minaguchi Shrine, Omi; a Japanese dwelling house for Mr. Elliot, Sydney, Australia; the main edifice of the Nanjen Temple, Kyoto; and several edifices for the Kōmpira, Sanuki.

CURRENT TOPICS.

Extraordinary disbursements for the relief of sufferers in the three prefectures devastated by the seismic wave have been sanctioned by the Emperor. The sum is a little over 477,600 *yen*, of which 452,600 *yen*, approximately, constitutes the actual relief fund, the remaining 25,000 *yen* being set aside for travelling expenses and sundry outlays connected with the work of distribution. Details relating to these disbursements are published by the Tokyo papers:—

Food, at the rate of 4 <i>go</i> of rice per day for 30 days from the 16th inst., the number of persons to receive rations being 49,137	Yen. 56,643.30
Clothing for 8,500 families, at the average rate of 15 <i>yen</i> per family...	127,500.00
Relief for 8,500 families, at the average rate of 20 <i>yen</i> per family	170,000.00
Fund for burying the dead, removing the debris, and taking care of the wounded	98,480.00

Total Relief Fund for Iwate, Miyagi, and Aomori ... 452,633.30

In the last item the dead are estimated at about 24,000, among whom those that have to be buried at public expense aggregate 10,000. The houses wrecked are put at 2,500; and the wounded survivors at 5,300.

The total given above is to be divided as follows:—For Iwate, 375,600 *yen*; for Miyagi, 59,600 *yen*; for Aomori, 17,400 *yen*, all in round numbers.

The figure representing the number of persons needing relief, which we lately reproduced from the *Tokyo Shimbun*, is thus proved to be erroneous. Our contemporary confounded the number of families and the number of persons.

The *Shogyo* shows that, judging from the total absence of any appropriation for repairing damaged roads and embankments, the Home Office must be contemplating further disbursements. The fact is that the experience of the past deters the Home Minister from using the Surplus, and it is reported that an understanding exists between him and the Governors of the afflicted districts in connection with the present disbursements which may be regarded as intended to meet the urgent needs of the moment only.

The Peking correspondent of the *Asahi* sends a strange item of intelligence to that journal, namely, that the Japanese Government has proposed to strike out of the draft Treaty of Commerce the clause relating to manufactures by Japanese subjects on Chinese soil, and that the Chinese Commissioner has given his consent to this proposal. The fact is, proceeds the correspondent, that there was never any clause in the Japanese draft of the new Treaty of Commerce relating to manufacturing industry by Japanese subjects in China, the Japanese Government having evidently concluded that the matter was already covered by the Shimonoseki Treaty. It was not so, however, in the case of the draft originally prepared by the Chinese Commissioner, Earl Li. That document contained distinct provisions relating to manufacturing industry, Earl Li's motive being to restrict, if not to rescind, this privilege already enjoyed by Japan in virtue of the Shimonoseki Treaty. Naturally, the Japanese Commissioners' interpretation of the provisions of the Shimonoseki Treaty did not agree with that put upon them by China's representative. Li was succeeded by Chang, but the difficulty remained as before, so that the negotiation came to a standstill. The *Asahi's* correspondent is surprised to hear that the Japanese representative has proposed to strike out the provisions in question, and declares the proposal entirely incomprehensible, seeing that the difference of interpretation between the two representatives indicates the absolute necessity of inserting a distinct clause in the Treaty of Commerce. He denounces the alleged overture of the Japanese plenipotentiary as a mere temporising measure, and observes that, even if the conclusion of the Treaty of Commerce be thereby hastened, the difficulty thus shuffled out of at present is sure to present itself hereafter in practice. Na-

turally, he goes on to say that such a proposal emanating from the Japanese Government, with full knowledge that the question will demand solution sooner or later, indicates a distinct abandonment of her acquired rights by Japan, and he concludes his letter with a violent tirade against the incompetence of his country's diplomatists.

The correspondents of both the *Yiji* and the *Nichi Nichi* have sent similar news. The latter's intelligence is substantially the same as that of the *Asahi*, and the writer adds that, after the Foreign Department came under the temporary control of Marquis Saionji, instructions were conveyed to the Japanese Representative in Peking not to insert the manufacturing clause in the Treaty, and that the Chinese Representative seems inclined to acquiesce readily in the proposal of Japan. The *Yiji's* correspondence bears the latest date, that is to say, the 29th ult. We read there that the sixteenth conference was held on the 27th of June, and that, as the clause bearing on manufacturing enterprise was eliminated, so as to facilitate the conclusion of the Treaty, no particular difficulties presented themselves at the last meeting. Indeed, as the conference is reported to have been occupied chiefly in amending the phraseology of the clauses already agreed upon, the negotiations may be said to have been practically brought to a termination. The next conference will be the last, and the two parties are said to be now making clean copies of the drafts. The correspondent thinks that the welcome tidings of the satisfactory conclusion of the Treaty may be expected after the lapse of a week.

The affairs of the Sei-wa Railway Company are still in a scandalous state. We have already explained that the shareholders are divided into two rival factions, each having its own office and its own staff of officers. They have now brought suit against each other for illegal use of the company's seals, and have inserted advertisements, side by side, in the columns of several papers, asking the shareholders to pay in the first installment. Naturally the shareholders, occupying a neutral position, are puzzled, and will wait until the singular dispute be definitely settled. Under the circumstances, to commence the work of construction is out of the question, though the company is bound to do so by the end of the current month, its permanent charter having been issued on April 30th. The Railway Authorities are much concerned about the anarchical condition into which the Company's affairs have fallen, but are not in a position to take any step, since the matter has been brought within the purview of the law courts. Should it be concluded, however, that there is no prospect of the difficulties being definitely settled previously to July 30th, there is a possibility of the company's charter being declared invalid. Incidentally we may mention that the dispute causes considerable embarrassment to the post-office, for the two factions having their offices in the same building in Matsusaka, and having the same sign-boards hung side by side, there are no means of deciding to which of the two mail matter should be delivered.

The question of fencing is now much discussed, not only in Educational circles but also in the Army and the Navy. The representation of the Tokyo Educational Society, that lessons in fencing should be regularly given in the higher common schools, has been rejected by the Municipal Authorities, but the Department of Education had nothing whatever to do with the action of the Municipality. Apart from this particular case, seeing that the problem deserves to be thoroughly investigated, the Department of Education has submitted it to the School Sanitary Council for a definite opinion. But the Council's views are divided, one section holding that fencing conduces to physical development, the other maintaining that it is injurious to the full development of the brain. The opinions of the military and naval authorities are equally divergent, though for a different reason. Those that declare for fencing

base their verdict on the assumption that it tends to educate presence of mind and therefore to make troops more efficient; while the other side holds that the practice serves merely to train individual courage and tends to produce men who aim at distinguishing themselves by irregular methods, thus militating against unity and system.

Messrs. Otsu and Nakashima, members of the Diet identified with the *Shimpo-to* (Opposition), have returned from their mission of inspection through the districts recently devastated by the seismic-wave, and have submitted their report to the Central Office of the Party. The document says that the relief to be extended to the sufferers should be divided into two kinds: one of an urgent description; that is to say, funds for maintaining the sufferers subsequently to the 15th inst., when the period covered by the Relief Fund Regulations will expire; and the other less urgent though not less necessary, namely, for provision for the future livelihood of persons that have lost their means of bread earning. The former need is estimated by the inspection commissioners to require the sum of about 300,000 *yen*; the latter, about 1,000,000 *yen*. They are of opinion that altogether a total of from 1,000,000 to 1,500,000 *yen* must be defrayed, but that as such a sum cannot be furnished by the Reserve Fund, an extraordinary session of the Diet must be speedily convoked to satisfactorily dispose of the matter.

The incorporation of the suburbs of Osaka into the city proper has been announced by Imperial Ordinance. The following districts are to be incorporated, the census being taken at the end of last year:—17 towns and villages from Nishi Nari Gun, aggregating over 27,000 families and 125,000 people; 11 towns and villages from Higashi Nari Gun, aggregating over 11,000 families and 52,000 people. The latest census of Osaka was over 94,000 families and 484,000 people. The new arrangement is to come into force from April of next year, when Osaka will become a city of over 132,000 families and 662,000 inhabitants.

A petition has been submitted to the Railway Authorities by the City Assembly of Yokohama in connection with the contemplated doubling of the Tokaido line, the route contemplated being to strike directly from Kanagawa to Hodegaya without calling at Yokohama. The petitioners think that the following three reasons must have influenced the Authorities in their decision:—

- 1st. To make a detour to Yokohama in connection with the doubling of the line would increase the cost of construction.
- 2nd. To make a detour to Yokohama would involve waste of time.
- 3rd. The disadvantages accruing from the loading and unloading of goods at Kanagawa instead of at Yokohama are less than the other disadvantages, put together—the greater outlay on account of construction and the waste of time.

The petitioners proceed to examine these reasons, in order to prove that, according to their way of thinking, the reasons are not strong enough to dictate the adoption of the proposed route. In the first place, the position of a commercial depot is determined by natural as well as artificial advantages. It was on that consideration that at an early period after the opening of the country for foreign commerce, Yokohama was selected in place of Kanagawa, the site originally chosen; for though human agency might perfect facilities of land transportation at Kanagawa, the same agency could, it was thought, provide more satisfaction by both maritime and land facilities at Yokohama. This prediction is realized, for the prosperity of Yokohama has grown by leaps and bounds, so that it is now an emporium holding over 180,000 souls. This must essentially be due to the fact that Yokohama is adapted, both naturally and artificially, for the seat of commercial transactions. Yet the Government now proposes that the veins conveying the life blood of Yokohama shall be diverted in another direction, and the heart of Yokohama shall be paralyzed. Can this disaster bear comparison with a slight increase

In the cost of construction and a trivial waste of time? It is true that to call at Yokohama instead of going direct from Kanagawa to Hōdogaya involves the expenditure of a little time, but it is not the less true that the selection of a railway route must be determined according to the relative facilities that a place affords in the matter of transportation of goods; while the time required in the running of trains may be adjusted by altering their speed. Especially when the advantages accruing from a detour far outweigh the disadvantages, the advisability of adopting the longer route admits of no doubt. Now what will be the result should the railway route be altered? Cargoes after being landed will have to be conveyed to Kanagawa, while goods coming by land must be unladen at Hōdogaya as well as at Kanagawa. The time and expense involved in such processes are far greater than the preliminary cost involved in making a detour to Yokohama from Kanagawa. Hence the petitioners conclude that the advantages accruing from the change of route are far from compensating the disadvantages incidental to such a step, especially when it is remembered that the completion of the reconstruction of the harbour and the connection of Yokohama Station with the Custom House piers by railway will make the transportation of goods more prompt and convenient. The petitioners are convinced that the proposed change of route is entirely at variance with the wishes of the Yokohama people, and the Assembly has been obliged to take up the matter. By unanimous resolution it asks the Authorities to reconsider the step before they irrevocably adopt it.

The celebrated Chiya scandal, brought about by the stubborn resistance of Judge Chiya to being removed from the Supreme Court to the Local Court of Okinawa was abruptly terminated by the Judge's death. A similar trouble has been caused by Judge Besaho, who refuses to be removed from the Local Court of Yamanashi to the District Court of Aikawa, Sado, where, owing to either the death or removal of one of the judges a vacancy has occurred. A special Disciplinary Court pronounced a verdict unfavourable to the recalcitrant Judge and dismissed him from the service. The Judge has appealed to the Court of Cassation, but it is expected that the award given by the lower tribunal will be endorsed by the higher.

We read in the *Tokyo Shimbun* that the Government will not extend any further relief to the afflicted Sanriku districts. Incidentally we may mention that the grand total of the subscription lists of the vernacular papers for the relief of the sufferers has reached over 200,000 yen. Most of the lists were to be closed on the 15th inst.

The two most prominent figures in the business world are Mr. Shibuzawa Eiichi, of Tokyo, and Mr. Matsumoto Jyutaro, of Osaka. Both are Presidents or Directors of an astonishing number of Companies or Banks. The *Yiji* gives a list of the public positions held by these two gentlemen, from which we find that Mr. Shibuzawa is President of no less than 14 companies and director or auditor of ten; while the other millionaire is President of 10 and Director or Auditor of six. The *Yiji* says that they are the "guinea-pigs" *par excellence* of Japan.

The attempt to float a Hakodate City Loan and an Osaka City Loan has failed signally. The Hakodate folk wanted 450,000 yen and offered 6½ per cent. interest, and the citizens of Osaka asked the public for 381,200 yen, the interest to be 5 per cent. and the minimum price of a 100-yen bond, 97 yen. For the Osaka loan only 5,800 yen was subscribed, and the Hakodate proposal elicited no offer at all. The *Shogyo Shimpō*, from which we take these details, says that it was a wretched blunder on the part of the Hakodate people to set about raising a loan despite the fact that the self-government system is not yet in force there, without previously consulting influential capitalists with the object of inducing them to organize a special syndicate. As for Osaka's

conception of floating a loan at the low interest of 5 per cent. and allowing a margin of only 3 yen, the programme displayed palpable ignorance of existing financial conditions. The Authorities of both Hakodate and Osaka must hold themselves responsible for the signal failure that has attended their inept schemes.

In continuation of a list given some weeks ago, we publish the following statistics of joint-stock companies coming under the control of the Noshomusho at the end of last month:—

At the end of June last.	No. of companies.	Aggregate capital. Yen.
Existing companies at the end of May ...	1,409	279,991,993
Companies established during June ...	67	7,879,500
Companies whose capital was increased during June ...	37	1,769,900
Total ...	1,503	289,641,393
Companies dissolved or "invalidated" during June ...	5	107,820
Companies whose capital was reduced during June ...	3	60,900
Total ...	8	158,710
Balance, existing companies at the end of June ...	1,495	289,182,683

Statistics relating to the commercial, industrial, and agricultural corporations included in the above are as follows:—

COMMERCIAL.		
Existing at the end of May last ...	679	71,003,760
Newly established during June ...	26	3,463,000
Capital increased during June ...	13	398,000
Total ...	718	74,864,760
Dissolved or invalidated during June ...	2	30,000
Capital reduced during June ...	3	60,900
Total ...	4	70,900
Balance ...	714	74,793,860

INDUSTRIAL.		
Existing at the end of May ...	652	107,205,236
Newly established during June ...	49	5,413,000
Capital increased during June ...	24	2,371,900
Total ...	705	115,090,136
Dissolved or invalidated during June ...	2	280,000
Balance, existing companies at the end of June ...	703	114,810,136

AGRICULTURAL.		
Existing at the end of May ...	78	1,883,975
Newly established during June ...	2	3,000
Total ...	79	1,886,975
Dissolved or invalidated during June ...	3	78,310
Balance, existing companies at the end of June ...	77	1,879,165

"Drive a tiger away in front, and a wolf menaces the rear," is a Japan proverb often applied to a case such as that of the Tokyo City Assembly at present. The Assembly has commissioned Messrs. Shiraiishi Gō, Motoda Hajime, Kojima Kango, and three others, all members of the Tokyo Bar, to act as its counsel in the water-pipe suit against the Tokyo Iron Foundry with the object of recovering compensation for losses incurred by the city in consequence of frauds on the part of the Foundry. The first stage of this suit, namely, Mr. Ameno-miya's application to have the distraint removed from his property, has been heard in the Tokyo Local Court and an award unfavourable to the plaintiff has been pronounced. But before the suit proper has come up for hearing, the above barristers—with the exception of Mr. Shiraiishi, who declared from the first that he would undertake the business gratis—have laid a claim before the City Council for fees amounting to ten thousand yen each, the alternative being that if they are not to be paid until the suit is concluded, they shall receive thirty thousand yen each, whatever be the verdict of the Courts. That is the version given by the *Mainichi Shimbun*, but the *Yomiuri* learns that the sum asked for is much larger. A point to be specially noted is that all three barristers are at the same time members of the City Assembly, and it would therefore appear that the case was entrusted to them by the Assembly without any arrangement as to terms. It is believed that fresh tumults will disfigure the next meeting of the Assembly.

The Sulphur (Reduction) Company was authorised on the 7th inst.

It is stated that the railway between Nagasaki and Nagoya will be finished in the course of this year. The line between Takeo and Hayagi will be completed on or about February next.

COUNT OKUMA.

Some prominent residents of Saga now staying in Tokyo, gave a banquet at the "Maple Club," Tokyo, the other day, in honour of their distinguished fellow clansman, Count Okuma. The Count delivered a speech on that occasion, having special application to his native district, but he also made other remarks that are applicable to Japan as a whole. One of his points was that the rural sections are now enjoying greater prosperity than the urban. The Count explained that this was due to the rate of the land-tax having been reduced to less than one half of what it was formerly. The surplus that remains in the pockets of farmers must have been appropriated to elevating the status of their homes, and to starting various undertakings, as also to improving the productive capacities of their farms. In support of this last contention, the Count observed that many farms now yield as many as 12 bales of rice per *tan*, while the area of others producing two crops a year has been much augmented. He also alluded to the propensity of Saga men to quarrel with each other, those of the urban sections being specially prone to pick quarrels with the residents of the rural districts. He declared that the leading men of Saga should endeavour, seeing that Saga folks can not eliminate this propensity from their character, to widen the scope of their quarrels, and so in the end complete industrially with outsiders.

Commenting on this speech, the *Nichi Nichi*, while endorsing the opinion of the Count as to the increase of the purchasing power of farmers, wonders why the Count's political adherents, in view of his recent avowal, should urge that the load of the people's burden is so great that they steadily oppose any additional impositions being put upon them. The warning of the Count against petty internal quarrels is considered by the *Nichi Nichi* as timely, Count Okuma's adherents being prone to interfere with the progress of important State affairs and endangering their success by petty bickerings. The *Nichi Nichi* approves the recent action of the Count in throwing off the hermit's veil and again condescending to speak in public. It was owing to his backwardness in appearing before the public that the Count's opinions were so frequently misconstrued by his followers. Henceforward, he must cease to act as a wire-puller behind the curtain. As a true statesman, he should deliver his views in the open and with all the straightforwardness possible.

The *Tokyo Economist*, an earnest advocate for raising the rate of the land tax, wishes to return to the subject. It contends that the three amendments effected in the Land Tax Regulations have resulted in reducing the assessment by 14,387,182.114 yen. When it is remembered that the average price of rice, taken as the standard in revising the tax in 1877, was 4.185 yen, and that used in amending it in 1889 3.88 yen, whereas recently the staple has been quoted between 6 to 7 yen, nothing is more certain than that the incomes of farmers must have considerably increased. The Count must have ascertained this long ago, and yet, strange to say, he suffered his followers to advocate a further reduction in the tax in the House of Representatives, that is to say, subsequent to 1890, by which time the evils attending the over-issue of inconvertible notes had altogether disappeared.

THE CHINA-JAPAN COMMERCIAL TREATY.

There has been a good deal of talk lately about the commercial treaty between China and Japan, the gist of the rumours being that the negotiations were brought to a conclusion on the 28th of June, and that the treaty would be signed so soon as the drafts had been copied. With reference to this, the *Nichi Nichi Shimbun* says that having made inquiries at the Foreign Office, it has been informed that, up to the 16th instant, no intelligence of such a nature had been officially received from Peking. Our contemporary conjectures that some false information has been transmitted to Japan.

THE GERMAN REPRESENTATIVE AT THE CHINESE COURT.

Baron Heyking's stay in Japan has been unexpectedly shortened by a telegram directing him to repair to his post in Peking at once. His Excellency had contemplated a month's sojourn in Japan, we believe, and was recruiting his energies at Chiusenji when the urgent message arrived. It would seem that the German Government contemplates resolute, or, at all events, vigilant, action in China; a determination to be sincerely welcomed, we think, for Germany long ago abandoned the mistaken route that she entered as a member of the Triple Alliance, and whatever steps she now takes in the Far East are not likely to be inimical to the interests either of Great Britain or of Japan. There still remains among the Japanese much bitter feeling about the policy adopted in Berlin in March of last year. But events are now justifying the opinion advanced by us at the time, namely, that Germany then made a temporary aberration from her natural political orbit, and that her return to it could be only a question of time. Baron Heyking has produced a most excellent impression on every one that has had the pleasure of meeting him in Japan. It is felt that Germany will now be strongly and astutely represented in Peking, and that an influence far sounder and much worthier of a great Power than that of Herr von Brandt will henceforth be felt in the Berlin councils.

GERMANY IN THE FAR EAST.

Our readers may be interested by comparing the following paragraphs:—

Japan Mail, July 13th.
Baron Heyking's stay in Japan has been unexpectedly shortened by a telegram directing him to repair to his post in Peking at once. His Excellency had contemplated a month's sojourn in Japan, we believe, and was recruiting his energies at Chiusenji when the urgent message arrived. It would seem that the German Government contemplates resolute, or, at all events, vigilant, action in China; a determination to be sincerely welcomed, we think, for Germany long ago abandoned the mistaken route that she entered as a member of the Triple Alliance, and whatever steps she now takes in the Far East are not likely to be inimical to the interests either of Great Britain or of Japan. There still remains among the Japanese much bitter feeling about the policy adopted in Berlin in March of last year. But events are now justifying the opinion advanced by us at the time, namely, that Germany then made a temporary aberration from her natural political orbit, and that her return to it could be only a question of time. Baron Heyking has produced a most excellent impression on every one that has had the pleasure of meeting him in Japan. It is felt that Germany will now be strongly and astutely represented in Peking, and that an influence far sounder and much worthier of a great Power than that of Herr von Brandt will henceforth be sensible in the Berlin councils.

Japan Herald, July 16th.
We have good authority for stating that the article published in the *Japan Daily Mail* of the 13th inst. about the German Representative at the Chinese Court, has no foundation in fact. Baron von Heyking had orders to see his colleague accredited at the Japanese Court. Being besides a very old friend of Baron von Gutschmid, it was only natural that he should go to Chiusenji, where his colleague is actually residing with most of the members of the Diplomatic Body. We need hardly add that the other statements made in the above-mentioned article about a change in German policy in the Far East, etc., are just as unfounded as those we have already referred to.

It seems quite plain that the *Japan Herald* has been officially instructed from Chiusenji to insert the above paragraph. Under any other circumstances we should not think of noticing an attack made upon us in that journal. But it appears to be now publicly stated on the authority of German officials that "the article published in the *Japan Daily Mail* of the 13th inst. about the German Representative at the Chinese Court had no foundation in facts," and that "the other statements in the same article about a change in German policy in the Far East, &c., were just as unfounded." That is

very plain speaking. Let us see, then what it was that we stated and what are the contradictions now officially published. First we stated that Baron Heyking's stay in Japan has been shortened by a telegram directing him to proceed at once to Peking. That is declared to have no foundation in fact. Well, we repeat it. Secondly, we said that the Baron was recruiting his energies at Chiusenji when the urgent message arrived. That is declared to have been without foundation in fact. We repeat it, however, but are quite willing to append the information that Baron von Heyking went to Chiusenji under orders to see his colleague in Japan and that he was not recruiting his energies there. As to his having gone to the place because he is a very old friend of Baron von Gutschmid, the news may be interesting, but is quite irrelevant, and obviously inconsistent with the other assertion that His Excellency proceeded to Chiusenji under orders. At any rate, our note did not touch upon these points at all. They are entirely novel, and to adduce them as proof that our article had no foundation in facts is a bewildering kind of logic. Thirdly, we said that the German Government seemed to contemplate resolute, or at all events vigilant, action in China. That is declared to have no foundation in fact. We accept the correction with amazement. Fourthly, we welcomed Germany's apparent determination, on the ground that "whatever steps she now took in the Far East were not likely to be inimical to the interests of either Great Britain or of Japan." That is declared to have no foundation in fact. We accept the correction with much regret. Fifthly, we urged the Japanese to abandon any remains of the bitter feeling engendered by the Berlin policy of 1895, inasmuch as Germany had now returned to her natural political orbit, namely, a friendly attitude towards Japan and coöperation with Great Britain in China. That is declared to have no foundation in fact. We accept the correction with great reluctance. Sixthly, we said that Baron von Heyking had produced a most excellent impression on every one that had had the pleasure of meeting him in Japan. That is declared to have no foundation in fact. We accept the correction with surprise. Seventhly, we said that Germany would now be strongly and astutely represented in Peking. That is declared to have no foundation in fact. We accept the correction with disappointment. Eighthly and lastly, we said that an influence far sounder and much worthier of a great Power than that of Herr von Brandt would henceforth be sensible in the Berlin councils. That is declared to have no foundation in fact. We accept the correction with disquietude.

Having been compelled to abandon so many hopes that our genuine appreciation of the German nation had led us to entertain, we feel justified in asserting one point, namely, that our article was written in the most friendly spirit possible, and that we decline to regard as really representative of German opinion the sweeping, exceedingly discourteous, and entirely undeserved assault that it has provoked.

DEATH OF SIR AUGUSTUS PAGET.

News has been received in Tokyo of the death of the Right Honourable Sir Augustus Berkeley Paget, G.C.B., whose son, Mr. Ralph Paget, now holds the position of Second Secretary in the British Legation, Tokyo. The deceased statesman was one of Great Britain's most distinguished diplomats. He served his country at one capital after another in Europe for fifty-two years, his last post being that of Ambassador Extraordinary and Plenipotentiary to the Emperor of Austria, a position that he held from January 1st, 1884, to July 1st, 1893. He was sworn a Privy Councillor on July 21st, 1876, and received the Grand Cross of the Bath on August 21st, 1883. In all his posts he won respect and affection, and his brilliant record, extending over more than half a century, is a page of her diplomatic history that England may justly be proud of. Sincere sympathy will be felt with Mr. Ralph Paget in his sad bereavement.

ARMY DEVELOPMENT.

In the *Yomiuri Shimbun* we find some details as to the manner of carrying out the programme of military expansion, on account of which budgetary appropriations were sanctioned by the Diet last session. The Government's original intention, we read, is to complete, within seven years, the expansion of the army to 12 Divisions, irrespective of the Imperial Guards. But inasmuch as the programme makes it optional to complete the establishment of the troops with the colours within three years, it has been determined that the staffs of the various new Divisions, Brigades, &c., shall be fully organized by the winter of the year after next (*i.e.* 1898). As to the order of carrying out this organization, the staffs of the three Boards of Command, those of five new Divisions, and those of any additional troops raised during the year, will be organized by the end of this fiscal year (March 31st, 1897); then, by the winter of 1897, the staffs of the new Brigades and of any further troops raised during that year, will be organized; and finally, by the winter of 1898, the organization of all the remaining staffs will be completed.

This account may be somewhat unintelligible to non-military readers. They should observe, however, that when staffs are spoken of, the reference may be to Board-of-Command Staffs, Divisional Staffs, Brigade Staffs, Regimental Staffs, or Battalion Staffs. As we interpret the project, the intention is to raise the full complement of Troops with the Colours during the three years, ending March 31st, 1899, so that the Reserve—which is formed of men that have served three years with the colours—will receive its first drafts in 1899—*i.e.* will receive all the men whose service with the colours commenced in the fiscal year 1896-7. Further, the staffs of all the new Divisions will be organized by the end of the fiscal year 1898-9, the staffs of five of them being organized before next spring, and the staff of the sixth before the spring of 1899. Why this delay should take place with reference to the staff of the sixth, we are unable to conjecture, but presumably some point of financial convenience is concerned. Further, as the troops with the colours are raised, they must be told off into Brigades, Regiments, and Battalions, and consequently the staffs of those tactical units will be formed *pari passu* with the raising of the troops. The three boards of command are separate organizations, being, in brief, the head-quarter staffs of four Divisions each. A Railway Corps is also to be established during the current fiscal year, with Colonel Yamane in command.

As to the cavalry, some information is furnished by the same journal. In the Army, as hitherto organized, each Division, the Guards included, was supposed to have one battalion of cavalry, the battalion consisting of three squadrons (or companies). But with the exception of the Guards, no Division had more than two squadrons, though in every case the battalion organization existed. At the close of last year, however, when the usual conscription took place, a sufficient number of conscripts were taken to add a squadron to each cavalry battalion, so that the establishment is now, for the first time, complete. But for the purposes of the new scheme of military expansion, it has been decided that two squadrons of cavalry shall be added to each Division, and that the battalion formation shall be abandoned in favour of the regimental, each Division thus including a Regiment of five squadrons of cavalry. That means, of course, that the six divisions already existing will receive an increment of eighteen squadrons; the Guards will receive an increment of two squadrons, and on account of the six new Divisions twenty-four squadrons will be raised. Hence the new Army will comprise a total of sixty-five squadrons, or thirteen regiments, of cavalry, whereas, up to the close of last year, the total cavalry establishment was only fifteen squadrons in reality, though nominally twenty-one. We have never succeeded in ascertaining the exact strength of a squadron

of cavalry, but to put it at 150 of all ranks will not be far from the mark. On that hypothesis, the cavalry of the new Army would aggregate 9,750 on the peace footing, and about 18,000 on the war footing. The *Yomiuri* adds that the Emperor's consent to this alteration from three squadrons to five, as well as to the fixed establishment of each cavalry regiment, and the change of name from Battalion to Regiment, was obtained by the Minister of State for War on a recent occasion, and that a Lieut.-Colonel of cavalry will be added to the staff of each Division. The two new squadrons are to be added at the rate of one yearly from the current fiscal year, so that the increment will be completed by the spring of 1899.

We may add that the twelve Divisions are to have the following head-quarters and districts, the head-quarters being placed first in our list in each case:—

First Division.—Tokyo (Azabu), Yokohama, Takasaki, Nagano.

N.B.—The Imperial Guards also are stationed in Tokyo, so that the garrison of the city on a peace footing consists of about sixteen thousand men.

Second Division.—Sendai, Fukushima, Shibata, Kashiwazaki.

Third Division.—Nagoya, Tsu, Toyohashi, Shizuoka.

Fourth Division.—Osaka, Wakayama, Otsu, Kyoto.

Fifth Division.—Hiroshima, Onomichi, Yamaguchi, Hamada.

Sixth Division.—Kumamoto, Omura, Kagoshima, Miyazaki.

Seventh Division.—Sapporo, Hakodate, Nemuro, Toigachi.

Eighth Division.—Hiromaye, Morioka, Akita, Yamagata.

Ninth Division.—Kanazawa, Toyama, Tsuruga, Gifu.

Tenth Division.—Fukuchiyama, Kobe, Himeji, Okayama.

Eleventh Division.—Marugame, Tokushima, Matsuyama, Kochi.

Twelfth Division.—Kokura, Oita, Kurume, Saga.

This distribution went into force from the 1st of April of the current year.

NEW UNDERTAKINGS.

The Board of Directors of the Sanyo Railway Company has decided to construct a special line, starting from Suma-mura, a village situated about midway between the two stations of Suma and Hyogo, and terminating in the vicinity of the Ajigawa-Bridge, Osaka, a distance of 24 miles. The cost is estimated at 3 million *yen*, and the project is to be submitted to a special general meeting of shareholders to be held on the 15th inst., at Osaka. The estimates are as follow:—

Receipts ...	<table><tr><td>Passengers receipts,</td><td>137,900 <i>yen</i>.</td></tr><tr><td>Goods receipts,</td><td>66,300 <i>yen</i>.</td></tr></table>	Passengers receipts,	137,900 <i>yen</i> .	Goods receipts,	66,300 <i>yen</i> 204,200
Passengers receipts,	137,900 <i>yen</i> .					
Goods receipts,	66,300 <i>yen</i> .					
Working Expenses		84,154				
Net profit		120,046				

The opening of the railway is expected to add 167,200 *yen* to the passengers and goods receipts of the existing line, while the working expenses are 36,026 *yen*, that is to say, a profit of 121,174 *yen*. The clear earnings directly and indirectly accruing from the new line are therefore expected to realise 8 per cent. on the investment.

The Colliery Railway Company held an extraordinary general meeting on the 8th instant, and decided, with the unanimous approval of the shareholders present, to raise 1,000,000 *yen* as an additional undertakings fund for the Mining Department, and 2,200,000 *yen* for purchasing four steamers to be used in transporting coal.

The establishment of a curious insurance company, designated the "Conscription Insurance Company," has been sanctioned by the Department of Agriculture and Commerce. The object of this unique insurance company is to insure young lads, so that when they are drawn as conscripts they will obtain money from the fund on which to support their family during the term of their service, the amount of course varying according to the sum insured for. The premium is to be confined between the two

extremes of 50 and 5,000 *yen*, premia varying according to age and the amount insured for. For a baby, one year old, a yearly payment of 2.17 *yen* will enable his parents to receive 100 *yen* when he is drawn for service after arriving at the age of 19 or 20. The yearly payment for a lad of 16 is 14.29 *yen*. The projectors are Mr. Wakamiya Seion, ex-Director of the Commercial and Industrial Bureau of the Department of Agriculture and Commerce; Mr. Tsuji Shinji, ex-Vice-Minister of Education, and three or four others.

The programme of the Oriental Steamship Company has been slightly modified. It has decided to include Brazil in the American service, there being in that south American State already more than 4,000 Japanese emigrants. The Great Eastern Steamship Company having been practically amalgamated with the Oriental Steamship Company, though not openly, and the capital of the latter having been increased from 5 millions to 7½ millions, the expanded Company is to open a special service to Tenuantepec, Mexico, to receive consignments of cotton produced in the United States.

A HEALTHY SIGN.

The Government and especially the Imperial Court, have apparently become more magnanimous towards utterances of historians and men of science with respect to the origin of the Japanese people. Formerly, the Authorities were so morbidly sensitive about utterances of that kind that any article or speech containing sceptical views about the "divine origin" of the race and the supernatural character of the fabulous beings said to have existed in the mythical age, was sure to provoke the high displeasure of the press censors. Prof. Kume's dismissal for having written an article in that sense; the suspension of the *Shikai* for publishing it; and, only a year or two ago, the suspension of the *Tokyo Economist* for having spoken too radically about the origin of the Japanese race, are notorious facts. A great change is now observable in the attitude of the Censors and the Court. Quite recently, Mr. Matsumoto Kumpel, M.A., whose article about the probable identity of the ancestors of the Japanese and the Hittites appeared last fall in our columns, read another essay on the same question before the Economic Society, and dilated much upon analogies detected by him between the records contained in the Old Testament and those in the *Kojiki*. He spoke in perfectly unreserved terms about the "Divine Beings" declared by orthodox Japanese scholars to have existed before the time of Izanagi and Izanami, and he explained that, judging from the meaning of the names given to those beings, they cannot have existed in life, but were merely impersonations of the sky, the earth, and so forth. He further made some ingenious suggestions indicating an analogy between Izanagi and Izanami, on the one hand, and Adam and Eve, on the other. Notes taken of this interesting lecture were published in the *Tokyo Economist*, but did not provoke the ban of suspension.

Another evidence of the Authorities' changed attitude is furnished by an article in the *Kokumin*. It appeared in the form of a letter from a writer using a *nom de plume*, but there are internal indications that the article emanated from the pen of a member of that radical paper's staff. The theme was the saving of the Emperor's picture by a school-master, at the risk of his own life, and without pausing to provide for the safety of his family, during the recent seismic calamity—conduct that elicited special mention in the official despatch sent by the Governor of Iwate to the Home Office. The writer denounces in unmeasured terms the commendation evoked by the incident from various newspapers. He regards the whole affair as unmitigated humbug. Loyalty to parents and loyalty to a ruler are one and the same thing. Can it be said that a man shows real loyalty to his parents if, on the occasion of such a catastrophe as that in Iwate, he risks his

life for the mere purpose of saving from destruction a picture of his parent? Is the picture of one's parent more precious than the life of his son? Suppose that the son had lost his life for the sake of such a delusion, and consequently failed to discharge his duty to his parents, could he still be called loyal? The relation of subject to Sovereign is the same. Rather, indeed, a Sovereign hold the life of his subject more precious than parents hold that of their son. Can it be proper, then, for a subject to risk his life simply for the sake of saving a picture of his Sovereign? Can a Sovereign be satisfied with such conduct on the part of a subject, seeing that his picture can be reproduced *ad libitum*, whereas the loss of a subject's life is irreparable? Any argument directed to maintain such a proposition must be denounced as a contention that attaches no value to proportion and is adapted to the mouth of a hypocrite only.

The above letter evoked a few rejoinders from correspondents writing under various *noms de plume*, the most plausible plea adduced by them being comparison between the colours of a regiment of troops and the Sovereign's picture hanging in a school. Just as troops are bound to guard and preserve their standard even at the risk of their lives, so the Emperor's picture in a school must be preserved from destruction at any cost. The standard represents the Emperor in the eyes of the troops, as the picture does in the eyes of the scholars.

Without pausing to discuss the question at issue, we note that the mere fact of such an article's being published by a newspaper without incurring the displeasure of the Authorities, and without producing any loud protest from the public—not a word has been editorially written on the subject by other papers—is a sign that men's minds have undergone a great change in the matter of Court forms and conventionalities. It is emphatically a healthy change.

DEATH OF MR. HITROVO.

With sincere regret we have to record that intelligence was received yesterday in Tokyo of the death of Mr. Hitrovo, Russian Representative at the Court of Japan. The sad event took place suddenly on the 12th instant, but no particulars are given in the telegram as to the cause or the place. Mr. Hitrovo had long suffered from asthma, and as he was never careful of his health, his tenure of life did not seem very secure. Yet, when he left Tokyo on leave of absence, there was no reason whatever to anticipate any serious danger. Russia loses an able servant in Mr. Hitrovo, and society a most genial gentleman. He was a man of wide culture and winning manners, and throughout a period that would have severely tried the tact of a less competent diplomatist, he managed to assert his country's interests successfully and firmly in Japan, with a minimum of friction, and without in the least impairing the friendly relations that always existed between him and the Japanese Foreign Office. Since the time of Mr. Davidow, whose tenure of office in Japan was similarly shortened by sudden death, no Russian diplomat in this country combined the *suaviter in modo* with the *fortiter in re* more skilfully than Mr. Hitrovo, and it is much to be regretted that his hand has been removed from the helm in these troublous times. To his many accomplishments he added a genuine love of art, and during his residence of two and a half years in Tokyo, he made a fine collection of Japanese objects of *virtu*, especially swords and sword furniture. Thoroughly popular with all nationalities, the news of his untimely death will make many hearts sad in Japan.

The President of Hawaii sanctioned the imposition of slight duties on imported Californian wines containing under 18 per cent. of alcohol. Japanese *Sake*, which is a powerful rival of the Californian wine, is subjected to an almost prohibitory duty, and spirits containing over 18 per cent. of alcohol are also placed on the list of heavy import duties.—*Asahi Shimbun*.

RUSSIA AND ENGLAND IN THE FAR EAST.

THE *Fortnightly Review* for June contains a cleverly phrased article under the heading of "Russia and England in the Far East." It is one of those essays with which recent experience has rendered us only too familiar—specious special pleading, interspersed with misconceptions and misrepresentations. That it should abound with inaccuracies and be disfigured from first to last by prejudice, will be at once understood when we say that the writer relies for his information upon the *North-China Daily News*, the Korean correspondent of that journal, and the *Japan Herald*. The slightest direct knowledge of Far-Eastern affairs would have warned any honest writer against depending upon such sources of intelligence where Japanese or Korean questions are concerned. We must assume, therefore, that "W."—for so the *Fortnightly Review's* essayist signs himself—is a total stranger to Far-Eastern affairs, and that his dicta are based solely upon indiscriminate excerpts from a very limited library, composed, unfortunately, of publications proverbial for error and partiality in the particular field under review.

Briefly stated, the argument of the writer in the *Fortnightly* is this:—Korea must be a dependency, and the choice of Powers to assume charge of her is limited to Russia and Japan. Of these two, Russia is the stronger and should, for that reason, be supported by England against Japan. At present, however, fear of British opposition withholds Russia from assuming complete control in Korea, and since the Great Northern State must have an ice-free port on the Pacific, she will, if she can not find it in Korea, seek it along the line of least resistance, namely, the Liaotung Peninsula. But her occupancy of Liaotung would be a most serious matter for English interests, whereas her occupancy of Korea would not affect those interests at all. Therefore, finally, Great Britain should openly withdraw all opposition to Russia's programme in Korea.

Every careful reader will be conscious that this line of reasoning stops abruptly short of completeness. It does not tell us what is to be the gain to England of suddenly reversing her Far-Eastern policy, and allowing Russia to enter into full possession of territory from which it has hitherto been the object of British statesmen to exclude her. The hiatus is not the fault of the writer in the *Fortnightly*. It is of our own making, and we have made it purposely, in order to draw more vivid attention to this the most vital phase of the whole problem. What is to be England's gain? Let us quote the exact words of the essay:—

It is of importance to note the persistency with which negotiations on Russia's part for the acquisition of the Liao-tung Peninsula are reported. True, these negotiations have been denied, but the objective

is a tempting one. Russian chauvinists have for years cast longing eyes in the direction of it. It is not excluded from the purview of Russian ambition by any inconvenient pledges. It would not only give the Eastern possessions of the Czar all the ice-free outlets that they can require, but it would render him the master of China and the greatest power in the Pacific. Finally, it would place Korea and Southern Manchuria in a vice of Russian territory, which would inevitably squeeze them into the condition of Russian provinces. If it is in this direction that we are pushing Russia by our fatuous reliance on the Korean pledge of 1886—and it seems to me very likely that we are—then we are simply sitting on the safety-valve of Russian expansion and provoking an explosion, which will inflict upon us immense harm. In Korea Russia would obtain all that she really wants without threatening or even interfering with a single British interest. In the Gulf of Pechili she would become arbiter of a volume of British trade worth nearly fifty millions sterling a year.

Here, then, we have a statement of the gain to England, and a very surprising statement it is. A certain line of policy, we are told, is open to Russia, namely, the acquisition of the Liaotung Peninsula. Her chauvinists have for years cast longing eyes in that direction. The peninsula acquired, Russia would not merely have all the ice-free outlets that she desires, but she would also be mistress of China, would become the greatest Power in the Pacific, would hold Korea and southern Manchuria in such a vice that their ultimate absorption into her empire must ensue, and would become arbiter of a volume of British trade worth nearly fifty millions sterling a year. That splendid ambition unfolds itself now before her eyes. Could she satisfy it, the results to England must be enormously damaging, if not disastrous. To turn her from such a policy would, therefore, be correspondingly important in British interests, and she can be turned from it—how? By graciously granting her permission to content herself with a small fraction of the programme. Allow her to annex Korea and she will be content. No longer will she care to become mistress of China; to rise to the position of the greatest Power in the Pacific; to hold an enormous tract of territory in such a vice that it must ultimately accrue to her by natural processes; to become arbiter of a great volume of British trade. Is it not difficult to believe that these silly propositions are seriously advanced? Russia in Liaotung could be empress of the Far East; could annihilate English supremacy, and could plant her foot upon the head of British trade. Against such contingencies Great Britain would necessarily struggle to the utmost limit of her capabilities. Hence, between Russia's ambition in Liaotung and its consummation, there stands the certainty of a maximum of British resistance, and it follows that if Russia really entertains such an ambition, she is prepared to defy Great Britain. Now turn to Korea. What prevents Russia from immediately asserting her supremacy in Korea, and placing the peninsula under her control? Nothing, according to the writer in the *Fortnightly Review*, except the remote contingency of English opposition; a contingency based on the pledge given by the St. Petersburg

Government to the Chinese in 1886—on the occasion of England's evacuation of Port Hamilton—that Russia would not, under any circumstances, occupy Korean territory. The writer himself contends that the pledge retains no binding force, since it was given to a Power no longer the Suzerain of the territory concerned, and he adds:—"To imagine that Russia feels herself bound by any Quixotic interpretation of her promise of 1886, would be too naïve." Yet, at the same time, he gravely asks his readers to believe that if England simply released Russia from that already valueless pledge, and bade her treat Korea as she liked, the Great Northern Power would be satisfied, and all the difficulties of the Far Eastern Problem would be solved. We have no interests in Korea, declares the writer in the *Fortnightly*, and our only title to interfere there is an obsolete pledge given by Russia to China ten years ago, when all the circumstances of the case were different. We have, on the other hand, immense interests in Liaotung, the possession of which would make Russia mistress of China and of the Far East, would place our trade under her heel, and would force us to fight for existence. Yet the shadowy possibility of encountering English opposition in Korea compels Russia to turn to Liaotung, where the certainty of England's most strenuous opposition awaits her, and a superfluous expression of British readiness to leave her a free hand in Korea would divert her from pursuing an incomparably bigger and more profitable policy in Liaotung.

Such writing as that of "W." is totally worthless for practical politicians. It is vitiated, at the very outset, by the stupendous misconception that no interest of Great Britain's would be "interfered with or even threatened" by a Russian occupation of Korea. Different minds may attach different interpretations to the term "interests." But we are not concerned with academical definitions: our business is with hard facts. If Russia's position in Asia has any importance for Great Britain, then a Russian occupancy of the Korean peninsula would vitally affect British interests. At present Russia's essential element of weakness in the East is that she has no basis of operations. Vladivostok is not and never can be a satisfactory basis. Giddy journalists have talked, and continues to talk, of a hundred thousand Russian troops actually massed there to-day. They would be nearer the mark if they talked of a hundred thousand bees in their own bonnets. But let Russia once obtain possession of Korea, her position in the Far East is radically metamorphosed. Seated on the Yalu, southern Manchuria, the northern littoral of the Yellow Sea and the neck of the Liaotung Peninsula would be hers whenever she chose to stretch out a hand to take them. It is true that when the Siberian railway is

finished, she will be able to collect an army at Vladivostock. But from Vladivostock to Korea or to the mouth of the Liao River is a far cry. Such an enterprise must be preceded by massing of stores on a colossal scale at Vladivostock, hundreds of miles away, and must be supported throughout by naval operations, for with the various lines of coast at the mercy of an opponent, a Russian army could not venture to march southward in search of the ice-free littoral supposed to be the natural objective of the Great Northern Power's ambition. In fact, for all aggressive purposes in the Far East, Russia is now virtually dependent on her navy, and no elaborate exposition is needed to demonstrate her relative weakness under such circumstances. But with Korea as a basis, she could collect what military force she pleased at China's very gates; the region between the Yalu and the Liao would lie at her mercy, and her acquisition of the Liaotung Peninsula, with the contingent command of the Gulf of Pechili, must come about by processes such as the whole history of her growth has prepared us to anticipate. We are not Russo-phobes. It has always been our conviction that a distinct agreement between Russia and England in Central Asia, and the elimination of buffer states that serve merely as sources of friction and invitations to intrigue, would be the happiest course for the two Powers. But that is a question quite distinct from the policy of deliberately placing Russia in a position that would constitute her arbiter of the destinies of the Far East. States possessing effective vitality must expand. That is Nature's law. But just as the exercise of individual freedom is limited by the obligation of not encroaching upon the corresponding sphere of another's liberty, so the legitimate interests of one Power set bounds to the expansion of another. Great Britain has large and important interests in the Far East, and she can not regard with indifference such a complete readjustment of the balance of Power as would result from Russia's occupation of Korea. There can be no heroic revision of the policy that the instinct of empire has impelled England to pursue in this part of the world for the past thirty years.

THE PRESIDENTIAL ELECTION IN AMERICA.

THE issues at stake in the American Presidential election have vital interest for the whole civilized world. Months ago, it was foreseen that the two great parties must rally to two main principles, the Republicans to protection, the Democrats to bimetallism. All, or nearly all, the outcry that has been heard of late with reference to the danger of Japanese industrial competition, may be regarded merely

as a device to re-animate the effete doctrine of protection. It would seem as though events had gradually drawn, with ever-increasing distinctness, a line of demarkation between the industrial and the agricultural classes in the States. Under the ægis of protection manufacturers have flourished. The great home markets being reserved to them, they have not yet been driven to compete for customers in foreign markets, where the high price commanded by labour under a protective system would severely handicap them. The agricultural classes, on the other hand, depend largely on European demand. The quantity of produce raised by them so far exceeds the requirements of their own nationals that without foreign customers they would be ruined. In the markets of Europe, however, the prices commanded by farm produce are constantly forced to a lower level by competition on the part of India, Russia, and other countries where either a silver currency confers special advantages or the scale of agricultural living is lower than that in the United States. The result is that things have fared worse and worse with American farmers, and in this moment of distress they have learned to believe that their only salvation lies in bimetallism. The remonetization of silver, they think, would not only enable them to pay off their crippling debts, but would also bring back prosperity. Protection they ought to hate, and probably many of them have learned to hate it, for its only effects in their case are to raise the price of labour and to enhance the cost of living. It comes then to this, that the Democrats stand forth as the champions of the agricultural classes; the Republicans, as the representatives of the industrial. Election platforms are not very stable affairs in the United States. Experience shows that when they have served to carry their party into power, no serious attention is subsequently paid to them. Their planks are not by any means regarded as hard-and-fast pledges. The platform adopted by the Chicago Convention, and apparently endorsed subsequently by the Democratic Party, was this:—

We are in favour of an honest dollar, a dollar worth neither more nor less than one hundred cents. We favour bimetallism, and to that end we demand the free and unlimited coinage of both gold and silver at the ratio of 16 to 1 as standard money with equal legal-tender power, independent of the action of any other nation. We hold that the Secretary of the Treasury should exercise his legal right to redeem all the coin obligations in gold or silver, as may be more convenient, and are opposed to the issue of bonds in time of peace for the maintenance of the gold reserve or for any other purpose. We are opposed to the national banking system and to any enlargement of its powers.

We are opposed to any contraction of the currency by the retirement of greenbacks or otherwise.

It would appear that the Republicans were at first disposed to shirk the currency question, though such action towards so momentous a problem would have been unworthy of politicians inviting

public confidence. Now, however, whether influenced by that consideration or forced by the Democratic declaration, they have come out squarely for gold monometallism, and thus the two parties stand marshalled for a conflict the results of which must be felt all over the world. The Democrats can count on the support of the south and the west. They seem to be sure of at least 110 votes in the Presidential election, and as 124 votes represents a plurality, the outlook is distinctly hopeful for them. Should they succeed, and should they carry their platform into practice, the main consequence must be that gold would be entirely driven out of circulation in the States. No one would pay an ounce of gold on account of an obligation dischargeable with sixteen ounces of silver, when twenty-one ounces of silver could be obtained abroad for the same ounce of gold. The tendency would be to carry silver as copiously and quickly as possible to the States, there to purchase gold with it at a price nearly 24 per cent. below the price ruling in Europe. American financiers are perfectly sensible of these contingencies, but they believe that their country is big enough and economically strong enough to undertake the rehabilitation of silver single-handed. In other words, they think that before any serious drain of the yellow metal had taken place from the States, the gold-price of silver, the world over, would have adjusted itself to the new conditions. It is a colossal experiment in a field where men are wont to shrink from everything savouring of the radical or the heroic. Evidently if the world saw itself on the eve of such a financial cataclysm, there would be a general rush on the part of foreign investors to unload American securities, and the effect upon the stock market could scarcely fail to attain the dimensions of an unparalleled crisis. But probably it is superfluous to forecast an event not likely to occur. Two things stand between the world and an experiment so dangerous: one is that the Democrats will fail to win the election; the other, that even if they win it, they will hesitate to put their alleged convictions to the test of practice. In any case, the problem of the century will acquire fresh imperativeness from the contest. The fate of silver is throwing the financial world into a condition of feverish unrest from which statesmen must perforce bestir themselves to rescue it.

The following returns of the average amount of Bank notes in circulation and of specie in reserve in Hongkong, during the month ended 30th June, as certified by the Managers of the respective Banks, are published:—

Banks.	Average Amount.	Specie in Reserve.
Chartered Bank of India, Australia, and China ...	\$1,879,077	\$1,000,000
Hongkong and Shanghai Banking Corporation ...	5,844,570	2,500,000
National Bank of China Limited	428,743	285,000
Total	8,152,390	3,785,000

MONTHLY SUMMARY OF CURRENT
JAPANESE LITERATURE.

Japanese modern literature has assumed proportions demanding something more than the occasional notice that it has hitherto received in these columns. Hence we propose furnishing our readers with regular summaries of the secular periodicals, resembling the condensed history of the religious press which has appeared in these columns for several years past. As an introduction to the subject it may be well to give a short account of the general character and tendency of literature during the *Meiji* era.

The modern literary world may be said to have originated in the earnest labours of such men as Nakamura Keiun and Fukuzawa Yukichi, who were among the pioneers that introduced Japanese readers to the charms of Western thought. The first fifteen years of the *Meiji* era may be regarded as an age of import. Translations, good and bad, of well-known foreign works in all the principal book-shops crowded out the old Japanese and Chinese works hitherto in such request. The events that preceded and followed Saigō's rebellion turned the attention of the nation from literature for a time, but when the political atmosphere again grew congenial to the lovers of literary pursuits, a reaction in favour of purely national and Chinese literature set in, and, in order to neutralize the effects of this movement, such societies as the Kana-no-Kai and Romaji-Kai were organised—bodies whose existence the present generation has almost forgotten. The pro-foreign section of the reading public naturally found the works of the two translators mentioned above somewhat too prosy for every-day reading, and a demand for works of a lighter type grew so pronounced that Mr. Yano Fumio's *Keikoku-bidan* brought him in a small fortune. One of the most eminent novelists of that day, and a writer who may be said to have been the father of modern novelists, was Mr. Tsubouchi Shoyo. He graduated at the University, and was a most diligent student of English literature. He was the author of the well-known works *Shisaku Kidan* (Incidents in the Life of Cæsar); *Shosei Kishitsu* (The Character of a Student); *Imose Kagami* (A Conjugal Mirror); *Mirai no Yume* (A Dream about the Future), and *Shosetsu Shinsui* (The Brains of Romance). Other novelists of that time worthy of mention were Ayeba Koson, an imitator of ancient styles of writing and of a conservative turn of mind; Sudo Nansui, noted for his polished style and powerful grouping of incidents; Morita Shiken, who devoted his wide knowledge of Chinese literature and his classic pen to the presentation in popular form of Western ideas; Koda Rohan, a master of the style of the Buddhist Zen sect, with all the contempt for material things and the abstraction from the every-day humdrum life that possess such fascination for unworldly minds; Ozaki Koyo, who was better versed in the literature of the Genroku era [1688-1704] than any man of his time, and who wrote in the style of the seventeenth-century novelists, albeit with the same indecent allusions that characterise their works; Ishibashi Shian, who discussed the relation of the sexes and blended the elements of romance found in foreign works of fiction so as to suit Japanese readers, a task that his extensive acquaintance with what is known as Yamato-Kotoba specially qualified him to perform; Iwaya Sazanami, an earnest student of German literature, whose special gift it was to stimulate and to instruct the rising generation; Miyazaki Sammai and Saikiku Sanjin, both men of great reputation; and Yamada Bimyoai, of the realistic school of novelists, an ardent admirer of Zola and other French writers of fiction, who will ever be remembered in the Japanese literary world for his earnest advocacy of the amalgamation of the colloquial and the written styles, and for the well executed models of the dual styles unified that in his writings furnished. These authors who, in many cases, as will be perceived by some of our readers, modestly retired behind a variety of *noms de plume*,

all earned a reputation by novel writing which, however short-lived it may prove to have been, has to be taken into account when we are seeking to mark the stages passed by Japanese literature in its onward march. Considering how little accustomed to anything like serious reading were the majority of semi-educated persons a few decades ago, it is not to be wondered at that Occidental thought had to be administered in small doses and largely mixed with palatable ingredients. We are aware that it is customary with certain Japanese writers to treat with supreme contempt the panderers to the public taste whose works we have been considering. These critics are mostly of the conservative school: they regard the ruthless removal of old literary and moral landmarks as fraught with unseen dangers of a serious kind. It is the opinion of many foreign observers that the minds of staid Japanese are cast in serious moulds, and consequently that the lamentations over the novel-loving spirit of the age uttered in various quarters are genuine expressions of the natural antipathy of the Japanese to anything like unintermittent frivolity. The majority of the novels of this period were of an inferior type, consisting of poor imitations of Bakin, of literal translations from foreign works, or reproductions of Chinese books. The demand for novels was so great that new editions of numbers of almost forgotten works were published, and there sprang into existence a "Novel Publishing Company," which, while the rage lasted, drove a roaring trade, and a novel publishing magazine, which obtained a wide circulation. Many of the writers of romance received a somewhat severe handling from such critics as Ningetsu and Shodayu, men that concealed their identity under these assumed names. As a result of adverse criticism combined with a certain amount of satiety on the part of readers, the ordinary love-story gave place to the detective story, which was rendered popular by Mr. Kuroiwa Ruiko. Lovers of light literature were also regaled with poems and plays, some original, others reproductions of foreign compositions. At the close of 1888 the rage for novels may be said to have passed. The granting of a Constitution and the establishment of the Diet were events that for several years absorbed public attention, and became the means of calling into existence a class of literature that only exists in countries where the government encourages the public discussion of great national questions, and is determined to be guided as far as possible by enlightened public opinion.

The present era may be said to be the age of newspapers and magazines. It is with the latter that we shall be chiefly concerned, since a weekly review of the contents of the former is published in these columns, and since books calling for lengthy notice must necessarily be very few during the transition stage through which Japanese literature is now passing. Though any general account of the literary characteristics of the principal Dailies has been rendered unnecessary by the frequent references published in this journal from time to time, it is perhaps well to observe that some of the daily newspapers, in addition to their function as organs of news, aim at supplying their readers with purely literary matter, thus furnishing a stimulus to the study of ancient and modern literature. The *Kokumin Shimbun* has always taken the lead in this movement, though such papers as the *Choya* and the *Yomiuri* have devoted space to the publication of historical narratives of an interesting and valuable character.

We now proceed to notice, as fully as our space will allow, such topics of general literary interest and importance as have been discussed in the new magazines and books that lie before us. The June number of *Shinri* (Truth), in an unsigned article, deals with the translation of technical terms. The writer observes that the subject has received a great deal of attention of late, articles on the subject having appeared in the *Taiyo*, the

Tetsugaku Zasshi, and the *Waseda-Bungaku*. The difficulty of finding and rendering current in Japan suitable technical terms is acknowledged on all sides. Among the ways of overcoming this difficulty that have been proposed, one is to the effect that the Professors of the University should discuss and decide on the terms to be used. But the objection to this is that it is very doubtful whether writers generally would bow to such authority in cases where terms not in general use were recommended. The *Shinri* is of opinion that the simplest course to follow is to retain the foreign terms. It contends that in numerous instances writers deem it necessary to place the foreign terms in Kana by the side of the translation to aid the reader's comprehension. That is cumbersome. Why not follow the example of most European countries and reproduce the original with such modification as the rules of transliteration may require? That is what happened in the case of Greek and Latin terms in the West and in the case of Buddhist terms, of Sanskrit origin, in the East. The writer in the *Shinri* concludes by remarking that in whatever country it is considered advisable to introduce foreign ideas, history shows it to be quite impossible to exclude foreign terminology; hence he thinks the time spent in the search for suitable equivalents in Japanese is so much time wasted.

The following items are from the *Tuikoku Bungaku* (The Literature of the Empire), a well-edited and high class organ, issued by the Literary Department of the Imperial University. The practice of composing Chinese verses is strongly condemned by an anonymous writer, who maintains that the only excuse that can be offered for such compositions is the inability of the composers to write poetry in their own language. They are driven to the necessity of making Chinese verses by sheer ignorance of their native tongue. The thoughts found in these verses are shallow and their expression most artificial. Young men who aim to be poets are recommended to make themselves masters of their mother tongue and then to embody in their poems the lofty ideas, deep meditations, and penetrating thoughts found in Western poetry.

Another writer complains of the poverty of the Japanese language in respect of humorous terms. To many, says he, such a complaint may seem ridiculous; but it is quite rational. It is far more difficult to make an intelligent man laugh than it is to make him pull a long face. The world needs more wit and fun, as the eccentric efforts of some writers that aim at being amusing abundantly prove. It has lately become the fashion in certain quarters to publish poems written in Chinese style, but whose language is colloquial: to these the term *狂詩* (*Kyoshi* (mad verses) has been applied. That is a very clumsy and inadequate sort of humour, if humour it can be called. In fiction and the drama, numerous models of comic verse are to be found, so that there is no excuse for the literary barbarism of which would-be poets have been found guilty.

A note entitled *Bibun* (美文) *Honyaku* (the Translation of Foreign Masterpieces) expresses disagreement with the objection to the large number of translations now appearing, that is to say, the objection that the translators are unable to reproduce the force of the original, and the selections from foreign authors made by Japanese translators are more ambitious than wise, the workmen not being equal to the task undertaken. The *Tuikoku Bungaku* thinks there is much to be said on the other side. The difficulties these translators have to encounter are not realised by many of their critics. Even in Europe, where languages are in many cases more or less allied to each other, the reproduction in another language of classical compositions so as to preserve the charm of the original is found to be seldom possible. Hence it is hardly to be wondered at that any one seeking to render Western thought into an Oriental tongue

like the Japanese, the structure of which differs so widely from the languages of the West, should meet with insurmountable difficulties. "Something is better than nothing," argues our contemporary. These translations are a step in the right direction. Their imperfections will be removed in the course of time. But a word of caution needs to be added to these remarks. When translators find that there is no possibility of rendering certain phrases into Japanese, they have no alternative but to omit them altogether: the too frequent practice of inserting matter spun out of the translator's brains, cannot be too strongly deprecated.

A writer in the same magazine insists on the necessity of more attention being paid to the study of foreign languages and of Japanese. There is too great a tendency to dilate on subjects connected with the literatures of European countries, though the writer lacks all the qualifications entitling him to express an opinion on such questions. With no adequate knowledge of English, men compose treatises on the comparative merits of English poets; raw students of German express a preference for one German poet rather than another. These things are a disgrace to the whole Japanese literary world. Although it may be a long time before we can attain to the rank of the Germans as literary investigators, yet we surely ought to aim at reaching the standard of the English in the matter of literary qualifications for criticism. But the neglect of which we complain, says the *Teikoku Bungaku*, is not confined to the study of foreign tongues: it is still more apparent in the case of our native tongue, to teach which in the Imperial University, a foreigner (Mr. Chamberlain) had to be employed, to our shame be it said. Is it not a disgrace that Japanese should be content to pick up the linguistic crumbs falling from the foreign professor's table? Is it not a disgrace that many of us are unable to express ourselves grammatically in our own language, and, worse still, do not know how to use Kana correctly. These are the men that talk and write grandly about the literary merits of German and English authors. No such want of the elements of learning is to be found among the *litterateurs* of other countries.

An article entitled *Kokubun Gakusha no Shinjigyo* (A new Occupation for Japanese Literary Men) demands fuller notice than we have given to the topics hitherto treated. The suggestions made in it and the information it contains are alike valuable. It is only a short time ago, says the writer, since Japanese literature began to be studied in a systematic manner. But still the materials for a scientific knowledge of the subject are not at hand. Writers should be grouped according to the age in which they lived or the topics on which they wrote. Concise accounts of their styles, their works and their personal history should be given, in fact a history of comparative literature should be written. In addition to this we need an Encyclopædia of Literature, to furnish students with minute information respecting any author or work that they may be studying. It may be worth while to record what has already been done in this line, if only to show how much remains to be done. The histories of Japanese literature published by Mikami and by Takatsu, and the *Wabungaku-shi*, by Owada, and a few less elaborate works, are the only attempts that have been made to furnish students with materials for a comparative study of literature. As literary Encyclopædias we have the *群書類従* (*Gunjoruiju*), the *扶桑拾葉集* (*Fusojuyoshu*), and the *八洲文藝* (*Hasshubunso*). To these should perhaps be added a recently published work called *國文讀本* (*Kokubun-tokuhon*). Of literary dictionaries, as distinguished from encyclopædias, there is a total lack, not a single book that we can name being of this class. The *Gunsho-ichiran*, by Ozaki Gaka, the *Zoku-gunsho-ichiran*, the *山村徳淳* (*Yamamura-toku-jun*), the *Hakubutsukan-shomoku-gedairyaku*, the *淺草文庫書目解題* (*Asakusa-bunko-shomoku-*

gedairyaku), and the *倭版書籍考* (*Yamato-ban-shoshikiko*), are books that give the dates of authors, the number of their works, with particulars concerning copies or printed editions, but that supply no such minute information as is required by the student of literature. Moreover, the details given in these works concern books published in pre-Tokugawa days. For minute information concerning the fiction and drama of the Tokugawa era we search these volumes in vain. That must be regarded as a serious defect. Perhaps there is no country in the world where the names of books are more misleading than they are in Japan. In numerous instances the title of a work gives no clue to its contents. Hence a mere enumeration of works is of little use to the student of literature. Numerous are the treatises that fail to supply the information their titles would lead us to expect, and contain minute particulars regarding subjects that modern critics would deem extraneous. Thus the need of a systematic history of authors and their works—a well arranged Dictionary of Literature—is most urgent. There is no greater obstacle to progress than the want of books of reference. This want it is within the power of our literary men to supply, and we trust that it will not be long before they commence their labours.

Another advocate of progress, in the same publication, draws attention to the lack of suitable maps for teaching history. A map, entitled *Dai Nippon Rekishichisu*, was published by Mr. Namatame Tsunenori not long ago, but this work, according to the writer whom we quote, has serious defects. It abounds with blank spaces and its valuable parts are very limited. Though we cannot but congratulate the cartographer on being the first to undertake a work of the kind, we regret that its deficiencies are so numerous, concludes the *Teikoku-bungaku* critic.

We read in the *Toyo Tetsugaku Zasshi* (Oriental Philosophy) that the Tetsugakkan, a school for teaching philosophy founded by Dr. Inouye Yenrio, has decided to open a new branch of the Institution to be called the *Toyo-daigaku-kwa*, the Oriental College Department. For this purpose Dr. Inouye has already collected nearly 2,000 yen, the greater part of which has been given by residents in Nagano-ken. By the ensuing autumn, it is anticipated, that some 2,000 yen more will be forthcoming from the same quarter.

No. 186 of the *Rikugo Zasshi* contains a review of Mr. MacCauley's recently published work entitled "An Introductory Course in Japanese." The reviewer takes exception to some of the examples given by Mr. MacCauley, for instance, on p. 106 as an example of compound nouns that consist of two nouns one of which is used as an adjective, after quoting such words as *kusuriya*, to insert a word of Chinese origin like *gakumon* is a mistake. These terms are not to be included in the same category. Later on the word *meiken* is given. This, too, is a doubtful example of the rule Mr. MacCauley was illustrating. Again, on p. 229, when furnishing examples of the formation of adverbs by adding the post-position *ni* to a noun, to place *sude ni* side by side with such words as *makoto ni* and *shinsetsu ni* was wrong. The treatment of words used in replying to questions or remarks on p. 163 leaves much to be desired. Just as Japanese in speaking English made constant mistakes in the use of "yes" and "no," so foreigners speaking Japanese frequently employ the terms "*hai*" and "*ie*" in a wrong sense. After pointing out a few other minor defects of Mr. MacCauley's work, the *Rikugo Zasshi* says, "Though not without parts which call for improvement, Mr. MacCauley's work may be said to have attained its purpose. It is by far the best book of its kind that has been published, and our desire is that it should become known to the world."

The *Tensoku*, Dr. Kato Hiroyuki's organ,

a relentless exposé of abuses of all kinds, sums up the character of certain scholars of modern days in the following terms:—(1) With low natures, they put on airs of great superiority and, while indulging freely in *sake* and courting the society of women of ill-fame, they make grand speeches. (2) They are either bigoted and hopelessly attached to old ways, or insincere and inferior. Even in these advanced days they speak of the appearance of gods and Buddhist divinities, are flatterers of the great, or court the smile of the vulgar. (3) Out of the love of money they sacrifice their positions as scholars. Their learning is converted into an article of merchandise. "That the above characteristics are common to a large class of modern scholars is undeniable. Can men of this type be said to have fulfilled their responsibility as representatives of learning in this empire?"

The same (June) number of the *Tensoku* has an article on antiquarian research in Japan, in which the writer deploras the want of interest in ancient works of art in this country. In Japan the antiquarian spirit can hardly be said to exist apart from such studies as subserve to a knowledge of anthropology and the fine arts. While for a number of years Europeans have been collecting in foreign lands articles of *virtu* and sending them home, we Japanese are so careless in these matters that before very long there is a likelihood of our descending to the ignominious position of inquirers at foreign doors for specimens of ancient Japanese art.

Among important works issuing from the press are the following:—*韓圖純理批判解説* (*Kanto-junri hihan-Kaisetsu*, "A Commentary on Kant's Critique of Pure Reason," 2 vols., by Kiyono Ben. The first volume is already out and the second will appear in the middle of August. The Tetsugakusho-in are the publishers. Price \$2.50.

The *Sibutsu-Shigenron*, the "Origin of Species," by Darwin, translated by Tachibana Senzaburo, published by the *Keisai Zasshi* Sha. Price \$1.45.

Kon-in Shinkwa-ron, a translation by Fujii Uhei of a popular work on the Evolution of Marriage, by Professor Westermarck, of the Finland University. The book was originally published in English, but has been translated into German, French, Russian, Italian, and Swedish, and now, by the express permission of the author, has been rendered into Japanese. Price \$1.60. Published by the Tetsugaku-shoin.

Nisen Gohyaku Nenshi, by Takenokoshi Yosaburo. A history of Japan from the days of the Emperor Jimmu, a work whose title suffices to show that the author has not imbibed the views of modern critics on historical chronology. Numerous smaller works have lately appeared, but they do not call for any special notice in this summary. There is perhaps no country where learned works are translated and sold at such low prices as those current in Japan. That the Origin of Species should be procurable at \$1.50 and that a small edition of Webster translated should be selling at 35 sen a copy, are ample proof that Japanese zeal for learning is free from the sordidness too often detracting from its value in Western lands.

The *Bungakukai* (文學界) recommends scholars to pay more attention to classical authors. The writer remarks that many of the modern developments of thought in Europe may be traced back to Greek and Latin writers, and further contends that to the classical authors of Europe belongs the credit of teaching the men of recent times how to think. In Japan, with few exceptions, learned men regard the classics with absolute indifference. No department of the University has been created to encourage that study. In Europe it is impossible to understand aright literature, religion, and philosophy without a knowledge of ancient classical authors. But in Japan a different opinion, we regret to say, is widely entertained. It is not our (*Japan Mail's*) business to discuss theories here, but we may perhaps be allowed to observe that the

parallel drawn by the *Bungakukai* is only imaginary, for there is no kind of similarity between the ancient Greek and Latin authors and Chinese and Japanese ancient writers and thinkers.

The same magazine is of opinion that far too large a space is given to works of fiction and poetry in modern newspapers of a certain type. These journals profess to be organs published for the purpose of giving urgent news. That busy recorders of the events of modern life should find space for so much irrelevant matter is very surprising. They all boast of possessing the latest intelligence on the events of the time, and yet find space for a mass of compositions having no claim to urgency.

An article published in No. 42 of the *Bungaku-kai*, entitled *Akamon Bungaku*, furnishes some interesting items of information on literary subjects. The term "Red-gate Literature" refers to the writings of University men, who go by the name of the Akamon-ha, the Red Gate Party, the allusion being to one of the gates by which the University grounds are entered. The influence of members of the Imperial University in the literary world, says the *Bungaku-kai*, is revealed in the pages of the *Teikoku Bungaku*, which is a product of the Akamon-ha. The members of the literary society bearing this title are all busy with their pens. To give a few instances, the connection of Mr. Takayama with the *Taiyo* is well known. The space devoted by that magazine to literary subjects is principally occupied by the writings of University men. Messrs. Sasa and Omachi have a great deal to do with the *Meiji-hyoron* (Meiji Criticism), Mr. Taoka is connected with the *Seinen-bun* (Literature of Young Men), Mr. Omachi with the *Shonen-bunshu* (少年文集). In the pages of the *Bungei Club* University men make a great show, and in the pages of the *八紘 Haiko*, the *Rikugo Zasshi* and the *Shinri* their names are frequently to be seen. The only organs where their absence is marked are the *Waseda Bungaku* and the *Mesamashi-gusa*. Though University writers figure thus largely in the literary world, what surprises us is that the writers are not professors. Why do not such men as Dr. Inouye astonish the world with some literary venture.

For many years past Messrs. Toyama Yatabe and others have been publishing verses known in Japanese as *Shintaishi* (New Style verses). Respecting this class of poetry the *Bungaku-kai* supplies its readers with the views of the well-known novelist Koda Rohan, embodied in a letter from Rohan given in its issue of June 30th, a short epitome of which we append. I observe, says Rohan, that of late the *hokku* (17 syllable verses) are all the fashion in the magazines, and that the new style verses are at a discount. But this cannot last. The *Shintaishi*, in my opinion, are destined to regain their popularity. There is no saying that the next ten years may not produce some one specially qualified to write this kind of poetry. Neither Chinese verses nor what are called *waka* (Yamato-uta) will retain their hold on men's minds. The latter even now owe the rank they occupy to the patronage they receive from the Imperial Household Department rather than to their intrinsic merits. And as for the verses known as *kyoshi* (crazy verses) they are like the squibs let off by children. They create a momentary sensation, but they will sink into lasting oblivion. Among the verses to be found in old books and old plays there are many popular ones, but this consideration should not be allowed to prevent people from appreciating the value of the new style of verses. As I read the magazines to-day it seems to me that we have retrograded some 15 or 16 years in the matter of poetry. Is this activity of archaic verse the last flicker of a dying fire?

In the same number of the *Bungakukai* from which we have been quoting, a writer complains of the want of ardour in literary matters;

a want visible in every direction since the conclusion of the war. It shows itself in the world of romance, the modern novelist expecting to effect with his 40 or 50 pages what in former days it took five or six times that number to accomplish. It reveals itself in the remarks of the critic, who for a thorough treatment of the subject under discussion substitutes a few cursory observations. The popularity of ancient verses and of the easily composed *kyoshi* is additional evidence of the lukewarm state of literary men. The beneficial results of the war are distinctly material in character. Literature has suffered severely therefrom.

The *Waseda Bungaku* notes with satisfaction the attention paid to the Fine Arts and to music by the periodicals of the day. The latter figures prominently in the pages of the *Teikoku Bungaku*, the *Bungakukai*, and the *Shinri*, and the former in the columns of the *Shirayuri* and the *Taiyo*, while the *Mesamashi-gusa* gives considerable space to both subjects. It is not quite clear what this tendency indicates. It may be a sign that art is about to enter on a new era. However regarded, the movement is a step in the right direction. The same organ states that the Department of War has undertaken to prepare the history of the China-Japan War, that it will take 5 years to prepare, and cost 50,000 yen. According to the *Nihon Shimbu*, says the *Waseda Bungaku*, the sources of information to be relied on are the reports of captains to their superior officers, descriptions of battles by eye-witnesses, and official daily records. The hope is expressed that the history will be a thoroughly reliable one, recording events as they took place without regard to their being favourable to Japan or the reverse.

As is probably known to many of our readers, for some time past the Imperial University has had in contemplation the compilation of an exhaustive history of Japan, and the work of collecting, classifying, and editing material has been entrusted to a committee, which now consists of 16 members. According to a recent number of the *Waseda Bungaku*, special steps have been taken to expedite the work. Diligent search has already been made in Kyushu, Chugoku, and Kwanto for historical records of all kinds, but half of the O-U provinces (Rikuzen, Rikuchu, Mutsu, Uzen, and Ugo), and the whole of the Hokurikudo are still unexplored. The Shigakkai (Historical Society) are in the habit of holding lecture meetings in Tokyo every month. It is usual to allow the public to attend these meetings, but in April last when Dr. Shigeno, the eminent historian, delivered a lecture, a notice was issued forbidding the attendance of any but members of the Society. Was this, asks the *Waseda Bungaku*, owing to the nature of the subject treated by Dr. Shigeno? Instructions have been given to the representatives of the various *Daimyo* to collect the historical records of their Diastates and forward copies of the same to the Imperial Household Department. It is said that Viscount Akimoto has already collected 300 volumes having reference to the Han of Tatebayashi. In order to facilitate the collection of material, Historical Societies have been organised in various districts: among these the O-U Society, and the Hokuriku Shigakkai are specially worthy of mention. Valuable matter is constantly appearing in the magazines published by these provincial associations.

A writer in the same magazine sighs for the days when the publication of books involved expense and trouble undreamt of by the mass of modern scribblers. Facilities for publishing books are now so great that literary tyros are encouraged to inflict their crude ideas on the reading world. The methods used for self-advertisement in recent times are, continues this critic, of a most objectionable kind. Authors entirely unknown to fame publish books containing their own photographs. Little children are encouraged to send literary contributions to such papers as the *Shonen Zasshi*, and then the photograph of the per-

son considered the best youthful composer is supplied to the subscribers. The bad effects of all this fuss on the minds of young people must be patent to everybody. In the old days when every character that a book contained had to be carved, only those that had something important to say ventured to publish a book, and booksellers took no leaps in the dark. Modern inventions have their drawbacks, regarded from a literary point of view.

On the subject of translations, the *Waseda Bungaku* has an excellent article. It is gratifying, says that magazine, to observe that learned men in Japan are becoming more serious and more practical, and are aiming at attaining a higher standard than has hitherto been reached. One great proof of this is furnished by the wide-spread desire to furnish students with thoroughly trustworthy translations of foreign standard works. The agitation in favour of better and more extensive translation is not confined to one or two literary organs, but has gained the approval of most of the chief magazine writers. A recent number of the *Taiyo* has an article entitled "The Age of Translations," in which the writer observes that great thoughts are the result of elaborate preparations; that, hitherto, intellectual matters in Japan may be compared to a tree the growth of whose foliage has been too luxuriant to admit of its bearing good fruit; that since the number of well educated men in proportion to the number of the ignorant is very small, the only effective method of elevating the masses is to place them in possession of the best thoughts, and the translation of standard books is the surest way of attaining this end. The *Hakko* is equally explicit. Two great defects, writes that organ, characterise modern literary men: one is their imperfect knowledge of literature, the other their failure to explain to their fellow countrymen the true significance and purpose of foreign literature. The latter defect can be remedied by the production of good translations. A writer in the *Bungaku-kai*, on the same subject, observes that many of the translations hitherto prepared have been merely pecuniary speculations; hence their slipshod character. Our contemporary trusts that new men actuated by purely literary motives are about to take part in the work. The *Kokumin Shimbu* has of late expressed its regret that there should exist antipathy even to well executed translations, and is of opinion that this feeling is an element of the desire for isolation and seclusion that has taken possession of certain minds. The cure for the anti-foreign spirit, says the *Kokumin*, is familiarity with Western thought, and this can be rendered attainable by a supply of well translated foreign works. Such books as Darwin's "Origin of Species," and Kant's "Critique of Pure Reason," have already appeared, says the *Waseda Bungaku*, and we are informed that Mr. Nakajima Rikizo in combination with Messrs. Yamamoto, Kuwaki and Takayama have already commenced the translation of certain ancient works, among which is Aristotle's Ethics. Mr. Takahashi Juzo has already finished the translation of Kant's "Metaphysics of Ethics." The translation of purely literary works makes large demands on the translator. He must be well versed in learning and must be a sufficiently good writer in Japanese to be able to reproduce the force of the original. If duly qualified men undertake the work and the country is supplied with a large stock of trustworthy translations, the necessity of students spending about one-fifth of their time in the study of foreign languages will be obviated. In order to prevent a useless waste of energy, it is desirable that a translating society should be formed and that money should not be spared in the effort to furnish the country with the much needed works of foreign authors in a form that will insure their thorough appreciation.

No. 174 of the *Tokui-Shushi* (Statistics) publishes the following details referring to the increase of ephemeral literature. Between the beginning of 1890 and the end of 1894 no less

than 98 different kinds of periodicals were published. The subjoined table gives statistics for the five years :—

Year.	No. of Magazines and Newspapers at the end of the year.	No. of Copies.	Newly Started Magazines and Newspapers.	Magazines and Newspapers discontinued.	Publications Suspended.	Proposed Publications to every 10,000 persons.
1890	716	188,280	441	373	39	128
1891	766	209,768	446	396	61	234
1892	793	244,803	460	434	87	263
1893	808	276,137	484	474	87	284
1894	814	367,733	518	506	140	341

THE INSURRECTION IN FORMOSA.

A telegram from Lieut.-General Katsura to the Minister of State for War in Tokyo says that the number of officers who lost their lives at the hands of the insurgents in Formosa is five, namely :—

Captain Yamada Manjiro, of the Infantry, killed in battle.

Lieut. Nakamura Michiaki, of the Infantry, killed in battle.

Lieut. Matsuo Koichi, of the Infantry, killed in battle.

Ensign Nishina Masajiro, of the Infantry, killed in battle.

Captain Miyayaga Keida, of the Infantry, died of wounds.

Telegrams to hand with reference to the insurrection itself are as follow :—

Taipei, 11 a.m., 8th instant; from Major-General Tachimi.

Major Sato's force, which retreated from Yuen-lin and halted at Ta-pu-lin, was engaged from the 2nd to the 5th instant driving away the rebels from the vicinity.

The Brigade, as previously planned, finished its operations against the insurgents in Nan-tou on the 6th instant, and the various corps assembled at Tai-chung. On the 7th, Lieut.-Colonel Imahashi, with two battalions of infantry, a battery of artillery and a party of sappers, advanced from Chang-hwa, and resuming communications with the troops in the south, issued orders for driving the rebels from Yuen-lin and its vicinity. A company was also sent to re-inforce Pu-li-sho, and Major Matsui with two companies was detached to preserve communications with that place.

Taipei, 3.15 p.m., 10th instant; from Major-General Tachimi.

Lieut.-Colonel Imahashi's force attacked the rebels, numbering about 800, at Yuen-lin-chie on the 8th instant, and drove them away, pell-mell. On the same day, some 600 insurgents attacked Lachiang, and after nine hours' hard fighting they were driven off. On the following day (9th) the officer commanding the Brigade sent Lieut.-Col. Imahashi's force, together with two companies of infantry and a field-gun, under Major Suzuta, and four half companies from Tai-chung, to Lo-chiang. The casualties in the fight at Lo-chiang were Lieut. Okuda, severely wounded, and Captain Iwai, Control-officer Watanabe, Ensign Urabe, of the Gendarmier; and eight men, wounded; also, one gendarme killed. Seven of the enemy were taken prisoners and over a hundred killed.

The following telegram has been published in Tokyo :—

Taipei, 2.30 p.m., 12th July.—The force under Lieut.-Colonel Imahashi attacked and captured Peh-tou at 10 a.m. on the 10th instant. The Japanese casualties were, one private killed, and one non-commissioned officer and one private wounded. On the 11th instant, Lieut.-Colonel Imahashi's force reached Tsu-tung-hiang, and at Ta-li-wu effected a junction with the troops under Major Sato. The Lieut.-Colonel's force will now march against Yuen-lin. The two companies of infantry and one section of artillery under Major Matsui marched from Tsu-tung-chie on the 11th instant to attack the insurgents. The company of reinforcements in Pu-li-sho was also to take part in the movement. (Signed) Major-General TACHIMI.

A great number of Police-inspectors, and other Police officers throughout the Empire were promoted or awarded grants ranging from yen 300 to yen 100, on the 15th inst. for services rendered in the years 1894 and 1895.

Baron Suematsu's increasing corpulency is causing him much trouble. He has been ordered by his physicians to make a tour in a mountainous country and take a course of the waters at Carlsbad.—*Tokyo Shimbun*.

THE SEISMIC WAVE.

The *Official Gazette* gives a very useful account, from the pen of Nakamura Seidan, a member of the Seismic Disaster Prevention Committee, about the relation of earth magnetism to the recent seismic disturbance. He first refers to the change noticed in the magnetometer at Nagoya, seven or eight days previous to the occurrence of the Gifu-Aichi Earthquake on Jan. 10th, 1894, and the indications at Sendai about a week prior to the occurrence of a similarly disastrous seismic calamity at Sakata on Oct. 22nd of the same year. With respect to the present calamity, indications were given by the instrument at Sendai from about the 11th. A most striking change was observed in the readings on the 14th, that is, the day previous to the calamity. As the instrument at Nagoya did not present any such appearance that day, the inference is that the change at Sendai must have been caused by subterranean disturbances that culminated in the dreadful calamity in the Sanriku district. On this hypothesis, disturbances may have been taking place off the coast of the three provinces from about the 11th, and these may have caused the tidal wave of the 15th. It is a pity that Nemuro had not an instrument with which to observe magnetic changes, for its readings might have served the excellent purpose of localizing the seat of the disturbance with tolerable accuracy.

FIRE IN CHINA-TOWN.

On Tuesday evening a big fire broke out in China Town, Yokohama, that involved the total destruction of several houses. The alarm was given at 8 o'clock, and Supt. Morgan proceeded to the spot with all the men of the Yokohama Fire Brigade, two hose-reels, stand-pipes, and a steamer. He found that the fire had broken out in a tenement house on Lot 145, in the occupation of Yu Lung. This house is divided into four and is occupied solely by Chinese—Kwong Man Wing, a curio merchant; and Sung Lung & Co., sugar and curio merchants, etc., who rent the place from Yu Lung. In an upstairs room of the principal tenants' apartments a kerosene lamp exploded and set fire to the furniture and hangings. The flames quickly spread, destroying the whole house. Then, fanned by a fairly strong breeze, they leaped across the road and attacked No. 146, a tenement house occupied by Mr. A. H. Joseph, silk and curio merchant; Wing Tai Lung, an importer and exporter; and Hing Kee, a straw-braid dealer. This house was more substantially built than the other and withstood the attack of the flames better, but the next house, also occupied by a colony of Chinese, quickly succumbed. The police brigades were in attendance, and a fire party from the U.S.S. flagship *Olympia*, and water being obtained in good volume from the well at No. 76, and the street hydrants, the fire was mastered within an hour. The Commander of H.M.S. *Undaunted* sent to inquire if he could render the local brigades any assistance, but fortunately it was not required. The places, we understand, were insured, principally in Chinese offices.

GUNS AND ARMOUR IN ITALY.

We read in the last papers from Europe, that Captain Urio, naval attaché to the Japanese Legation in Paris, and Captain Endo, who occupies the same post in London, accompanied by Messrs. Takayama and Miyabara, Japanese Naval Engineers, visited in Italy, under official instructions from their Government, the large establishment of Terni (cannon and armour-plate factories), the two shipbuilding yards of Leghorn (Orlando), and Sestriponte by Genoa (Ansaldo), as well as the engine works of Ansaldo at Sampierdarena.

The same papers note that a very favourable impression was derived by the Japanese guests from their visit to these places, but the practical results of the inspection is still unknown.

KOREAN AFFAIRS.

The long-expected fall of Li Pöm-chin, head of the Cabinet in Korea, has taken place, and the question now asked is, what led to his discomfiture. The *Yiji Shimpō* attributes his misfortune to the fact, or rather hypothesis, that he had alienated the confidence of the Russian Minister, who became tired of his coarse vulgarity and lost patience at his want of prudence. Another explanation is that the direct causes culminating in his fall were that, after losing the confidence of the Russian Minister, he advised the king to return to the Palace, and also that he secretly attempted to do away with a trusted Korean employé of the Russian Legation. Li is in an embarrassing predicament, for the Cabinet, the Russian Minister, and the American Minister are all urging him to start for his destination, America, and he, on his side, is afraid to leave his present asylum lest the followers of the late Premier and the late Minister of Agriculture, Commerce, and Agriculture, whom he caused to be murdered, should rise and wreak vengeance upon him. However, he must start for the United States, and it is said that he intends to do so during the current month, taking with him his family, for he knows well that whatever Cabinet changes take place hereafter, no hope can be entertained of his obtaining a portfolio. With his fall, the real power has passed into the hands of Han Kyu-u, the Minister of Justice, and his coadjutors, the Ministers of Finance and of Education and the Chief of the Police Board. It is entirely a mistake to suppose that with the disappearance of Li the influence of the anti-Japanese party has waned in the Korean Cabinet. Nothing is farther from the truth. Japan is as unpopular as ever, and Russia's predominance remains undiminished. Indications are not wanting, however, that the Koreans do not repose so much confidence in Russia as they did formerly. Reports sent to Seoul by the Korean ambassador to Russia are believed to be in the sense that the Korean Cabinet may rely upon the possibility of borrowing money from Russia, but that the protection of the palace by Russian troops cannot be obtained. The Cabinet has consequently been obliged to have recourse to another method, namely, the engagement of some 20 Russian officers to train a body of Korean troops as Palace Guards. The arrival of those officers is eagerly awaited. It is said that Russia is to send two companies of troops for the special purpose of guarding her Legation, a procedure regarded as probably one of the conditions of the so-called Japan-Russia Convention. The principal topic to which the Korean Ministry are now devoting attention is characteristic of their prevailing temper. They are seeking to make the political stage revolve so as to present to the public once more the scenes popular before the present system was adopted.

The rumour that the Korean Government declared against the use of foreign, and especially Japanese, coins, has proved groundless. The news was never taken seriously by anybody acquainted with the true condition of the media of exchange in Korea. At present all kinds of coins are used in the various districts of the peninsula, each kind being restricted to particular districts. Even the different varieties of coins struck several years ago at the Osaka Mint, we believe, circulate only in Seoul and Ninsen and the suburbs, although the Government has frequently issued orders enjoining the people generally use those coins as legal tender. Further, in the capital itself, and in Ninsen, citizens and merchants refuse to sell goods in exchange for the coins in question. The fact is that the Government struck only a small quantity of genuine one-yen and 20 sen silver coins, and issued debased subsidiary coins in large quantities. The silver coins that possess real money value have disappeared from circulation, and there remain only 5 sen, 1 sen, and ½ sen subsidiary coins. These debased tokens, at first circulating in various places, have flowed back to Seoul and Ninsen, where they lie idle in the people's boxes to the great obstruction of the smooth transaction of business.

The Banks refuse to accept them, as do also the Customs beyond the legal limit. Both the Chamber of Commerce, in Ninsen, and the Japanese Consul stationed there are devising measures to deal with this trouble. On the other hand, Japanese silver coins are very popular. In remote districts, Wiju for example, the yen piece is taken at the rate of 1.24 yen, and many wealthy merchants are coming over to Ninsen to buy Japanese coins.

When, owing to their novelty, the Koreans were much more of a curiosity than they are at present, there used to be some discussion about the sex of young people seen in the train of great men or moving about the streets of Söul, with a decidedly feminine cast of features and long braids of hair down their backs. If the disputants had known more about Korean manners and customs they would have found less room to doubt. "Complete seclusion of all young women and all older women except those of the low class, is an inexorable law in Korea," says the *Korean Repository*. "All young women of respectability are carefully hidden from the eyes of males, whether strangers or friends. The rat-ta-ta of her flying ironing sticks may be heard in the streets, the smoke of the green pine-wood fire she is cooking by may be seen ascending above the roof, and possibly her voice may be heard by a passer-by, but her face and form are never seen." In Japan the expression "secluded," as applied to a girl, means that she is immensely precious in the eyes of her parents. But in Korea the custom of seclusion seems to have been dictated solely by caution. "The theoretical inferiority and weakness of woman, and the superiority and strength of man render some such protection necessary; the facts of history point to protection of some sort as highly desirable. The previous dynasty had no law of seclusion, women enjoying great public freedom. In the final decades of the dynasty women became the special objects of violence. Buddhist priests were guilty of wide-spread debauchery of homes; conjugal infidelity was estimated the lightest of crimes; the most popular sport of court and provincial nobles was a raid upon a home known to contain a beautiful woman. These onslaughts on the home did more to ruin and destroy the State than anything else, for the prevailing corruption and debauchery finally engulfed royalty itself. The present dynasty tried to remedy this evil by withdrawing woman from the public eye."

In marriage affairs the principals have not the least voice. The match is made by the parents. Not until the knot is tied do the persons bound see each other. Then, as the girl has been secluded ever since she was six or seven; cut off from instructive converse with others; condemned to an everlasting routine of cooking, sewing, and small talk, the man finds her what the dualistic philosophy of his country has already taught him to expect—an inferior being. Thus the practice of this Korean creed is like that of the great economical fallacy, protection: each created circumstances favourable to its perpetuity.

Yet this essay in the *Korean Repository*, from which we have been quoting, has a very good deal to say about the real status of the Korean woman:—

An absurd philosophy, the dogmas of a man-made religion, shadowy legal rights, illiteracy, and neglect have combined to force woman beneath man's level in Korea. But she has risen in spite of these depressing forces, and actually occupies a place in national life, all theory denies her. In her essential qualities she is diligent, forceful in character, resourceful in an emergency, superstitious, persevering, indomitable, devoted. There is much more in evidence of her diligent integrity than there is of her lord's industry. There are no man tailors to share with her in clothing a race, the spacious dimensions of whose garments indicate seemingly that they were designed to use up cloth—great quantities of cloth. Then the entire job of laundering these garments and cooking the 200,000 bags of rice which the nation eats daily is all done by her. She does a man's work on the farm (we have seen her yoked with a man, dragging a plough in the country) and runs thousands of small stands for merchandise as well as doing a thriving business in the huckster line. In part the power and influence of Korean women are to be met with in every quarter of the world man deludes himself into believing he has appropriated to himself in Korea. When times of trial arise and the home is threatened with starvation, the busy needle and flying washing and ironing

sticks of the wife keep the household together. Even more, her persevering and indomitable energy rises superior to the severest poverty, while her liege lord collapses as though he had a shoestring for a backbone. Could we know the actual facts in every case, it would be found probably that many of the strutting, self-styled aristocrats in large towns are really drummers up of trade, purveyors of washing and needle work, messengers for the real "man-of-the-house" who is too busy or too modest to appear in the street. Korean women are withal inveterate intrigantes, exercising an unseen but powerful hand in general affairs—all the more powerful because unseen.

A writer in the *Korean Repository*, signing himself H.G.A., tells the story of the defences of Ping-yang, as he found them on a recent visit to the celebrated battle-field. The conclusions he arrives at are that the Chinese showed great skill in their methods of fortification, that in every case the sites chosen by them for forts and parapets were good; that the disgrace of not successfully holding at bay the Japanese troops on the east and south sides was "of the deepest dye," and that "no words can properly express the disgrace, disloyalty, and cowardice" exhibited by men who allowed themselves to be driven out of such fortifications, natural and artificial, as existed on the north side." Readers of the news that reached us immediately after the battle of Ping-yang doubtless remember the allusions made to Mount Peony, where Hideyoshi's celebrated general, Kato Kiyomasa, sustained a crushing defeat three centuries ago, and where the Japanese encountered no little difficulty in September, 1894. "H.G.A." says, "As one stands on the summit of Mt. Peony one is amazed at the daring and pluck that drove the occupants from this almost impregnable position."

"Reaction against the reforms introduced into Korea in 1894 has begun to set in," says the *Korean Repository*. Evidently the statement is correct, otherwise the new Minister of Education, Sin Ki-sun, would not have ventured to memorialize the Throne in an emphatically reactionary sense. The *Independent* of June 6th says:—

The Minister of Education, Sin Ki Sun, has memorialized the Throne to the effect that the adoption of foreign clothes by the soldiers, policemen, and Government students, and the cutting of hair is the first step toward making them barbarians; that the use of the *summun* and the adoption of the western calendar is the first step toward throwing off the yoke of China, that the new regulations for the Cabinet, giving the freedom to discuss public matters, deprives His Majesty of some of his power, and encourages the freedom and liberty of the people. These were things contemplated by the former traitorous Cabinet. He has been appointed Minister of Education, but he cannot perform the duties of the office so long as the students have their hair cut and wear foreign clothes. The use of the *summun* is the act of a beast and is like going into the fire with powder, and is the beginning of the destruction of the government and the venerable Chinese classics. He therefore hopes His Majesty will dismiss him from the Cabinet.

The King paid no public attention to the memorial and the Minister entered the Cabinet, apparently persuaded that he had acquired the right to exercise a free conservative hand. Three days later he issued an order forbidding the students of the Royal English School to wear foreign dress, under pain of heavy penalties. The order was to have gone into force at once, but its operation was eventually postponed for a fortnight, by which time the summer vacation began, and on the re-opening of the schools the portfolio of the retrogressive Minister may be in other hands.

Many critics are wont to say that Japan's influence in Korea has not been productive of any genuine reform. Here is what the editor of the *Korean Repository* writes on the subject, incidentally to some remarks on the acts of the present anti-progressive Minister of Education:—

The efforts of the Minister of Education to stem or throttle the new spirit growing up here can only be partially successful at best. Quite a few Koreans, especially among the students of the several schools, are cutting their hair a second time and that too at the very time when such an act is the "first step towards barbarism;" with a lively tri-weekly published in the native script and widely read by all classes, the common people will begin to think. This and not the use of the native character, is the real cause of alarm of the Conservative party. The concern for the Royal prerogative may be true or feigned, but the discussion of public questions by the Cabinet will be one of the most effectual ways of breaking up the intrigue for which this government has an unsavory reputation. A little opposition may be good. The country, however, must not be allowed to go back to the corrupt and corrupting ante bellum times.

We observe that the Editor of the *Korean Repository* takes some pains, in his June number, to refute a charge advanced by the *Literary*

Digest that his magazine is "violently anti-Japanese." Truly, we do not think that an accusation so palpably unjust needs any refutation. If all editors in the Far East showed the spirit of fairness and impartiality that has hitherto distinguished the *Korean Repository*, public intelligence and accuracy of judgment would be much improved.

DETAILS OF THE TOYAMA INUNDATIONS.

Details of the recent inundations in Toyama are to hand. The statistics are these:—

Embankments breached, 4,577 *ken* (9,158 yards); roads damaged, 299 *ken* (598 yards); bridges damaged, 18; bridges swept away, 9; persons drowned, 4; houses washed away, 15; houses wrecked, 24; houses flooded, 1,724; sheds washed away or wrecked, 6; arable land inundated, 516,765 *cho* (1,292 acres); other land flooded, 813,870 *cho* (2,034½ acres). From the beginning of the month the weather continued wet and gloomy in Toyama, and, after a short interruption, rain again began to fall heavily at about 10 p.m. of the 5th instant. From the afternoon of the next day, the storm grew in force, and between 2 p.m. of that day and 10 a.m. of the next, the rain-gauge at the Toyama Observatory showed a fall of 52 mill., the highest record since the instrument was set up. The Jijoganji-gawa rose more than 4 feet, the Jinzu more than 10½ feet; the Kurobe, more than 11 feet. The first river broke its embankment early on the morning of the 7th instant, and inundated the neighbouring country.

THE RUSSIAN THRONES.

The *Times* correspondent gives the following account of the three Thrones used on the occasion of the Coronation of the Czar, the Throne of the Empress Dowager, and the Thrones of the Emperor and Empress:—

All three thrones are armchairs of antique form and have interesting historical associations. That of the Emperor is covered with plaques of gold in which are many large, roughly-cut jewels, rubies, emeralds, and turquoises, to the number, it is said, of nearly 2,000. It is usually called the Throne of the Tsar Michael, the first ruler of the Romanoff dynasty, but according to the old records it belongs to an earlier period, having been sent as a present by a Shah of Persia to Ivan the Terrible. The throne of the young Empress, covered with plaques of ivory beautifully carved in bas relief, was a gift of Pope Paul II. to the Tsar Ivan III. on the occasion of his marriage with a niece of the last Byzantine Emperor. The Empress Dowager's throne, not unlike that of the Emperor's in general appearance, is that of the Tsar Alexis, father of Peter the Great. It is ornamented with nearly 1,000 diamonds and over 1,200 rubies, together with many turquoises and pearls, while from the back rises an eagle of solid gold, and statuettes in the same metal of St. Peter, and St. Nicholas, the miracle worker. On the back of each throne is a dark crimson velvet cushion edged with gold, and bearing in gold embroidery the monogram of its august occupant. The canopies are likewise of crimson velvet and gold and are surmounted with black, orange, and white plumes.

A TIDAL OR SEISMIC WAVE AT IKI.

Intelligence from Iki, an island off the coast of Hizen, 48 miles from Taushima, says that frequent showers of rain fell there on the 8th instant, and that, at 10 a.m., the thermometer registered 21° C. (69.8° F.). Towards evening a violent gale began to blow, and at 7 o'clock the sea showed signs of disturbance, rising several times two or three feet above its usual height, and retreating with exceptional rapidity. The boats anchored off the island were thrown into considerable confusion, and some damage was done to cultivated lands, but happily there were no casualties among the people or the live stock.

Among the riders at the recent equestrian games at the Akasaka Palace the most conspicuously successful was H.I.H. Prince Kanin, who received warm encomiums.

CHINESE NOTES.

It is alleged that, at the dictation of Count Cassini, the Chinese Government have agreed to appoint a Danish Naval officer to an important position in the service about to be organized. The attempts of the Chinese Authorities to evade this appointment, the insistence of the Russian Representative, and the understanding that the Dane is to be second to, not of equal standing with, the officer that England is expected to lend, are graphically described by the leading Shanghai paper. But the story is too much embroidered. Of course the hypothesis is that Russia wants to prevent the organization of China's new navy under completely British auspices. If that be so, her method of procedure seems somewhat roundabout. At all events, the British Government can not enter that field of competition.

The Shantung correspondent of the *North China Daily News* tells the story of a remarkable man who recently died at Linchingchow. A beggar, content to live on scraps picked out of the gutter; illiterate to the point of not being able to read, and without any apparent gift except singular tenacity of purpose, this man, Wu Tou-mo, succeeded in founding three colleges and in sustaining them for the decade preceding his death. His unique idea was that he had a mission to establish free schools. To that end he devoted every cent he could procure, and even when money came to him in showers and honours were heaped upon him by the Emperor until he had more titles than any other man in the town, he remained a beggar in habits, refusing to eat with the students that received their education through his labours, and satisfying himself with the remnants of their meals. But in business matters he seems to have been a man of exceeding shrewdness, who did not hesitate to take full advantage of his neighbours' simplicity.

A wholesale raid has been made by the Shanghai police upon a species of Chinese Monte Carlo, in the vicinity of the Woosung Road, not far from the rifle range. Matsheds had been erected for the convenience of the gamblers; quite a little town was growing up about the place, and watchmen were always on duty, one of their functions being to warn off foreigners. The raid is thus described:—

Inspector Howard determined to disperse them and proceeded to do so on the afternoon of June 28th. By different routes, and without exciting suspicion, thirty native constables were placed in ambush about two miles away in the country; and in another direction twenty constables were posted, whilst two foreigners kept the bridge over the Singkingpang creek between a large cotton ginning mill and the gamblers' sheds. Altogether 50 native constables, six native detectives, and five foreigners were engaged under Inspector Howard. At the appointed hour, when all was in readiness, Inspector Howard crossed over the bridge just mentioned and blew his whistle. The gamblers, surmising they were to be attacked, ran in all directions, but as the constables remained hidden for some time their uncertainty as to which route to take was increased. So well were the police placed, however, when they did begin to move that no fewer than 84 gamblers were caught, whilst two in attempting to cross a creek near the likin station were drowned. The raid is described as having been most exciting, the gamblers in their flight throwing away money, etc., as they scampered pell-mell across country. Two baskets of money were recovered from a creek, some \$40 or \$50 were picked up in the fields, and the country people no doubt gleaned some more. When the prisoners were paraded at the police station, 28 were found to be Cantonese, many of them in good positions, and one man was said to be a large drug dealer at Nanking.

The Viceroy of Nanking, Liu Kun-yi, has issued the following proclamation:—

Whereas, our citizens ought to treat foreigners who come into our country with consideration, and thus show a friendly spirit since there are already friendly treaties with all other nations. Any affair that concerns other countries ought to be reported to the local authorities who will decide in an impartial way according to the established law. At the present time all the German military instructors in this provincial capital were engaged to train the new army by the late acting Viceroy H.E. Chang, and are exerting themselves in the interests of China.

In the case of the churches and hospitals that have been established by the French, English, and American missionaries for preaching and healing, these are indeed works of benevolence. Law-abiding citizens should harbour no suspicions as to their

doings, but rather treat them with great respect on all occasions. Any one who, without cause, stirs up trouble, or incites to riot, is a law-breaker, and will be punished without leniency. Citizens should attend only to their own business, and not follow idle rumours and thus unawares be caught in the clutches of the law. The inspectors of police and magistrates of this district are all instructed to give protection and act energetically. I have already ordered those who are under my service to seize and punish several if any trouble arise.

On this account, I issue a special proclamation to instruct all the soldiers and civilians of this city to attend to your own duties, and respect the established laws. In any affairs which concern foreigners do not listen to false reports and silly gossip. If any ill-intentioned parties start rumours and cause trouble, they will be seized and punished without leniency.

There seems to be some uncertainty as to the proximate cause of the issue of the above, but doubtless it owes its origin to the recent trouble between the Chinese braves and the new German-drilled "Ad-Astra" force, which resulted in a German drill instructor's receiving a bad beating. The Viceroy now finds it advisable to remove this force to Woosung, and arrangements to that end are in progress.

The *North-China Daily News* has opened a subscription for the relief of the sufferers by the Seismic Wave in Japan. The amount subscribed up to July 4th was 2,600.

Our readers doubtless remember that serious trouble seemed to impend at Hankow, owing to the arbitrary manner in which the vested interests of British land-holders were about to be treated in connection with the establishment of a French settlement. The difficulty has now been solved by the simple expedient of making large additions to the British concession in directions distinct from the area to be occupied by the French.

Owing to the sudden rise of various rivers in Chihli—the Yungting, the Peiho, and others—large tracts covered with nearly ripe wheat have been inundated, and a famine is apprehended.

The appropriation of the site selected for the new Japanese settlement at Chungking will necessitate the removal of a number of graves, a contingency that is expected to cause much trouble.

The cotton-mill project of the Viceroy in Chungking has been abandoned.

Official sanction has been definitely given to mining operations in Manchuria. There is believed to be an abundance of gold, silver, iron, and coal. The terms of the sanction are thus given by the Mukden correspondent of the *North-China Daily News*:—

Any man may have an official *piao* entitling him to work for gold or silver in any piece of ground he chooses. If the ground belongs to another man, this man is bound to sell the ground to the miner for what it cost—this seems the hardest condition connected with the new decree. If the concession wanted is among the mountains, nothing is paid therefor. The *piao* empowering the man to mine costs nothing for the first three months, giving time to explore the concession, which may be abandoned, if unpromising, and another taken within that time. After three months, when the miner is satisfied with his claim, he pays two shoes of silver (Tls. 107) for his *piao*. One-tenth of the products of mining, if silver, belongs to the Emperor and four-tenths if gold. Coal pays so little that it is inappreciable. A considerable number of claims are made already, and it is to be hoped that they will be sufficiently profitable to entice large numbers into the work. Despite the vigilance of soldiers kept purposely to prevent the people from meddling with the gold deposits, a considerable quantity of gold dust found its way into the market. We may surely look for a great deal more now. Manchuria, if properly worked, would help to allay the bimetallic agitation.

The renewed outbreak of the Mahommedan rebellion in Kansu seems to be decidedly serious. The leading Shanghai paper of June 29th has the following:—

Telegraphic despatches received here yesterday evening from Kansu via Peking report the Mahommedan rebellion to be spreading to an alarming extent and that it is much more formidable than the one which began a year ago and was reported last February as "crushed." It is further reported that the Mahommedan rebels have recently inflicted another serious defeat upon the Imperialists. Governor Wei of Shensi, with 10,000 men, was at last reports (24th instant) within 280 li of forming a junction with General Tung Fu-hsiang's army near Huchou.

It appears from correspondence in the same paper, that the Mahommedans of Ili and Hsin-chiang have joined the revolt, and that the Im-

perial forces are in a parlous state. The followers of Islam are said to give evidence of high spirit and military bravery, whereas the Government troops, though better armed, are craven, incompetent, and lacking in *esprit de corps*.

A letter from north Kiangsu, under date June 20th, published by the *N.-C. Daily News* says:—

News was received to-day that a Roman Catholic priest was severely beaten—some official despatches say killed—in Chuchoufu this morning. Chuchoufu is in the north-west end of Kiangsu. For fifteen years, foreigners have held property in the city. The Roman Catholics had repeatedly attempted to take possession of their property and were as often driven out, the Viceroy's orders to the contrary notwithstanding. After the triennial examinations this year, the priests were invited to come and take possession, with the effect just noted. The settlement of this case will be of deep interest to other missions in the prefecture.

Mr. Krause, the German drill-instructor, who was so mercilessly handled by an undisciplined mob of Chinese soldiers, has received a salutation in the form of twenty-five thousand marks, accompanied by the cancelling of his agreement. We presume that a sum of ten thousand dollars paid down, and liberty to return to the Fatherland without further service in a country where a man is liable to get clubbed for doing his duty, will satisfy Mr. Krause. But his dismissal is peculiar. May it not suggest to conservative Chinese braves a device for getting rid of all the "Ad-astra" instructors?

There has been a duel in the neighbourhood of Shanghai—at Woosung, say some; in a garden just outside the settlement, say others. The principals were German officers, Captain Count Nayhauss and Captain Wilhelm Hoffman. The cause is uncertain; apparently some caustic remarks made by Captain Hoffman were the origin of the trouble. The two officers came down from Nanking, where they were serving, obtained seconds and a surgeon in Shanghai, and then slashed at each other with swords, Captain Hoffman receiving a severe wound in the arm.

In a letter written from Morioka to the Missions Etrangères, the Rt. Rev. Père Berlioz, Bishop of Hakodate, says, with reference to the seismic-wave disaster:—

Fathers Jacquet and Deffrennes, who left for Kamsishi the day after the disaster, write me that the spectacle is heart-rending and defies all description. In the midst of the putrefying bodies of men and animals nothing is heard but the groans of the wounded, the murmurs of those who have lost all, the cries of the orphans. There is not one who is not in mourning.

The authorities are doing their duty with a devotion above all praise, and the organisation of succour is working with admirable method. But in the face of so many and such great needs, none can remain indifferent to such frightful calamities. We find ourselves confronted by one of those misfortunes in the allaying of which every one should assist, and; I am confident that the sentiments of charity which animate those who have feeling for the suffering of their kind, will urge them to do something for our unfortunate Japanese.

The promptitude of the Chinese Authorities in meting out justice—or injustice—when certain crimes are in question, is illustrated by a recent case. The Soochow Magistracy having learned that an alleged leader of the Kolaohin was hiding in the vicinity of the Taho Lake, and having bribed a member of that powerful society to guide them, apprehended the man and carried him to Soochow, where his head was cut off six hours after his arrival.

A movement is on foot in China to establish chambers of commerce in all the provinces. A censor has memorialized the Throne to authorize, by special decrees, the Viceroys and Governors to take steps in that sense. As yet the programme seems to have taken practical shape in the province of Shanai only, but no obstacles seem likely at present to prevent its wider application.

A correspondent of the *North-China Daily News* sends to that journal a glowing account of the prospects of the new settlement at Soochow, which place, as our readers are probably aware, was opened to foreign trade by the Shimonoseki Treaty. A new silk filature has been finished and another will soon be completed. Thirty houses, of the Shanghai native type, are

being built, and have already found tenants. A Chinese electric light company is getting up its plant; a large cotton spinning and weaving mill is very near completion, and tea shops, opium divans, and so forth are springing up everywhere.

The "Ad-astra" army corps of Nanking (soon to be removed to Woosung) is not the only body of men in China organized and drilled according to the German system. Another corps of thirty battalions (15,000 men) exists in Chihli. It is called the "Wuyi Corps" and has its head-quarters at Lutai, a few miles north of Tientsin. The formation of this corps was recommended by General Nieh, an officer who certainly did not distinguish himself in the recent war, though he is now Commander-in-chief of Chihli. Nieh's idea was that the corps should be German in all respects, and we learn from a memorial recently addressed to the Throne by the Viceroy of Chihli that the men forming it are the pick of those employed in Manchuria and Chihli during the war; that a number of German officers are now engaged licking it into shape, and that its rôle is to be a "roving offensive" corps ready to take the field at any moment and to fight at any point. A sum of some thirty thousand taels has just been granted to build military and medical schools, ordnance stores, a magazine, and a hospital. We wonder what use either this corps or the "Ad-astra" body would be if deprived of its German officers? What the Chinese army wants above all things is officers. The men are good stuff enough, but the officers are miserable. Can the Germans, can any foreign instructors, make good native officers, and does the system of employing foreign instructors tend to make good native officers? Foreign drill sergeants are excellent in their way, and foreign officers teaching in officers' schools are excellent. But where the foreigner is in all in all during peace, his native successor in war is not likely to be much respected or to deserve much respect.

From Wenchow comes news that the Chinese at Sung-kiang are still engaged in anti-Christian riots. The house of the German mission, originally damaged, is now totally destroyed, and two other houses belonging to a Christian have met with the same fate.

Those that labour under any doubt as to the position occupied by Nepal towards China, had better read the following account (taken from the *N.-C. Daily News*) of the entrance into Pekin on June 23rd of a tribute-bearing mission from the Nepalese King, or the "King of the Goorkhas" as he is called in China:—

The Chief Ambassador of the Goorkhas was gorgeously arrayed in garments of yellow, red, and blue, and he rode in a green baize sedan chair borne by four bearers in a sort of uniform with native official hats, a man holding a yellow umbrella going in front. Ambassadors of independent Powers would have been seated in similar chairs, but borne by eight bearers. The Vice-Ambassador rode in an ordinary blue baize sedan chair borne by three bearers. A man bearing a red umbrella marched in front of this chair. Then came the retinue of the Ambassadors, all riding on diminutive Szechuan ponies. These retainers were armed with the national broad-bladed *hookor*. Then came a small party of native soldiers, a portion of the escort furnished by the Governor of Shantung. After the soldiers came the tribute of the Nepalese King, borne by some thirty to forty mules, the tribute being packed in boxes strongly corded, except four elephant tusks nearly five feet in length, each pair being carried by one mule. These tusks were magnificent and astonished the natives by their size and length, as they were a sight rarely witnessed in that portion of the empire. Another large party of soldiers brought up the rear of this unique procession, an event seen, probably only once in ten years. The chief of the mission will be introduced to the Emperor this month by either the President of the Mongolian Superintendency or of the Board of Rites, the reason for the delay in this ceremony being the period of strict mourning which his Majesty has to go through owing to the death of his mother, the late Princess Ch'un. The length of mourning for parents amongst the Manchus and Mongols is one calendar year; the greater length of three years being observed by Chinese only in obedience to the tenets of Confucianism. The Nepalese Ambassadors will pay the usual obeisance accorded to their suzerain the Emperor, namely, the three genuflections and nine *kombans*, and the Emperor will then order a banquet to be given them after reading a translation of the memorial of the King of Nepal and the list of tribute. This done, a number of return presents will be given the Ambassadors for the King, with the injunction to continue loyal tributaries to the Imperial dynasty, and the mission will then be permitted to return to their country. Missions like the above generally stay six months or so in Pekin, being entertained at the expense of the Emperor, who also provides the necessary silver to carry them back to their country—a tedious journey of quite one year, overland.

The Kobe Committee for the distribution of the very handsome sum subscribed in that Set-

tlement to relieve the sufferers by the Seismic Wave, have placed themselves in communication with Shanghai, asking that the Shanghai fund (now amounting to over three thousand dollars) be entrusted to them, and Shanghai has agreed.

THE SEISMIC WAVE IN HAWAII.

Fuller details are now to hand with reference to the Seismic Wave in Hawaii. They show that the phenomenon was on a much larger scale than previous reports led us to suppose. We quote from the *Commercial Advertiser* of June 20th:—

Great was the excitement in the city Friday morning when the steamer *W. G. Hall* arrived from Hawaii with accounts of the tidal waves on that island. As usual, a few crack-brained individuals went running about the city spreading all sorts of sensational stories regarding loss of life along the Kona coast and terrible disaster in all quarters. The following account of the tidal wave and the damage it caused was received from Captain Simerson of the *W. G. Hall*.

"We were at Honuapo on Monday morning, when the tidal wave was first noticed. As soon as I saw the danger I whistled to the boats and we were very soon steaming out to sea. After the danger was over we returned.

"The wave came from the southwest, struck Kawaihae first and then went around the Kona and Kau way to Hilo.

KAWAIIHAE.

"The first wave struck at about 8.15 a.m. The wharf which has stood the test of years was completely demolished.

KAILUA.

"Wave struck at about 8.30 and demolished the lumber yards of Messrs. M. F. Scott and George Clark. All the lumber was washed out to sea, but boats were set to work and much of this was restored. The warehouse was filled with water and much of the freight was badly damaged."

Following is an abstract of a letter received from J. Kaelemakule, sub-agent at Kailua, and inserted here for convenience:—

"Great excitement prevailed on Monday last, June 15, occasioned by a tidal wave.

"Without warning the sea rose eight feet over usual high water mark. The wharf at the landing was twisted out of position, and at present has the appearance of an archway. The sea entered McDougall's and also my store, and when it stopped rising the water was two and a half feet over my veranda floor.

"You can imagine how we all felt. We naturally first thought of getting to a place of safety, thinking that another wave, larger than the first, would sweep everything before it.

"My family and people living just back of my store are moving what personal effects they can take, and are up to their waists in water.

"The official documents and records were hastily thrown up to the highest shelves in my office. It was impossible to remove them; we were all surrounded by water. I am glad, however, to report that with the exception of some of the stationery the books and Government records are unharmed. A great deal of damage no doubt has been done here and along the Kona coast, but I have not time to report them at this writing."

Following is an extract from a letter written by Miss Paris of Kailua to a friend in Honolulu:—

"I have not the strength or time to describe in detail the terrors of the tidal wave yesterday (Monday). I hope never to experience another. It was about 9 o'clock in the morning when a native man I had been talking with came outside and told me to look at the sea. I did look. It was fast receding, leaving rocks and places bare. I went over the Kaelemakule's and while there the tide flowed in and was soon quite beyond the usual high water mark. After I returned to the house the water receded very rapidly, washing over the rocks like a freshet. I sat in the lanai thinking what I should do. The suspense was dreadful. The next time the wave came higher, and the third time the water came pouring in over the wall. After that it subsided slightly and I began to think it was dying out, and went into the house, when suddenly Mrs. Senter screamed: 'Oh, what shall we do? It is going to be terrible!' I rushed out and found the yard flooded with water.

"On the impulse of the moment I said, 'Let us go up stairs.' So up we flew. Then I called to the natives who were on the big wall at the side and asked what we ought to do. They said: 'Come over quickly and go mauka. I ran to the front of the house, and I'll never forget that sight.

Just the sea in front of us, everything obliterated. It seemed to come in successive swells. Between two waves we waded through the water where it was most shallow and then up on the wall. It is well we left the house when we did, for the water rushed in and filled the lower part. When I returned about an hour afterwards everything was in a terrible state. The water had receded, leaving the walls broken and debris scattered all about the place. Just before sunset another wave came, reaching way into the place. While this one was receding we gathered blankets, bags, and a few other articles and rushed out to spend the night somewhere. We found a little house just above where about twenty natives had gone, and there camped out on the lanai."

Miss Paris came down on the *W. G. Hall* to Maui, and after making a short stay there will come on to Honolulu.

"Wave struck about 8.30 a.m., and the water rose about thirty-five feet, entering the cave on the side of the pali. Nine houses were completely demolished. Of these four were grass and five wooden. The home of Charles Kaiiki, who has charge of Queen Dowager Kapiolani's land, was among the number. When the wave receded fish were scattered in among the lantana bushes. It may sound like a fish story, but the finny creatures were even hanging in the branches of the lantana bushes. Probably the most severe effects of the wave were felt at Keauhou. The cause of the great height of thirty-five feet is easily explained when it is remembered that Keauhou is in a very narrow bay.

NAPOOPOO.

"Wave struck at about 9 a.m., and the water reached thirty feet. Three houses were washed away and lumber from the lumber yard of M. F. Scott was scattered all over Kealeakua bay.

KAAWAEOA.

"Wave struck at about 9 a.m., and reached thirty feet. Moses Barret's house was destroyed, as was the wharf. The water got into the warehouse and caused considerable damage.

HOOKONA.

"Wave struck at about 9.30 a.m., and reached about eight feet. The wharf was destroyed, together with the Chinese stores. The bridge at this place was probably the worst damage of any.

KAALUALU.

"Wave struck at about 9.40 a.m., and reached twelve feet. The wharf and four houses were washed away.

HONUAPU.

"Wave struck at about 9.40 a.m., and reached twelve feet. A big timber from one of the scows was torn away by the force of the water and taken up into the large pond.

PUNALU.

"Wave struck at the same time as at Honuapo, and reach the same height. No damage done.

"The natives along the shore at Punalu, as well as Honuapo, remembering the sad havoc caused by the tidal wave in 1868, when eight-one lost their lives, betook themselves to higher ground for safety. They were seen dragging their canoes, bed clothes, etc., after them. At Punalu the majority slept out all night, and on Tuesday they moved back to their houses, says a Kau correspondent.

HILLO.

"Wave struck at about 10 a.m., and reached in the neighbourhood of eight feet. No damage done.

"All along the Kona coast three very heavy waves were felt in the morning. After that they became very much less in height, continued throughout Monday and Tuesday, ceasing entirely Wednesday morning. Fish were lying all over the place, and at Keauhou large rocks and debris took the place of a formerly beautifully smooth sand beach.

"There were no lives lost, but great deal of damage to property resulted."

Purser Matthews and Freight Clerk Tommy White of the *W. G. Hall* were standing with Captain Simerson when the above facts were obtained, and furnished much important information which has been embodied in this article.

American Journals just received show that the wave reached Santa Cruz, in California, and that its height there was about 9½ feet. The *San Francisco Chronicle* of June 16th has the following:—

Santa Cruz, June 15th.

Nature in the shape of a tidal wave came near overturning the Santa Cruz water carnival to-day. They do not have tidal waves in Venice nor often in California, and that is why the barge builders of Santa Cruz were simply stunned by the prospect of their misfortune. But the waters subsided, the barges, like Noah's Ark, are safe and

dry, and the builders of boats have recovered from their attack of heart failure.

There is a ship-yard near the dam in the San Lorenzo river. It is on an island, oozy and brush-covered, surrounded by a moat without the draw-bridge, but which you drive through if your horse be amphibious and your waggon high.

It was low tide in the morning, and dozens of men were working on the island—painters, upholsterers, gilders, carpenters. Some one resting his bent back and his eyes, cried, "Look, the dam!" and then rose a solid wall of green water. In less seconds than it takes to write it, the water had risen 9½ feet outside the dam. It fumed and fretted, lashed itself into foam and dashed over the dam, which trembled ominously, but the bags of sand held firm and the busy little island with its precious occupants were saved.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

THE SEISMIC WAVE FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I trouble you to acknowledge for me through your columns, the receipt of sixty yen (\$60.00) from the Presbyterian Missionaries in Kanazawa, Kaga.

I had hoped by this time to be able to forward you the accurate statistics from the Kencho, but it will be a day or two before they are printed. When they are issued they may be relied on, and they will be very full and complete.

Sincerely,

E. ROTHESAY MILLER.

Morioka, July 14th, 1896.

TELEGRAMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your comments on Dr. Christlieb's recent complaints of your discriminations against the Germans and Germany in the columns of the *Japan Mail*, you invite further criticism of a kindred character. I am happy to offer some with regard to the United States. A reader of the *Yokohama foreign press* might peruse column upon column without so much as having heard whether there be any United States. Not that we find fault with Reuter for not having heard of such a country. It is with ye editors of the local press that I have this somewhat to say. Last week a column in the *Japan Mail* was headed "From the American Papers." I eagerly scanned it, thinking to find something fresh and interesting from my native land. There was not the slightest reference to any such land. Your compiler had used his scissors vigorously enough on all other countries, but the very one that made his information possible was not once in his thoughts. This little bit of incivility toward the greatest of the nations occurs so frequently in the *Yokohama press*, that very likely the older American inhabitants have become quite hardened if not resigned to it. True the American contingent is a very feeble folk in this empire, but they outnumber any other nationality in Tokyo at least; and inasmuch as ye editors are not publishing papers exclusively for your health, it might be worth some financial considerations for you now and then to refer to a little nation of seventy millions lying on the North American continent. Hoping to see this unpardonable neglect immediately righted, I beg to subscribe myself

AN AGGRIEVED AMERICAN.

Tokyo, July 11th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent "An aggrieved American," who constitutes himself the mouthpiece of "the greatest of the Nations" (an expression as modest as it is truthful), seems hardly likely to emulate the example of his countryman whose birthday is annually celebrated in February.

No column headed, "From the American Papers" appeared in the *Japan Mail* during the period referred to.

Your obedient servant,

AN INTELLIGENT ENGLISHMAN.

Yokohama, 15th July, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Lest you might think my recent letter more factions than serious, I beg to enclose "a few paragraphs" from your last Friday's issue, further illustrating my position, and which may

have a more salutary effect by being presented in this isolated, graphic fashion.

You will observe that your column and a half is taken directly and bodily from the "American" press. It would take a microscopic investigation to find any farther allusion to "America." Even on the ground of Editorial courtesy some mention might occasionally be made of the United States in these extracts. But on the deeper ground of gratitude you might likewise now and then recognize the source of this valuable and interesting column by a reference to some of the present seething events in the United States. By so doing, I can assure you your journal would possess a deeper interest for not a few of your readers.

I beg to remain, most truly yours,

JOHN DAVIS,
Trinity Division School.

23, Tsukiji, Tokyo, July 13th, 1896.

[As we understand, what our correspondent desires is that the telegrams taken by us from American exchanges should contain more about America itself. But we would remind him that these telegrams are intended solely to give news of the Old World. For the rest, it is only just to point out that, with the exception of the *Japan Mail*, no foreign journal in Japan possesses a United States correspondent, whereas the *Mail* has several.—J.M.]

AN ENQUIRY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I ask for information through your columns concerning Japanese musical instruments. Is there an instrument called a *Kō*, and what is it like? What is the *Tsumagoto*? and the *Uichine*? where can a complete list, with illustrations, of Japanese musical instruments be had? Also, I would be glad to know the name of large and reliable firms, making, or dealing in, such instruments. Any information on the above points will be gratefully received.

Thanking you for allowing space for this in your valuable paper.

Very truly yours,

INSTRUMENTAL.

July 14th, 1896.

THE OBJECT OF PRAYER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am of the opinion that the gospel of Jesus Christ suffers more from its pretended friends than from its avowed enemies. Witness, for example, a communication in yesterday's *Japan Mail* from "Cosmopolitan" in which a defence is made for idolatry.

All that we certainly know of the mind of God on the subject of answering prayer—or anything else as to that matter—is communicated to us through his Revelation, commonly called the Bible. There is not a sentence in all that book that even intimates that God will hear the prayer of an idolater. It is a matter somewhat surprising how much of the Bible is levelled against idolatry. Solomon says (Prov., 28:9) "He that turneth away his ear from hearing the law even his prayer is an abomination unto the Lord." What does the law say about the worship of idols? Listen to the very first commandment; "Thou shalt have no other gods before me." Listen to the second; "Thou shalt not make unto thee a graven image, nor the likeness of any form that is in heaven above, or that is in the earth beneath, or that is in the water under the earth; thou shalt not bow down thyself unto them, nor serve them: for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children, upon the third and upon the fourth generation of them that hate me, and showing mercy unto thousands of them that love me and keep my commandments." (Ex., 20:2-5). He that disregards this part of the law (the moral truth of which has never been abrogated) only offers an abomination unto God when he prays. He is a sinner, and "now we know that God heareth not sinners: but if any man be a worshipper of God and doeth his will him God heareth." Of the multitude of scriptures, witness a few selections: "And he did very abominably in following idols according to all that the Amorites did, whom the Lord cast out before the children of Israel." "They shall be ashamed, yea confounded, all of them: they shall go into confusion together that are makers of idols." "And they that escape of you shall remember me among the nations whither they shall be carried captives, now that I have been broken with their whorish heart, which hath departed from me, and with their eyes, which go a whoring after their idols." "Thus saith the Lord God: Every man of the house of Israel that taketh his idols into his heart, and putteth the stumbling block of his iniquity before his face and cometh to the prophet; I the Lord will answer him therein according to the multitude of his idols; that I make the house of Israel in their own heart, be-

cause they are all estranged from me through their idols." "Thus saith the Lord God: Return ye and turn yourselves from your idols; and turn away your faces from all your abominations." "And ye shall hear the sins of your idols: and ye shall know that I am the Lord God." "Thus saith the Lord God: I will also destroy the idols and I will cause the images to cease from Noph." Let us turn to the New Testament: "Wherefore my judgment is that we trouble not them which from among the Gentiles turn to God; but that we write unto them, that they abstain from the pollutions of idols." "Now while Paul waited for them at Athens, his spirit was provoked within him, as he beheld the city full of idols." "Ye know that when ye were Gentiles ye were led away unto these dumb idols." "And what agreement hath a temple of God with idols? for we are a temple of the living God.....Wherefore come ye out from among them, and be ye separate, saith the Lord, and touch no unclean thing; and I will receive you." "For they themselves report concerning us what manner of entering in we had unto you; and how ye turned unto God from idols, to serve a living and true God." "My little children keep yourselves from idols." "And the rest of mankind, which were not killed with these plagues, repented not of the works of their hands, that they should not worship demons, and the idols of gold and of silver, and of brass, and of stone, and of wood; which can neither see nor hear nor walk."

In view of such scriptures as the above, for one to say he is certain that God will hear his prayer while bowing before an image of Buddha only illustrates the lamented fact that idolatry, as it has ever been, is the besetting sin of the age.

"I came not to destroy but to fulfill," therefore idolatry is right! What! I am ashamed to attempt a reply to such a perversion of the language of Jesus. Was Jesus talking about idolatry! Did he mean to say he came to "fulfill" idolatry! He came to fulfill a God-given law which was "just and good." But he is made to say that he came to fulfill one of the most abominable practices that the human race ever fell into. By such an application (?) of scripture Jesus can be made to participate in every horrible crime and sin imaginable. I find men engaged in murder, theft, and the work of prostitution. I can therefore take part in these things because Jesus said, "I came not to destroy but to fulfill"! "O full of all subtlety and all mischief, thou child of the devil, thou enemy of all righteousness, wilt thou not cease to pervert the right ways of the Lord?"

J. M. McCALEB.

12, Tsukiji, Tokyo, July 9th, 1896.

THE IMPERIAL UNIVERSITY GRADUATES.

The ceremony of distributing Diplomas to the graduates of the Imperial University of Tokyo took place on the 10th inst., at 9:30 a.m. in the library of the University. After a military band had played, Prof. Hamao, the President of the University, proceeded to award the diplomas. Among those who attended the ceremony were the Representatives of Great Britain and China, Messrs. Kiyoura and Makino, and other distinguished persons, the number of visitors being about 300. The total number of graduates is 313. The following is the list:—

COLLEGE OF LAW.

Section of English Law.—Kashiwabara Yojiro, Toyama; Inouye Junnosuke, Ohita; Shibata Komasaburo, Nara; Takahashi Yojiro, Shiga; Ariyoshi Tadakatadzu, Kyoto; Suzuki Kenjiro, Miya; Isaka Ko, Ibaraki; Shoya Akira, Tokyo; Kano Tomonosuke, Ibaraki; Takahashi Bungoro, Hokkaido; Matsuo Shoji, Fukuoka; Sekiguchi Gisaburo, Miki Itaro, Tokushima; Nan-un Shonosuke, Yamagata; Miura Yagoro, Chiba; Watanabe Katsusaburo, Okayama; Shimada Tetskichiro, Ishikawa; Ariwara Michihiro, Gumma; Yamada Saburo, Hokkaido; Matsumoto Kan-ichiro, Ehime; Takauchi Kimpel, Hokkaido; Miyake Norinari, Okayama; Vasuzumi Tokitaro, Saga; Kokura Takenosuke, Chiba; Heisa Eitaro, Yamaguchi; Nakahara Norita, Kumamoto; Nishimura Chotaro, Osaka; Ito Kotaro, Kyoto; Fujimoto Michiyasu, Kumamoto; Midzuhara Chikatsugu, Yamagata; Matsugawa Kuro, Ehime; Tatsuki Hichita, Gifu; Morita Saburo, Shiga; Ishida Shintaro, Ishikawa; Sakurai Komogoro, Shizuoka; Shibahara Jokichi, Hyogo; Kimura Ko, Tokyo; Matsui Toyotaro, Yamaguchi; Takeshima Keishiro, Ishikawa; Ito Sukeichi, Aomori; Kurokane Yasuyoshi, Yamagata; Tokunaga Kichiro, Kumamoto; Matsukata Goro, Tokyo; Maruoka Heizo, Kumamoto; Solo

Oto-o, Tokyo; Karai Gentaro, Fukuoka; Kekine Sadakichi, Tokyo; Tsuda Mataji, Yamaguchi; Kato Junjiro, Hokkaido; Shindo Keizo, Miye; Koga Korin, Sagami; Miura Tatsuo, Okayama; Kamdate Shinataro, Fukuoka; Urano Masao, Toyama.

Section of French Law.—Suzuki Shigeoyasu, Fukushima.

Section of German Law.—Miyao Shunji, Niigata; Miyoshi Umisaburo, Tokyo; Furukawa Goro, Saga; Iida Seiichi, Yamaguchi; Tamagawa Jichi, Tokyo; Sekine Genji, Yamagata.

Section of Political Economy.—Katayama Teijiro, Niigata; Kamino Katsunosuke, Tokyo; Ichirai Otohiko, Kagoshima; Hatchidai Norihiko, Tokyo; Usami Masao, Yamagata; Abe Moritaro, Ohi-ta; Yamazaki Yooroku, Saga; Kudo Eiichi, Awomori; Watanabe Goro, Hokkaido; Sakigawa Saishiro, Saga; Hata Toyosuke, Tokyo; Kobayashi Masakichi, Hiroshima; Koike Chozo, Ibaraki; Hamada Tsunenoke, Kochi; Moroi Rokuro, Saitama; Ariyoshi Ryunkichi, Fukuoka; Shimidzu Tetsutaro, Tokyo; Ito Shunsuke, Hyogo; Hayakawa Gonfu, Ishikawa; Nonaka Tokutaro, Saga; Minami Hiromu, Toyama; Ohara Senkichi, Gifu; Emura Kichi, Yamaguchi; Hayashi Ichiro, Kumamoto; Takata Unematsu, Hokkaido; Ishimaru Sukasaburo, Saga; Ishii Tetsu, Shizuoka; Tomura Teinan, Wakayama; Takata Otane, Shizuoka; Kikuchi Chuzaburo, Hokkaido; Tanaka Kumozo, Gumma; Fukano Rentaro, Ishikawa; Tsuru Hidekuma, Miyazaki; Migita Torataro, Miyazaki; Totoku Hiroji, Aichi; Ohira Komatsuchi, Hiroshima.

COLLEGE OF MEDICINE.

Section of Medicine (Graduates of March, 1896, and September, 1895.)—Fujinami Tadasu, Aichi; Hashimoto Setsusai, Tokyo; Tomita Chutaro, Ishikawa; Shimose Kentaro, Ohi-ta; Kawashima Keiji, Tochigi; Maki Hitoshi, Fukui; Nagano Junzo, Kumamoto; Ishikawa Teikichi, Yamagata; Uchida Shintaro, Tokyo; Sasaki Jiro-saburo, Iwate; Takahashi Teiken, Aichi; Miura Hasutaru, Tokyo; Toraiwa Yorishige, Miyagi; Mizuno Sakujiro, Gifu; Ichinobe Shozo, Iwate; Watanabe Keitaro, Niigata; Soudzaki Toyojiro, Aichi; Arai Yasukichi, Kagawa; Okamura Tatsuhiko, Tokyo; Nakaidzumi Yukinori, Gifu; Nishimaki Jichiro, Niigata; Sakamoto Shigeakatsu, Miyazaki; Kimura Rintaro, Saitama; Awaka Junji, Toyama; Masayama Masanobu, Shizuoka.

Section of Pharmacy.—Nishizaki Kotaro, Hokkaido.

COLLEGE OF ENGINEERING.

Section of Civil Engineering.—Shibata Keisaku, Okayama; Umeno Jitsu, Fukuoka; Kume Rokuzo, Saitama; Tokumi Tsuneo, Nagasaki; Tokumi Tsuneo, Nagasaki; Aki Kyoichi, Tokushima; Kobayashi Taizo, Hyogo; Omura Shotarō, Nagano; Aoki Isamu, Okinawa; Miyagawa Kiyoshi, Kumamoto; Nakawa Kichizo, Nara; Satoh Chotaro, Niigata; Kato Isamu, Tokyo; Shibata Shiju, Nagasaki; Satoh Shiro, Hokkaido; Sugitani Kozo, Tokyo; Odagiri Chyushiro, Kanagawa; Inagaki Heitaro, Tokyo; Okazaki Heitaro, Gumma; Akutsu Seiga, Miyagi; Hashitsume Seigi, Yamagata; Kimura Kwanichiro, Niigata; Hamano Yoshiro, Chiba.

Section of Mechanical Engineering.—Yoshino Mashiro, Tokyo; Machida Tatsumi, Fukuoka; Yano Kichiro, Ehime; Zushima Tsuneo, Fukuoka; Shinoda Tsunetaro, Hiroshima; Uchida Tokuro, Hyogo; Toriyama Sakakichi, Tokyo; Yokoi Jitsuro, Tokushima; Matsuno Chikatsu, Nagasaki; Sekimoto Eisaku, Hokkaido; Sekifuji Kunisuke, Hiroshima; Furuta Goro, Saga; Hibi Koitsu, Hokkaido.

Section of Naval Architecture.—Tarisue Kentaro, Tokyo; Tsuruta Denjiro, Saga.

Section of Electrical Engineering.—Ho Hide-taro, Osaka; Toshimitsu Hirao, Wakayama; Aoyama Tadaharu, Yamagata; Noguchi Gun, Hokkaido; Hirota Sei-itsu, Hiroshima; Tomita Chiusei, Kyoto; Goto Ichiro, Gifu; Sugino Bunroku, Nara; Yoshino Denji, Chiba; Katayama Kinichiro, Shizuoka; Niwa Mamotsuke, Gifu; Ichikawa Seiji, Ishikawa; Fujita Keitei, Tokyo; Morita Kazuo, Kumamoto; Matsuura Ryoichiro, Fukui; Tsukino Shogoro, Kagoshima.

Section of Architecture.—Suzuki Teiji, Tokyo; Horiike Konosuke, Kyoto; Fukuoka Tsunejiro, Nara; Hashimoto Heizo, Tottori; Ikeda Kentaro, Nagasaki.

Section of Applied Chemistry.—Nakagawa Shosuke, Osaka; Kotera Fusajiro, Osaka; Miyoshi Kyntaro, Hokkaido; Inouye Mikichi, Kyoto; Oyama Jiya, Hyogo; Shimizu Shogo, Tokyo; Iwamura Yen, Kyoto; Imaida Osamu, Gifu; Yamazaki Utaro, Tottori.

Section of Mining and Metallurgy.—Yamada Kunihiko, Hokkaido; Ibara Kozuo, Yamaguchi; Tsumaki Kurizo, Yamaguchi; Tamaki Koji, Miyagi; Ishiura Jinjiro, Ishikawa; Sozo Juro, Kumamoto; Seo Takumi, Niigata; Osame Mura

Shokichi, Hokkaido; Nakanishi Denjiro, Ishikawa; Takakura, Seizaburo, Ishikawa; Ohashi Hachishiro, Kyoto; Sugimoto Juntaro, Hokkaido. Section of Civil Engineering.—(Graduated on Dec. 12th, 1895) Nishimura Torataro, Shiga.

Section of Electrical Engineering.—(Graduated on May 28th, 1896) Amano Kumajiro, Ehime.

Section of Applied Chemistry.—(Graduated on Oct. 24th, 1895) Nakai Shiro, Osaka.

College of Literature, Section of Philosophy.—Kuwaki Genyoku, Ishikawa; Aneaki Shoji, Kyoto; Tatebe Tougo, Niigata; Shimizu Tomojiro, Miye; Takayama Rinjiro, Yamagata; Matsumoto Kojiro, Tokyo; Hirota Ichijo, Wakayama; Shinoda Jiro, Hiroshima; Yamamoto Yasunosuke, Wakayama; Kurita Kamejiro, Tokyo; Murakami Shunko, Yamaguchi; Takahashi Tadasaburo, Miye; Nozaki Matajiro, Okayama; Kuroki Chihiro, Kumamoto.

Section of Japanese Literature.—Hayashi Moritaro, Tokushima; Sugi Yoshisuke, Yamaguchi; Takejima Matajiro, Tokyo; Shimomura Kyo, Saga; Yoshida Yutaka, Fukuoka; Ohmachi Yoshimori, Tokyo; Sasa Masakazu, Kyoto.

Section of Chinese Literature.—Kawahara Tokuzo, Fukui; Yamanoichi Shin, Shimane; Asakawa Yutarou, Fukuoka.

Section of Japanese History.—Uchida Ginzo, Tokyo; Kida Sadakichi, Tokushima; Kuroita Katsumi, Nagasaki; Nakano Reishiro, Saga; Ito Oshiro, Fukuoka; Shibasaki Kempei, Gumma; Nakashiro Naomasa, Kochi; Sasakawa Tanezo, Tokyo; Kobayashi Seisaku, Niigata; Kidera Ryujiro, Tokyo.

Section of General History.—Koda Naritomo, Tokyo; Hara Katsuro, Iwate; Segawa Hideo, Yamaguchi; Yui Tadasu, Kochi; Kitabatake Sadaaki, Katsuo Tsunejiro, Shiga; Inouye Tsuneji, Yamaguchi; Shibuya Komasaaku, Nagasaki; Kawaguchi Nobuo, Tokyo.

Section of Philology.—Ogawa Shogi, Ehime; Kanazawa Shozaburo, Osaka.

Section of English Literature.—Shima Bunjiro, Tokyo; Tamura Kisaku, Okayama; Hanryu Myakotaro, Yamagata.

Section of German Literature.—Nagaye Tojiro, Osaka.

COLLEGE OF SCIENCE.

Section of Mathematics.—Watanabe Yo, Ishikawa; Yoshida Kokuro, Ishikawa.

Section of Physics.—Sano Shidzuo, Saima; Tomoda Chiuo, Ishikawa; Seto Toraki, Kochi; Yasaka Hanroku, Ohi-ta; Nishi Eisei, Yamaguchi; Uruguchi Jui, Tokyo; Hattori Masachika, Tokyo; Shinsaiara Takeshi, Ibaraki.

Section of Chemistry.—Matsuwaka Koichi, Aichi; Takei Kanzo, Hyogo; Hirao Cindan, Okita.

Section of Zoology.—Aida Tatsuo, Kyoto.

Section of Geology.—Ogawa Takuji, Wakayama; Iwasaki Juzo, Kumamoto; Inouye Kin-suke, Yamaguchi; Shimomura Seien, Fukuoka.

COLLEGE OF AGRICULTURE.

Section of Farming.—Tsukida Tosaburo, Gumma; Omori Junzo, Nara; Ito Teizo, Yamaguchi; Ida Shiukichi, Hyogo; Kimura Kon, Kyoto; Tanaka Toraji, Niigata; Hashimoto Yasujiro, Fukuoka; Aoki Nobuitsu, Tokyo; Kuroki Ikutaro, Fukuoka; Uyeda Bunka, Oita; Ikeda Chojiro, Aichi; Horidzuka Chotaro, Gumma; Fujimoto Haruji, Tokyo; Shirozaka Tetsu, Kagoshima; Ito Ryugo, Niigata; Hattori Motohiko, Tokyo; Kobayashi Chiuo, Miyagi.

Section of Agricultural Chemistry.—Suzuki Umetaro, Shizuoka; Hanai Toichiro, Saitama; Miyachi Tetsuji, Kochi; Ishidzuka Tetsupe, Yamagata; Mayeno Naganori, Kochi; Kusunoki Iwao, Aichi; Nishimura Eijuro, Hokkaido; Aoyama Sanjiro, Tokyo; Shimada Mitsutaro, Osaka.

Section of Forestry.—Ishimaru Fumio, Fukui; Kume Kosaburo, Saitama; Matsuda Rikikuma, Shimane; Oshima Kojiro, Ishikawa; Miyazaki Tsunetaka, Hokkaido; Senbon Teizaburo, Tokyo; Nijima Yoshinao, Tokyo; Ogawa Teisuke, Yamagata.

DEDICATING THE STEAMLAUNCH "GLENER."

The *Gleaner*, a handsome steam-launch, built by Mr. A. C. Sim, of Kobe, for the Yokohama branch of the Missions to Seamen, was formally dedicated on Thursday afternoon by Bishop Bickersteth, D.D. The *Gleaner* was brought up alongside the pontoon at the Yokohama Amateur Rowing Club Boathouse, and the Mission flag floated at the Club flagstaff. About a score of persons were present, amongst them being the Rev. W. T. Austen, and Mrs.

Austen, of the Seamen's Mission; the Rev. E. R. Borthwick, chaplain of H.M.S. *Undaunted*; Rev. J. H. Ballagh, Rev. J. C. Ballagh, Messrs C. K. M. Martin, A. J. Wilkin, A. C. Sim, and others. A special service of prayer and praise was conducted by the Bishop, who delivered the solemn dedicatory prayer. At the close, Bishop Bickersteth said that he desired to express the satisfaction of all present at the success that had attended the Chaplain's efforts to secure the handsome craft before them. Mr. Austen had for some time past been endeavouring to obtain the means necessary for the purchase of a steam launch for the mission, and now he had been able to attain his important object. He called it important, not because the object was to lessen the burden on the Chaplain's shoulders day by day; for, on the contrary, Mr. Austen calculated that the launch would enable him to do two or three hours' more work per day than usual, and consequently the time that he would be away from home would be increased. Therefore the result of acquiring the launch, with the help of subscriptions from America and elsewhere, was that the work of the mission would be largely extended. Those who lived by a sea-port felt very strongly indeed that they had a duty to those to whom they owed so much, the men who spent their lives at sea. From what he had been privileged to see of sailors, he could honestly say that there was amongst them a great deal of religion; but they were exposed to great temptations and danger. The object of the Mission to Seamen was to help them in their difficulties and temptations, and if the launch helped sailors to join in those services which those on land enjoyed so much, none would regret what they had done to further the object that the Chaplain had in view. He trusted that it would result in the greatest spiritual good for those for whose benefit it was intended, and that by its means Mr. Austen might be able to minister more effectually than hitherto to those in whom he took so deep an interest.

Mrs. McNair, wife of the American Admiral, had been asked to christen the launch, but owing to a previous engagement could not be present. She wrote wishing every success to the boat in its career. Mrs. Austen accordingly took the post of honour and christened the launch by dashing a bottle of water against the bow. She said—I have much pleasure in naming the vessel *The Gleaner*. I hope that the launch will be well used and appreciated by those for whose benefit she has been built. I wish *The Gleaner* God-speed, and trust that for many years she will be used for and by seamen of all nationalities visiting the harbour.

A general inspection of the new launch followed, and then a trip was made round the harbour. The *Gleaner's* dimensions are—Water-line, 46 ft.; over-all, 52 ft.; beam, 11 ft.; draught, 4 ft. 3 in. coal capacity 6 tons; water capacity 3 tons. She has compound engines with a stroke of 10 inches. Her boiler is of the vertical water-tube type, with condenser, feed heater, and automatic lubricators. Her capably ventilated cabin, forward, is 13 ft. by 9 ft.; while she has accommodation for a crew of five. Her cabin and deck will accommodate about 100 men, thus admirably meeting the purpose for which she was built. She will be at the service of parties of seamen wishing to proceed on shore at night and who at present find such a difficulty in escaping the vile harpies of sampan men and jinrikisha pullers who are always laying in wait for them.

CRICKET.

MR. CRAWFORD'S ELEVEN VERSUS MR. WHITE'S ELEVEN.

A cricket match was played on Saturday afternoon, in dull, overcast weather, between an eleven captained by Mr. Crawford, and a team led by Mr. White. The former went in first and compiled a total of 237, to which Mr. Crawford contributed a magnificent 118 not out. The other side went in but only made 62, in the time remaining for play. Scores:—

MR. CRAWFORD'S TEAM.	MR. WHITE'S TEAM.
Mr. Johnson, b. Bugbird ... 20	Mr. H. V. Dickinson, b. Ed-wards ... 0
Mr. Todd, b. Bugbird ... 0	Mr. F. H. Bugbird, h.w.b. ... 0

Innings declared closed.	237

THE FLEET VERSUS Y.C. AND A.C.

A match was played on Thursday afternoon, in broiling hot weather, between teams representing the Y.C. & A.C., and H.M. ships now in harbour. Matting was used on the pitch, and until 5 o'clock it was a bowler's day, over a fifteen men being clean bowled in two innings. The homeside went in first and could do nothing against the bowling of Gillett and Pearson, the former taking four wickets for 17 runs, and the latter five for 16. The Fleet made a little better stand, though Goddard's deliveries were deadly, and knocked up 46. Garde should have been held by Duff when he had made 12, but his life did not last much longer. Goddard's bowling analysis was 57 balls, 22 runs, 4 maidens, 6 wickets; Edwards', 55 balls, 20 runs, 5 maidens, 4 wickets. Yokohama went in on their second innings about 4 o'clock and played till about ten minutes past five, when the innings was declared closed, 86 being the score; Crawford carrying out his bat for an excellent 23. The Fleet in their second essay held the bowlers in defiance, and when stumps were drawn they had compiled 121 for three wickets. Scores:—

AUSTRALIA AND JAPAN.

By JOHN PLUMMER, M.J.S.

Sydney, May 23rd.

Much unfavourable comment has been occasioned by some remarks lately published in the Melbourne *Age*, a paper which has become proverbial for its protectionist utterances. Those remarks seem to cast grave doubts on the possibility that mutual trade relations between Australia and Japan may be maintained to any considerable extent. The *Age* says—"One of the influences which have stimulated our production with a view to export has been the prospect of a trade with Japan; but the consular report on the foreign trade of Japan for the quarter ending 30th September last, issued by the Foreign Office, places the Japanese market in a very unfavourable light as an outlet for Australian products. During the quarter the imports to Japan from Australia amounted to only \$193,000 making \$520,000 for nine months. Though still insignificant, the Australian trade had increased since 1891; but neither this increase nor anything in the present or prospective requirements of Japan warrants the extravagant hopes which now seem to be entertained in Australia as to very speedily finding or creating a profitable and extensive market for her productions here.' It is said to be 'possible' that a considerable trade may be developed between the two countries; but if so, its main feature will be that of export from Japan to Australia. The free-trade party may take comfort from the following significant passage:—"If the people of Australia seek cheapness without being particular as to durability, Japan can also soon supply them with a hundred articles which they either now make for themselves or import from England or Germany—matches, boots, sad-

dlery, harness, portmanteaux, hats, &c., all of which Japan could furnish to them at less than half the prices they would have to pay for European prototypes." On the other hand, 'Japan has at present absolutely no requirements that Australia could supply which are not already satisfactorily met by the much nearer United States; and it is improbable that unless tempted by lower prices Japanese buyers—who are strongly attracted to the people of the United States by sentimental reasons, and also by the further consideration that they are by far Japan's best customers for all the great staples of her export trade—will ever seek in Australia articles which they can obtain in less time and equally good from the States. Among these are flour, leather, preserved provisions, fruits, wine, biscuits, butter, lard, beef, &c.' There is but a limited field for the importation of Australian stallions and brood mares, while 'for a wholesale import of Australian horses for general use there is not the smallest prospect.' Almost the same may be said as to wool and mutton. The report ridicules the representation that the Japanese are learning to enjoy mutton. It states that a Japanese would as soon think of eating mutton as a respectable English mechanic would of eating horseflesh. To the ordinary Japanese, the odour of mutton is intolerably offensive, and the mutton imported into Japan is consumed exclusively by the foreign residents. Reference is made to the despatch of commercial agents by this colony and one of the adjacent colonies to investigate trade openings in Japan, and as in both cases a very sanguine view has been taken, it is suggested that "these colonies should be afforded the above warning of the opinions held by residents of long experience in Japan."

These remarks of the *Age* have called forth a reply from Mr. E. Jerome Dyer, now residing in Melbourne, who points out that the report quoted was that furnished by Sir E. Satow, at the end of last year, to the Marquis of Salisbury, and contends that it is misleading in several respects. After making the statement that the chief Australian ports from which Japan will draw its largest supplies of wool, frozen beef (or live stock), hides, and leather, are much nearer Japan than any port in the United States, and, furthermore, that ships have the advantage of ports of call on the way which the routes from the States to Japan do not offer, Mr. Dyer says—"Amongst the nine lines mentioned in this report as the monopoly of the United States and not imported—or ever likely to be—from Australia, I am glad to be in a position to state that even in this furthestmost port of Australia (Melbourne) there are several merchants and manufacturers regularly shipping a majority of these lines in steadily increasing quantities. They are leather, preserved provisions, wines, biscuits, and butter, besides many other products entirely associated with our agricultural development." The general line of the report, continues Mr. Dyer, "is discouraging to an Australian trade with Japan, but it appears to reluctantly admit what I have repeatedly stated publicly that meat must be imported by the Japanese in course of time. Australia has the advantage of the States in distance and f.o.b. price, therefore this new outlet should command our watchful attention. Though I believe the time is scarcely yet ripe to take this business up in the wholesale and expensive manner that it would necessitate, yet in confirmation of the certainty and nearness of this prospect I might quote the gist of a letter handed me by the secretary of the Tokyo Chamber of Commerce in March last year:—"I am prepared to take 18,000lb. per week of frozen beef at 9 *sen* (2½d.) per lb. c.i.f.' This letter was signed by the owner of 26 retail meat shops in Tokyo. Being an offer to contract for a long period of regular supplies at a fixed price, it proves that a demand existed last year, which, according to statistics and trustworthy reports, is growing beyond the means of local supply. The above offer, it might be mentioned, was considerably under the Tokyo wholesale price. It must be admitted that in the light of the prices which have ruled of late in London—often ranging about 12d. per lb., out of which freight, commission, and other expenses had to be paid—this Japanese offer is at least encouraging. The population of Tokyo is 1,500,000, while that of Japan exceeds 40,000,000, thus affording a very large field to work upon, even though the proportion of consumers may be comparatively infinitesimal."

Mr. Dyer then proceeds—"Sir E. Satow is not clear in his remarks about the loss to Australia or to England and Germany if Japan commenced the manufacture of woollens. It is not expected by Australians that this wool is to be used for the purpose of manufacturing the class of goods at present being imported into Japan so much as in supplying the demand created by the adoption of warm woollen clothing for winter wear. At present the Japanese army of 280,000 is being clothed in this material, and as their army is being increased to 800,000 men and the navy proportionately, there should be fair business in this outlet alone. Besides, these compulsory customers have already enthusiastically admitted its incomparable advantages as compared with cotton, and they thus form the best of mediums for introducing it to their countrymen. Australian producers hope and feel that England will neither reduce her purchases of wool nor suffer in sales to Japan, as the manufacturers of the latter country are certain to confine their operations to material suitable to the peculiar requirements of their people, and will not for many years attempt to make the class of goods which England exports there. The rapidly increasing imports of woollens for general purposes should also act as a counterbalance against the effect of any movement by the Japanese in the direction indicated. As to Germany—well, if her woollens were not often nearly all cotton we might feel justified in concerning ourselves. Besides her trades in woollens with Japan is of very small account. In short, there is every indication that a new demand in clothing material is about to spring up in Japan, and it is the raw material for this that we expect and hope to supply. No doubt this consular report reads pleasantly to the British Foreign Office and the British manufacturer, and in this respect it points out that her Majesty's representative in Japan, though he has only been there a few months, knows how 'to cut his coat according to his cloth.' He omitted, however, to mention that the Japanese have a disagreeable habit—from an interested outsider's point of view—of patriotically preferring their own manufacture of an article to that of other countries. I met many instances of this characteristic when in Japan, but the most extraordinary case that came under my notice was during the war, when the Government supplied the troops with locally tinned meat at 30 cents. per tin, while European merchants' warehouses were bursting with imported stocks, which they were vainly offering at one-third less. Besides, Japanese manufacturing in new industries carries with it deep local interest, unremitting activity in advertising goods and pushing sales and warm practical support from both Government and people. If woollens are to take the place of cottons as winter clothing in Japan, and it appears to me inevitable, it is the height of absurdity to imagine that the Japanese, so expert in the manufacture of cottons and silks, and so keen and energetic in business, will continue importing for this new demand when they can produce as good—for their purposes—at two-thirds the price. The Japanese are a comparatively new people to the English-speaking world, and though a wonderfully assimilative race, they have customs and tastes necessarily different from ours. Like China and all other Asiatic countries, a ready demand for the goods of the west did not exist when white men first visited those countries, and demand had to be created. This is the case with Australia in its efforts to find a footing in Japanese markets, and we are not faring so badly at this early stage. In the case of wool there are many indications that the Japanese are interesting themselves quite as much as we are in the question. A Japanese gentleman has just arrived in Sydney for the purpose of inquiring into wool export, and an agitation has begun in Japan in the interests of woollen manufactures."

A lengthy extract from the *Japan Daily Mail* of the 7th March last, concludes a communication to which too much importance cannot be attached, and which may do not a little towards counteracting the unfavourable impression produced by the quotations from Sir E. Satow's report. The *Age* has also republished an article from the *Japan Daily Mail* of March 24, on the disadvantages under which Japanese merchants labour in consequence of an absence of the banking facilities enjoyed by other nations. The matter has already attracted some attention in Australia, and in view of the possible expansion of Japan shipping business it is not improbable that an effort will be made at an early date to secure improved banking facilities between the two countries.

The New South Wales Attorney-General, who seems to have regained much of his lost health, speaks in favourable terms of his recent visit to Japan. Replying to an interviewer who had asked him about the prospects of trade between the two countries, he replied—"I am sending in a report upon the matter, and cannot disclose its features. I have collected a good deal of information on this point, and from what I could ascertain from the highest authorities in the country, I think there is a possibility of increasing our trade with them. At present they have to some extent the advantage of us. While we might take a number of goods from them, yet through their habits of life generally they would not at present

be likely to want much from us. For instance, they have yet to be educated up to the value of wool. Cotton is almost entirely used, but the Japanese being quick to learn, they would, I believe, soon discard their padded cotton for the warmer and more reliable wollen fabrics. Then there is no market in Japan for our hardwoods, and they have their own soft woods. Nor do the people need our meat or produce. They live entirely on fish, rice, and vegetables." Questioned on the subject of Japanese immigration, Mr. Marsh replied—"I think it would be a very undesirable thing. I have now been in several parts of Japan, and know the place and the people very well. I have also seen the Japanese in other countries, especially in Honolulu. From what I have observed I think we should close our doors to any large influx. Chiefly, however, for this reason. The decent working Japanese will not leave his country. He is too home-loving and patriotic. It is mostly the undesirable class who leave their country for their country's good, and these would find their way to Australia. Therefore, they should be kept out. Still, I don't think there is very much fear of a descent of the Japanese upon Australia. In any case, he would never come like many of the Chinese do, as practical slaves."

The attempt to recover the gold lost in the *Catterthun*, delayed by unfavourable weather, is likely to be successful, the extra gear special diving dress, and pumps obtained from Europe having proved all that could be desired. Soon after they arrived in Sydney, a trial was made in deep water outside the Heads, with the result that a diver went on the bottom at 25½ fathoms, and brought up samples of the seabed. Between this depth, and the greatest depth the *Catterthun* gold is buried was, at the utmost, 4½ fathoms, or 27ft., and that in a total depth of 180ft. seemed to strike the diver and his mate as so little that it was decided to go on with the *Catterthun* business. Some little time elapsed before the wreck was located, but as soon as this had been effected the diver went down and found himself on the deck of the vessel, the principal difficulty being the darkness, which was partially overcome by the use of the electric light. In one of the reports from the wreck it was stated that a difficulty was experienced by the divers in keeping their feet when on deck, due to the current and roll of the sea, and that these conditions would to some extent militate against as early a recovery of the gold as might be expected. Such has proved to be the case, but it is expected that suitable weather will prevail within the next few days, in which case the operations will speedily be terminated. The chief interest in the undertaking (next to seeing the 10,000 sovereigns safe in the bank) lies in the fact of this being the deepest ocean-diving attempted in this part of the world. Mr. W. A. Morgan, one of the greatest living experts in diving, and the present head of the Westminster firm, says that the greatest depth at which a diver may safely work is 150ft. (25 fathoms), though one of Mr. Gorman's men descended into 204ft. of water, at which depth the daring man sustained a pressure of 88½lb. on every square inch of his body. Strangely enough, the coming up is even more dangerous than the descent, owing to the rush of blood to the head when the pressure on the brain is removed.

Two New South Wales residents, Dr. Bell and Mr. Picker, have returned to the Hunter River district from a visit to Japan. Both gentlemen speak very highly of the progress, peculiarities, and the industrious customs and frugal habits of its people. Mr. Bell said that from his observations he would consider that agriculture had attained greater perfection in Japan than any other country in the world. While in Japan, he made a tour by rail, a distance of 360 miles, stopping at different centres of population on the way, and as far as eye could reach each side of the line of route and the whole of the distance, every foot of land was tilled, and in a manner calculated to fully test its productiveness. He and his companion were wonderfully interested with all that they beheld, and thought there was much that Australia could learn from the Land of the Rising Sun.

THE SEISMIC-WAVE DISASTER.

We beg to acknowledge with thanks receipt of the following sums towards the relief of sufferers through the terrible disaster in Iwate, Aomori, and Miyagi Prefectures:—

NEWS FROM THE SOUTH.

Dr. J. W. Carrington, the Chief Justice of the Colony, reads the lessons on Sunday at both services in St. John's Cathedral, Hongkong.

Two apprentices from the British sailing ship *Scottish Isles* were brought before Commander Hastings at the Hongkong Magistracy on the 6th inst. charged with deserting their ship. The defendants said they were tired of the sea, and wanted to get away. The Magistrate fined them \$7 or, in default twenty-one days' imprisonment.

Whatever may be said of the Cantonese trading people, remarks the *China Mail*, it cannot with truth be alleged that they are not enterprising. News has been received in Canton that a Censor named Wong has memorialised the Throne, urging upon his Imperial master to throw open to general commerce the whole eighteen Provinces of China. The terms of the memorial are not reported, but it is believed that its tenor is to remove certain restrictions that exist at the present time, and which render commercial intercourse between the Provinces a matter of extreme difficulty and of considerable unfair enrichment to the official classes. The reception of this welcome news in Canton has led to the resuscitation of the agitation originated twelve years ago for the formation of a Chamber of Commerce in the city, the objects of which shall be to promote the interests of general trade throughout the whole Empire. It is to be hoped these enterprising Cantonese merchants will succeed in binding themselves together, for such an Association—if it is likely to be confined to these objects alone, and is not to be used as another means of boycotting foreign merchants—must, in time, operate towards greater freedom of trade throughout the Provinces. It is not likely that the Chinese would rest satisfied with that after experiencing the advantages of trade, and foreigners have every reason to expect a more rapid expansion of foreign trade in the interior of China than has been the case during the last fifty years.

According to a Hongkong contemporary, the *Chinese Mail* states that an Imperial edict has been telegraphed from Peking in reply to a memorial forwarded by the Tartar-General at Canton. In the early part of this year a soldier belonging to the Blue Banner committed an impudent theft in the street. He was arrested by the official in charge of the Police Force, but the prisoner, in accordance with the regulations of the service, was immediately handed over to the Manchurian officials. The Viceroy of Kwangtung sent a despatch to the Tartar General asking for the name of the prisoner to

be struck out of the Banner. In consequence, a number of the bannermen went to the Tartar-General's Yamén and demanded that the Viceroy's order should be cancelled. While the dispute between the civil and the military authorities was in progress the prisoner died in prison, and afterwards a large number of the Tartar soldiers proceeded to the Yamén of the officer in charge of the Police Force, wrecked his house, and assaulted his son. The edict orders that any Manchurian soldiers who have been guilty of serious offences may be arrested by the civil authorities. This is a new departure, as hitherto the Tartars have been amenable to no one but their own officers, and sometimes they are not very amenable to them.

The Hongkong Dairy Farm Company, Limited, whose herd of cattle was devastated by rinderpest in March last, will be voluntarily wound up and then reconstructed.

The Government of India, we (*Rangoon Gazette*) understand, are likely to take steps to investigate the cultivation of the reha plant (China grass), as an enormous demand for the fibre has sprung up in England. By a new process of manufacture, excellent fabrics can be woven from reha, and the industry seems to have a great future before it.

The report of the Banque de l'Indo-China has some interesting allusions to the question of the supply of the French commercial dollar for Indo-China, remarks the *Daily Press*. If the Government insists on striking these coins as before, they are sure to be drained away and converted into bars and sent to the Osaka mint. It is only a premium that the French Government gives to speculators. The Chambers of Commerce at Saigon, Haiphong, and Hanoi having asked for the legalisation of the Japanese yen, it seemed natural to them to adopt, as has been done in the case of the new British dollar, the same weight as the yen for the French dollar. The Bank also made representations of the same tenor to the Government, and the result was that the weight was reduced, leaving it just slightly superior to the British dollar and the yen, but only by 1-6 of 1 per cent. This is small enough to stop the drain of the coin and yet large enough to enable the French commercial dollar to maintain its good name. Since this decision in July of last year the Bank has sent in for coinage silver equal to seven millions of dollars.

A REMARKABLE LADY EXPLORER

AN INTERVIEW WITH MRS. BIRD BISHOP.

After an absence from Shanghai of about five months, during which she has accomplished a remarkable journey in the less known regions of Szechuan, Mrs. Bird Bishop has returned. Anyone more different from the conceptions of a person likely to willingly go through the hardships, exertion, and even dangers of travel from a foreign-hating populace than Mrs. Bishop it would be difficult to imagine. Seemingly she is a retiring soft-voiced woman, whose silver hair is a passport to respect amongst all but a Chinese mob, and who has reached a period of life when physical comforts might be fairly expected. But when she begins to talk, selecting her words with the nicest discrimination, she at once exercises a sort of spell over the listener, making him feel the power of her intellect, and the acuteness of her observatory powers. It is then recognised that Mrs. Bishop is a wonderful woman, possessing an unsuspected force with which to overcome the most forbidding obstacles. No excuse therefore is needed for recording an hour's conversation in which Mrs. Bishop related to a representative of the *North-China Daily News* some of her recent experiences. They cannot be better given than in her own words.

"I left Shanghai," said Mrs. Bishop, "on the 10th of January last for a journey in Szechuan. I travelled to Ichang by steamer and then by houseboat to Wanhsien, a distance of about 300 miles and occupying three weeks. I only landed a few times for the purpose of taking a photograph or visiting a temple. Then I took an open chair—which is not seen in Szechuan, and was therefore the cause of some trouble—and started on a journey of 1,200 miles. The end of the first stage was Paoningfu, about 300 miles from Wanhsien. The first thing that impressed me exceedingly was the beauty of the country.

The forests and glorious vegetation, the magnificent fertile valleys, and the size and handsome appearance of the farm-houses—all struck me greatly. I could hardly have believed such things existed in China. Then again the abundance of the coal, which crops out of the road, is marvellous; the people have only to dig it out and use it for fuel. On that route I met with a great

deal of hostility. The people were most unfriendly, and proceeded to violence, but the officials always endeavoured to do their best to protect me. Before coming to Paoningfu the country becomes less Alpine and less rich and populous. From Paoningfu I went by Sintientsi, over a less interesting hilly country to Mienchiu, everywhere impressed with the richness of the country in coal and salt. I travelled in that region for some time, visiting various objects of interest and eventually reached Kuanhsien. On the way thither I experienced very bad treatment, being attacked and stoned and hit in the head by a large stone, the effects of which I feel even now. Kuanhsien is in the north-west corner of the plain of Chéngtu, which I found a most marvellous instance of fertility and wealth of population—I have seen nothing like it anywhere. I have travelled for eleven days over the plain, and there is not a place where you do not hear the sound of rushing water, so completely is it irrigated. Kuanhsien is the centre of a great deal of trade with Northern Tibet, chiefly in drugs. It is also very interesting as being the place where—nobody knows how many hundreds or thousands of years ago—a man who has to his memory the grandest temple in China, divided the waters of the Min and sent them to fertilise the plain of Chéngtu, and made such a wonderful system of irrigation works that there can be neither floods nor drought.

Kuanhsien is situated just at the base of the hills where the mountainous region begins. Thence I went up the Min river, which the Chinese consider the actual Yangtze, as far as Weichuan, and, turning off the Lifanting river, went to Lifanting, where the authorities did everything they could to prevent me going further—everything short of actual violence. But I went one day's journey further in China proper to the furthest Chinese frontier post, Tsahkuhiao, where Chinese officialdom ends. From that time for some weeks I was in the country of the Mantze. They are quasi-independent tribes, who pay tribute to China through their rulers. They are actually ruled by a chief, Tsusu, who is appointed by the Emperor for life, and who is generally succeeded by his son. In the case of the Soma territory, where I was, the Tsusu rules a territory containing about 20,000 people, but I could get no reliable figures as to number of the whole race. These tribes are perfect Caucasians in their appearance, both men and women being very handsome. They live in stone houses, two, three, four and even five stories high, many of them resembling feudal castles. One marked feature is that in nearly every village there are one or more lofty square towers, from 50 to 60 feet high, built of stone, the use of which the present inhabitants have no record of. Their social customs are altogether different from those of the Chinese. They are extremely rigid Buddhists, and the signs of religion are everywhere. They have many interesting peculiarities. One son in every family becomes a lama; they either burn their dead, commit them to the river, or expose them on the mountains, at the decision of the lamas. Their marriages are, as in England, love matches, not made by the parents. They raise barely enough of grain and other food for their own consumption. I found them kind, friendly, and hospitable, and at nights slept on the roofs of their houses. The men do not wear the queue; whilst the women fasten strings of coral beads in their hair which they wear in coils round the head. The country after leaving the Min river is most magnificent, a combination of Switzerland and Cashmere, and at that season of the year, though there is not eternal snow, the innumerable snowpeaks give it added beauty. The forests of magnificent timber are very extensive. The flowers and ferns have the redundancy of the tropics. I went up to the source of the Lifanting river, a branch of the Min on the Tsukushan mountain, crossed the pass which appears to be about 13,700 feet high, and descended upon the Rongkai river, an affluent of the Great Gold River. The castle of the Tsusu of the Soma tribe is on a spur of rock extending nearly across the valley, and being a stone structure of several stories in height and in excellent repair, has a singularly grand aspect. There was just then trouble between two of the tribes, and the bridges over the Rongkai were broken down, so I was unable to carry out my intention of going down to Tachienlu, a fourteen days' journey, and I came back chiefly by the same route. Gold and enormous quantities of nitrate of soda are found along this route. The rivers I may say are emerald green torrents of considerable width; a succession of rapids and cataracts the whole distance. The numerous Mantze villages on this side of Lifanting have been inhabited by Chinese since the Taiping rebellion. In continuing my return journey I recrossed the plain of Chéngtu; from Chéngtu came down the Min to Kiatingfu on, to Sinfu and

Luchou, and through a very beautiful and fertile country to Chungking.

This is Mrs. Bishop's record in her own words of her tour, but in the course of a brief catechetical examination which she suggested, some additional facts were gleaned. The spirit of hostility to foreigners she describes as something astonishing in its intensity and extent. Everywhere such phrases as "foreign devil," "foreign dog," "child-eater," and worse were heard. There is no doubt in Mrs. Bishop's mind that the people do really believe foreigners eat children or tear out their eyes, and in Chéngtu and elsewhere she saw children wearing a red cross on a green ground as a charm against foreigners carrying them off. Mrs. Bishop learned that the unfriendliness had increased in the few weeks previous to her visit, and it seems that the large sum demanded by the French missionaries as compensation for their losses in the riots has deepened the feeling of resentment, whilst it has to be remembered that not one of the ring-leaders in those riots has been punished. Not a trace of the buildings destroyed in the riots is now to be seen; every brick has been carried away. For fear it should be imagined that the missionaries have provoked the hostility of the people, Mrs. Bishop laid particular emphasis upon the fact that her experience of the China Inland Mission was that great care was taken to avoid wounding prejudices or violating custom in any way. Never had she seen such care taken—a care that imposed a constraint upon the missionaries. All their houses are built in the native style, a matter of great importance in Mrs. Bishop's opinion. So far as the action of the officials went, she believed they desired to protect foreigners, but nevertheless the unfriendliness amongst the people was nearly universal.

Mrs. Bishop, besides keeping full notes of her experience, has taken some 200 photographs. Photographers may be interested in knowing that she uses a half-plate tripod camera of orthodox form, and films instead of plates. The edges of some negatives have been affected by heat, but from the sixty so far developed very successful results may be anticipated. That Mrs. Bishop has suffered considerably from her treatment by the Chinese mob is evident, and her decision to seek rest in Japan is certainly wise. She is not inclined to talk much about herself, but the dreadful howls of an infuriated Chinese mob—which once heard will never be forgotten—have had their effect, and though Mrs. Bishop contemplates writing a paper for the Royal Geographical Society, and another visit to Korea, she will not attempt this until restored to strength; which restoration every one must hope will be speedy.—*N.C. Daily News*.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, July 13.

A number of notable Democrats, being alarmed at the decision of the Chicago Convention in nominating Mr. Bryan, who is an extreme silverite, are rallying to the support of Mr. McKinley, and the latter now declares strongly in favour of gold.

("SPECIAL" TELEGRAM TO THE "JAPAN MAIL.")

Hadodate, July 14.

Her Majesty's ships *Centurion*, *Narcissus*, *Immortalité*, *Pique*, and *Rainbow* left this port yesterday for Akishi.

Hakodate, July 17.

H.M.S. *Alacrity* left this port yesterday for Akkishi.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, July 10.

The Chicago Democratic Convention has adopted the silverite platform.

The rising in Matabeleland is increasing. Earl Grey, Administrator of Rhodesia, has now accepted the Cape Government's offer of a transport corps which he had previously refused, the Chartered Company bearing the cost. The corps proceeds at once to Beira.

London, July 11.

The Deceased Wife's Sister Marriage Bill has passed through all stages in the House of Lords.

Mr. Bryan of Nebraska, a former Congressman, has been nominated by the Chicago Convention as the Democratic candidate for the

Presidency of the United States, and Mr. Sewell, of Maine, for the office of Vice-President.

The Senate has passed the Bill making Madagascar a French Colony.

The Italian Ministry has resigned.

London, July 14.

Cholera is decreasing in Egypt and there are no fresh cases reported among the British troops.

London, July 15.

An attempt was made yesterday on the life of President Faure. Whilst driving through Longchamps, two revolver shots were fired at his carriage, but the President escaped unhurt. The assailant was arrested.

The situation at Bulawayo is again serious, and by last accounts the rebellion seems extending southwards.

Exchange on London at Paris 25.16
Exchange on London at New York 4.88½
(Tel. Trans.)

(FROM THE TONGKIN PAPERS.)

Paris, June, 24.

The understanding between the Powers on the subject of Crete is complete.

The strike of factory hands in St. Petersburg has terminated.

Paris, June 25.

The French squadron received as cordial a welcome at Ferrol as at Corruna. The crowds cheered the French sailors, crying "Long live the alliance of France, of Russia, and of Spain." Friendly speeches have been made at various banquets.

Paris, June 20.

The Duke de Nemours is dead.

[The Duc de Nemours, one of the Orleans Princes, was the second son of King Louis Philippe, and was born in Paris, 25th October 1814.]

According to *The Times*, Russia appears disposed to demand the neutrality of Egypt under the control of Europe.

Paris, June 28.

Arton has been sentenced to six years' hard labour for the dynamite affair.

[Arton was accused in connection with the Panama frauds.]

An attempt has been made to assassinate the new Shah of Persia at Teheran. The Shah was not injured. His assailant has been arrested.

(FROM THE "COMERCIO.")

Madrid, June 26.

In the month of August forty thousand more men are to leave to reinforce the army in Cuba.

Madrid, June 29.

The troops will leave for Cuba early in September.

A new shipping tax is established for the Peninsula, which is calculated to yield 12,000,000 pesetas a year. The new tax is to continue only for twelve years. One peseta per ton is to be levied on all cargo landed or shipped, with the exception of wine and salt, which will pay only half the amount. On foreign shipping the tax will be two pesetas a ton.

(FROM THE SHANGHAI PAPERS.)

Hongkong, July 8.

Mr. Chamberlain's dispatch with regard to the new member of the Council, states that the General [General Black] and one Chinese member will be appointed; therefore we are same as before. Great indignation is felt here.

(FROM THE JAPANESE PAPERS.)

Osaka, July 13.

A Peking Correspondent, writing to the *Asahi* under date July 1st, says:—The Japan-China treaty was concluded on June 26th. The signatures of the respective Ministers-Plenipotentiary will shortly be affixed. The reason for the sudden termination is attributed to the erasure of the clauses relating to the starting of manufacturing in China by Japanese. As this was provided in the Shimonoseki treaty there no necessity to recapitulate it in the commercial treaty.

Kyoto, July 14.

Prince Wi-hwa, Pak Yong-ho, and Sim Eung-ki arrived at the Kyoto Hotel last night, and will leave for Otsu to-morrow.

Yamagata, July 14.

The *Matsushima* and the *Saiyen* are expected to arrive here to-morrow.

Kumamoto, July 14.

A man was attacked with cholera in a village of Akuta district to-day and died very shortly.

Gifu, July 14.

A man in the Mushiota district has been attacked by cholera.

Moji, July 11.

The steamer *Daini Kisei Maru*, at half-past two o'clock to-day, collided with the *Dai-ichi Kisei Maru* off Haya Momoye and sank within three minutes. The *Dai-ichi Kisei Maru* just managed to reach Tanoura. The number of deaths is still unascertained.

Bakan, July 12.

The steamer that was sunk was principally a cargo carrier, but had seven passengers on board. These are safe. The raising of the steamer is a hopeless task.

Sōul, July 12.

The Japanese Consul, Mr. Uchida, will leave to-morrow for Japan by the *Genkai Maru*.

Nara, July 12.

The four Railway companies of Yamato, Yoshino, Amano, and Nan-wa are to be amalgamated.

Osaka, July 15.

It has been decided to station the 10th Division Head-quarters at Himeji, instead of at Fukuchiyama where the site is unsuitable for the purpose; the Head-quarters of the 20th Division, the 25th battalion of Infantry, and the 10th Company of Engineers, will be stationed at Fukuchiyama; and the 40th Regiment of Infantry at Tottori.

Hiroshima, July 15.

The *Matsushima* and the *Saiyen* have left Ujina for the west.

Nagasaki, July 15.

Four hundred and fifty Russian troops from Vladivostok have arrived here, homeward bound.

Fukui, July 15.

An inaugural banquet was given to-day at 3 p.m. at the Fukui station, the Chief Engineer Mr. Sengoku, being the principal guest. Fireworks were displayed. The number of passengers carried during the morning was 600.

Aomori, July 15.

The Aomori Savings Bank commenced business to-day. The capital is said to be yen 30,000.

Bakan, July 15.

The Bakan Bank opened business to-day.

Takamatsu, July 15.

The rainfall in this district is too abundant, and owing to the unseasonable weather much damage has been done to crops. Swarms of locusts are ravaging the fields.

Up to yesterday, there were nine cholera patients, 20 dysentery cases, and 3,620 persons suffering from camp fever.

Tottori, July 15.

The weather continues rainy with a very low temperature, and the farmers are fearing greatly for the crops.

Sōul, July 15.

The Japanese Minister, H.E. Mr. Hara, it is expected, will have a royal Audience at the Kyōng-Un Palace and present his credentials on the 26th.

Naoyetsu, July 15.

T.I.H. Prince and Princess Komatsu, who have been attending the Branch meeting of the Japan Red Cross Association, arrived here at 3 p.m. They were welcomed with warmth by a large number of people.

Osaka, July 15.

Rice in stock to-day at the Dojima Rice Market, amounts to 547,034 *koku* of domestic rice. This is 40,209 *koku* in excess of last year. The amount of foreign rice in stock is 27,803 *koku*.

Nagasaki, July 17.

The *Okinawa Maru* has left for Kagoshima to lay the cable to Formosa.

Nagano, July 16.

H.I.H. Prince Komatsu left for Tokyo, to-day. Sōul, July 16.

Li Pom-chin, the Korean Minister to the United States, left to-day for his destination via Chefoo and Shanghai.

Otsu, July 16.

Prince Wi-hwa, Pak Yong-ho, and Shim Eung-kai visited the Miidera Temple to-day and took tiffin at the Chikusei. They proceeded to Karasaki, Ishiyama, by steamer, and returned to Kyoto by canal boat at 5 p.m.

Bokan, July 16.

Mr. Kabayama, Secretary of the Colonization Department, has left for Tokyo.

Nagano, July 16.

A feeble earthquake shock was felt at 11 p.m. last night.

Moji, July 16.

Messrs. Ozaki Saburo and Omiwa Chobei left for Korea on the 15th inst. at 4 p.m.

Morioka, July 16.

A meeting of the relief investigation committee took place to-day, the attendance numbering about 50. Mr. Hirata Kan, M.P., was elected to the Chair. Governor Sawa, of Iwate Ken, spoke of the plan of relief adopted after the catastrophe.

Nara, July 16.

Mr. Furuzawa, Governor of Nara Ken, has gone to Tokyo to ask the Central Government for a subsidy towards erecting new Prison buildings.

PROBLEM NO. 239.

By C. PLANCK.

(A first prize winner, from "The Chess Problem Text-Book.")

BLACK.

WHITE.

White to play and mate in two moves.

The *Belfast Newsletter* remarks that, strange as it may appear, many leading players give little or no attention to chess problems, and seldom think of solving them. This is not because problems are wanting in depth and beauty and interest and variety; nor because they spoil play in actual games. For, as a rule, problems are characterised by flashes of brilliancy and by beautiful combinations; and instead of injuring a man's play, the

study of problems ought to tend towards making him a master of the end game.

White resigns (b).

NOTES BY THE "TIMES WEEKLY."

(a) The moves of such a game should each be carefully studied. If now 18—Q to B 8 ch., K moves; 19—Q takes R, P takes P ch., and wins the Queen.

(b) If Q takes R, Q to Q 8 ch., and wins at once.

In an article contributed to the *Sketch* soon after the completion of the play at the Hastings Congress, Von Bardeleben spoke of the game of chess as being very much a matter of idiosyncrasy. "A patient, cautious man will play a slow, cautious game, while an impulsive, eager man will play impulsively and eagerly. We have both kinds of players in Germany, just as you have them in England. The brilliant player, whose game is replete with strategy and far-sighted combination, is sought for and admired in Germany quite as much as anywhere else. There is very great danger in learning chess. The game has almost a fatal fascination for those who give themselves up to it, and if acquired before the habit of self-control is developed may have the most disastrous consequences. As an intellectual discipline chess falls immeasurably short of mathematics—if, indeed, there is any comparison between the two—in that mathematics deals with fixed and definite propositions, while chess is the most plastic of games, and contains very little

that can be regarded as fixed or definite. But you must not think that I attach no importance to the moral exercise involved in playing chess. It is a great and noble game, and develops the mental powers in some degree but that degree is hardly appreciable by any known test."

EXAMPLES OF THE "GIUOCO."

GAME No. 526.

GIUOCO PIANO.

WHITE.	BLACK.
A. Albin.	W. P. Shipley.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to B 3	4—Kt to B 3
5—Castles	5—Castles
6—P to Q 4	6—P takes P
7—P takes P	7—B to Kt 3
8—P to Q 5	8—Kt to K 2
9—P to K 5	9—Kt to K sq.
10—P to Q 6	10—P takes P
11—P takes P	11—Kt to Kt 3
12—B to K Kt 5	12—Kt to B 3
13—Kt to B 3	13—P to K R 3
14—Q to Q 3	14—P takes B
15—Q takes Kt	15—Kt to R 2
16—Kt to Q 5	16—P takes Q
17—Kt to R 7 ch.	17—K to R sq.
18—Kt takes P mate.	

It is noteworthy that a single weak move in the opening should reduce Black to a helpless position as early as the fifth move, viz., 5..... Castles, instead of 5..... P to Q 3, although the former move seems plausible enough. Such, however, is the case.

After 6—P to Q 4, Black's replies are forced till he had only the choice of evils with 8..... Kt to Q R 4 (instead of 8..... Kt to K 2); but even then White answered 9—B to Q 3, necessitating 9..... P to Q B 4 in order not to lose the Kt with P to Q Kt 4. Anyhow, the attack would not have been so overwhelming as in the text.

With 10—P to Q 6, Black's Queen's side is entirely blocked, and nothing could save his game. Albin finishes it by a pretty sacrifice of the Queen, and mate in two moves.

23—Kt to Kt 3	23—Q R to Q sq.
24—Q R to K sq.	24—B takes P
25—Q R to K 4	and White won after a few more moves.

Showalter is an opponent of a different calibre, and does not neglect 5..... P to Q 3, and otherwise conducts the defence correctly till 9..... P to Q 4, which is a premature advance. 9..... P to R R 3, and to wait White's decision with the centre pawns, would have been better. The turning point of the game occurs after 14—R to K 4. 14..... P to K R 3 turns out unfavourably, and so would 14..... B to R 4; therefore, 14..... B to K 3 seems the only feasible alternative. The variation is somewhat complicated, but Black would not come to any harm eventually, as White has after all a weak Q P, and that weakness would remain if the attack can be repelled. White, with good judgment, seizes the opportunity of getting rid of his weak Q P, whilst otherwise strengthening his attack. Showalter thought of relieving his uncomfortable position with 19..... P to B 3, but White's next two moves drove his Queen back to R 2, and he finished with a weak sacrifice, 24..... B takes P, overlooking the fatal 25—R to K 4.

Since two eminent players have come to grief in the two games above, it might be advisable to arm the student with a safe defence. Black gets a good game with:—5..... Kt takes P; 6—B to Q 5, Kt takes K B P; 7—R takes Kt, B takes R ch.;

8—K takes B, Kt to K 2, &c., with I took and two pawns (quite an equivalent) for two minor pieces.

Gunsberg lays down the maxim that in order to win in a modern chess contest, chess talent is not sufficient. One requires, in addition, "a great deal of experience, and a great deal of professional patience and restraint—qualities which can be acquired only with sufficient opportunity."

GAME No. 528.

PASSENGERS.

ARRIVED.

Per British steamer *Belgie*, from Hongkong via ports:—Colonel The O'Gorman, Madame O'Gorman, Mr. Geo. Wheeler, Mr. A. E. Moses, Mr. Jno. N. Boyd, Mr. C. Rogers, Mr. D. H. Campbell, Mrs. Edye, Miss Irene Lee, and Mrs. Leonard in cabin. For Honolulu:—Mr. J. W. Brown in cabin. For San Francisco:—Captain Gerrish and Captain S. L. Christie in cabin; 2 Europeans and 632 passengers in steerage.

Per French steamer *Salasie*, from Marseilles via ports:—Mr. Lassneur, Miss Bernheim, Mr. Bermewitz, Mr. Anderson, Mr. Mikkas, Mrs. Hemington, infant, 3 children, and amah, Miss Hemington, Mr. Mottet, Mr. Bie, Mr. Franz Urbiz, Mr. Worth Fohn, Middle, Ferry, Mrs. Moore, infant and amah, Mrs. Cooper, Mr. Bianchi, Mr. Trice, Mrs. MacCallum, Miss MacCallum, Mr. Posknoye, Mr. and Mrs. Rohde, 4 children and 2 amahs, Mr. Abakomnoff, Mr. Metz, Mr. Grinwald, Mr. Levy and family, Mr. Pissenti, Miss Bridmann, Miss Cob, Rev. and Mrs. Hykes, 4 children and amah, Mr. A. A. Annot, and Mr. Loa Kioa Chow in cabin; Mr. Li Hong Kow in steerage.

Per British steamer *Sunda*, from London via ports:—Mr. and Mrs. Bunting and 4 children, Mr. Thomson, Captain Croal, Mr. A. Cauley, Mr. A. W. George Carey, Mrs. De Ath and servant, Mrs. Fisher and servant, and Mr. C. T. M. Nickols in cabin; Mr. Gauntlett, Mr. H. Lundbeck, and Mr. and Mrs. Hay and 2 children in second class.

Per American steamer *City of Rio de Janeiro*, from San Francisco:—Mr. F. Strahler, Mrs. F. Strahler, Captain W. H. Walker, Mrs. M. Lucas, Mr. G. D. Wise, Mr. H. O. Raynor, and Mr. M. Priest in cabin.

DEPARTED.

Per French steamer *Ernest Simons*, for Shanghai via Kobe:—Baron von Heyking, Baroness von Heyking and maid servant, Mr. Montague, Mrs. Montague and 3 children, Mr. Odagiri, Mrs. Odagiri and amah, Miss Domballe, Miss Woodward, Mr. O'Fallon, Mrs. O'Fallon, Mr. E. Tuska, Mrs. E. Tuska, Mr. James Connelly, Mrs. J. Connelly, Mr. Ziliacus, Mr. Munster, Mr. Healing, Mr. J. Liddle, Mr. G. Abily, Sisters Henri and Marie, Mr. F. Remedios, Mr. Boule and child, Mr. Polette, Mr. O. Chinda, Mr.

McDonald, Mr. John Campbell, Major C. Lambton, Mr. E. E. Elias, Mr. W. Bewen, Mr. Fournier, Major-General Jones Vaughan, and Mr. Loudon in cabin; 3 Chinese and 2 boys in steerage.

Per British steamer *Belgie*, for San Francisco via Honolulu:—Mr. Johnson Bennett, Mr. Johnson Bennett, Jun., Mrs. Frederick Butterfield and maid, Mr. J. N. Boyd, Mr. F. Dujardin-Beaumez, Mr. J. W. Brown, Captain S. L. Christie, Mr. Paul Corliss, Mr. H. Fujiyama, Dr. John F. Gentner, Captain Gerrish, Mr. T. S. Morrison, Miss Nichols, Mr. Geo. Schulze, Mr. K. Suzuki, Hon. W. O. Smith, Dr. C. B. Wood, and Mr. M. Morioka in cabin.

Per Japanese steamer *Yokohama Maru*, for Kobe:—Mr. A. Adelsdorfer in cabin. For Nagasaki:—Captain N. Sada and Mrs. Sanger in cabin; Mrs. E. Hundrup in second class. For Shanghai:—Dr. G. Taylor, Dr. Sanger, Mr. F. A. Foremney, Mr. T. Wallace, and Miss Wallace in cabin; 83 passengers in steerage for ports.

CARGOES.

Per French steamer *Ernest Simons*, for Shanghai via Kobe:—Raw Silk for Europe, 3 bales; Waste Silk for Europe, 73 bales.

Per British steamer *China*, for San Francisco via Honolulu:—

REPORTS.

The American steamer *City of Rio de Janeiro*, Captain Wm. Ward, reports:—Left San Francisco the 27th June at 4.05 p.m. Arrived at Yokohama the 16th July at 11.30 p.m. Passage, 18 days, 13 hours, and 57 minutes. Had moderate weather the whole passage, overcast and fog most of the time from the meridian; thick fog from Susaki.

LATEST COMMERCIAL.

IMPORTS.

Yarns—There has been a fair quantity placed during the past week, but prices realised are very low and mostly unremunerative. In Grey Cottons, a fair amount of business has been put through on the basis of former quotations. Fancy and Coloured Cottons, also Woollens, remain in a moribund condition.

COTTON PIECE GOODS.

	PER YARD.	PER PIECE.
Grey Shirtings—81 lb, 34 yds, 30 inches	\$2.40	to 2.80
Grey Shirtings—91 lb, 34 yds, 30 inches	2.70	to 3.25
T. Cloth—7 lb, 24 yds, 32 inches	1.70	to 2.00

Nos. 2 100, Gassed	118.00 to 125.00

METALS.

No fresh business, large arrivals, and *Bon* festival keeping dealers fully occupied. Prices nominally unchanged, but with the increase in stocks a weakness is being manifested which does not augur well for importers. The slaughtering of American Nails still continues, but although the quantities offered are not large they have a very depressing effect upon the market.

Flat Bars, 1 inch	PER PICUL.
Flat Bars, 1 inch	3.40 to 3.45
Round and square up to 1 inch	3.45 to 3.50
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	3.65 to 3.75
Galvanized Iron sheets	4.60 to 4.80
Wire Nails, assorted	9.00 to 9.40
Fin Plates, per box	5.50 to 5.60
Pig Iron, No. 3	5.30 to 5.40
Pig Iron, No. 3	1.65 to 1.70

KIROSENE.

Market has relapsed a little, and there is less disposition to operate on the part of dealers. Quotations remain as last given.

American	\$2.15 to 2.25
Russian	2.10 to 2.20
Langkat	—

SUGAR.

Very little doing, buyers and sellers being far apart in their ideas of prices.

Brown Takao	Nom. \$4.15 to 4.20
Brown Manila	Nom. 5.00 to 5.05
Brown Daitong (New)	Nom. 3.45 to 3.50
Brown Canton	Nom. 3.30 to 4.75
White Java and Penang	Nom. 6.00 to 7.00
White Refined	Nom. 6.90 to 9.30

EXPORTS.

RAW SILK.

The market remains in the same condition. There has been only one buyer, who has taken up some 40 piculs Joshi Filatures 10/13 den. at \$720, and 10 bales new Koshi Filatures 10/12 den. at \$705. Prices are quite nominal, and seem likely to remain so until orders come forward from America again. Stock 7,500 piculs, of which 1,650 piculs are new Silk.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

Sir SAMUEL HARRIS, in his work entitled "The Nile Tribu-
taries in Abyssinia," says—"I ordered the druggist Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Uncertain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1891, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas,
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

DINNEFORD'S

The Universal Remedy for Acidity of the Stomach,
Headache, Heartburn, Indigestion, Sour Eructations,
Bilious Affections.

MAGNESIA

Sold Throughout the World.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 25TH, 1896.

SUMMARY OF NEWS.

THE trial of Dr. Jameson has commenced.

H.I.H. THE PRINCE IMPERIAL intends to visit Nikko shortly.

THE Hongkong A.D.C. is to give "Dorothy" next winter.

THE murders of Christians in Candia (Crete) are being renewed.

THE *doyo* season (the Japanese dog-days) commenced on the 19th inst.

THE International Telegraph Convention concluded its sittings at Buda-Pesth this week.

ON Saturday last Reuter telegraphed that Italy was expected to abandon Kassala at an early date.

IN an interview at Paris, Li Hung-chang declared that China desired to hold the balance

equal between England and France in arranging a share for both countries of the trade of South-West China.

THE *Kawabiraki* at Tokyo has not yet taken place owing to its promoters' dreading bad weather.

THE Directors of the Grand Hotel, Limited, Yokohama, have had their remuneration raised to \$400 each per annum.

NO news from Europe came over the wires for four days this week, owing to the break-down of the over-land telegraph in Japan.

MR. CARL FASKE, second mate of the Danish steamer *Ask*, died suddenly in Hongkong on July 14th: it is feared from sun-stroke.

H.M.S. *Grafton*, with Rear-Admiral Oxley on board, arrived at Singapore on the 16th July; she was expected at Hongkong on the 23rd inst.

MRS. HARRIET BECHER STOWE, the author of the famous anti-slavery novel, "Uncle Tom's Cabin," has just died at her home in America at the age of 85.

THE Grand Hotel, Limited has declared a dividend of 10 per cent. for the half-year. Mr. Lowder and Mr. Jas. Walter have been re-elected Directors.

MR. HAMAGUCHI KICHIYEMON has been elected to represent in the Lower House the Fourth Division of Tokyo, in succession to Baron Kusumoto Masataka.

THE Yokohama Japanese Chamber of Commerce, at a meeting held on the 20th inst., unanimously agreed to petition for the entire abolition of export duties.

MR. TAKADA HIDRO, Staff Engineer in the Japanese navy, is allowed to wear the 5th class of the order of the Legion of Honour presented to him by the French Republic.

THE citizens of Hiroshima have presented 500 yen to Prof. W. K. Burton, of the Home Department, for his distinguished services to that town in connection with the Water-works.

DETAILS of the rising in Formosa are coming in slowly. The rebels belong to some gangs of bandits that fled to the inaccessible hill-country at the beginning of the Japanese occupation.

A CASE of double suicide occurred in Yokohama on Monday, a good-looking Tokyo girl throwing herself into the Creek with a young married man, whose acquaintances she had recently made.

FROM American papers we learn that the Porte, on the demand of the Powers, has named Prince Samos, who is a Christian, Governor of Crete. The situation is therefore ameliorated.

CAPTAIN MATSUDA YAKICHI, of the *Tsuruga Maru*, which was sunk in Bushu Bay on the 10th of June, involving the death of four persons, has had his certificate suspended for six months.

A GALE on the 20th and 21st did an enormous amount of damage. The train service between Yokohama and the South is interrupted by "wash-outs;" and telegraph wires are down all over the country.

THE damage to the *Kobe Maru* from skimming a rock near Shimonoseki is much more serious than was imagined, remarks a Shanghai contemporary, and her repairs will probably take at least ten days. Had she been a yard farther

out she would have gone clear; had she been a yard farther in she would probably have torn out her bilge and sunk. She was saved by being built of steel with a double bottom.

A FIRE broke out on the 14th inst. at 3 a.m., in the silk factory of Isshinsha, Inaba Province. The flames started in the drying room and 325 *kwamme* of cocoons, 32 *kwamme* of silk, and one building, were consumed.

THE First National Bank held its regular meeting of shareholders on the 19th inst. The net profits of the Bank were yen 235,437.936; to this was added yen 50,000 brought over from last year. A dividend of 12 per cent. was declared, the balance carried forward being yen 54,035.932.

THE yacht races on Saturday provoked good sport. *Mary* won the "Daimyo Cup," presented by Mr. Scidmore; *Ronin* won the "Insurance Cup"; *Vega* won the "French Residents' Cup"; *Warata* won the dinghy race; and *Sodeska* was the winner of the Mosquito Club prize.

MESSRS. SUZUKI BUNTARO, M.D., Amatani Senmatsu, M.D., Morishima Kutara, and Fujimama Kan, have been ordered to Germany to conduct medical researches; Mr. Namba Seigai, and Dr. Otani Shiukan, to the United States and France for electrical investigations. They leave Yokohama on the 26th inst.

H.M. THE KING OF KOREA, on hearing the news of the sad calamity in the Sanriku districts, sent an expression of his deep sympathy with His Majesty the Emperor of Japan, through the Korean Minister in Tokyo. H.M. the Emperor returned his thanks to H.M. the King of Korea through the Minister of the Imperial Household.

THE Boston (U.S.A) Corps of the Honourable Artillery Company, now visiting England, has been greatly fêted, and was present at a special review at Aldershot, held in the presence of Lord Wolseley and the Duke of Connaught. At a banquet to the Corps yesterday evening, the Prince of Wales was present and the most cordial speeches were delivered.

VISCOUNT AOKI, Japanese Minister at Berlin, being interviewed on July 8th, said that Japan was in no wise disturbed by the splendid reception that had been accorded Li Hung-chang in Germany, but regarded it simply as an honour paid to the envoy of a great Empire, and devoid of political importance. The reported Triple Alliance between China, Japan, and Russia was a fiction.

THERE is not much change in the Import trade. Business continues to be done in most descriptions of Yarn, at about late rates, and a good demand has sprung up for Shirtings, more especially the heavier kinds. Fancy Cottons have been moved to some extent, the principal lines in request being Turkey Reds and Victoria Lawns. The Woollen trade is still dull. There is not much doing in the Metal market, but large arrivals continue to be landed. The Kerosene trade is quiet, but prices remain unchanged, and arrivals of Oil continue on a fair scale. A considerable movement in Brown Sugar has taken place at late quotations, but there is not much demand for White sorts, which are well held. Nothing done in the Silk trade but a few direct shipments, and stock continues to arrive in fair quantities. Nothing to report in the Waste business. There is a good demand in the Tea trade for grades Good Medium downwards, and prices are unchanged. There is plenty of leaf to draw upon, settlements to date being a good way behind those of last season. Exchange has continued steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Formosan question is discontentedly discussed by papers of all complexions. Four articles have appeared ventilating the general dissatisfaction, two in the *Mainichi* and one each in the *Yiji* and the *Kokumin*. All lay special stress on the urgent necessity of sweeping alterations in the *personnel* of the Formosan officials, who are denounced as incompetent to grapple with the very difficult task imposed on them by the present condition of the island. One of the *Mainichi's* articles contains a statement, said to have emanated from Li Chun-shang, a Chinese immigrant in Formosa, whose meritorious services during the campaign for the subjugation of the island were rewarded with a decoration. The statement is that the present disturbances are attributable chiefly to the vindictive spirit engendered among the natives by the wholesale slaughter resorted to on the occasion of the last rebellion. Hence he foresees that the insurrection will be followed by an outbreak in a fresh quarter, and that rebellion will succeed rebellion until the natives are completely driven from the island. But the views of this Li Chun-shang are greatly discredited by news that the *Kokumin's* Formosan Correspondent sends from Chang-hwa, under date the 20th instant. He alleges that Li, for all his decoration, is a man of most doubtful loyalty. Thus, on the occasion of the sharp fight that took place at Lo-Kiang on the 8th inst. between the Japanese troops and the insurgents, Li Chun-shang and another Chinaman mustered a force of over 1,000 natives, ostensibly to co-operate with the Japanese in suppressing the insurrection. But it was noticed that a considerable portion of his men fought at the side of the insurgents, and when he was called upon to give an explanation of such treacherous conduct on the part of his people, his reply was vague and entirely unsatisfactory. The *Kokumin* reports its opinion on the Formosan problem, namely, that any natives open to suspicion should be rigorously dealt with and that the rest should be driven out of the island, for the conciliatory policy originally adopted is the primary cause of the present trouble. The same paper, on the authority of an anonymous officer, is inclined to form a comparatively low estimate of the fighting capacity of the troops in Formosa. Their pluck, says our contemporary, is not so conspicuous as it was during the war, and the cause is to be sought in the partiality shown by the Military Authorities when distributing compensation to the families of those that fell on the field and rewards to the survivors, the share allotted to the latter being beyond comparison greater than the provision made for the relatives of the killed.

The *Nichi Nichi* has devoted its leading columns in several successive issues to a discussion of the two great diplomatic problems now always linked together when Eastern affairs are considered, that is to say, the problems of Russia and England with special reference to the Far East and to Japan. The Russian problem was discussed last week and the English has occupied our contemporary's space this week. Having premised the extreme improbability that Korea will be abandoned to the control of Russia alone, Russia being pledged not to attempt any such monopoly, and England, China, and Japan, being also bound to safeguard their own interests and secure the peace of the world by preventing Russia from wielding unchecked influence in Korea, the *Nichi Nichi* proceeds to observe that the public labour under a delusion when they imagine that Russia is absorbed in encroaching upon others' rights and territories. Our contemporary holds that the southern expansion of Russia is dictated by sheer necessity, and that the growth of the Great Northern Power, must not be regarded as the outcome simply of ambition and greed. An analogous case may be found in the perpetual unrest of the working classes in obedience to impulses that they can not resist. The *Nichi Nichi* next describes how steadily and by what

different processes from those adopted by England, for example, Russia has pushed forward her frontier, and then comes to the great point, namely, in what relation Japan and Russia should stand toward each other. "Japan," it declares, "should go hand in hand with Russia in solving the Eastern problem, and should strive to establish a good understanding with her northern neighbour, for it is conceivable that a failure of *entente* might at any moment involve the two Powers in war. What a State should rely on is the national resources and national defence: no artifice nor tortuous policy will avail under circumstances such as those that now exist. The true programme of a State is to trust the trustworthy, and to prepare itself so as to be able to control any situation that may arise in the natural course of events."

Briefly stated, the *Nichi Nichi's* argument about the second problem is this:—England will find it difficult to maintain an attitude of isolation. It is impossible for her single-handed to check the southern expansion of Russia, nor is she competent to become mistress of the situation in the Orient without the co-operation of another State or States. The conclusion of the article is devoted to discussing Anglo-Japanese relations. "The procedure of England used to be actuated by considerations of self-interest alone. But she made a markedly new departure in the matter of Treaty Revision between the two countries, abandoning her traditional selfish principles in that particular case, and taking the lead of all the Western Powers in concluding with an Eastern nation a convention that involved several concessions on her part. That magnanimous action has won the hearty gratitude of Japan, and the significant departure that England made in this special instance shows that she is not wedded to any invariable line of policy, but is ready to strike out a new course when the advisability of such a proceeding presents itself. That is a point to be kept in mind by the Japanese people."

The *Kokumin*, always ready to welcome any growth of intimacy between Counts Matsukata and Okuma, shows itself correspondingly mortified whenever any obstacle interferes with their *rapprochement*. In the first of two articles devoted to discussing this prominent topic of domestic politics our contemporary avows the belief that the primary cause of the *entente* between the two statesmen was the isolation in which they found themselves, and the bitter experience that they suffered owing to the disloyalty of their former colleagues in power, especially Marquis Ito. Another article is directed against Satsuma statesmen and Baron Ito's party. The *Kokumin* believes that, taking advantage of Count Matsukata's sincerity and warm sense of friendship, these politicians have threatened him with entire severance of intercourse, should he persevere in his present course. The *Kokumin* writes to know why, if these Satsuma statesmen have any sympathy with their distinguished fellow-clansman, they do not bring pressure to bear on Marquis Ito so as to induce him to adopt Count Matsukata's views and admit that financier, as well as his close ally, Count Okuma, into the Cabinet. It further asks why, if they find it impossible to intercede in that manner, they do not silence the counter-agitation of Baron Ito's party, and leave Count Matsukata free to do as he likes. Merely to utter threats against the Count without adopting either of the above alternatives can not be regarded as other than very cruel and unfriendly conduct on the part of his distinguished fellow-clansmen.

Mr. Sugiura Jyuko, ex-member of the Diet, who writes editorial articles for the *Tokyo Asahi*, is a noted Chauvinist. His sensitive patriotism is greatly wounded by the War-Commemoration postage stamps, specimens of which have appeared in the *Official Gazette*. The supreme excellence of the Japanese spirit of nationality, he writes, is centered on the Court. Every subject must constantly preserve a feeling of profound reverence towards the Court, and must be strictly on his guard against any act

calculated to bring indignity upon Imperialism. In these degenerate times, he deplores to observe that the point is not as strictly observed as it ought to be. The stamping of bank notes with a picture of the Empress Jingō is an instance of the violation of that great duty. But the indignity done to the ancient Empress is thrown into the shade by the new stamps bearing likenesses of the late lamented Princes Arisugawa and Kitashirakawa; likenesses that will be exposed to the ignominy of being polluted with saliva and defaced by post marks. Just now, when the people are awakening from their infatuated imitation of things foreign, why has the Government repeated the vicious error made in the case of the bank notes, and shown itself heedless of subjecting the Imperial Court to ignominy? Mr. Sugiura fails to understand such conduct. Was there no better way of showing reverence for the memories of the lamented Princes? From a sentimental as well as a national point of view, the issue of stamps bearing such devices is strongly denounced by the writer, and with the grandiloquence that often accompanies impotence, he warns the Authorities against being again guilty of such an irreverent solecism.

The *Yiji* reverts once more to the suggestion that the all-important portfolio of Foreign Affairs must be occupied as soon as possible by a statesman of the first calibre, and that Count Okuma is the best available candidate for the post. If, however, private considerations preclude the giving of the seat to the Count, then the Premier himself must assume it, either in addition to his present duties or by resigning the latter.

The enforcement of the District Self-government System in three cities and thirty Prefectures, where, last April, the preparatory step was taken of abolishing small districts and forming in their place one large district, as approved by the Diet, gives much uneasiness to the *Nichi Nichi Shimbun*. Our contemporary's doubts are inspired by the provision in the new system that gives to large land-owners—namely, men possessing estates valued at ten thousand *yen* and upwards—the right of returning one-third of the number of members of the District Assembly, no limit of time being fixed during which the estates must have been in possession of their nominal owners. Without such a limit the manufacture of "large land-owners" will not be a difficult task, and is not unlikely to be largely resorted to in the heat of party competition. An abuse of the kind would also affect the election of members of the Local Assembly, for, according to the provisions of the Local Self-Government System, their election is made by the City Assembly and Councillors and by the District Assembly and Council. In view of the fierce spirit of party rivalry that exists, a provision opening the way to such abuses is dangerous and calls for speedy amendment.

The *Tokyo Economist* undertakes to explain the reason why the outflow of specie has of late exceeded the inflow, and why the import of goods exceeds the export. Last year, while the balance of trade was much in favour of exports, specie left the country to the extent of more than 20 million *yen*. That was due to the result of the War, which necessarily involved a drain of specie from the country. Another cause materially affecting the trade was an extraordinary issue of convertible notes, over and above the prescribed limit, the volume of the currency, which stood at a little over 167,251,000 *yen* in January of 1895, having swollen to above 194,618,000 *yen* at the end of that year. Such are the *Keisai Zasshi's* explanations. They satisfy our contemporary, but may not be equally convincing to the public at large.

Count Mutsu is said to be improving in health at Honolulu. He is staying at the Waikiki Villa, but in accordance with medical advice has refused to see visitors.

EDITORIAL NOTES.

THE KOBE LAUNDRY CRISIS.

THE *Kobe Chronicle* says that there is reason to believe that the Kencho authorities are contemplating some form of action in the laundry question. The officials have been making investigations as to the formation and attitude of the Laundrymen's Guild, and the consequent combination of European residents culminating in last Friday's public meeting and appointment of committee. Special inquiries were made as to the proceedings at the meeting, and as to the feeling of the foreign community. It was explained that the Laundrymen's Guild had proclaimed certain regulations and declared a boycott against all who should disagree with them; and that the foreigners, determined not to be at the mercy of a dictatorial guild, had resolved to make some arrangement independent of the Japanese laundrymen. Japanese labourers are growing far too fond of combining, striking, boycotting, and generally annoying their patrons and employers; and unless the authorities can devise some method of checking the evil, it will be for foreigners to devise means of their own. What the Kencho authorities contemplate doing in this question we cannot ascertain; probably they will severely admonish the refractory washermen and get the regulations altered. It is not easy to see how any compulsion can be used towards the obdurate washermen; any man has a perfect right to ask what price he likes for his services, to refuse a lower price, and to decline entering on a contract at all. There is no really satisfactory remedy if the labourers themselves have not the common sense to see what harm will result from their dictatorial arrogance; the only way will be to dispense with them.

The *Kobe Chronicle* learns that at the advice of the Kencho authorities, eighty-three laundry keepers of Kobe have signed the following agreement in the presence of Mr. Okuza, a public notary, as witness:—

1.—Contracts between laundries and customers shall be regarded as being for four months, and only be terminated on four months' notice or payment in lieu of notice; and in case any washerman takes another one's customer without such notice, the proceeds of the contract shall be divided as under:—2.50 yen shall be deemed the estimated proceeds of washing for one person for a month. Of this sum, 1.50 yen shall be paid to the washerman who has lost the customer, 75 sen to the washerman who has taken the customer, and 25 sen to the laundry guild.

2.—The commission hitherto paid by laundries to house-boys or amahs of foreigners shall be abolished. Under whatever name or disguise it may be, such commission should not be paid.

3.—Any washerman who has violated the preceding articles shall be fined 50 yen. On complaint of violation of rules, a committee of three members elected from among the laundrymen shall investigate the case; and if the committee finds a washerman guilty of a violation, there shall be no appeal nor refusal to pay the fine. In case of refusal the fine shall be compulsorily enforced.

THE NEW "PROMETHEUS."

THE latest addition to the "Blue Funnel" Line, the *Prometheus*, arrived from Kobe to-day. She has been specially designed for cargo carrying; derricks and windlasses appearing everywhere on the vessel. The *Prometheus* is the largest ship now in the "Ocean S.S." fleet, and she is a spar-deck vessel, with raised poop fore-castle and centre-castle. The principal dimensions are—Length 430 feet, beam 49 feet, and depth of hold 31.6 feet; net register tonnage 3,340, gross 5,304 tons. She is expected to carry about 7,500 tons deadweight on a mean draft of 24 feet 7 inches. Her free-board is 7.3 feet. Besides the cargo space, below decks, the capacity of the centre castle is 29,378 cubic feet. This space, however, we learn, will be mostly used for sheltering deck passengers when carrying coolies up and down the China, and Malay coasts, and for the pilgrim service to the Red Sea. The *Prometheus* in addition to the usual fore-and-aft water-ballast tanks, which are capable of storing 1,040 tons, has a deep ballast tank abaft the engine-room, in a position usually allotted to spare

bunkering. This tank is capable of holding 727 tons of water, thus making her total water ballast capacity equal to 1,767 tons. The engines are of the triple-expansion type, with cylinders 29, 50, and 82 inches in diameter respectively, with a stroke of 5 feet. She indicates about 4,000 h.p., and has made 13½ knots speed. The ship after which the *Prometheus* was named was a comparatively new vessel sold a short time ago to the Japanese.

CONFERRING HONORARY DEGREES.

ON the 24th June, the honorary degree of D.C.L., was conferred upon Mr. Thomas F. Bayard, United States Ambassador to England; Mr. Joseph Chamberlain, Secretary of State for the Colonies; Mr. John Morley, member of Parliament, late Chief Secretary for Ireland; Professor Francis Andrew March, professor of the English language at Lafayette College, Pa., and five others. The large circular hall where the degrees are conferred was filled to overflowing long before the time for the ceremonies to commence. A majority of the audience was composed of ladies in bright costumes, and very few undergraduates were present. Consequently the traditional interruptions and chaff were of the mildest character. Mes. Bayard and Chamberlain occupied seats on the Chancellor's right after the conclusion of the picturesque procession, in which the high officials of the University took part. The Chancellor spoke in Latin, stating upon whom the degrees were conferred. The name of Mr. Bayard was well received, but the other recipients were all eclipsed by the cheering which greeted the name of Mr. Chamberlain. Officials bearing wands of office went to the door and escorted into the presence of the Chancellor the nine recipients of the degree. All the latter wore the red doctor's gown, and were headed by Mr. Bayard. The degree was conferred upon each in turn, in a long Latin speech, which was frequently interrupted by cries from the undergraduates of "Cut it short," "That's quite enough," etc. There was only slight applause and no comments when Mr. Bayard received his degree, but when Mr. Chamberlain was similarly honoured he was welcomed with cries of, "How's Mr. Kruger?" "Where is your orchid?" Mr. Morley was well received, on the whole, but was slightly disconcerted just as he was ascending the steps to shake hands with the Chancellor by the cry of "Remember Mitchellstown." Professor March's name was the last on the list.

PADEREWSKI.

THE break-down of the great pianist Paderewski is regarded as final. His cancelling of all his English engagements is held to signify permanent retirement from the pianistic field. That he overworked himself recklessly is very evident from the story of his extraordinary industry, playing every day and every night, without any noteworthy interval, during months, until he became "a bundle of uncontrollable nerves." It is curious to observe that the first emphatic warning of his break-down came in the form of an almost overwhelming attack of stage fright. This virtuoso, who had played so often before great audiences and whose assurance of winning applause was so certain that anything like nervousness seemed out of the question, confessed to a friend that on the occasion of his last recital in Carnegie Hall, he had felt himself almost paralyzed by stage fright.

HON. ARTHUR SEWALL, OF MAINE.

THE Democratic nominee for the office of Vice-President of the United States is much less generally known than is the Republican nominee. The former is probably, not Mr. "Sewell" as spelled in Reuter's telegram, but Mr. Arthur Sewall, of Maine. He is a leading Democrat in local politics, but is not prominent in national politics, except that for several years he has been a member of the Democratic National Committee. He is a mere figure-head on the ticket, to which he can not add much weight; but the Hon. Wm. J. Bryan, the Democratic nominee for President, is a man of national reputation.

He was for several years a member of the House of Representatives from Nebraska, but is a comparatively young man. He is an eloquent speaker, and has been called "the silver tongued orator of the prairies," a name appropriate to the platform on which he stands.

LI HUNG-CHANG AND BISMARCK.

A HIGHLY-COLOURED description of the meeting of Li Hung-chang and Prince Bismarck appears in the American press. Not content with describing the clothing of the two famous old men, the lively journalists of the States invent a conversation for them. Here is a part of the performance:—

"You are the greatest and more celebrated statesman of your country," said Bismarck. Li was gazing at Bismarck's rugged face and eagle eyes. "Now that I have seen your serenity's piercing eyes, I for the first time understand your success," he said. Bismarck replied: "Your loftiness, too, has had great successes." But Li deprecated them with: "Not nearly so great as yours." "Well," responded Bismarck, "we all try to do our duty."

Li is much crippled. He stood as long as he could, and when he was about to sink with fatigue Bismarck invited him to sit. Then the two old men fell to discussing their ailments.

"I sleep badly," said the Prussian, in response to the Chinese statesman's eager enquiries.

"I, too, suffer great pain," said Li.

"But I have no pain," retorted Bismarck.

"It is in my face," continued Li. "It hurts me," and he invited Bismarck's attention to his homely face, which is still further twisted by neuralgia. At luncheon they talked politics. With several German reporters present, and taking stenographic notes, Li talked recklessly for a man who has a yellow jacket to lose.

"The purpose of my visit," he remarked, "is to ask your serenity's advice."

"What advice?" asked Bismarck.

"How can we best reform China?"

"I cannot judge from here."

"How can I act successfully against the court in Peking?"

"One cannot act against a court. No Minister can resist the will of the ruler. He only executes it or gives advice."

"But how can the ruler's will be carried out?"

"Only on the basis of the army. It may be quite small, not more than 50,000 perhaps, but it must be good."

"We have men," replied the former Viceroy, "but training is wanted. Nothing has been done in this direction. For thirty years I have striven in vain against this lethargy. I have now seen the finest army in the world—that in Germany. Though I shall no longer be able to expend means of my own, which were at my disposal as Viceroy, I shall do what I can to act up to your serenity's advice. We must reorganize, and we must do it with the help of Prussian officers and on the Prussian model."

"The army," remarked the Prince, "need not be distributed all over the country. It is only necessary to have it at one's disposal at any moment and to create means of communication in order to throw the force quickly and easily from one point to another."

DEATH OF MRS. HARRIET BEECHER STOWE.

MRS. HARRIET BEECHER STOWE, the authoress of "Uncle Tom's Cabin," died at Hartford at 12 o'clock on July 1st. According to an American exchange, when the death signal came, her daughters were at her bedside, but the dying woman showed not the least sign of consciousness. She suffered no pain, but passed away peacefully and quietly, as if going to sleep. After the first attack on Friday she rallied somewhat, but her case was considered hopeless after the first two days. She was born at Litchfield, Conn., on June 14th, 1812, being the daughter of Rev. Lyman Beecher, a Presbyterian clergyman, who held a distinguished position among theologians and pulpitorators. Her mother was Roxanna Foote, a granddaughter of General Ward, who served under Washington in the Revolution War.

THE BRITISH FLEET.

THE *China Mail* in announcing the departure of the *Spartan* from Hakodate, on the 27th June, for the Behring Sea, says that Mr. Barret Hamilton, one of Lord Salisbury's Secretaries

embarked on her. He has been specially sent out from home to conduct an enquiry relative to the Fishery question. He will be up in the seal district for about six weeks. In consequence of the departure of the *Spartan*, the *Linnet* will probably be retained at Hakodate instead of proceeding to be Behring Sea to relieve the *Swift*. The *Spartan* will likely count as the second ship at the Fisheries. H.M.S. *Redpole* has permission, on the representation of H.M. Consul, to remain at Amoy in consequence of a threatened riot.

THE FINAL VERDICT.

HERE is what will be, we believe, the final verdict of the British nation about the recent Transvaal troubles, for, after all, history still recognises only one axiom in international affairs, "the end justifies the means":—

Mr. Labouchere is beginning to tire us with his continual attacks on Mr. Rhodes and on Mr. Beit. Mr. Rhodes is responsible for the Jameson raid; the whole business was a miserable fiasco, and reflects anything but credit on every one connected with it; but when this is all proven the other side of the shield deserves a glance; for, after all, it is the brighter side. If to-day the British possessions stretch in an unbroken line along the central plateau of Africa from Cape Town to Lake Tanganyika, the praise is due to Mr. Rhodes, and the achievement will surely be held in the future to outweigh all his failures and faults. Nor is it fair to speak of Mr. Beit as a German financier occupied selfishly and unscrupulously in building up his own private fortune.

It is an old maxim that it is difficult to enrich one-self without enriching one's country. Henry Bessemer made a million for himself, but more than a hundred million for the steel industry of Great Britain, and Mr. Beit's fortune is simply a similar sign of ability the effects of which are not confined to his own person. It is within the truth to say that there is no industry in the world so splendidly organized as the gold-mining industry on the Rand. We have seen the best coal-mines in Great Britain, the finest steel works in Pittsburgh, but we have never seen such perfect machinery, so perfect an organization of labour, as can be found in any of the twenty or thirty best mines in or about Johannesburg. The praise for this is due to Mr. Beit, more than to any one else, and this achievement will perhaps be held in the long run to outweigh any of his mistakes. What has Mr. Labouchere put to his credit save that now and then he moves us to laughter?

A CORRECTION.

In an article published by us last issue two corrections have to be made. We wrote:—"No one would pay an ounce of gold on account of an obligation dischargeable with sixteen ounces of silver, when twenty-one ounces of silver could be obtained abroad for the same ounce of gold." Here "twenty-one" is a mistake for "twenty-nine." Further on we said:—"The tendency would be to carry silver as copiously and quickly as possible to the States, there to purchase gold with it at a price nearly 24 per cent. below the price ruling in Europe." Here "24" should have been "80."

THE TELEPHONE.

HER BRITANNIC MAJESTY'S Legation in Tokyo showed much conservatism in the matter of telephones. It didn't like them at all, and kept them out of the sacred compound until a few months ago. The Queen herself has been even more conservative. Only now has her Majesty permitted the installation of this immense convenience at the four Palaces. The Pope was a little more liberal. Already he has a telephone in the Vatican. What is more, His Holiness is said to have sanctioned confession by telephone, but will not yet allow absolution to be granted instrumentally.

MINING DISASTER IN PENNSYLVANIA.

THROUGH the caving in of the roof of one of the galleries of the Red Ash Vein, Twin Shaft, Pittston, Pennsylvania, at the end of June, 100 men were buried alive. About forty were English-speaking miners, and thirty Poles and Huns, the others being Italians. The roof had been reported dangerous some weeks before, and the men were engaged in propping up the sides at the time.

THE LATE SIR AUGUSTUS HARRIS.

FROM American Papers we learn that the late Sir Augustus Harris submitted to an operation some week ago, but never recovered from the shock.

THE "FUJI-KAN."

A HOME paper says:—The new Japanese battleship *Fuji* is now lying in the Victoria Dock in London, and alongside her is a large floating

crane to hoist her machinery and other heavy weights on board. The military mast has already been stepped in its place and the fighting tops fitted. Work on board her is being expedited in every way.

"A PUBLIC NUISANCE."

IN the Consulate-General Court of the U.S. on Thursday, Mr. McIvor sent Charles A. Luther to gaol for thirty days for being drunk and disorderly on the public highway on the 16th July. Defendant had only been discharged from the U.S. gaol two days—where he had served 20 days' for a similar offence—when the police had again to apprehend him.

BICYCLING IN THE UNITED STATES.

REFERRING to the recent road race between Dayton and Cincinnati, at Chester Park in the latter city, the *Commercial Gazette* of June 14, says:—"Five of the winners rode 'Dayton' wheels in the race, and they attribute no small part of their good luck to the running qualities of those speedy and sturdy machines."

KOBE, SHANGHAI, AND HONGKONG.

FROM Kobe papers we learn that the foreigners in that port have subscribed \$6,389, towards the relief of the sufferers in the north-east of Japan. Shanghai has telegraphed \$4,000, and Hongkong's list has already reached \$2,000. H.E. the Governor and the Rt. Rev. Bishop Burdon, D.D., heading the fund.

DEATH OF A NOTED GEOLOGIST.

SIR JOSHUA PRESTWICH, Professor of Geology at Oxford, formerly President of the Geological Society and Vice-President of the Royal Society, and the author of many valuable geological works, died on June 23rd, aged 84 years.

MARSHAL YAMAGATA AND THE RUSSIAN MISSION.

Various rumours are circulated by Opposition papers with respect to the alleged cool treatment accorded Marshal Yamagata in Russia. One paper alleges that the Marshal was denied the honour of attending the ceremony of coronation, the Russian Court only acknowledging the mission of Prince Fushimi. These papers learn that the idea of despatching two separate missions to Russia originated with the late M. Hitrovo, but that Baron Nishi neglected to arrive at an understanding on the matter with the Russian Court, and that an objection on the part of the Japanese Cabinet was overruled owing to some researches of Mr. Kaneko, Vice-Minister of Agriculture and Commerce, who found that Holland had despatched, on the occasion of a certain ceremony held during the reign of one of the English Georges, two separate missions of honour. Mr. Kaneko apparently overlooked the fact that the relations between Holland and England were of a special character, and that one of the two missions despatched was sent in a private capacity. All these absurd rumours are conclusively contradicted by a special letter that the *Tokyo Asahi* has received apparently from a person in the suite of Marshal Yamagata. The letter describes the doings on the 26th May rather minutely. At 7 a.m. on the 26th, it says, the Marshal, accompanied by his suite, repaired to the Legation of the Turkish Ambassador, which all the Ambassadors and Delegates of other Powers had agreed upon as a common rendezvous, the Turkish Ambassador being *doyen* of the *corps diplomatique*. At 8.30 a.m. the great ceremonies began, and the Marshal returned to his residence at 4 p.m. It was feared at first that the Marshal would be unable, at his age and in his enfeebled condition, to sustain the continued strain that the ceremony imposed upon him, for all present on the occasion were required to keep standing until the close. The Marshal's suite were therefore very much relieved and delighted when they found him bearing the strain without feeling particularly exhausted. It is said that of all the delegates despatched by Asiatic Powers, the Marshal alone was present at

the coronation within the cathedral, for national usage did not admit of the Ambassadors of China, Korea, Turkey, Siam, and so forth uncovering during the ceremony.

The *Nippon* gives a conversation which Mr. Komura, Vice-Minister of Foreign Affairs and a great friend of its editor, had on this subject with Count Katsui. The latter asked Mr. Komura, in his usual outspoken manner, whether it was true that Marshal Yamagata had been received coolly at the Russian Court, and that he had been admitted to the ceremony merely in the capacity of a Field-Marshal? Mr. Komura replied that he could not reply definitely, as details had not yet reached the Foreign Office, but that the Marshal did not receive any specially warm treatment in Russia would appear probable. The Count further observed that if it was really necessary to despatch an Ambassador in addition to Prince Fushimi, he regretted that the choice should have fallen on the Marshal instead of on Prince Shimazu of Satsuma. The relations between that great house and Russia are very cordial, as might be inferred from the fact that it was on Prince Shimazu that the present Czar first called when he arrived in Japan on his famous tour.

AN APPOSITE CRITICISM.

Were we asked to name the most prominent characteristic of the Japanese artist, we should say that it has always been complete subordination of self to the uses of his time. He worked solely to brighten the lives of his contemporaries. It was thus that the decorative element found so large a place in the field of his endeavour. He turned his hand in whatever direction the mood of the moment tended. To every sphere of society, to every domain of domestic life, to every usage of etiquette and courteous intercourse, he willingly devoted his talents. Whether to his complaisance and versatility is to be ascribed the genesis of the spirit of art that pervades the nation, or whether those qualities in him were the outcome of that spirit, we shall not here pause to consider. Our immediate object is to draw attention to a criticism by Mrs. Meynell that indicates an emphatic *rapprochement* between the aim of the artist in modern Europe and the aim of the Japanese artist in all ages of his history:—"The talent which has quite lately and quite suddenly arisen, to devote itself to the use of the day or week, in illustrated papers—the enormous production of art in black and white—is assuredly a confession that the Honours of Mortality are worth working for. Fifty years ago, men worked for the honours of immortality: these were the commonplace of their ambition; they declined to attend to the beauty of things of use that were destined to be broken and worn out, and looked forward to surviving themselves by painting bad pictures. So that what to do with their bad pictures, in addition to our own, has become the problem of the nation and of the householder alike. To-day men have begun to learn that their sons will be grateful to them for few bequests. Art consents at last to work upon the tissue and the china that are doomed to the natural and necessary end—destruction; art shows a most dignified alacrity to do her best, daily for the 'process' and for oblivion. Doubtless this abandonment of hopes so large at once and so cheap costs the artist something; nay, it implies an acceptance of the inevitable that is not less than heroic. And the reward has been in the singular and manifest increase of vitality in his work which is done for so short a life. Fittingly, indeed, does life reward the acceptance of death, inasmuch as to die is to have been alive. There is a real circulation of blood—quick use, brief beauty, abolition, recreation. The honour of the day is for ever the honour of that day. It goes into the treasury of things that are honestly and completely ended and done with. Who of the wise would hesitate? To be honourable for one day—one named and dated day separate from all other days of the ages—or to be for an unlimited time tedious?"

NOTIFICATION RELATING TO THE SALE OF THE HOUSEHOLD DEPARTMENT'S MINES AND SMELTING-WORKS.

A notification over the signature of the Minister of the Imperial Household was published in Friday's *Official Gazette*, relating to the sale of the Sado Gold Mine, the Ikuno Silver Mine, and the Smelting-Works at Osaka. It runs as follows:—

The two Mines and the Smelting-Works shall be sold as they stand on Oct. 31st of the current year. The details of these properties are as follows:—

Sado Mine:—(1) The right of working the two lodes of Aikawa and Hyakushiyaku, and the subordinate lode of Yudo. (2) The buildings, plant, tools, and implements, ground, and forests belonging to the Mine.

Ikuno Mine:—(1) The right of working the five lodes of Omori, Kanagase, Kamikobata, Akenobu, and Nakase. (2) The buildings, plant, tools, and implements, ground, and forests belonging to the mine.

Osaka Smelting-works:—The buildings, plant, tools, implements, and ground.

Persons desirous of purchasing the above mines and smelting-works should submit tenders, after duly inspecting the properties and pursuing documents in which detailed statements of the establishments are entered. Such documents may be obtained at the offices concerned. But it is required, by way of preliminary, that permission shall be obtained either from the Imperial Estates Bureau or from the Sado and the Ikuno Mines Office and the Smelting-works Office, and that, before obtaining such permission from the Smelting-works, security amounting to 10,000 yen, either in cash or Government Bonds, or Bank deposit-notes, shall be handed over, such security to be returned when the inspection permit is given back. The period of inspection shall be from August 1st to September 10th of the current year.

Applicants must submit tenders, drafted according to a form specified by the Imperial Household, to the Chief of the Imperial Estates Bureau between 8 a.m. and 12 noon of September 16th, together with security, amounting to 150,000 yen, either in cash or unregistered Government Bonds. The tenders shall be opened at 1 p.m. on the same day at the Imperial Estates Bureau in the Akasaka Detached Palace, Tokyo, by the Chief of the Bureau, in the presence of the Chiefs of the Imperial Treasury and of the Investigation Section, or their proxies. Tenders that lack intelligibility, or tenders the signatories of which do not appear on the occasion of opening, or tenders put in by proxy, will be rejected.

The highest tender, provided that it be above the upset price, shall be accepted. But should it happen that there are two highest tenders of equal amount, the tenderers must be invited to submit supplementary tenders. Should the tenders decline to submit supplementary tenders, or should the supplementary tenders be again found equal, then the successful tender shall be determined by lot. In the event of the highest bidder's withdrawing his tender, the next highest shall be accepted. But should all the tenders be below the upset price, the applicants shall be invited to submit new tenders. The contract for taking delivery must be concluded within 7 days from the day on which the successful tender is accepted, and at the same time, as security for the fulfillment of the contract, a sum of money corresponding to one-tenth of the price offered must be paid to the Chief of the Estates Bureau, either in cash or in unregistered Government bonds. The security of 150,000 yen lodged as the time of bidding, shall be confiscated should the tender be withdrawn; and the contract security of one-tenth of the tender, shall be confiscated if release from the contract be sought, or if it be not implemented. The price offered must be paid in one sum, and in addition to the objects specified above for sale, the successful tenderer will be under obligation to purchase the crude ores, the partially reduced ores, and the stores in stock on October 31st, at the following rate:—

The price of crude ores from the Sado and Ikuno mines shall be one-half of the remainder obtained by subtracting the cost of smelting from the proceeds accruing from the smelted ores. The price of partially reduced ores at the two mines, prepared for carriage to the Smelting-works, shall be determined according to the process prescribed at the respective Mining Offices, the cost of transport being deducted. The price of partially reduced ore whether lying at the two mines or at the Smelting-works, which have no yet been included in the category of partially reduced ores, shall

be determined in the same way as that of crude ores produced from the Sado and Ikuno mines. The price of coal extracted from the Yudo colliery, subordinate to the Sado mine, but not yet entered into the books kept at the Mining Office, shall be the expenses actually incurred in the work of extraction.

The cost of substances expended in estimating the prices of crude ores and partially reduced ores, shall be determined in accordance with the purchase prices paid at the Smelting-works in connection with the latest operation of the kind.

The successful tenderer shall be under obligation to implement any contract that either of the two mines or the Smelting-works has already entered into with a third party, provided that the fulfillment of such contract falls subsequently to October 31st.

We read in the Tokyo papers that the special gift to be made to the people of Sado and Ikuno by way of farewell present is 70,000 yen and 50,000 yen respectively. In view of the magnitude of the investment, the number of bidders must be very small. It is presumed that they will be practically limited to the three millionaires of Tokyo, Iwasaki, Mitsui, and Furukawa, and to Messrs. Sumitomo and Fujita, in Osaka. The reason why a deposit of 10,000 yen is required to obtain the privilege of inspecting the Osaka Smelting-Works is reported to be that the several rare machines are at work there, especially the plant for smelting copper. But it is difficult to imagine that any valuable secrets exist in such operations now-a-days, and, moreover, the condition as to a deposit need not deter anyone, seeing that the money is to be handed back immediately on restoration of the permit.

POLITICAL TOPICS.

The relations between Count Matsukata and Count Okuma appear to be growing more and more intimate. On Friday morning the latter called at the former's residence and paid a visit lasting over two hours. The meeting is regarded as a sequel to the interview between the two statesmen a few months ago in Kyoto, when Baron Iwasaki was supposed to have brought them together.

The *Mainichi* has it that a Convention containing stipulations between Japan and Russia with regard to the integrity of Korea, was concluded in St. Petersburg by Marshal Marquis Yamagata, and that it consists of 27 articles, according to some, and of only 7, according to others. Our contemporary summarizes its gist thus:—

1. That the King shall return to his own Palace.
2. That Japan and Russia shall station an equal number of troops in Korea, subject to increase, on condition of previous mutual notice.
3. That Japanese gendarmes shall guard the Seoul-Fusan telegraph line.
- 4.—That Korea shall be supported and assisted in her domestic and foreign policy, conjointly by Japan and Russia, provided always that such support or assistance shall not impair her dignity as an independent country.

We reproduce this statement for what it may be worth.

Various comments are made on a general meeting of the principal Korean refugees in Japan held at Suma, a short time ago. The *Kokumin's* version is that the meeting was primarily instigated by the pro-American, otherwise called the "English Language" faction in Korea, which is led by "Philip Jaishon" and the brothers Li, men whose idea is to make themselves masters of the situation with the assistance of America. But they lack a leader, and seem to be of opinion that they must persuade Pak Yong-ho to come back and direct the movement, for Pak and these pro-American politicians are related in several ways. It was to discuss this question that Pak Yong-ho, Prince Wi-hwa, Li Chun-yong, the ex-Home Minister, the ex-Ministers of War and of Justice, and the ex-Chief of Police met at Suma. Information has not yet been obtained as to what conclusion was reached by the meeting. There is a general conviction that Pak, while fully sensible of the dangers

attending the step, is anxious to bring about a secret understanding between Japan and America with regard to Korea, and to have the safety of his own person guaranteed by the American Minister in Seoul. It is said that the Korean politicians attending the meeting thought it advisable for Pak to take with him a man of acknowledged ability, and that the choice fell on the ex-Chief of the Police Board. An interesting feature of this affair is the apparent removal of the barriers that used to separate Pak Yong-ho from the members of the last Cabinet and also from the grandson of the Tai Wön-kun. Pak incurred the enmity of all these persons when he was in power for being won over to the Queen's side; he caused the late Kim and his colleagues to be expelled from the Cabinet, and brought about the arrest of the Tai Wön-kun's grandson. Mr. Fukuzawa is credited with having persuaded the two parties to forgive and forget their old differences in the face of grave troubles, and to take counsel together in the interests of their native country. It is even reported that Mr. Fukazawa himself was present on the occasion of the Suma assembly.

The *Mainichi's* version of this affair is entirely different. It says that the two parties are reconciled in appearance only, being secretly as antipathetic as ever. Pak's going down to Suma instead of staying in Tokyo was entirely due to a wish on his part to dissociate himself from the party of the ex-Korean Ministers, for he has become persuaded that his only chance of recovering his position is to sever all connexion with those inimical to the present Government. How that result was to be achieved by the attending conference, the *Mainichi* does not explain. It declares, however, that the motives of the other Koreans present at the meeting were equally insincere, for, so far from desiring to promote Pak's prospects, they believe that his restoration to power would be fatal to their own prospects, since they must then have to be content with a subordinate rôle. Hence, under pretext of holding a conference with Pak, they went to meet him at Suma, their real aim being to make him an object of suspicion to the Soul Government. The *Mainichi* evidently believes, or desires to be credited with believing, that nothing like effective union is possible to the large party of Korean refugees now sojourning in Japan.

INDUSTRIAL TOPICS.

Bamboo and bamboo wares constitute an important item in the miscellaneous export commerce of Japan. Bamboo for shipment abroad is grown in districts adjoining Kyoto and Osaka, and in Shikoku, and in Kyushu, the varieties differing somewhat according to localities. In Hiroshima the black and the spotted varieties grow; the former is produced in Kochi also and in many parts of Kyushu. Bamboo grown in Yamaguchi, Oita, and Ehime belongs to the cheap varieties. The cultivation of black bamboo is carried on greatly in Kochi, where a *tan* ($\frac{1}{2}$ of an acre) of bamboo yields 30 to 60 yen per year. Bamboo is exported to most countries of Europe and also to America and Australia. The bulk of the bamboo shipped from Kobe—whence nine-tenths of the total are exported—goes to England, the varieties being black, spotted, white, and so forth. To France and Germany the black and white sorts of the best quality are shipped, while long bleached angling bamboos are in demand for New York.

A report from Sasaka, the largest sericulture centre in the northern half of Shinshu, has reached the *Nippon*. It describes the unusual hardships to which the sericulturists of Nagano *Ken* are now subject. Other districts this year are equally badly off. The output in Shinshu is so meagre that it is said the like has not been experienced these two decades. The first trouble came in the shape of a severe frost early in May, when the mulberry leaves suddenly turned black. New leaves eventually appeared and enabled the alarmed sericulturists to re-

cover their equanimity, and things went on tolerably well until the fourth stage of the worms, when disease overtook them, killing off four-fifths of their number. The produce of cocoons was thereby lessened by as much as 70 to 80 per cent. compared with an average year, and business of almost every description in Nagano, Uyeda, and so forth has been seriously affected, from bankers down to *jinrikisha*-men and restaurant girls. The foregoing description applies to the northern half of Shinano, and a few short notes are given in conclusion that have special reference to Susaka. In that town about 3,600 reeling pans worked by machinery are set up, distributed among 80 factories. Owing to the high market price of cocoons, the reeling season, which usually commences in the latter part of June, was postponed to the beginning of the current month. The market, however, shows no sign of going downward, the ruling price at present being 3½ yen per *kwamme* for best, though the quality is far below the usual standard. The cocoons purchased by the respective factories do not exceed ½ to ¾ of an ordinary year. Under the circumstances, 10 factories have decided to suspend operations altogether, another 10 are still irresolute, while those opened have reduced the number of pans and operatives by one half. Hope now is centered on the summer and autumn reelings, but even should a satisfactory result be obtained, it is questionable whether the market price of cocoons will fall to the usual level. Altogether, the year must prove one of extraordinary distress to the people of Nagano Ken.

CURRENT TOPICS.

We read in the *Yiji* that illiteracy among Japanese recruits is as follows:—

Percentage of literate and illiterate persons among Japanese recruits			
	1891.	1892.	1893.
Graduates of the higher common schools...	4.10	4.67	6.86
Men possessing the qualifications of graduates as above	7.95	7.93	8.62
Graduates of primary common schools	20.63	23.35	25.40
Men possessing the qualifications of graduates as above	17.89	17.82	19.65
Men that could read and calculate a little	34.14	32.81	33.96
Men that could neither read nor calculate	26.61	24.09	25.59
	100.00	100.00	100.00

The rate of illiteracy shows a marked diminution, namely from 26.61 in 1891 to 15.52 in 1893; but still, compared with Germany, where the ratio among recruits was only 0.22 in 1894, the difference is significant.

The people of Iwate are reported to be highly dissatisfied with the small outlay that the Home Office has made for the relief of the sufferers by the recent calamity. The amount that the Governor of that Prefecture originally intended to obtain from the Central Government was 900,000 yen, but owing to urgent representations on the part of members of the Local Assembly and other leading men of the district, it was increased to 1,000,000 yen. The Government, however, declined to sanction the application of the Governor, on the ground that any outlay over and above the limit of the Second Reserve Fund would be illegal. The result is that the sum was cut down to 375,600 yen approximately. Naturally, the people of the Prefecture are much incensed against the Home Office and the Governor. The first meeting of an extraordinary session of the Local Assembly to deal with affairs relating to the seismic calamity commenced on the 15th inst., and a stormy debate is expected to occur in the course of the proceedings.

The arable land devastated by the Wave is estimated not to exceed 500 *cho* (1,250 acres) throughout the Prefecture, and being, moreover, dry fields, not wet, the land-tax receipts of the Treasury will be affected only very slightly.

Japanese cement manufacturers have been taken by surprise. An Imperial Ordinance has been issued authorizing the War Department to dispense with the ordinary processes provided in the Law of Finance, when purchasing cement for the construction of military water-works at Hiroshima. The cement manufacturers, abusing the advantage that their limited

number gives them, have hitherto formed a ring, and have extorted a price fully 10 per cent. above ordinary market rates. Hence the special powers now delegated to the War Office. The measure has well answered its purpose: already prices have been reduced to their proper level.

The Nippon Yusen Kaisha advertise the opening of a new foreign service, to Seattle in Oregon, the terminus of the Great Northern Railway. The *Mike Maru* is to make the first voyage. She will start from Kobe on the 1st proximo and from Yokohama on the 5th, reaching her destination *via* Hawaii. Mr. Iwanaga, a Director, and Mr. Masnjima, a consulting lawyer, of the Company, are now in St. Paul, Minnesota, concluding a contract with Mr. Hill, President of the Railway. The contract is expected to be signed and exchanged in a day or two.

The *Shogyo* learns that the Authorities have decided to appropriate 2½ million yen by way of bounty for the encouragement of navigation in the Budget for the coming fiscal year. The total bounty to be given during the 30th fiscal year, according to the present law, amounts to more than 7 million yen, if the various projects contemplated of the Nippon Yusen Kaisha and other companies be carried out. Such a sum seeming disproportionate to the resources at the disposal of the Treasury, the authorities are thinking, it is said, of imposing some restrictions on the method of granting bounties.

The Osaka Shosen Kaisha has submitted a written programme for a service of steamers to Formosa, compiled at the instance of the Governor-General's Office. The principal points in the programme are that steamers of at least 2,000 tons displacement shall ply between Kobe and Kelung thrice a month; that the number of services along the coast of Formosa shall be increased to six a month; and, lastly, that steamers of at least 4,200 tons displacement shall ply between Tamsui, Amoy, Swatow, and Hongkong three times a month. A special subsidy from the Government is thought necessary for the service to China and to Formosan harbours in the vicinity of the savage districts.

MR. YAMADA TAIZO ON FORMOSA.

Mr. Yamada Taizo, M.P., who is identified with the Liberal Party, accompanied their Excellencies the Premier and the Minister of the Navy on their tour through Formosa. He has submitted a report to his Party on the result of his inspection:—

EXISTING CONDITION OF ADMINISTRATION:— Nothing can yet be said about the existing administration in Formosa beyond the undisputed fact that it has fallen into the hands of Japan. It is true that the new system came into force from April 18th, but it exists merely on paper, and its practical effects can not yet be judged. Matters regarding camphor, opium, sugar, indigo, and so forth have yet to be investigated. In short, a publicist who goes to Formosa with the avowed purpose of observing the administrative condition of the new dependency, is destined to meet with utter disappointment.

FORMOSA A NON-TAXED COUNTRY:—In March last a notification was issued over the signature of Admiral Count Kabayama, then Governor-General of Formosa, that all taxes and duties hitherto imposed having been irregular in nature as well as questionable in regard to the mode of collection, would be abolished, and that the taxes and duties to take their place would be scheduled and duly enacted. These matters still being in the investigation stage, the Formosan people are at present entirely exempted from payment of any tax.

MONOPOLY OF INDIGO ABOLISHED:—The Government Indigo-Monopoly was abolished on July 30th, 1895. The monopoly having been maintained for several centuries, the natives are said not to be particularly gratified at the liberal step taken by their new masters; they have been accustomed to the unjust methods for so long.

OLD LAND TAX:—The land-tax was levied at the rate of 24 taels 4.68 mace per plot of the 1st class, corresponding to a little over 9.1 *tan* in Japanese measure; 20 taels 4.1 mace for 2nd class land, and 10 taels for 3rd class land. There was another kind of inferior taxable land that was taxed at a rate not exceeding 10 *sen* per plot. The land rates were of two different descriptions, one at the rate of 10 per cent. the other at 15 per cent. of the land-tax. In Taipei, Kelung, Tamsui, and the adjacent districts the assessment on land aggregated, in Japanese currency, between 270,000 and 280,000 yen, that of Tainan and its vicinity was nearly equal. Consequently, it will not be much beyond the mark to say that the revenue from the land-tax was about 800,000 yen a year.

CAMPOR AND OTHER PRODUCTS:—Researches into the produce of the important staples of Formosa are not yet complete, but it is generally believed by officials or business men concerned in their manufacture or sale, that the yearly output of camphor must lie between three and four million yen, that of tea being about three millions, and that of sugar about four millions. The export duties on sugar at the Taku customs are said to amount to about 280,000 yen. This sugar mostly goes to Hongkong where it is refined and then shipped abroad. Competition with the Hongkong sugar refineries will, it is considered, be very difficult. In Formosa there are three refineries, but their aggregate output does not generally amount to more than 300,000 yen a year. The extent of the indigo crop is yet unascertained, while the crop of hemp is believed to amount to about 1,000,000 yen. Gold dust is found not far from Kelung, the price per 14 to 15 grains ranging between 2 and 20 taels. The annual yield is estimated at between one and two million yen. Coal is considered to be abundant and its extraction easy, the inferiority of its quality being the greatest drawback.

THE SAVAGE BORDER AND HAKKAS:—The distinction between places inhabited by savages and Chinese can be noticed at once. The savage villages are embowered in trees, while the Chinese towns are entirely destitute of trees or verdure. The so-called Hakkas, who so often disturb the tranquillity of Formosa, are of two species, namely, the true Hakka, and the remnants of Chinese troops and banditti. The Authorities are devising measures to extirpate them altogether within two or three years.

COMMUNICATIONS:—The only facility of communication on land at present is by railway service between Kelung and Taipei, a train being run twice a day. However, the enjoyment of this facility was previously denied to the public at large, and it was only from the 25th ult. that ordinary folks were allowed to participate in the conveniences afforded by the line. The telegraph is confined to the transmission of official messages, and as messages for Japan have to go *via* Hongkong, the charges are very high. The work of laying a submarine cable between Formosa and Kyushu is now going on, and should be completed within the year, provided no untoward accident happens. Postal services and steam services are extremely defective, subjecting the Japanese in the interior to considerable disadvantage. These causes tend to push up the market price of commodities to an abnormal figures.

CHINESE IN FORMOSA:—The sentiment entertained by the Chinese living in the island toward their new masters is not uniform. The lower classes who are already naturalized have, it is needless to say, no desire to leave the island, but ordinary labourers do not seem to have any fixed idea on the matter. They are merely intent upon laying by as much money as possible till the period arrives when they are to decide whether they shall become Japanese or leave the island and continue as Chinese subjects. They evidently think that it will be time enough then to make a decision. Of the merchants, those of means and position seem inclined to become Japanese subjects, while poorer men have no such disposition. The aborigines are said to be entirely convinced of the invincible strength of the Japanese troops. In short, taken as a whole, the inhabitants of Formosa

are overjoyed at the present non-imposition of taxes and also at the upright and fair manners of the Japanese officials.

JAPANESE AND CHINESE MERCHANTS IN FORMOSA:—The Japanese merchants now carrying on business in the new dominion are inferior in every respect. They are deficient in foresight, being merely intent on realizing as much profit as possible in the shortest limit of time. Then they intend to return to Japan. They are constantly being undersold by the Chinese.

A PEEP INTO THE ADMINISTRATION OF THE ISLAND:—At present, laws and regulations issued either from the Central Office or Local Offices, are first sent to the Headman of each village, who in turn brings them to the notice of the people living in his jurisdiction. This method is far from perfect in working, and consequently not a small portion of the people remain ignorant of enactments issued by the Authorities. A great difficulty will therefore be experienced when taxes are imposed, a step the Authorities intend to take within the present fiscal year.

THE OPIUM QUESTION:—Mr. Yamada entertains strong doubts as to the practicability of subjecting over 100,000 opium smokers to medical examination, which opinion he bases on his own observation of the state of affairs in the island. We may note in this context that a certain vernacular paper writes that the Government's original idea on the subject has undergone a change and that it is contemplating enforcing a strict prohibition policy. A recent utterance of the *Nichi Nichi* on the subject also seems to indicate a coming change.

COMPLAINTS OF OFFICIALS:—The unusually high prices of commodities in Formosa are evoking loud complaints from the officials in the service of the Governor-General's office. Wherever he went, writes Mr. Yamada, complaints came to his ears, and he fears that this mood may affect the efficiency of the service.

THE NEW GOVERNOR-GENERAL'S POLICY:—The following are said to be the main points of the new Governor-General's policy:—To facilitate communications; to Japonicize the Chinese in the island; to strengthen the military defences; to construct roads between the various towns of importance; to develop and encourage existing industries.

Mr. Yamada writes, in conclusion, of the non-efficacy of ordinary umbrellas for the purpose of shelter from the sun in Formosa, and also of an instruction of the Governments forbidding Japanese women to walk abroad without their *obi*. There are already over 2,000 prostitutes in Formosa, most of whom come from Kyushiu.

THE ORIGIN OF THE FORMOSAN INSURRECTION.

We translate the following from the *Nichi Nichi Shimbun* of the 22nd instant:—

With reference to the outbreak of the insurrection in Formosa some reckless fables have been published by the *Japan Gazette*. We are aware that they deserve no attention, but almost an identical account has appeared in the *Hong-kong Daily Press*. The assertions advanced are, that our military men and civil officials behave with great cruelty and that the administration of Formosa is a failure. The ventilators of these calumnies have, of course, their own reason for what they do. We, however, have received what we believe to be a true account of the origin of the insurrection, and we proceed to re-produce it.

"About 7½ miles from Ten-liu, in the Tai-chung district, there is a mountain called Shan-ping-tung. Behind it stand ranges of high mountains. For many years past this region has been the resort of lawless folk, whom the Chinese authorities, unable to reduce to order, were wont to leave unmolested, while the well-to-do inhabitants of the district made a habit of providing for the security of their lives and properties by paying toll to the bandits. The insurgents on the present occasion are not men who, from having once been peaceful law-abiding people, have turned

rebels. They are the bandits that for a long time past have lain concealed in the mountain fastnesses about Yuen-lin, wielding considerable power. In the spring of this year, our troops, garrisoning the district, set themselves to clear away these Yuen-lin bandits, but the latter had such a thorough knowledge of the natural advantages offered by the ravines and forests of the locality, that little impression could be produced upon them, and they were left alone. As is generally the case with semi-barbarous people, the immunity these bandits enjoyed inspired them with a feeling of contempt for our military force, and they began to make raids upon the hamlets and farms in the vicinity. Thus, on the 12th of June, they visited a Japanese wine-shop, not more than 150 yards from a police station and behaved with great violence, after which they fired several shots and then retired to their hiding-places. On the 14th an attempt was made by a detachment of our troops to dislodge them from Shan-ping-tung, but in the result our men found themselves surrounded by the bandits. A movement made against them in greater force on the 21st of June ended in their disappearance and the burning of their place of residence. A week later (28th of June), a body of them, numbering some 300, armed with rifles, attacked the gendarme station at Liu-pa-pu, and then proceeded to assault Tsi-tsi-chie and Yuen-lin. Thus, briefly speaking, the origin of the insurrection is that these men, bandits by profession, grew presumptuous on account of their too lenient treatment at our hands, and proceeded to lawless acts that ended in open rebellion."

COUNT OKUMA ON CURRENT AFFAIRS.

The "Sage of Waseda" continues to supply "copy" to some of the Tokyo papers. His most recent utterances deal with the journey of the ex-Foreign Minister to Hawaii, the visit of the Premier to Amoy, the relative excellence of Oiso and Suma, and other non-political subjects. The Count views Count Mutsu's journey in the light thrown upon it by the *Kokumin*, a fact that shows the *Kokumin* to be in the confidence of the Count. He is positive that the journey of the ex-Foreign Minister to Hawaii has a political meaning. It is a curious phenomenon, but none the less real, that the two first class Powers of the world, Russia and the United States, irrespective of the difference in their systems of Government, continue to maintain relations of most cordial intimacy. The case is entirely different between Japan and Russia, and on many points the two can not proceed smoothly together. But both the Government and the people of Japan unite in declaring against any entanglement with Russia. Count Mutsu's journey, on the alleged plea of recruiting his health, is an outcome of the universal sentiment of the nation. His real business is to soften the feelings of Russia toward Japan through the intercession of America, and to facilitate the consummation of the proposed understanding between Russia and Japan with respect to Korea. This is apparent to any one with sufficient discernment to view things a little below the surface. As to the Premier's visit to Amoy, the affair possesses no deep meaning at all. It was simply to ingratiate himself with the subordinate officials who accompanied him, enabling them to obtain a larger allowance for travelling expenses, Amoy being a port under the control of a foreign country. Nor was his visit to Formosa for any other purpose than that of comfortably viewing the new dominion. We do not believe that Count Okuma has expressed any such crude opinions.

The visit of H.I.H. the Crown Prince to Nikko has been postponed indefinitely.

The University of Kyoto, shortly to be built has no connection with the Imperial University Tokyo. There are six colleges in the Tokyo University, but the Kyoto will be confined to three, Law, Engineering, and Medicine.

MR. FUKUZAWA ON THE POSITION OF THE JAPANESE WOMAN.

One of the "Hundred Essays of the Aged Fukuzawa" discusses the position of women in Japan. Mr. Fukuzawa is desirous of reverting once more to this familiar topic of discussion, seeing that a certain section of the public, especially outsiders, in treating of the position of Japanese women, are prone to ignore one factor. They overlook the fact that, while apparently powerless and servile, women wield, in some respects, a most powerful influence. Leaving aside the cases of henpecked husbands, for such are not so numerous in Japan as elsewhere, the influence of a mother over her children is almost unlimited, and a son grown into manhood is obliged to obey her behests, lest disobedience call down upon him the odium of being an undutiful child. A father's influence in this respect can not be compared with that of a mother. Even before a couple are blessed with offspring, the servility of the wife toward her husband is in many cases merely superficial, for in reality she frequently holds the sovereignty of the house in her own hands. For instance, when a merchant is about to transact business with a new house, the character of the mistress of the latter constitutes one of the most important conditions for securing the confidence of the former. When the mistress is reputed to be trustworthy, then the merchant will be ready to advance money or goods. Again, when tastes as to diet and raiment differ between husband and wife in consequence of their having been born and brought up in separate places, the taste of the wife generally prevails. All these things and many others of a like kind may be adduced as proofs that, though apparently subordinate to men, the real position of women is greatly different from what superficial observers suppose. According to circumstances, Japanese women wield even greater influence than their Western sisters. It follows that writers who attempt to uphold the cause of women, should duly pay attention to these points and, ceasing to wrangle about the relative influence of the two sexes, should rather strive to improve the outward appearance of the relationship between women and men. They should, for instance, endeavour to induce men to moderate their public treatment of women, taking care at the same time to preserve the characteristic refinement and modesty of Japanese women, and should make the stern sex descend a little from its apparently lofty pedestal, so that the two sexes may assume an appearance of equality not in excess of what is becoming. Let the husband be careful in his language and demeanour towards his wife, and let him when mentioning his wife's name, either orally or in letters, attach an honorary prefix. Then, without in any way affecting the importance of the husband, an ennobling and refining influence will be imparted into the domestic atmosphere, and vulgar traits will be eliminated altogether. In short, the question of women's influence in Japan being mostly confined to external affairs, it would not be difficult to achieve the desired result.

Commenting on the above, the *Woman's Magazine* says that Mr. Fukuzawa's arguments in regard to women's position and female education are not particularly new. They are simply an exposition of plain, matter-of-fact ideas compiled with his usual vigorous common sense. Yet it is these common-sense opinions that are most useful in elevating the status of women and in promoting female education. Theories and arguments that transcend common sense and sound strange to ordinary people are positively injurious. Consequently, the editor of the *Woman's Magazine* values the arguments set forth by Mr. Fukuzawa because of the sound basis of common sense that they rest upon. They will the more naturally appeal to the common-sense of the people. He earnestly hopes that the time will come when Japanese fathers and brothers, unconsciously obeyed modern usages and a better creed, will be led to look more carefully after the education of their daughters and sisters.

COUNT OKUMA IN THE "FAR EAST."

Count Okuma has contributed a short essay to the *Far East* on "The Current Political Questions in America." The essay was written in Japanese, and has been translated, apparently with great skill, by the new magazine. Here is what the distinguished statesman has to say about the protection policy adopted by the Republicans:—

They say that the wages for labour in Japan are exceedingly cheap and have no parallel in the world; that, should the goods manufactured by this exceedingly cheap labour find their way into market in the United States in increasingly great quantities, the high-priced goods manufactured there by the expensive labour of Americans would before long cease to be marketable. It is indeed true that our labour is cheap compared with that of Western countries, especially that of the United States. But it should be remembered that it is not much over thirty years that Japan has been opened to the world: and as to our industries it is hardly a decade since they began to be more or less modernized. But there has been, meanwhile, a notable advance in wages: the wages for labour to-day are incomparably higher than the wages of twenty, or even five, years ago. At this rate of increase it is not hard to see the future in Japan. We are a progressive race. Our industries, manufacturing, and other arts, have made long and rapid strides. We are trying to develop them by making use of machinery and other agencies of the present day civilization. Labour here will soon become without doubt as costly as that in the West, if not more costly. But some Americans seem to be at a loss what to do with their industries—those Americans who are but superficially informed as to our present, or rather our recent past, rate of wages. Even suppose for the sake of argument that the Japanese goods produced by the present comparatively cheap labour should continue to find their way into the American market. When examined minutely they amount now to only about \$23,700,000 (gold) worth, while her whole import amounts to \$732,000,000 worth—the Japanese goods forming a mere thirtieth part of the whole. Besides, this thirtieth part is made up almost altogether of raw materials by the use of which the American manufacturers make large profits. When we take these facts into consideration we see no reason for the alarm which some of the American politicians are feeling or trying to make their countrymen feel. If there are any goods that injure American industries they are English, German, and French goods and not Japanese. We are greatly surprised to see Americans take Japan for their industrial competitor. It is further argued that the trade between the United States and Japan is one-sided; that Japan merely sells her goods into America, while she buys hardly anything more than kerosene oil and raw cotton: and that American gold and silver therefore go out to Japan never to return. It is certainly true that Japan exports her goods into America to the extent of thirty-two million dollars' worth, while the American goods she imports amounts only to four millions and a half of dollars. But America is merely reaping the fruit of what she sows. It is but the natural consequence of her political policy. The American goods are comparatively dear because of her high protective tariffs: they are so dear that with the exception of rock oil and one or two other articles, it would not pay us to import them. They are, indeed, meant for home consumption and not for export, for so long as they are protected it would be impossible for them to find a market beyond the borders of the United States of America. Should they by any possibility become unprotected and cheap, the Japanese would be only too glad to import them because of easy and inexpensive transportation. But on account of their costliness we are obliged to return the gold and silver to America indirectly through Englishmen, Frenchmen, Germans. This is no more than the present state of affairs. What would be the consequence should the United States take further measures to "protect," as they say, their own industries, especially against new Japanese industries, it is too deplorable to imagine. She will buy as before, but will not be able to sell: gold and silver will continue to go out of her borders and not come in. It is evident, then, that some of the American politicians not only mistake their country's true rival, but also err in their policy of developing American industries. The world's movement is not to be easily altered by the actions of a solitary nation—still less by the actions of a single handed political school or party. The Japanese industries will surely develop up to the limit of their capacity, whatever be the measures they are met

with in other lands. But for the Americans to try to help their industrial development by the artificial policy of making their goods so dear as to be unfit for exportation, is, it seems to me, not to read the signs of the times.

We find it impossible to agree wholly with the Count's dictum in the matter of wages. Undoubtedly wages in Japan have undergone a marked increase during the *Meiji* era, but that "labour here will soon become as costly as that in the West, if not more costly," we can not agree. The whole manner of life in Japan must be changed before any such result is attained. How long a period is to be assigned for that change? How many years must we wait before a factory hand, content to live on four or five *yen* worth of rice, fish, and vegetables monthly, demands a *yen* for his day's work?

JAPANESE TORPEDO CORPS.

The *Yomiuri Shimbun*, which has been busying itself of late to obtain information with reference to military and naval development in Japan, writes that the number of Torpedo Corps hitherto in existence is four, namely, one for Yokosuka, one for Sasebo, one for Kure, and one for Takeshiki. It is now on the *tapis* that two or three additional corps should be organized, but their districts have not yet been fixed. In the matter of torpedoes, attention has been paid chiefly to the eastern coast of the empire, and especially to the south-western. From a defensive point of view that choice is doubtless correct, but it is thought probable that the importance of fortifying the northern coasts will now be taken into consideration, and that the new corps will be stationed in accordance with that programme.

THAT ARMY OF A HUNDRED THOUSAND.

"We do not say that there are exactly 100,000 troops available at the first call nor that they are all in Vladivostok; but there are within a few thousands of this total, well equipped and within easy reach of the port." Such is the dictum of one of the local English journals that have, for a long while past, credited Russia with having collected an army of 100,000 men at Vladivostok. This particular authority, it will be observed, now begins to weaken. He leaves himself, in the first place, a margin of "a few thousand." Then he shuffles a little farther out of the dilemma by saying that the hundred thousand—minus a few thousands—are "not all available at the first call," nor are they all in Vladivostok. But they are "within easy reach of the port." Where, then, are they, and how are they maintained? Distributed throughout the Vladivostok section of Eastern Siberia, will doubtless be the answer to the first question, but as to the second, the means of maintaining 100,000 men, we do not quite see what reply can be given. If Russia had a hundred thousand troops within easy reach of Vladivostok, she would be obliged to devote the services of a fleet to keep them supplied. When Mr. Henry Norman visited Vladivostok there were about 2,600 men there. He noted, however, that 30,000 could probably be concentrated at the place in a short time. From 30,000 to 100,000 is an immense leap. Whence have the men come? Whenever news is circulated that five hundred or a thousand Russian troops have passed Nagasaki *en route* for Vladivostok, it is immediately assumed that so many men have been actually added to the military force in the Far East, and no one seems to take notice of the fact that many other time-expired men must be carried away from Vladivostok. British transports are perpetually conveying troops to and from India, but who would be so silly as to place all the outward drafts in the category of re-inforcements? We entertain very little doubt that Russia has considerably increased her forces in and about Vladivostok since the summer of 1894. Had she not done so, she would have been acting in an extremely fatuous and short-sighted

manner. Probably she could now march an army of 25,000 or 30,000 men across the Tumen, without leaving Vladivostok unprotected. But when folks talk of a hundred thousand, it is plain that they have very little conception of military matters. Of course we shall be accused, as indeed we have already been accused, of sneering at Russia's preparations and capacities. We do nothing of the kind. Our opinion of Russia's potentialities and of her recent efforts to augment them is free from any particle of contempt or depreciation. We merely prefer reasonable reflections to thoughtless exaggerations. In 1894, we laughed at the idea of Russia's detaching a number of ships from her "Mediterranean Fleet," for service in the Far East. Our amusement was limited to the fancy that Russia possessed, at that time, in the Mediterranean, any naval force upon which such drafts could be made. Of course we were charged with ridiculing her capacity altogether, just as now we are credited with denying *in toto* her military strength in Vladivostok. There is no *via media* for some writers.

THE WAR-COMMEMORATION POSTAGE STAMPS.

The *Official Gazette* publishes specimens of the postage stamps to be issued in commemoration of the war. It will probably be found strange, but no one acquainted with the Japanese will hesitate to call it characteristic, that these stamps, instead of bearing any legend or device suggestive of the *successes* achieved by Japan, remind the public of her *greatest losses* only, the deaths of their Imperial Highnesses Princes Arisugawa and Kitashirakawa. We do not think that had an artist in the West been invited to design a stamp commemorative of his country's brilliant victories, he would for one instant have conceived the notion of limiting himself to a portrait of the most illustrious among his compatriots that perished in the war. Yet, when we have said that about the new Japanese stamps, we have said everything. There are four stamps—all intended for postal cards—two red and two bluish gray; the former, two-*sen* stamps, the latter, five-*sen*. The likenesses, which are excellent, show the head and neck, so that the Grand Cordon of the Chrysanthemum and a portion of the uniform are seen. These portraits are enclosed in circular bands, or frames, within which are inscribed "Imperial Japanese Post," in Roman characters, below; and *Dai Nippon Teikoku Fubin*, in ideographs, above; the legends being divided by chrysanthemum scrolls in the case of the five-*sen* stamp, and by the numeral "2" in the case of the two-*sen*. Above the circular band in the five-*sen* stamp is a sixteen-petalled chrysanthemum, flanked by the ideographs *go sen*; below, the same chrysanthemum is repeated and is flanked by the numeral "5" and the abbreviation "Sn." The field of this stamp is wood-grained, notches are cut on each side near the corners, and the edges are bevelled, so that the stamp seems to be in relief. In the case of the two-*sen* stamp, a sixteen-petalled chrysanthemum interrupts the circular band, above; the ideographs *ni-sen* support the band below, and the corners are filled with scrolls of the seven-leaved Paulownia. The edge is bevelled as in the five-*sen* stamp. Of the two-*sen* stamp, five millions are to be issued; of the five-*sen*, two millions. The designing is chaste and artistic, and the technique is undoubtedly excellent. We may add that these new post-cards will be issued from the 1st proximo. For collectors the chief interest in these stamps will centre upon the specimens issued by the *Official Gazette*. These are marked "*mi-hon*" (specimen) and can be detached from the sheet. The number printed will not exceed the circulation of the *Official Gazette*, so that they should ultimately be in great demand. They are really beautiful stamps, and in conjunction with their predecessors, the *Ginkon-shiki* stamp, they do great credit to Japanese designers and artisans.

THE SUN & THE SOLAR ECLIPSE OF AUGUST 9TH.

The spectacle is one of which, though the man of science may practically state the facts, perhaps only the poet can render the impression.—LANGLEY.

IT is a truism in astronomy that it is easy to see what one knows to exist. The planet Neptune was seen and its position measured on two nights by LALANDE, but as the observations did not agree, on the assumption that the planet was a fixed star, the second observation was laid aside as erroneous. Though the planet had thus been seen it was not observed until fifty years later, when, in 1846, ADAMS and LEVERRIER, by mathematical research, had discovered its position. Then it was easy to see that it had a disc such as no fixed star could have, but this was not observed until it had been demonstrated by much abstruse mathematical labour.

In 1877, with the 26-inch refractor in Washington, HALL discovered Deimos and Phobos, the minute attendants of Mars, but they have since been seen with much smaller telescopes and by much less skilled observers. The same is true of the fifth satellite of Jupiter, discovered by BARNARD at the Lick Observatory in September, 1892. It needed the great power of the 36-inch refractor and most skilful observation to discover the satellite, but it may be now seen with less favourable equipment, aided by the knowledge of where and how to look that encourages patient, painstaking observation. Nor does this truth hold good in astronomy only. At the University of Pennsylvania recently, the negative of a ROENTGEN shadow picture was recovered. It had been taken in 1890, but it was cast aside as a curious failure by Professor GOODSPEED, who now has to say, "We can claim no merit for the discovery—for no discovery was made." From every-day life numerous illustrations of this truth might be drawn. This well-known tendency casts no doubt on the reality of the observations; it simply shows that stimulus to careful observation is needed. It shows how the teaching of the great ethical philosopher, CHRIST, penetrates to the root of all knowledge:—"Take heed therefore how ye hear, for whosoever hath to him shall be given."

Now all this applies directly to the matter of solar eclipses. The red clouds and flames that form a beautiful and striking feature of the eclipsed sun were so little noticed before 1842 that they were considered as a new discovery, and they might well even now be missed by one ignorant of their existence. Prof. YOUNG, in his book on "The Sun," says:—"A total eclipse of the sun is unquestionably one of the most impressive of all natural phenomena." Many may have in Japan this year the opportunity of a life-time: what shall they see, and how shall they see it? It would be better to say, "what *will* they see?" For the amount of instruction

given will depend upon the amount of knowledge possessed.

Before speaking of the constitution of the sun, and the phenomena of the eclipse, a few words may be said about the occurrence of eclipses. The moon must pass at least twice each year between the sun and the earth. If at that time the moon is near the earth, the cone of shadow will reach the surface of our globe, and there will be a total eclipse. If the moon happens to be at a distant point of its orbit, the apex of the cone falls short of the earth and there is an annular eclipse. The belt of shadow cast on the earth may be over 250 miles in width and the eclipse may last for nearly eight minutes, but such favourable conjunctions are rare, and about three minutes is the average duration. Total eclipses favourable for observation occur on an average only about once in two years. An eclipse was visible in Japan in 1887, but after this year another will not be visible for more than forty years.

Passing on to the consideration of the sun itself, we see at the time of an eclipse that it consists of three fairly well defined parts. The glowing white globe, which is the sun as ordinarily seen, is called the photosphere, the globe of light. Next above this is the chromosphere, the globe of colour, and the associated prominences, the red clouds and flames seen in an eclipse. Beyond this is the corona, the crown of white light, the most remarkable feature in an eclipse, seen to extend in irregular outlines to distances greater than the diameter of the sun. In estimating distances this diameter is a convenient measure, for miles are far too short for such vast spaces. The diameter of the sun is about 32' of arc, or about 853,000 miles. The moon's mean distance from the earth is 239,000 miles: were this distance nearly doubled and the space from the centre of the earth to the moon's orbit filled in, that globe would be equal in size to the sun. Using this measure, the depth of the chromosphere is only some 12", or about 1/150 of the sun's diameter. The prominences are of heights up to 13' of an arc, but generally the heights are less than one-tenth of the sun's diameter. It is not necessary to speak further of the central photosphere. It can be seen at any time, and the eclipse helps only indirectly in solving the many problems connected with the nature of its spots and its eruptions. The chromosphere was not closely observed until 1842 during the eclipse visible in Southern Europe. The prominences were unusually brilliant and caused much discussion. Some doubted their connection with the sun, others considered the whole sight an optical illusion, and it was not until so late as 1860 that the chromosphere and its prominences were given a place as a part of the sun. Photography was at that time first employed with success in an eclipse, and its application left no doubt as to the real connection between the

chromosphere and the sun. But no one supposed at that time that we should be able to reach out to determine of what this far away sphere was composed. The spectroscope, invented a few years before, enabled astronomers during the eclipse visible in India in 1868, to determine that the chromosphere consisted chiefly of hydrogen. All the observers made the mistake of identifying a yellow line in the spectrum with sodium. This mistake could not have been corrected until the next year, and other errors might have followed in its train; but happily at this time LOCKYER and JANSSEN discovered independently that the chromosphere could be observed without an eclipse. JANSSEN, in India, the day after the eclipse, observed the chromosphere and corrected the mistake made the previous day. It was soon certain that the yellow line was caused by an unknown substance, to which the name of helium was given because it was supposed to exist in the sun only. Not until last year was its presence in a terrestrial substance discovered. Since that time the astronomer has been free during the golden seconds of an eclipse to devote his attention to other problems. In appearance the prominences are like jets, horns, or trees of flame, or like red clouds detached from the sun. They rise sometimes with a speed of 250 miles a second, proving an energy of eruption very far beyond that with which we are otherwise acquainted. Hurricanes on this little world of ours travel at a speed of 100 miles an hour. These hurricanes of fiery vapour on the sun move sometimes with a velocity of a million miles an hour. Such a hurricane would sweep from the north pole to the south pole in 48 seconds, tearing off and carrying with it the whole surface of the globe in a mass of glowing vapour. It was difficult to conceive that a body mainly gaseous, as the sun probably is, should be able to confine the gases previous to such a violent eruption. The number of prominences seems to vary in general with the number of sun spots. This year is about half way between the maximum and minimum years, so there will be probably no special display. The corona has, of course, been in all eclipses, but it was not until so late as 1869 that it was definitely declared that it was a real phenomenon of the sun, and not a display caused by our own atmosphere: so slowly has our knowledge of the sun advanced. The observation of its spectrum containing the line of an unknown substance showed clearly that the corona had an independent and real existence. The appearance of the corona has been described in various ways. YOUNG describes it thus: "The moon appears of almost inky darkness, with just sufficient illumination at the edge of the disc to bring out its rotundity in a striking manner. It looks not like a flat screen, but like a huge black ball as it really is. From

behind it stream out on all sides radiant filaments, beams, and sheets of pearly light forming an irregular stellate halo, with the black globe of the moon in its apparent centre. The portion nearest the sun is of dazzling brightness, but still less brilliant than the prominences, which blaze through it like carbuncles. Usually there are several "rifts," as they have been called, like narrow beams of darkness extending from the very edge of the sun to the outer night, and much resembling the cloud-shadows which radiate from the sun before a thunder-shower. But the edges of these rifts are frequently curved, showing them to be something else than real shadows. Sometimes there are narrow, bright streamers as long as the rifts, or longer. These are often inclined, occasionally are even nearly tangential to the solar surface, and frequently are curved. Speaking roughly, the corona shows a disposition to assume the form of a quadrilateral or four-rayed star, although in almost every individual case this form is greatly modified by abnormal streamers at some point or other." The inner corona extends to a distance of about 3', or one-tenth of the sun's diameter, and there it unites in a more or less definite outline with the outer corona. The form of the outer corona is irregular and varied. Its visible extent appears to depend upon the clearness of our atmosphere at the time of observation. In the eclipse of 1878, LANGLEY had the unusual opportunity of observing from Pike's Peak at an elevation of 14,100 feet. He saw the coronal streamers extending to a distance equal to 13 or 14 diameters of the sun, and capable of reaching over one-tenth of the 93 million miles that separate the earth from the sun. The corona was there visible for four minutes after totality. It is important, therefore, to observe from as great an elevation as possible. The shape of the corona varies much from eclipse to eclipse. It would be natural to suppose that the extended form is caused by increase in solar activity. But the truth seems to be just the opposite of this, if the number of sun spots may be taken as an index of solar activity. The corona of 1878 was observed to be like that of 1867, and these were years when sun spots were at a minimum. The eclipse of 1889, at the end of the next eleven-year period, was waited for to test the truth of the theory. The corona, as observed in California on New Year's day, 1889, was of the same strongly marked type. This type of corona with the extended streamers is considered therefore to correspond to a minimum of solar activity.

It seems, then, that the activity of the chromosphere varies directly as the number of sun spots, and that the extent of the outer corona varies inversely with the number of spots. The brilliancy of the inner corona, however, seems to increase with the number of spots. This connection between the form of the sun and the

number of its spots makes a chain of coincidences that may connect the earth with the sun. Observations extending over many years show beyond dispute that the maxima and minima of sun spots occur in eleven-year periods. It is also certain that magnetic disturbances on the earth increase and decrease in the same period. These are the facts. We can speak with no such certainty about the origin of the spots, the cause of their periodicity, and the nature of their connection with terrestrial magnetism. These coincidences, unexplained though they are at present, show that no truth can be neglected as unimportant. SCHWABE, at Dessau, began about 1825 to make records of the sun spots on every clear day, and after twenty-five years of patient observation he was able to announce the law of their periodicity. He says of himself that, "like SAUL, he went to seek his father's asses and found a kingdom."

How shall we account for the presence of this luminous corona at such a vast distance of ten million miles from a body less than a million miles in diameter? Our own atmosphere becomes exceedingly rare at a height of five miles above the earth; if it reached a hundred thousand miles its extent would be comparable with that of the corona. But the corona is in no sense an atmosphere, and its real extent must not be considered as limited to that which men with weak eyes and surrounded by their own clouds have seen. We can perhaps hope for no better conditions for observation than those given to LANGLEY on the top of Pike's Peak, but we must believe that with better atmospheric conditions a still more vast corona would be seen.

A theory of electrical repulsion has been elaborated to account for the extent and other phenomena of the corona, but we doubtless need to know far more than we do of electricity here upon our own planet before such a theory can be established. The outer corona probably consists of particles shining by reflected, and by their own, light. These particles are thrown up and suspended at such vast distances by a force that we have otherwise no means of knowing. The particles do not gravitate towards the sun and do not rotate with it. The material must be in a state of excessive tenuity for comets pass through it without retardation.

Efforts have been made to do with the corona what is done so successfully with the chromosphere—to examine it without an eclipse. The efforts have not met with much encouragement, but, considering the many advances made within the last thirty years, it would be rash to say that astronomers will be unable in this particular case to control their circumstances.

We may now consider the phenomena of an eclipse with special reference to the coming obscuration. On August 9th, the sun rises eclipsed at London, which is

therefore the western limit of the path of shadow. It is then more than nine hours later in the day in Japan, and it takes the shadow about two hours to travel from London, so that, at Poronai, the eclipse begins at five minutes past three in the afternoon. By the standard time of the 135th meridian it will begin some thirty minutes earlier. Totality will last over two minutes and a half; but from the first contact of the moon with the edge of the sun until the time of complete separation may be as long as two hours, the time varying with the relative positions of the earth and the moon. The moon may be so near to the earth as to hide not only the photosphere of the sun but also a belt with a width of about $1\frac{1}{2}'$ of an arc, thus covering the chromosphere and the lower prominences. In such a case, however, totality lasts nearly eight minutes; during this eclipse, as the duration of totality is much less, the chromosphere and prominences to a height of about 25" will be covered except just before and just after totality. For some time after the beginning of the eclipse there is nothing special to see. The image of the sun coming through a small hole in a shutter, or through the spaces in thick foliage, is seen as a crescent instead of circular as usual. The partial eclipse, approaching more or less to being total, may be seen at a distance of 2,000 miles from the shadow belt. About ten minutes before totality the darkness becomes perceptible, and the remaining light is intensely white. The temperature falls, sometimes as much as six degrees, and dew may form. The air quivers and bands of light and shade appear on every white surface. Then, if the western horizon is visible, the moon's shadow is seen advancing like a heavy thunderstorm, an awe inspiring sight. Travelling at the terrific speed of from 1,000 to 5,000 miles an hour, the shadow suddenly envelops all, and the swift change gives the appearance of intense darkness. The appearance during totality is best described by an eye witness. Gen. MYER, who saw the eclipse of 1869 at an elevation of over 5,000 feet above the sea, wrote: "To the unaided eye, the eclipse presented, during the total obscuration, a vision magnificent beyond description. As a centre stood the full and intensely black disc of the moon, surrounded by the aureola of a soft bright light, through which shot out, as if from the circumference of the moon, straight, massive, silvery rays, seeming distinct and separate from each other, to a distance of two or three diameters of the solar disc; the whole spectacle showing as on a back-ground of diffused rose-coloured light." If the totality is of short duration, the light of the corona is three or four times as great as that of the full moon. In order to best see the corona from the very first, the observer should have his eyes bandaged for about ten minutes before totality, so that he can

at once see the faint light of the outer corona. This would be to sacrifice the sight of the approaching shadow, but every astronomer who *observes* the eclipse has to forego the pleasure of *looking at* it. On the horizon light from beyond the shadow appears, and in the sky the stars come out. In the coming eclipse, on the east of the sun will be Jupiter so near as perhaps to appear within the rays of the corona. Three or four times farther, toward the east is Venus, and, very little farther, Mercury. Mercury is so near the sun that it is seen at other times only in the morning or evening twilight. In 1878 two observers thought that they saw one or two planets near the sun within the orbit of Mercury, but there have been no other observations of such a planet or planets. In the eclipse of 1882 a small comet, visible to the naked eye, was seen near the sun, the first and only observation of that wandering star.

Such, prosaically enough stated, are some of the facts that will serve to deepen an impression of the vision of the eclipse. The opportunity now so near at hand is one that comes often only once in a life-time. He who can should witness this revelation of the great forces of nature and all pervading order. He should enjoy for a short moment the beauty that is for the present veiled by the great glory of the sun, and ponder, on the revelation of a glory not far from every one of us and yet hidden save in brief glimpses of the unseen. "Such knowledge is too wonderful for me; it is too high, I cannot attain unto it."

MR. MORETON FREWEN ON FREE SILVER IN AMERICA.

MR. MORETON FREWEN'S admirable essays on questions of currency and finance have deservedly won for him such a reputation that great interest attaches to his opinion of the probable effects of free silver coinage in the United States:—

Scheme, and readjust, and tinker with tariffs as you will, you cannot make a silk purse out of such a sow's ear; you cannot restore the balance of trade to the United States unless her currency legislation is such that it drags up the exchanges between Europe and Asia; whereas every further movement, in America or elsewhere, toward gold monometallism drags those exchanges down. In short, gold monometallism in the United States involves an increased competition for the industries of white men everywhere, at the hands of the yellow races of the Orient; and there is not a consular report which comes to us from the Far East but emphasises this statement. What, then, is the argument for single-handed free coinage in the United States? It is this. Either free coinage will establish bimetalism for the whole world, or, failing this, there will be such a gold premium in New York as to-day assists exporters in Russia, in all Asia, and in nine-tenths of South America. This gold premium, unlike a protective tariff, will stimulate the exports of the United States, while acting, just as a protective tariff does, to reduce imports; therefore, either free coinage will give bimetalism to the whole world, or, failing this, it will tend to secure that excess of American exports over imports which is the only possible alternative to further gold loans, leading up to ultimate insolvency.

There is this further point, that if America copies our gold standard, "confidence will be restored," and we will lend her more money; thus aggravating in the future the very disease from which she

suffers. On the other hand, if she goes to free coinage, we shall, in a panic, return her securities, and thus sell her back her railways and industrials at half-price, just at that very moment when, her legislation having sent the rupees, the tael, and the yen to nearly, or quite, par, the export trades of the Orient will be cut into, and the exports of the American farm, mine, and factory will take their place. In other words, because of the insane injunctions of a portion of the London press, our investors there will be so misled as to sell American stocks to Americans at that very moment when America prosperity is about to set in.

In the first place, then, free coinage in America would bring the Asiatic exchanges promptly to par—for the moment, at least—and, assuming that there would be panic sales of American securities held here, perhaps £40,000,000 sterling of American gold would flow into Europe. This great flood of gold would be likely to inflate prices in Europe to some extent, to thus increase the exports from the United States, and also to reduce the gold premium at Buenos Ayres and elsewhere, thus checking exports of wheat, &c., which compete with similar exports to Asia, and until gold prices here had risen, would greatly contract exports from Asia to Europe. Thus a double influence favourable to the balance of trade in the United States would be exerted. The United States would export more to England because Asia would export less, and thus America's gold, as well as her securities, would go back to her. Secondly, because England, selling more goods to Asia, the rupee, the dollar, and the yen being at par, England could then also buy more produce from the United States. Thus, while free coinage in the United States might, in the first place, tend to displace gold, there would almost simultaneously be exerted an even more powerful tendency for gold to be shipped west from Europe in order to liquidate what it seems to me must be an immense trade balance in favour of the United States. As to the absurd idea one frequently encounters, that Asia will dump silver upon the American mints and carry off gold, it is hardly necessary to examine this fallacy. It is for the objectors to show why Asia should give the metal which to her is alone money, in order to buy the other metal which is not money; and why also the white metal should be withdrawn from the hoards of the Orient at that moment when it appreciates, in order that it may be exchanged for the yellow metal, which has just depreciated almost one-half in terms of rupees.

Although we have always been in general accord with Mr. FREWEN'S bimetallic views, there are in the above extract one or two points that we fail to follow. He finds it almost unnecessary, for example, to dispute the "absurd idea," the "fallacy," that were free coinage of silver legalized in the United States, "Asia would dump her silver upon the American mints and carry off gold," and his contemptuous attitude towards that peril is dictated by the thought that the Orient would not be so foolish as to sell the metal which to her is alone money for another metal which is not money to her at all. That is somewhat misleading. The truth, as we conceive, is that the Orient would buy gold with its silver in the United States, not for the purpose of using the gold direct as money, but for the purpose of re-purchasing with it a larger stock of silver money. Under the system enunciated in the new Democratic platform, any person carrying 16 ounces of silver from the East to America could obtain for them an ounce of gold. That ounce of gold he might carry back to the East or to Europe, and there sell it for 29 ounces of silver, thus netting some eighty per cent. on the transaction, and finding every 16 yen or taels originally in his possession converted into 29 of the same monetary tokens. It is not likely that the process would continue for any length of time. With a great financial

power like America standing in the market and offering a certain gold price for all the silver brought to her, things must soon adjust themselves everywhere to the new standard. Moreover, since the American mints would not be under any obligation to buy silver with gold, and since neither banks nor private individuals would be disposed to part with the gold in their possession, the supply of the yellow metal available for these "dumping" transactions would be limited. Still, there can be no doubt that with so huge a profit in sight, a prodigious onslaught would at first be made on America's stock of gold. At the same time, speculators unable to buy gold in the States, would invest their silver in products and manufactures for exportation. An article to-day costing 29 ounces of silver would be purchasable for 16, so soon as silver became legal tender at that ratio, and thus profits not realizable by direct transactions in the two metals, might be secured, to a slightly reduced extent, by the medium of commodities. Of course, prices in the States would soon rise in the presence of such appreciating factors, but, so long as gold stood at a premium, the export trade must be stimulated and the import correspondingly depressed. Mr. FREWEN puts all this very clearly, but seems to attach undue importance to the industrial competition of the Orient. That is a minor point, however. What surprises us is that a sound exponent of bimetalism, like Mr. FREWEN, does not denounce extreme experiments such as that now contemplated by the American Democrats. It is true that the essay quoted above was written early in June, that is to say, before the Democratic platform was published. But its language leaves no room to doubt that Mr. FREWEN was then prepared to advocate a heroic attempt on the part of the United States, single-handed, to restore silver to its old place.

THE NURSERY OF LABOURERS IN JAPAN.

The latest number of the *Tokyo Economist* contains an interesting article on the future of Hiroshima Prefecture, which it declares is the nursery of labourers in Japan. The writer devotes his attention chiefly to describing the lives of the factory girls of the Kanegafuchi Spinning Mill, established on the banks of the upper reaches of the river Sumida, Tokyo. In that mill there are now 2,096 girls employed, of whom 70 to 80 per cent. come from Hiroshima, and 10 to 20 per cent. from Niigata and Miye. The girls are paid at the rate of 8 to 16 sen per diem, according to ability, but pay the company 6 sen for food and boarding a day, being lodged in a dormitory built in the compound of the Mill. They serve on a three years' contract, and receive three yen by way of out-fit expenses and a small sum for travelling. For three years they work diligently and live thriftily, so that on their return home, at the expiration of their contracts, their savings generally amount to over 100 yen. A larger number of Hiroshima girls are employed at the Osaka mills. Hiroshima has also sent more than 20,000 contract labourers to Hawaii, and a small number are living in New Caledonia, Queensland, and

Guadalope. It is said that the remittances sent through the post by Hiroshima labourers in Hawaii amounted to 594,000 yen last year. The amount of money earned by male and female labourers from Hiroshima, either at home or abroad, must accordingly reach a large figure. The *Tokyo Economist* makes some interesting observations regarding these diligent and thrifty people. The districts of Aki, Saiki, and Yamagata, in Hiroshima Prefecture, are the places where the prisoners taken by Prince Yamatodake over 17 centuries ago—when he drove out the aborigines that occupied the eastern portions of the main island of Japan—were made to settle. Descended from such ancestors, the inhabitants of Yamagata and other districts are regarded with contempt by the citizens of Hiroshima, who call them *hoito*, an Ainu word meaning beggars. The reason for the use of this epithet is that their ancestors of the people in question, having been vanquished by the newcomers, were obliged to sustain themselves by begging food and raiment from their conquerors. The miserable condition to which they were reduced gradually made them submissive and diligent in habits, traits that still distinguish the inhabitants of those particular districts.

SMART AND THE "SATURDAY."

The *fin-du-siècle* self-content of to-day's reviewers is well illustrated by a *Saturday's* notice of Christopher Smart's "Song to David." Smart wrote this grand poem when he was in a lunatic asylum, and in 1791, when the first edition of his collected works was published, the editor excluded the poet's one and only really fine production on the ground that it bore "melancholy proofs of his estrangement of mind." Hence it happened that until this year of grace 1896, the Song only once found its way into print, in the "Golden Treasury." Mr. Stott, the publisher, has now brought it out in all the technical glories of modern typography and binding. Yet, rare as are Smart's readers, and rarer still the persons familiar with "A Song to David," no thesaurus of quotations lacks these two gems:—

The crocus burnishes alive
Upon the snow-clad earth,
and
Use all thy passions! love is thine
And joy, and jealousy divine.

But what we set out to notice were the *Saturday Review's* comments, "anything more unlike the eighteenth century than the 'David' could not be imagined;" and again, "who would conjecture that lines like these were by a contemporary of Johnson?" Does not such criticism delightfully betray the smug self-satisfaction of our time? The eighteenth century, indeed! The century that gave us Collins' "Odes," Pope's "Dunciad," and the Kobinoo of English poetry, Gray's "Elegy!" Has this age of ours reached a moral and intellectual standard so much higher than that of our forefathers in the days of Smollet, Johnson, Goldsmith, Sterne, Fielding, Horace Walpole, and Gibbon? It is true that theology has ceased to be autocratic; that science has exposed new worlds to us; that philosophy has passed from ontology to positivism. But has not that growth of knowledge been accompanied by the stunting of sentiments without which humanity would be a poor affair after all? It is scarcely possible now to conceive a man of nearly seventy standing bareheaded for an hour under pouring rain in a provincial town, as Johnson did, twisting his face into expressions of penitential grief for a sin of unfilial disobedience committed fifty years previously. And remember that Windsor audience of shopkeepers and labourers that listened, evening after evening, as the village blacksmith, seated on his anvil, read aloud "Pamela;" that audience that "raised a great shout" over the happy union of the hero and heroine, and, procuring the church keys, set the parish bells ringing for joy. Are such events imaginable in this *nil-admirari* epoch, and has human nature been enriched by their disappearance from the range of sane possibilities?

FORMOSAN AFFAIRS.

A telegram from Taipei, dated 11.25 p.m. on the 17th instant, says:—"Lieut.-Colonel Imahashi, having effected a junction with Sato's two companies, is engaged attacking the headquarters of the insurgents at Ta-pin-ting, and in its neighbourhood. On the 15th instant, the two companies detached from the same corps under Major Suzuki, drove away a large body of insurgents from the San-pei-chow district. In that engagement, Captain Ishikawa and Lieut. Nakane were wounded, and the killed and wounded among non-commissioned officers and privates totalled ten. Captain Ishizuka's detachment, having been attacked by a large body of insurgents, retreated temporarily to Poh-chiang. Subsequently, on the 13th instant, he found himself surrounded there by about a thousand of the enemy, whom he is now engaged in repulsing. Hwai Yung, who led a band of natives to assist our forces in that quarter, has had many casualties. Major Matsui, having been re-inforced by a company from Lieut.-Colonel Imahashi's force, and being thus at the head of four companies of infantry and one battery of artillery, marched from Tsi-tsi-chie on the morning of the 16th instant, in the direction of Pu-li-sho. In the mountainous regions between Tsi-tsi-chie and Peh-tien, and to the eastward of Tuen-lin, Yung-tsing, and Shou-ton, bodies of a hundred or two hundred rebels are observed here and there, their apparent purpose being to combine for purposes of attack. Lieut.-Colonel Masuda's two companies are now at Chia-i, where, on the 10th instant, a force of about 400 rebels appeared at the front gate, but withdrew to the east and south the following day, in which direction, at a place called Chu-show, a little over a mile away, another force of 300 insurgents are posted. Their programme appears to be to effect a junction with the rebels that escaped from Yuen-lin, and make an attack on Chia-i."

Another telegram from Taipei, under date 9.50 p.m. on the 17th instant, says:—"The following report has been received from the Sixth Mixed Brigade:—News having come that the rebels in the vicinity of Ka-tan-sui show signs of advancing, two additional bodies have been sent thither from Feng-shan. Last night precautions were taken against a possible attack at Tai-nan, but nothing unusual occurred. The precautionary measures have not, however, been relaxed."

It is impossible to follow the above movements accurately in the absence of maps, and unfortunately no map sufficiently minute exists. Briefly speaking, the insurgents may be said to be scattered through the hilly country to the east and south of Yuen-lin, their movements in the latter direction taking them to the vicinity of Tainan, on the south-west coast. The country is extremely difficult from a military point of view. A series of hills and forests, virtually pathless and almost wholly unexplored by the Japanese, afford great advantages to the insurgents, whose direction of approach or attack is always uncertain, and whose whereabouts must generally be exceedingly perplexing to discover. The Japanese have evidently been obliged to divide their forces into a number of small bodies, acting more or less independently, but at the same time regulating their advance so as to avoid dangerous isolation. Under such circumstances, a considerable period may be required to stamp out the rebellion.

It is to be presumed that all moderate people have largely discounted the plainly exaggerated accounts of Japanese cruelties published by several of the local foreign journals. We do not ourselves believe that the Japanese have behaved immaculately. Very far from it indeed. Our information goes to show that since the second outbreak of rebellion, when such atrocities were perpetrated by the Hakka rebels, the Japanese soldiery and the military coolies have betrayed a bullying and intolerant demeanour that can not have failed to provoke the hostility of the natives. But there are three things to be remembered. The first is that at the outset the

Japanese were blamed for leniency, and it was confidently predicted by foreigners on the spot, that their toleration would be misconstrued and abused. The second is that the wildest accusations of barbarous and wholesale inhumanity were preferred against the Japanese on a previous occasion, were accepted as true by a local foreign journal, were "written up" in terms of the most ludicrous and hair-brained hyperbole, and were ultimately found to be quite baseless. The third is that even before the Japanese landed in Formosa, the great difficulties they were destined to encounter in pacifying a country where the effective use of force on a drastic scale is scarcely possible, were foretold by every writer acquainted with the circumstances. Something of those difficulties they are encountering, and to allege now that the fault lies entirely with their own maltreatment of men that have never yet been amenable to lawful authority, and were never expected to become amenable to Japanese authority until some terrible lessons had been taught them, is surely unreasonable. Finally, it should be observed that, so far as can be ascertained at present, the insurgents now in arms against the Japanese had not been previously within reach of the cruelties laid to the latter's charge. On the contrary, they seem for the most part to be remnants of Liu Yung-fu's braves and of the Hakkas associated with them, that fled to the hills after the taking of Tainan last year, and remained in hiding until the hardships of such an existence, or the receipt of some substantial encouragement from without, induced them to take the field. We note that all the accusations preferred against the Japanese on this occasion come from one source. The same writer has made his voice heard in Hongkong, in Shanghai, in Kobe, and in Yokohama. By and by the truth will be known, but it does seem harsh and unjust that judgments so hostile to the Japanese should be based on every scrap of evidence obtainable. In such matters the *Japan Gazette* remains conspicuous. It is the boss victim of hysteria in the Far East.

A lengthy report has been received from Taipei concerning the progress of the insurrection in Formosa:—

A telegram from Major Sato, despatched from Ta-pu-lin on the forenoon of the 5th instant, has at length furnished information about the state of affairs in the vicinity of Chia-i, the elucidation of which had hitherto defied all efforts. Major Sato says:—"On the 2nd instant, about 200 of the insurgents came to Ta-pu-lin, but were immediately driven back by our fire. They retired to a distance of about 2½ miles and posted themselves on our north, east, and south. On the 3rd instant, an officer's reconnoitering party was sent out eastward from Ta-pu-lin, to a distance of about 200 metres. Some 300 rebels were found in the vicinity. They opened a hot fire from the 4th instant. Captain Fumichi, with four half-companies, was sent to attack the rebels at a distance of about 2½ miles on the north and east of Ta-pu-lin. The insurgents were driven back. On the 5th instant, the Twelfth Company dispersed the insurgents gathered on the east of Ta-pu-lin, at a distance of about 2½ miles."

It is apparent from the above that Major Sato did not find himself in sufficient force to undertake an offensive campaign on any thorough scale against the rebels, and that he was obliged to be content with occasional sorties against them from Ta-pu-lin. We may mention that Ta-pu-lin is a position on the high road running from Tai-wan to Chia-i and thence to Tainan. It is 11 miles from Chia-i, which lies on its south, and 18, as the crow flies, from Yuen-lin, on the north-east, where the rebellion first broke out. This road from Tai-wan to Chia-i runs nearly parallel to the range of hills forming the western boundary of the unexplored part of Formosa, and is at a distance of only a few miles from that boundary. It is plain that the rebels had been lying concealed in the unexplored territory up to the time of the insurrection, a fact apparently inconsistent with the theory that Japanese ill-usage is responsible for the outbreak, since the people among the mountains eastward of the boundary can not have had any regular contact with the Japanese.

The report then proceeds:—

In accordance with the plan of campaign, the Third Battalion of the Eighth Regiment reached Tai-chang at 8 p.m. on the 6th instant, and the Second Battalion arrived at Miao-li simultaneously. The garrisons of these two places were then relieved, and ordered to proceed against the insurgents.

This part of the report is dealing with the movements of the re-inforcements sent from Tai-pei to assist in quelling the rebellion. Miao-li is a town of importance some 60 miles north of Yuen-lin.

The First Company was despatched to Ko-lung. Apparently the head-quarters of the insurgents were at Lin-pa-pu and in its vicinity. Several reports had reached Pu-li-sho that the rebels were advancing from Tsi-tsi-chie, and that the situation was critical, and that signs of a march against Lo-chiang and Chang-hwa (places due west of Tai-wan, on the road leading from that town to the coast-wise route running north and south), but these rumours did not prove true, nor were any insurgents assembled in these districts. Nevertheless, intelligence came to hand that about a thousand rebels collected at Yuen-lin were about to move against Chang-hwa. A junction having been effected at Nan-tow between the forces of Lieut-Colonel Imahashi and Major Matsui, the rebels in that vicinity were completely dispersed.

On the 6th instant, the Miao-li garrison that had returned to Taiwan, and the greater part of the Suzuta Battalion arrived at Tai-nan, and the programme of the Commandant of the Second Brigade, for the distribution of forces was thus complete.

The Commandant of the Second Brigade, having re-inforced Lieut-Colonel Imahashi with two battalions of infantry, a battery of artillery, a squadron of ten troopers, half a company of engineers and a special sanitary corps, directed him to march through Chang-hwa with the object of effecting a junction with the forces on the south (i.e. the forces in the districts originally menaced by the insurgents), and to attack the rebels at Yuen-lin. On the 7th instant this force left Tai-wan, and reaching Chang-hwa, marched southward from that place the following morning. Major Inuzuka, of the Gendarmes, was also directed to join the expedition with his detachment which had been in Peh-tow, and a farther reinforcement of 30 men was added. Moreover, on the same morning, the Commandant of the Second Brigade sent another company to Pu-li-sho, with orders to guard the communications in the direction of Tsi-tsi-chie. At the same time, to keep touch with Pu-li-sho, Major Matsui with two companies was despatched to the vicinity of Won-tu-lin, and to the engineers belonging to the main body was entrusted the duty of repairing the line of telegraph to the south of Chang-hwa.

At the time of despatching the main force against the rebels, the Commandant of the Second Brigade ordered Captain Nakamura's Company to move from Miao-li to Tai-wan, and the Company left Miao-li at 6 a.m. on 7th instant. (Apparently to act as a reserve.)

Lieut-Colonel Imahashi's force started from Chang-hwa at 6.30 a.m. on the 8th instant, and moved in the direction of Peh-tow. At 9.40 a.m. the scouts discovered that bodies of insurgents were collected in the neighbourhood of Yuen-lin (not the place of the same name where the rebellion originally broke out), and they were dispersed by heavy fire. They numbered some 800 and had three banners. In this fight, the expeditionary force had one man wounded. A halt was made at Yuen-lin, and while steps were being taken to cut off the retreat of the rebels, it was learned that Lo-chiang was seriously menaced. Two companies were immediately sent to its relief. The same morning, the telegraph between Chang-hwa and Lo-chiang was cut. Meanwhile, a report had been sent from Captain Ozakiwara, who was stationed in Chang-hwa, to the Commandant of the Brigade, that Lo-chiang was actually attacked by the rebels, and that the town was in flames, and the Commandant despatched orders to Lieut-Colonel Imahashi to detach a force for the relief of the place.

Lo-chiang, as we have already explained, lies due west of Chang-hwa, at a distance of 7 miles. It stands at the junction of the north-and-south coast-wise road and the road passing inland to Chang-hwa and Tai-wan. To reach Lo-chiang while Lieut-Colonel Imahashi's force was south-east the rebels must have moved round his right flank.

Captain Ozakiwara succeeded, by various devices, in establishing communication with Lo-chiang, and ascertained what had happened there. His report was this:—"On the 8th, at 7 a.m., about 600 rebels moved against Lo-chiang from

the Yuen-lin road and from the sea-coast on the west. They attacked the town, and having set the southern part on fire, surrounded it on the north, east, and west. The garrison, assisted by the gendarmes, the police, and the local officials, opposed the insurgents, and after a sharp struggle drove them off, a portion of them flying towards the Yuen-lin road and a portion towards the sea-shore. At 11 o'clock Major Yoshihiro, commanding the Lo-chiang Brigade (who had apparently accompanied the expeditionary force and been sent back to relieve Lo-chiang) marched into Lo-chiang at the head of Lieut. Kaiho's detachment, together with the Chang-hwa gendarmes. The casualties in this affair were 1 killed, and a Captain, a Lieutenant, a commissariat officer, an ensign, 8 soldiers, 2 policemen, and a civil employé wounded. Seven insurgents were taken prisoners, and they left fully a hundred dead upon the field, but the number of their wounded is unknown."

On the morning of the 9th, Lieut-Colonel Imahashi sent Major Suzuta with two companies of infantry and a gun to Lo-chiang, and from Tai-wan four half-companies were despatched by the Third Regiment to Chang-hwa, two of the half-companies remaining in the latter place, and two moving on to Lo-chiang. When Lieut-Colonel Imahashi resumed his southward march, he placed these re-inforcements on the strength of the Chang-hwa garrison under the command of Major Yoshihiro. Meanwhile, the Matsui battalion stationed in Won-tu-lin, was engaged dispersing the rebels in that vicinity, and the communications between Pu-li-sho and Tai-chang remained undisturbed.

On the 10th at 10 a.m. Lieut-Colonel Imahashi's force attacked Peh-tow and took possession of it. Some fifteen hundred rebels had been assembled there, but they fled during the night of the 9th, and the number that actually opposed Imahashi's force did not exceed three or four hundred. The whole retreated in the direction of Yuen-lin, according to the statements of the natives.

Through a length of fully 17 miles the telegraph line, from Tai-chang to Kwei-tsz-tow, is destroyed. Nothing is left of it. The telegraph to the south of Chang-hwa is also seriously damaged.

The above account may be regarded as an accurate résumé of the operations up to the 10th instant.

We now have telegrams from Tai-pei, dated at noon on the 20th. Major-General Tachimi says:—

On the 18th instant Lieut-Colonel Imahashi drove the rebels away from Ta-pin-king and Oro-sho. In the former place they numbered about 150 and in the latter from 300 to 400. The insurgents at Oro-sho were all armed with rifles, apparently, and the rebel Chief, Kangi, seems to have been in command there. They retreated chiefly in the direction of Ais-san. It can not be confidently affirmed that there are no more insurgents in the neighbourhood of these places, but their strength is probably too much broken to warrant any renewed offensive movements on their part. In this engagement, Lieut-Colonel Imahashi's force had one private killed, an officer and three men wounded. He will remain for the present in Yuen-lin.

It will be observed that whereas the minute report published in these columns yesterday, described the course of the campaign up to the 10th instant, the above telegram takes up the story from the 18th. We shall, no doubt, have full particulars by-and-by of the operations between the 10th and the 18th. On the latter date Yuen-lin—not the Yuen-lin mentioned in yesterday's telegrams, but the town among the hills where the insurrection originally broke out—had been recovered, and Lieut-Colonel Imahashi was engaged in, clearing away the insurgents from places in its neighbourhood. Major-General Tachimi's report continues:—

Two companies, under the command of Major Naito, were sent to Peh-tow.

According to intelligence received from Major Matsui and Captain Ishizuka, the latter assumed the offensive on the morning of the 17th instant, and at 9.40 a.m. recovered possession of Pu-li-sho. During this engagement the inhabitants of Ai-ting and Sheu-fang, places in the neighbourhood, showed a most friendly spirit towards our men and rendered them great assistance. In the fight Lieut. Yuge was killed, and one first-class private and a few common soldiers were wounded.

Major Matsui's force, marching out of Lin-pa-pu on the 16th instant, advanced through a most arduous district, and driving the rebels before them, entered Pu-li-sho on the 18th, thus effecting a junction with Captain Ishizuka's force.

The casualties sustained by him from the 16th to the 18th were 2 killed, 11 wounded, and 1 missing. Three horses also were lost.

The Matsui Battalion is to remain in Pu-li-sho. According to a report received from Lieut-Colonel Masuda in Chia-i, the insurgents in Ko-shun-sho fled in anticipation of an attack. Neither insurgents nor inhabitants are now to be seen at that place. Scouts sent out subsequently have brought news that the majority of the rebels are at Nai-ko-sho (a place to the eastward of Chia-i), and that another body have retreated to Un-sui-kei.

Thus the rebels have been everywhere driven off, and all the positions in the district are once more in our occupation.

It does not follow, of course, that the insurrection is completely crushed. To stamp it out altogether, it would be necessary to capture or kill all the rebels, which is virtually impossible so long as the scene of the conflict is in the immediate neighbourhood of the hill country. It may be that they have been killed or wounded in such numbers as to be practically eliminated for all really mischievous purposes, but we observe that in almost every case the accounts of the various fights have not included any statement of rebel losses, from which we infer that the struggle has been of a guerrilla character, and that the insurgents have run away too quickly, or kept under cover too carefully, to have a large list of casualties.

HARBOURS.

The *Tokyo Shimbun* declares that Obama, Tsuruga, Nanao, Fushiki, Naoyetsu, and Niigata in the Hokuriku districts, are ports for loading and unloading cargoes. But of these, the last three, though generally regarded as such, can not properly be called harbours. Indeed, along the whole coast of Hokurikudo there is no good anchorage, Ebisu, in Sado Island, being the only one in the vicinity. It is by nature a very good harbour, open toward the south and entirely sheltered from the north wind that so greatly disturbs the Sea of Japan, especially in winter. It is usual with steamers visiting Niigata, Naoyetsu, and Fushiki to hasten to Ebisu for shelter whenever they are overtaken by storms, for, between October and April, large steamers often find it impossible to discharge or take in cargoes at those places. Tsuruga is somewhat better off, but it has one serious defect, namely, being directly exposed to the north wind. Obama is a Tsuruga in miniature. The *Tokyo Shimbun* considers Nanao to be the best harbour along the coast of Hokurikudo. Strange to say, it omits to explain why this particular harbour is so much better than the others.

A few details about Funakoshi Harbour, Chikujen, Kyushiu, are given in the *Fiji*. The Mitsui Bussan Kaisha recently despatched thither Capt. Arai and a foreign employé of the Firm to investigate the geography of the harbour and to ascertain whether it affords a safe anchorage to steamers of large size. The report submitted by them speaks in favourable terms of Funakoshi. It says that the basin is deep, and affords safe anchorage for more than 10 vessels of 1,000 tons displacement or so, and that six or seven vessels of under 5,000 tons displacement, even at low-tide, can lie there. When a pier and other necessary accessories have been constructed, Funakoshi will become one of the best harbours along the western coast of Kiushiu. It is far better than Kuchinotsu, Misumi, and Moji, and is, moreover, nearer by more than 60 miles to China. The Government is inspecting the various harbours along the north-western coast of Kyushiu to discover which is the best as a special port of export, and it is generally believed that the choice will fall on Funakoshi.

From Gifu six lengthy telegrams were received regarding the recent floods. The 5th, dated 22nd, at 12.40 p.m., ran:—The three large rivers, Kiso, Nagara, and Ibi have overflowed into 21 districts, and 54 embankments are damaged.

THROWN SILK.

The question of establishing factories for throwing silk, is stated by the *Tokyo Shimpō* to be attracting attention in Japanese industrial circles. To prepare silk for weaving purposes, the thread has to be twisted into one of the forms technically known as "singles," "tram" or "organzine," the last being popularly known as "thrown silk," and consisting of two, three, or more "singles" twisted together in a direction contrary to that in which the singles themselves are twisted. The Japanese are said to be behind the time in the art of throwing, though why that should be the case when the best modern machines are procurable by any one ready to pay for them, we do not understand. Italy at one time was the only country in the world where the manufacture of organzine was understood, and readers of English history know that when the brothers Lambe obtained, in 1719, a patent for their famous throwing mill at Derby, it was openly acknowledged that they had procured their models clandestinely from Italy. Consciences, however, especially commercial consciences, were not so tender in those times as they are at present, and legislators revelled in magnificent ignorance of economical principles. In Japan's case, also, the silk throwing enterprise is to be developed by Italian ingenuity, for, according to the *Tokyo Shimpō*, a leading merchant of Milan contemplates establishing a throwing factory on a large scale somewhere in the interior; a project that is spurring the Japanese to similar enterprise. Of course, if Japanese manufacturers seriously think of developing a large export trade in silk fabrics, the treatment of the silk before it goes into the loom is of prime importance. It will not do to rely on cheapness of labour. The proper course is to derive full competitive advantage from cheap labour, instead of employing it merely to mitigate the penalty of inferior machinery. Never have the comparative benefits of first-class and third-class machinery been more forcibly illustrated than by the history of the silk trade in England herself, for, just 70 years ago, the loom then used in France, according to a statement made by Mr. Ellice in the House of Commons at that time, could produce five times as much ribbon as the English loom with the same manual labour, and the improved German velvet-loom did forty-eight times as much work as the English. Given equally good machinery, the Japanese should be able to make a strong bid for the command of the fancy-silk-goods market of the world. They possess, as compared with the artisans of other countries, precisely the advantages though perhaps in a greater degree, that the French possess over the English, namely, that the art of designing has been developed to an extraordinary extent among them, that their artists have remarkably good taste, and that their colours are conspicuously bright and lustrous as well as chaste and sober. Moreover, skilled labour is wonderfully cheap in Japan, and the silk is produced at the doors of the factories. The Japanese have been so successful in cotton spinning, under far less advantageous circumstances, that we see no reason to predict defeat for them in the matter of silk weaving.

SUSPECTED DOUBLE SUICIDE IN YOKOHAMA.

About half-past six o'clock on Monday morning two bodies were found floating in the Creek at Takashimachō, Yokohama. They were the corpses of a man and a woman of the artisan class. The police have discovered that the man was named Sakamoto Matsugoro, aged 26. Upon him was found a letter addressed to one Mogi Yei-taro, dated the 19th inst., which stated that his prospects were hopeless and the future contained nothing worth living for. In a *portemonnaie* was found 31 *sen* 1 *rin*, and another letter addressed to the Mogi family. Sakamoto, the dead man, was married and had a son by his wife. The girl was afterwards found to be the wife of the dead man's brother.

PROPOSALS.

It is a generally accepted theory—accepted among men, at least, and, so far as we know, among the best of women—that to have refused many offers of marriage is very far from being a crown of credit for a girl. Plainly, the root of this belief is the postulate that no man asks a girl to marry him unless he thinks that her conduct towards him has justified the petition. It is admitted that men are not always gifted with the fine faculty of strictly adjusting action to encouragement, or of discerning how much of the favours they receive are only a reflection of their own self-assertion. Still, on the whole, men do not put their fate to the great test without a strong hope of success, and so far as their hope has been educated by the lady's previous attitude towards their addresses, she is responsible. That being the every-day creed of folks that move upon old-fashioned planes of behaviour, it is pleasant to find the idea strongly endorsed by a woman whose nobility of thought has been acknowledged by all English-speaking peoples however brief the period during which she has addressed them. Mrs. Meynell is one of the great literary lights of our time. She has flashed suddenly upon the horizon, and has at once commanded universal admiration. Here is what she makes a lady say to the man whose suit has just been refused:—

Why wilt thou chide,
Who has attained to be denied?
Oh learn, above
All price is my refusal, Love.
My sacred Nay
Was never cheapened by the way.
Thy single sorrow crowns thee lord
Of an unpurchasable word.
Oh strong, Oh pure!
As Yea makes happier loves secure,
I vow thee this
Unique rejection of a kiss.
I guard for thee
This jealous sad monopoly.
I seal this honour thine; none dare
Hope for a part in thy despair.

"How incomparably noble, strong, passionate, and pure," says a critic, "those words of consolation to the one lover who has come so near as to be denied." The one lover! Thus Mrs. Meynell's conception of the true woman is that not twice in a lifetime does she allow the wrong man to fancy himself the right.

GERMANY AND PRINTING AFFAIRS.

Here are two interesting items from *The Stationary Trades Journal*:—

In the German printing trade an agreement has recently been arrived at, which practically amounts to "splitting the difference" upon the demands made. A joint conference of representatives of employers and journeymen was held at Leipzig, April 15th-17th, when a nine-hours working day, instead of 9½ hours, was conceded. The piece rates are to be increased by 2 pfennigs (=68 per cent.) per 1,000, and the weekly time wage from 20s. to 20s. 6d. Fifteen minutes each, in the morning and afternoon, and at least an hour at mid-day, to be allowed for meals. In towns of less than 20,000 inhabitants, the present working hours may be maintained if desired by a majority of both employers and journeymen.

It is certainly disagreeable to read in an *Evening News* interview with Mr. W. D. Ross, of *Black and White*, that he attributes the high standard attained by that paper and the *Cycling World*, to the superiority of the machinery used—all made in Germany, and not only so, but rollers and ink as well. "English high-class printing machinery is not in the same hemisphere as the German, which is perfection. A German machine is finished like a watch. Above all, it has absolutely no vibration; vibration ruins fine work. When I came here there was one English machine, the best this country could produce, but it had to go. It would print 15,000 copies fairly well, but after that it smudged and blurred, and was perfectly hopeless. A German machine will print 500,000 copies, and the last will be as clean and clear as the first. That one English machine made more noise than six Germans." This frank expression of opinion will do no harm, if it causes English makers to see what amount of truth there is in it, and to recognise the fact that good machines are made outside, and that printers will go where they can get the best for their purpose. Mr. Ross adds, "the Briton thinks himself supreme, and doesn't worry," but there is likely to be a great deal of worry if German makers really can build better machines than we are able to do.

THE SEISMIC WAVE.

For the information of those that kindly subscribed for the relief of the sufferers by the Seismic Wave in the north-east, we beg to state that the sums hitherto received by us aggregate \$4,203.62, of which total the second installment (\$1,122.12) has now been handed over to the Committee engaged in distributing the relief after the manner described by us in a recent issue. Full details of the various disbursements made by the Committee will be published later on, together with the acknowledgements of the recipients. We may add that the subscriptions sent to us (excluding the subscriptions of the Presbyterian Missionaries in Kanazawa, which were forwarded direct to the scene of the disaster) numbered 149, the average amount subscribed thus being a little over \$28. It appears that those intending to subscribe have, for the most part, sent in their names. We shall therefore cease to publish the list after to-day, but should any subscriptions reach us at a later date, they will of course be duly acknowledged and handed to the committee of distribution.

We are asked to state that Admiral Sir Alexander Buller, K.C.B., has presented, through His Excellency Baron Sannomiya, the sum of 100 *yen* to the relief fund for the sufferers by the Seismic Wave.

THE FLOODS.

The vernacular papers contain many telegrams this morning regarding the floods. From Tochigi Prefecture comes news that at Kodakiyama one person was drowned, one injured, and one is missing. In the Enya District a river overflowed, drowning one person. Many embankments have been damaged in Shiga Prefecture. In Fukushima the Abukuma-gawa rose eighteen feet above its ordinary level, and on the 22nd July was still increasing in volume. Nine houses were carried away, one person drowned, and many bridges destroyed. A telegram from Osaka says that the Yodogawa rose ten feet above the normal, and over 200 houses were immersed by the flood above their lower storey: there were several accidents but no loss of life. The Sekiyado river, in Chiba Prefecture, rose 16 ft. at Chiba, but at Kinoshita at noon the water was only 11 ft. above the ordinary level. News from Aomori is to the effect that the floods have damaged the railway track between Hachinohe and Shiriuchi. The railway bridge at Owani was damaged, and a portion of the track between Aomori and Oshaku is washed away. About 120 yards of the bridge on the Kidzuga-gawa at Nara, was washed away, but the six pedestrians who were crossing the bridge at the time were saved.

The heavy rainfall of the 20th and 21st has damaged the roads at Nagano. The overflowing of the Kisogawa, according to a telegram from Tsu, has reduced the villages in the neighbourhood to a pitiable condition. Many houses have been destroyed through the bursting of the embankments of the Ebigawa. At Gifu seven houses and one school-building were carried away by the flood, and much destitution prevails in consequence of the flooding of the food-stores. The embankment of the river was breached in 60 different places. A Toyama dispatch says that the Jinzoo-gawa rose fully 14 feet above the normal level, and after it had broken its banks the western part of the town presented the appearance of a lake studded with small islands. Communication was established with the higher portions of the town by means of boats.

On the Nara Railway, the Tamamidzu and Kidzu section has been damaged. On the Sanyo Railway, the Himeji and Mitsuishi section was interrupted, and the telegraph line broke down. On the Oshiu Railway, the overflowing of the Kitagami-gawa stopped all trains at Hanamaki station. According to a report from Hanamaki, the overflowing of the Kitagami-gawa caused a flood 10 feet deep. Nearly all the lines to the north were more or less damaged.

THE GREAT QUESTION IN AMERICA.

Naturally the American papers received by last mail are full of the great question now agitating the electorate in the States. The Republican Party's declaration about the currency problem was this:—

The Republican party is unreservedly for sound money. It caused the statement of the law providing for the resumption of specie payments in 1879; since then every dollar has been as good as gold.

We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are therefore opposed to the free coinage of silver, except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such agreement can be obtained the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favour all measures designed to maintain inviolably the obligation of the United States and of our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth.

There is nothing ambiguous about this declaration, as it appears to us. The Republicans distinctly announce themselves bimetallics, but in common with the scientific leaders of the bimetallic movement, oppose the idea of attempting to re-habilitate silver without an international agreement. But the declaration is not comprehensive. It does not make any engagement, for example, that some law, like the Bland Act or the Sherman Act, will not be passed ordering the coinage of millions of silver dollars having a nominal value of only fifty odd cents and a legally created fictitious value of 100 cents. Neither does it say anything about the cancellation of legal tenders on redemption. These omissions were held to indicate a "straddling" scheme for placating the free-silver men, and ultimately, as the telegraph has informed us, the Republican leaders were compelled to come out "flat-footed" for gold.

Senator Teller's resolution, proposed by way of substitute for the above, and rejected by 818½ votes to 105½, ran as follows:—

The Republican Party favour the use of both gold and silver as equal standard money, and pledges its power to secure the free, unrestricted, and independent coinage of gold and silver at our mints at the ratio of 16 parts of silver to 1 of gold.

Mr. Teller seems to be a man of very high reputation. We read of him in an American Republican contemporary:—"He is the one man in the silver movement who has been able to command respect. Mistaken though he is, no one can doubt that he is acting from sincere conviction. No personal or property interest, no damalogical desire to catch the votes of a constituency that has been led into false ideas, has prompted him. One could shed tears at seeing so earnest a man become the victim of a great political heresy. But, while he holds the views he does, no Republican could wish him to remain in the party. The Republican Party can not afford to retain in its leadership men who do not believe in its principles."

The utterances of the Republican Platform on the subject of Protection are simply a repetition of the stereotyped phrases that have for so long a time served to drive men from the paths of sound finance:—

We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity. The true American policy taxes foreign products and encourages home industry; it puts the burden of revenue on foreign goods; it secures the American market for the American producers; it upholds the American standard of wages for the American working-man; it puts the factory by the side of the farm and makes the American farmer less dependent on foreign demand and price; it diffuses general thrift and founds the strength of all on the strength of each. In its reasonable application it is just, fair, and impartial, equally opposed to foreign control and domestic monopoly, to sectional discrimination and individual favoritism.

We denounce the present Democratic tariff as sectional, injurious to the public credit, and destructive to business enterprise. We demand such an equitable tariff on foreign imports which come

into competition with American products as will not only furnish adequate revenue for the necessary expenses of the Government, but will protect American labour from degradation to the wage level of other lands. We are not pledged to any particular schedules. The question of rates is a practical question, to be governed by the conditions of the time and of production; the ruling and uncompromising principle is the protection and development of American labour and industry. The country demands a right settlement, and then it wants rest.

We believe the repeal of the reciprocity arrangements negotiated by the last Republican Administration was a national calamity, and we demand their renewal and extension on such terms as will equalize our trade with other nations, remove the restrictions which now obstruct the sale of American products in the ports of other countries, and secure enlarged markets for the products of our farms, forests, and factories.

Protection and reciprocity are twin measures of Republican policy, and go hand-in-hand. Democratic rule has recklessly struck down both, and both must be re-established; protection for what we produce; free admission for the necessities of life which we do not produce; reciprocal agreements of mutual interest which gain open markets for us in return for our open market to others. Protection builds up domestic industry and trade, and secures our own market for ourselves; reciprocity builds up foreign trade and finds an outlet for our surplus.

As to the other planks in the platform, they are summarized thus by *Public Opinion*:—"The platform also condemns the Democratic administration of the pension bureau, declares for a vigorous and dignified foreign policy, the control of the Hawaiian Islands by the United States, demands that the Nicaragua canal be "built, owned, and operated by the United States," and that the Danish Isles be purchased for a naval station in the West Indies. The platform declares that the United States should exercise all proper influence to bring the Armenian atrocities to an end. The Monroe doctrine is reaffirmed, with the declaration that, We have not interfered, and shall not interfere, with the existing possessions of any European power in this hemisphere, but those possessions must not, on any pretext, be extended. We hopefully look forward to the eventual withdrawal of the European powers from this hemisphere, to the ultimate union of all of the English-speaking part of the continent by the free consent of its inhabitants. Sympathy is expressed with the Cubans in their "heroic battle against cruelty and oppression," and it is declared that—the government of Spain having lost control of Cuba, and being unable to protect the property or lives of resident American citizens, or to comply with its treaty obligations—we believe that the Government of the United States should actively use its influence and good offices to restore peace and give independence to the island. The platform favours enlargement of the navy and the coast defences, restriction of immigration, the enforcement and extension of the civil service law, protection of the right of voting, condemns lynching, demands the creation of a national board of arbitration to settle disputes between employers and employed in interstate commerce, restoration of the free-homestead policy, the admission of the remaining Territories to Statehood as soon as consistent with the interests of all concerned, and representation in Congress for Alaska. Temperance and the rights of women are thus dealt with:—We sympathize with all wise and legitimate efforts to lessen and prevent the evils of intemperance and promote morality. The Republican party is mindful of the rights and interests of women. Protection of American industries includes equal opportunities, equal pay for equal work, and protection to the home. We favour the admission of women to wider spheres of usefulness, and welcome their cooperation in rescuing the country from Democratic and Populistic management and misrule."

THE KAWA-BIRAKI.

The tea-house owners of Ryogoku Bridge and its vicinity showed superfluous discretion on Saturday. A few showers in the forenoon alarmed them so much that they decided to abandon the projected "opening of the river" in the evening. It was too late, of course, to announce the change of programme through the press, and numbers of people proceeding to the place under the clear sky of a beautiful moon-light evening, had to come home disappointed, and submit to a good deal of jeering from urchins assembled on the canal bridges. Those that had engaged boats through *funa-yado* or *machi-yai-faya* received notice of the postponement, but those that went independently were disappointed. The fête is now fixed for next Saturday, but the *Kawa-biraki* in Tokyo is gradually coming to be classed with a tailor's to-morrow in point of untrustworthiness.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A DANGEROUS DOG.

TO THE EDITOR OF THE "JAPAN MAIL,"

SIR,—I should like to call the attention of your readers to what I consider a dangerous dog.

Yesterday, while walking past the premises owned by Messrs. Kuhn & Komor, I was attacked from behind by a large dog, presumably belonging to that firm. Fortunately it seized my elbow, and being on the bone it merely grazed the skin, otherwise I should have had a most serious bite.

I would advise any who may come across this animal to give it a wide berth, as I consider it dangerous to be at large, without being muzzled.

I am, Sir, your obedient servant,

E. R. BORTHWICK.

H.M.S. *Undaunted*.

July 17th, 1896.

[This is not the first complaint that has reached us about this dog. That he is a savage and dangerous brute is certain, as residents on the Bluff have reason to know. Persons have been prevented from using the narrow street next the Dispensary through the attitude the animal assumes.—Ed. J. M.]

MR. MORTON FREWEN.

TO THE EDITOR OF THE "JAPAN MAIL,"

SIR,—With much surprise I read your strictures on Mr. Morton Frewen's views regarding the results that the passage of a free coinage by the United States Congress may engender.

The proposition that you traverse is that "Asia will not hasten to dump her silver upon the American Mints"—assuming "that any person carrying 16 oz. of silver from the East to America could obtain for them an ounce of gold. That oz. of gold he might carry back to the East or Europe, and there sell it for 29 oz. of silver thus netting some eighty per cent. by the transaction." Do you really suppose such a procedure possible? Will the West continue to give 29 oz. of silver for an ounce of gold when 16 oz. can be sent to the U.S. Mints and be coined into 16 dollars that will represent 16 gold dollars? Is it possible, think you, that the European will play into the hands of the astute Asiatic, allowing him to net a profit of eighty per cent.? Let me give you my idea. Mr. McKinley was nominated by the Republican Convention with a whoop of victory—and on general principles his election was thought to be a foregone conclusion—that is by the goldites; the silver men, who had the courage of their convictions withdrew from the convention; the speech of Mr. Teller was worth "a thousand men," speaking from the stump, for the silver advocates. The Democratic party have nominated their candidate on a distinct declaration that they are for free coinage of silver on the ratio of 16 to 1, irrespective of the money policy of any other nation. Mr. McKinley will not be elected. He will be snowed under. Mr. Bryan, the Democrat, will win; that I am persuaded of. Now for the result to follow. The announcement of his election will be immediately followed by a rise of silver—for the American people and all the world besides will know that the Democracy will act upon their declaration. By the time that Congress will have assembled, prior to the passing of a free coinage bill, silver will be nearly on a par with gold, only awaiting the event of its passage to be at par. All the efforts of the Act will have been discounted

gradually. Gold, as it will be depreciating in terms of silver, will hasten to invest on a rising silver market, and will be in as active circulation as it ever was. Hoarding will be discounted, silver will become a favourite investment as an appreciating commodity. The United States will have set the pace and all the world will follow. Do not delude yourself with the idea that McKinley will be elected. The American people are for free silver, and the people will vote for Mr. Bryan in defiance of old party affiliations or party traditions. I have ever maintained that the United States would attend to this business, now the fruition of my anticipation is clearly in sight.

Yours truly, X.
Yokohama, July 21st, 1896.

(An appreciation of 80 per cent. in the gold price of silver within a space of, say, six months, seems to us to be the reverse of "gradual." At any rate, how much "dumping" will have happened within these six months? "X." does not appear to have read our first article on this subject.—Ed. J.M.)

CHRISTOPHER SMART.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your notice of Christopher Smart you overlooked the fact that the "Song to David" was published by Beeton's in 1870, in their great "Book of Poetry."

Yours truly, B.
Yokohama, 22nd July, 1896.

The Rev. Rothesay Miller acknowledges receipt of \$114.20, from the Aoyama Gakuin, Tokyo, for the Relief Fund, as organized by the Y.M.C.A., by the Protestant Churches of Tokyo.

A hail-storm was reported from Gumma-Ken on the 20th inst. The greatest damage was done at Koidzumi Mura, Saha District, where 247 tan of mulberry trees and vegetables were destroyed.

THE GRAND HOTEL, LIMITED.

The half-yearly general meeting of shareholders in the Grand Hotel, Limited, was held on Monday afternoon. There were present, Mr. J. F. Lowder in the Chair; Messrs. Jas. Walter, B. C. Howard, C. K. M. Martin, R. Howie, H. Cummings, B. Martinelli, C. Braccialini, and J. Toindé, Secretary.

The CHAIRMAN said that he thought it might be taken for granted that the accounts for the half-year were completely satisfactory, hence the small attendance. If any present were not satisfied, then he would be pleased to answer any question that might be raised, for in the absence of others he did not feel it incumbent upon him to enter into unnecessary explanations.

Mr. HOWIE proposed, and Mr. CUMMINGS seconded, that the accounts presented be passed.—Carried.

The same gentlemen next proposed that the retiring directors, Messrs. Lowder and Jas. Walter be re-elected.—Carried.

Mr. CUMMINGS proposed and Mr. HOWIE seconded, that Mr. Keil be re-elected auditor.—Carried.

Mr. HOWIE proposed that the remuneration to the Directors be increased by \$100 each. The Company was sufficiently prosperous to pay better for work that was well done. The work of the Directors of the Company was no sinecure, and therefore he had great pleasure in proposing that the Directors' fees for the coming year be raised to *yen* 400 each.

Mr. CUMMINGS accorded.—Carried. The CHAIRMAN, replying on behalf of his brother-directors, said that he felt obliged for this token of their appreciation. The work of directors in limited liability companies in Yokohama was mostly done gratuitously. Their directors therefore appreciated the kindness shown in presenting them with something worthy of their acceptance. He could assure them that the work of their directors, as Mr. Howie had remarked, was no sinecure; they met at the hotel regularly every Monday afternoon to see how the business was progressing and to consider the best means for developing it. He was greatly obliged for their vote.

This closed the business of the meeting. Report of the Directors, to be submitted at the Fourteenth Semi Annual Ordinary General Meeting of Shareholders, to be held at the Grand Hotel, Yokohama, on Monday, the 20th day of July, 1896.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half year ended the 30th June, 1896, accompany this Report.

The net profit for half year including balance brought forward from the 31st December, 1895, and providing for general expenses, Directors' and Auditor's fees, bonus to Manager, interest, and writing off bad and doubtful debts, amounts to \$44,283.63 which it is proposed to apply as follows:—

In payment of a dividend of 10 per cent. for the half-year \$25,000.00
Balance to be carried to new account \$19,283.63
\$44,283.63

A sum of \$15,000 having been written off for depreciation for the half-year ended the 31st December, 1895, it is not considered necessary to write off anything for the half-year under review.

Two heavy payments, presently falling due, for a new steam launch, and a new boiler, will absorb some \$8,000 of the balance carried forward; and as this sum, with the proposed dividend, will exhaust the cash at the credit of the Company, it is not deemed prudent to declare a higher dividend than that proposed. Moreover, in view of having to meet these payments, which represent permanent additions to our assets, and should therefore be distributed over a longer period of time than a year, it is intended to withhold the usual annual payment of \$5,000 towards the reduction of the debt of the Company, now standing at only \$25,000.

Messrs. Walter and Lowder retire from the Board by rotation, but offer themselves for re-election. The Directors have been fortunate enough to secure the co-operation of Mr. B. C. Howard, who has accepted the office vacated by the retirement of Mr. Rickett, on his departure from Japan.

Mr. Keil retires from the office of Auditor, and the Directors have much pleasure in recommending his re-election for the current year.

According to Article 86 of the Articles of Association, the amount of the Directors' fees for the current year will have to be decided at this meeting.

It is proposed that the dividend shall be payable on the 21st day of July, when the warrants will be issued.

J. F. LOWDER, J. Directors.
JAMES WALTER, J.
Yokohama, 9th July, 1896.

STATEMENT OF ASSETS AND LIABILITIES ON JUNE 30TH, 1896.

Yokohama, July 10th, 1896.

THE METHODIST EPISCOPAL CONFERENCE.

After another year of varied experiences, the ladies of the Women's Foreign Missionary Society and the preachers of the Japan Conference of the Methodist Episcopal Church have gathered again at Aoyama, Tokyo.

The W.F.M.S. Conference meets in the chapel of Aoyama Jo Gakuin, but both conferences assembled in Goucher Hall on Wednesday morning, July 15th, for the usual opening service the Sacrament of the Lord's Supper.

After Holy Communion, Bishop Joyce presiding, the roll of the Japan Conference was called, and 69, out of a total membership of 88, answered to their names.

The Bishop announced the transfer of K. Ishizaka and T. Fujiwara, who were present, from the California Conference; and of George F. Shepherd, who is expected in September, from Northern New York.

The Conference was organized by the unanimous election of the following:—

English Secretary	J. W. Wadman.
Japanese Secretary	K. Nakada.
Statistical Secretary	M. S. Vail.
Treasurer	E. R. Fulkerson.
Interpreters	S. Ogata and Y. Takasugi.

J. W. Wadman was appointed Conference Reporter; therefore any report of proceedings in the *Japan Mail* after this one will be from his pen.

In accordance with the connexionism of Methodism, each year the conference receives its proposition of profits of the Book Concerns in New York and Cincinnati. This year the Bishop presented a draft for \$595, gold.

In the afternoon, the Statistical session was held to receive from the pastors' reports of church property, the number of members, probationers, baptisms, Sunday Schools, and so on, and to receive the monies contributed during the year for the Benevolences of the Church, Foreign and Home Missions, Church Extension, Education, Bible Societies' Committee, Tract Society, Episcopal Fund, and Conference Claimants' Fund (for worn-out ministers and the widows and children of deceased ministers).

The members are gathered together after a year of more than usual encouragement, and they are in the best of spirits, full of hope and waiting together for a fresh baptism from on high for the great work to which they will soon, in his strength, again address themselves. They are also very much pleased that Bishop Joyce has consented to remain in Eastern Asia (Japan, Korea, and China) for two years, and that they will enjoy his Episcopal supervision for that time.

The daily meetings are: 6 a.m. Prayer meeting; 8.30 to 12, Conference Session; 5 p.m., a meeting for the promotion of holiness, conducted by the Bishop; 7.30, an anniversary meeting.

These with Cabinet meetings (for the stationing of the Conference), committee meetings, and special sessions of Conference, will make full and busy days while the dog star burns in the heavens.

On next Sunday, at 9 a.m. the Conference Love Feast will be held, and at 10 a.m. Divine Service, with preaching by Bishop Joyce.

Visitors are cordially welcome to all conference sessions (the conference probably will not close before next Wednesday), as well as to the public services.

LETTER FROM WASHINGTON.

(FROM OUR OWN CORRESPONDENT.)

Washington, U.S.A., June 19th.

Congress has adjourned, and a good riddance for the whole country except hotels, restaurants and other places of personal comfort here in Washington. It was a do-nothing body, with two unusual features; it was the shortest "long session" for fifty years, and the most extravagant, the appropriations footing up more than five hundred million dollars. The most sensational incident was the speech of Senator Tillman, of South Carolina, delivered in the Upper House early in the winter. So wild, so radical, so anarchistic, so denunciatory was it, that not a Senator attempted to notice it even to the last day of the session, though some parts of it were levelled in bitter attack on other members, and stinging thrusts at the President. Mr. Cleveland unsparingly used the veto, but in some instances he was overridden by the constitutional two-thirds in the legislative branch. One of the measures so treated was the river and harbour bill, made up by scandalous log-rolling among the representatives, each wanting a slice to influence his district, and all uniting on the principle of the old conplot:

"Tickle me, Jimmie, tickle me true,
You tickle me and I'll tickle you."

The bill was also bad in providing for contracts that will extend over several years, and amount to nearly one hundred million dollars. Pension legislation was almost as reckless as ever, and at the present rate not only the Treasury but the country will be looted in a few years. One act was peculiarly vicious in opening the doors for all kinds of matrimonial gambling. Years ago the wife of a pensioner got a divorce and married another man. Sometime afterwards both men died, and last Fall she came up with all the serene assurance of widows, "who know what they want and are not afraid to ask for it," and requested that she be put on the rolls as the widow of her first husband so that she could draw the widow's pension. The chief of the executive refused his approval, but the gallantry of the legislators or the wives of the widow brought up the necessary two-thirds to her support. A significant incident in the Lower House was the resolution of thanks to Mr. Reed, introduced by a Democrat, and passed unanimously. This is the routine compliment given the Speaker, but it was in marked contrast with the treatment he received at the end of his first term in wielding the gavel several years ago, when most of the Democratic minority angrily refused to endorse what they considered Reed's overbearing conduct. It is a triumphant vindication of Mr. Reed's bold and sensible course in making a legislative body attend to the work it was chosen to do.

The adjournment leaves all foreign complications in the keeping of Mr. Cleveland. The legislative branch sought to make him show his hand on the Cuban question, when they passed a resolution authorizing him to recognise Cuban belligerency, but the document has been placidly kept in the White House desk. The Venezuelan matter is under the cover of the learned commission and their corps of experts. There is no intimation when a decision will be reached as to the true boundary, but a rumour is floating in the journalistic sphere that Lord Salisbury and Mr. Cleveland are on the high road to an amicable agreement. Poor little Hawaii, that three years since filled our land with all the woes of a rejected maiden, is now unnoticed, though a plank may be put in the platforms about her.

The future course of our home politics is as uncertain as a Western cyclone or a Japanese earthquake. The Republicans after wrestling with their agony of doubts in St. Louis, have declared for gold, and a modified high tariff. There was considerable kicking against the demand for a re-enactment of the McKinley bill that caused such a hubbub all over the world in 1892. The

majority of the rural voters down south and through the west are against that barbarism. Twenty-five delegates bolted with Senator Teller.

The Democrats meet a month from now in Chicago, and unless they are tamed down in the meantime the larger part of them will be crazier for free silver than ever rampant agitators in Japan were for treaty revision. Cleveland, Carlisle, and generally the recognized leaders in the North are firmly opposed to this venture, but their influence has exercised no check on the headlong career of the masses of their followers. After a long silence, Mr. Cleveland made an earnest appeal yesterday through the press to all good Democrats to rally in favour of sound money, even though the odds seem against them. But he said, "A cause worth fighting for is worth fighting for to the end. If sound money Democrats suppose there is danger of a mistake being made, such danger should stimulate their activity in averting it" for the interests and good "of the grand old organization so rich in honourable traditions, so justly proud of its achievements, and always so undaunted and brave in its battles for the people's welfare." But his critics say his clariion call came too late; all admit that so far the silverites are ahead. But the merchants and manufacturers and substantial men generally are against the scheme. They have always borne the expenses of the campaigns, and if their advice is not heeded the silver politicians will be left without the sinews of war. There is an ominous look in dispatches that the business men of two flourishing Southern towns, Savannah and Birmingham, have determined to bolt the ticket if free silver is declared for at Chicago. These warnings liberally lubricated by political "soap" may do a vast deal more with obstinate delegates than sound reasoning and clear cut logic.

It is undeniable that there is a wide sentiment in this country for the free and unlimited coinage of silver at the ratio of 16 to 1. If the vote were taken now, the best observers would fear the result, but it is hoped that argument and discussion will have great effect before November. Our business stagnation will continue, as both sides claim that it is due to silver. One doctor would cure by feeding the patient with more silver, while the other would cut it off entirely. It seems strange that all the western world has recovered from the depression except ourselves and with our vast natural resources we should have been among the first. While England has a comfortable treasury surplus, we are daily running behind.

A most interesting experiment is being tried in this city,—the equipment of an electric road by one of the large railway companies, the Pennsylvania, for handling its own local passenger traffic. The line runs from the heart of Washington to Mt. Vernon, the house of George Washington, a distance of seventeen miles, with a branch of five or six miles to Arlington, the National Cemetery. It parallels the steamroad for seven miles, and all local passenger trains for that section have been taken off. This is said to be the first undertaking of the kind by a steam corporation in the United States, and if it is successful steam will be abandoned for all suburban traffic in our cities.

Another rival is promised, however, for the subtle current in street transportation, air-motors. A new design has been invented, which it is claimed, will make their use much cheaper than underground trolley or cable and just as efficient. There is only one horse car line here, and that must change to rapid transit in three months or lose its charter. The directors have announced that after years of weary search they have found air-motors that will meet all demands of safety, speed, and fair expenses. The company's patronage does not warrant the enormous cost of any sort of surface system, and overhead trolleys are forbidden in Washington by congressional enactment.

Professor Langley's flying machine created almost as much sensation in the scientific world as the Röntgen rays, when it was flashed over the wires that he had solved the problem of air navigation. He has a laboratory on an island on the Potomac river some miles below the city, and he has always jealously guarded all knowledge of his progress. He is the director of the Smithsonian Institution, and his scientific specialty is the study of the sun, its landscapes and its dark spots. This labour on the question of floating in the atmosphere was a diversion. When he saw how curiosity had been aroused he gave some of the results of his latest effort and appeared confident that the ultimate goal would be reached in a comparatively short period. This machine has not been exhibited, but has been described as a metal bird with mammoth outspread wings, and with the power placed in the body. The whole weighed about twenty pounds, and was several hundred times heavier than its own bulk of air.

He set the propeller going and raised the ship aloft, and it circled round and round, steadily ascending like a condor, until it was three or four hundred feet up, and, then the steam being exhausted, it slowly sank until it settled on the surface of the water, without breaking any of its parts. Again it was sent up, and again it made its voyage without damage.

A figure interesting to old foreign residents in Japan was called into public view in Washington a few days ago. Judge Bingham, now eighty-one, formerly U.S. Minister in Tokyo for twelve years, came on here from his home in Ohio to testify in a will case, whether he thought the writing in dispute was that of his friend Judge Advocate-General Holt or a forgery. These two gentlemen had high regard for each other, and corresponded for a long term.

This will contest is a very curious one, and in many respects without legal precedents. The lawyers are treading new ground, and the decision will be famous in the annals of jurisprudence. Judge Holt spent most of his life in Washington, where he enjoyed the acquaintance and intimacy of some of the leading public men of this land, as General Grant, General Sherman, Senator Sherman, Senator Sumner. Two years ago, he died, leaving neither wife nor child, but as no will could be found, his nephews and nieces claimed the estate, worth \$200,000, as heirs-at-law. A few months after a will drawn up in due and regular form came through the mail to the registrar's office, with nothing to indicate where it came from except the post-mark of Washington. The address was in a disguised hand the letters being awkwardly printed with a blunt pen, or small brush perhaps. It was dated 1873, and witnessed by General Grant and General and Mrs. Sherman, all dead now. It was very short, and bequeathed all the property to two ladies, one a relative of the Judge's wife, and the other his god-child. Of course a lawsuit followed, and it is now in its fifth week, the best lawyers being engaged in each side.

This morning's paper announces the arrival at San Francisco of Mr. Hoshi Toru, who comes to replace Mr. Kuriuo as Japanese representative here. Lucky he will be if he can display the tact and urbanity of Mr. Kuriuo, and step at once so easily into American life and usages. Japanese are quick to learn all forms and ceremonies.

The following clipping interests all shipbuilders here and naval officers. S. Takakura and A. Sakurai, two officers of the Construction Corps of the Imperial Japanese Navy, are on a visit to this city. They are graduates of French naval schools, and are making a personal inspection of the resources of the American shipbuilding plants. It is gathered that the purpose of the Japanese Government is to give this country contracts for perhaps two cruisers, but these will be of only second class, like the *Charleston*. The Japanese will procure their big battle-ships and first-class cruisers from the older British and French shipbuilders. This is accounted for by the fact that the Japanese naval officers were educated in Europe, and are strongly prejudiced in favour of European methods of construction.

LETTER FROM ST. LOUIS.

(FROM OUR OWN CORRESPONDENT.)

St. Louis, June 22nd, 1896.
The work of the great National Republican Convention is done. William McKinley of Ohio, is the nominee for President of the United States, and Garret A. Hobart of New Jersey, the nominee for Vice-President. Both were nominated on the first ballot. McKinley, as predicted, had a complete "walk over" and received 661 votes, making a two-thirds vote of the Convention. The other candidates, Reed, Morton, and Allison did not have "a ghost of a show," and received only a small vote, and little applause. When McKinley's name was mentioned by Governor Foraker, the 20,000 people in the great Auditorium arose to their feet and waved flags, banners, hats, and handkerchiefs and yelled for 30 minutes.

Though tickets to the great convention were hard to be had, your correspondent was given a pass to all its sessions, and spent most of the three days in watching the proceedings of the history-making body. While some very sensational things developed, as a whole there was comparatively little excitement manifested, which was doubtless due to the cut and dried programme of Mark Hanna and the McKinley crowd. The great fight of the convention centered on the money question.

The platform came clearly for a gold standard, which displeased the delegates from the Western States. Senator Teller from Colorado

lead the fight for the free coinage of silver at a ratio of 16 to 1, but the odds were against him, and the convention came out for gold. When the vote was announced, Senator Teller and a number of delegates from the far Western States left the convention, and bolted the party. This has given the political situation in this country a new phase. Three months ago McKinley's election was conceded, but now it is doubtful. The Democratic Convention will meet in Chicago on July 7th, and is morally certain to declare for the free coinage of silver, which will at once make the campaign solely, almost, on the money question. That being so, the causes of dissatisfaction will be forgotten, and States which ordinarily would have gone for the Republican nominee will go Democratic. It is now claimed that the Republicans can not carry a State West of the Mississippi river, as the West is solidly for silver. Senator Teller is being urged for the presidency on the Democratic ticket, but it is hardly probable that that convention will nominate other than a regular Democrat of free silver stripes: it may be Bland of Missouri. Just what will be the outcome of this rather sudden change in the political front of our nation's politics, will be watched with absorbing interest. The logical and most likely candidate to be successful this year is McKinley, but it may be that the new issue will work a miracle in stemming the tide of public opinion and forcing it another way.

It has been a very busy week for our great city. We have had visitors and statesmen from every State in the Union, but now business will resume as usual. The town has been ablaze with bands and marching corps and uniforms, inasmuch that nearly everything gave way to convention talk.

The great auditorium in which the convention was held is to be used next Saturday by the Sunday Schools of the city for a great rally day. There will be 50,000 Sunday School children who will meet and sing Sunday School songs together. It will be an impressive sight, and produce as much enthusiasm for Christ as the convention did for McKinley.

H.B.M. COURT FOR JAPAN.

Before J. CAREY HALL, Esq., Assist.-Judge.
TUESDAY, July 21st.

A CLAIM AGAINST CAPT. PYNE.

This was a claim for \$166.15, brought by C. F. Pope against W. E. Pyne, for stores, etc., supplied in 1894.

Mr. J. F. Lowder appeared for plaintiff.

The petition of plaintiff stated that on or about the 21st March, 1894, the plaintiff, at the request of the defendant, supplied the defendant with sundry stores and labour to the value of \$166.15, but the defendant refused, and still refuses to pay the price of the said supplies or any part thereof. Plaintiff therefore asked that defendant be ordered to pay the sum of \$166.15, together with interest thereon at the rate of 7 per cent. per annum, from 21st March, 1894.

In his answer, the defendant admitted that on or about the 20th March, 1894, he was indebted to the plaintiff for the amount claimed, and for security of the debt he gave plaintiff an order to take possession of certain sails, from the British schooner *Arctic*, of which he was then the owner, and to hold said sails as and for security for the debt. The security was accepted, and possession of the sails was taken by the plaintiff. Subsequently the plaintiff parted with the security without the consent of the defendant. The plaintiff still held, to the best of his (defendant's) knowledge, the order to repossess himself of the above mentioned security.

Mr. Lowder said that defendant admitted the debt, but in his answer made one allegation of fact, which he would have to prove, namely that the sails were pledged to plaintiff as security for debt, and that plaintiff afterwards parted with the pledge without consulting the defendant. The defendant pleaded that plaintiff in parting with the sails without defendant's sanction, had performed an action whereby the debt was discharged.

His Honour—I understand that he pleads a set-off.

Mr. Lowder—Then the debt being admitted and this being his allegation, I ask that he opens his case.

W. E. Pyne, defendant in the case, on being sworn, said—On or about the 21st March, 1894, certain repairs were done to the *Arctic's* sails by Mr. Pope, on credit, at his house. When these sails were finished, he obtained from me a promissory note for the amount of his bill. Then he sent the sails on board and the ship went to sea. On my return to Yokohama, when the promissory

note became due, I told Mr. Pope that I was unable to pay him the cash. I forgot the date of this transaction. I offered Mr. Pope the *Arctic's* sails as security for the debt, which he accepted. I then gave him an order to take possession of the sails. He took possession of them and the sails were taken to his house. He kept them until the *Arctic* went to sea under Capt. Brown's charter, in March, 1895. When Capt. Brown chartered the *Arctic*, Mr. Pope was very well aware of the fact, and he and Brown came to some arrangement, I believe, to do some more work upon these sails, while they were in Pope's possession. After finishing this work, at Brown's request, Pope sent the sails on board the schooner, allowing the charterer to go to sea, leaving the bills unpaid. Then he threatened to hold me responsible for the ship's debts that he had contracted with Brown. The ship could not possibly go to sea without sails, and if Pope had insisted on getting his bill paid before parting with these sails, according to my agreement with the charterer, Brown would have had to redeem them, as he had to find a complete fit out, or break his agreement with me, which, under the circumstances would have been best for all concerned. Pope would have been paid for his sails, and I should not have lost my schooner. Brown agreed with me to fit the vessel out solely at his own cost. At the same time Brown knew that Pope held the sails as security for a debt that I owed him. Brown had a perfect right to pay this debt, for I let him have a lot of articles to assist him with the outfit, valued at over \$600, the receipt for which, signed by Brown, is in possession of this Court.

His Honour—In what case was that?

Defendant—In an *Arctic* case.

His Honour asked Mr. Lowder if he objected to this paper being produced.

Mr. Lowder had no objection. It was not evidence.

His Honour—Quite so.

Defendant, continuing—Pope, I believe, insured the sails for \$700. When the *Arctic* arrived at Hakodate, Pope gave his power of attorney to a man there to arrest her for this debt, although he might have done so in Yokohama. He did not communicate with me about the matter. When the *Arctic* arrived in Yokohama, Pope did not repossess himself of the sails.

In answer to Mr. Lowder, defendant said the debt was incurred through repairs to sails.

Mr. Lowder then handed defendant two bills, dated March, 1894, for \$166.15, which showed that the debt was not on account of sails, but for tar and other articles.

Defendant—I have certainly made a mistake. The sails are not mentioned here: I do not remember signing these bills, but they certainly bear my signature. I thought I signed a bill for the sails. Have you any other bills of mine?

Mr. Lowder (laughing)—I am not under examination. Do you think you need continue the case?

Defendant thought he would continue the case, and in answer to Counsel said the vessel went to sea in the early part of 1894, and she returned in the September of that year. In March, 1895, he chartered the ship to Brown, though at that time she had no sails beside those in the possession of Pope. I told Pope that Brown was responsible for the repairs to the sails. I cannot remember whether I told Pope to deliver the sails to Brown. The sails were delivered on board in March, 1895, and the vessel returned to Yokohama on the last day of October that year. A suit for wages was entered in this Court, on behalf of the crew. The *Arctic* was arrested, with everything on board. The sails, together with the vessel, were sold by order of this Court and the proceeds went to satisfy the demands of the crew.

Mr. Lowder—You being the defendant in the case?

Defendant—Yes.

Mr. Lowder—Then these sails have been sold, and you received the proceeds?

Defendant—I never saw the proceeds.—(Laughter.)

Mr. Lowder—But they went to pay your debts, I suppose.

Defendant—They called them my debts.—(Laughter.)

Mr. Lowder—But those debts were paid by the proceeds of the sale of the schooner and her sails?

Defendant—I suppose so.

Mr. Lowder—Then how can you say that this debt of Mr. Pope's has been discharged?

Defendant—Why, because he could have enforced payment of it against the charterer.

Mr. Lowder—It does not follow.

Defendant—From my point of view it does: he parted with his security?

Mr. Lowder—Did you ever ask for the return of the security?

Defendant—No, I did not.

His Honour said it was unnecessary for the other side to lead evidence. He would not call upon them.

Mr. Lowder—I can bring evidence, if your honour pleases, to prove the rate of interest prevailing here. But it is common knowledge that it is 7 per cent.

His Honour—Quite so, the only doubt is as to how long the interest should run.

Mr. Lowder—The petition says the debt was incurred in March, 1894.

His Honour—Judgment must be for plaintiff, with costs.

JAPAN'S INDUSTRY AND TRADE.

The Oriental Society (To-ho Kio-kwai) held a meeting of the offices of the Japan Educational Society in Tokyo at 1 p.m. on Sunday, 28th ult. Speeches were made by two prominent men, viz., Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce, and Mr. Masuda Takashi, President of the Mitsui Bussan Kaisha. The address delivered by the Vice-Minister of Agriculture and Commerce was of such importance to the commercial world that we have gone to the trouble of having a careful translation made. Mr. Kaneko spoke as follows:—Amongst our manufacturing industries cotton spinning is the only industry in this country that has been established on the same basis as in western countries, and at present our competition with Europeans in this industry is already active in the markets of the East. Should we be defeated in this competition it will certainly have a great effect on our manufacturing industry and commerce. The failure of this industry would prevent the development of our commercial prosperity in future. Therefore those who are cautious regarding our foreign trade should not overlook the importance of studying the future of this industry. The cotton spinning industry of this country was first started at Kagoshima by Prince Shimazu, then *Daimyo* of that province, during the Keiwo era (1865-7). The spinning machinery then introduced from England consisted of 6,000 spindles, and the object was to give employment to the *shitoaku*, retainers of the clan. Some years afterwards another factory was opened by Prince Shimazu in Sakai, Izumi province. During 1880 (3rd year *Meiji*) Mr. Kajima Mahei started a similar factory in the vicinity of Tokyo. The latter venture is now known as the Takenogawa Cotton Mill. But at that period the object of these mill-owners was to replace hand labour by machinery. Their object has been almost accomplished, for there is very little or almost no hand-spun yarn on the market now. The time has now come for the country to compete with the imported yarn. Between 1867 and 1877 the value of various foreign goods imported to Japan aggregated 246,000,000 *yen*, of which 89,000,000 *yen* were for cotton yarn, this staple representing 35 per cent. of the total import. The Government then purchased various spinning machinery from England, which the authorities disposed of to different people who were given special facilities for repayment. Thus an impetus was given by the Government to the cotton spinning industry and the result was so far successful. During 1887 the quantity of cotton yarn imported into Japan was 47,439,693 *kin*, but the import was reduced to 12,350,000 *kin* in 1895. The low count yarn manufactured in this country—under 20's—has prevented the import of Indian cotton yarn. The quantity of Indian yarn received here during 1890 amounted to 13,970,000 *kin*, but it was greatly reduced in 1894, the total quantity received during that year being 2,330,000 *kin*. These figures show that we have already attained the desired result in the matter of competition, and that we have succeeded to a large extent in competing with the imported article, but there still remains the work of stopping the import of 2,000,000 *kin* of Indian cotton yarn. This we can do by increasing the manufacture of low count yarn on one side and on the other in competing with the English yarn by manufacturing fine counts. The import of English yarn of finer counts, from 30's upwards, does not show any remarkable change, though in the low counts—in which a much larger business is done—Indian yarn has been beaten by the home made yarn. During 1890 upwards of 17,900,000 *catties* of English yarn were imported, while in 1894 imports of the same yarn amounted to 13,600,000 *catties*. It is natural that things should develop from coarse to fine. Formerly the people were accustomed to wear cotton cloth made with very coarse yarn, but of late cotton cloth of very fine thread has become popular. This explains why so large a quantity of fine yarn is being imported from England. In making fine counts, like the Eng-

lish yarn, the raw cotton produced in the United States is required, China and India cottons not being fit for the purpose owing to coarseness of fibre. Accordingly, we feel the necessity of providing ourselves with ready means to import American cotton, in connection with which special banking facilities will be required. In order to accomplish these things the co-operation of Government and people is very important. It is also a very important question to decide how many spindles are required in this country to ensure a full supply of cotton yarn.

It is only two years ago that an expert said that 600,000 spindles would suffice, but according to the present view one million spindles will not be enough. Unless the country's civilization should take a retrograde movement the demand for the cotton yarn will increase year by year, and if this is so it is hardly necessary to add that a large number of spindles will be required. We can not tell exactly how many spindles are needed in Japan at present, but so far as statistics show there is still a spare space remaining open for the supply of cotton yarn. The present demand for cotton yarn is calculated to amount to 78,220,000 *catties*, altogether. Eight parts of this are now supplied by home made yarn, and the remaining two parts by foreign yarns. This then is the space yet open to the native manufacturer.

In the next place, the main object of our cotton spinning industry is to compete with European manufacturers in Eastern Markets. Having obtained the approval of the Diet in the preceding year the Government promulgated the law concerning the abolition of export duty on cotton yarn. This law was enforced on and after the 1st July, 1894. Again, the law effecting the abolition of import duty on raw cotton came into force in April last. An advantage amounting to 10 per cent. was thus obtained by the cotton spinners in competing with foreign spinners. These laws were made for the benefit of our cotton spinners. The recent statement on the export of our cotton yarn shows that the values in 1893, 1894, and 1895 were 59,000, 955,000, and 1,034,000 *yen* respectively. The sudden increase in 1894 is due to the abolition of the export duty in the latter half of the year. During February of this year the export of cotton yarn amounted in value to 213,000 *yen*. We may therefore expect that the export of home made yarn this year will be between one and a half million and two million *yen*.

As stated above, we have already achieved the advantage of exporting our cotton yarn, and as markets have been opened for our cotton yarn there only remains now that we should maintain the competition with foreign yarn in the markets of the East. We cannot, however, hope that goods that have been shipped abroad in bad order will find a ready sale, so we must make full investigations as to the consumption in the principal markets, such as Korea, China, and Hongkong. During 1894 Korea imported cotton yarn to the value of upwards of 108,000 *yen*, of which more than 68,000 *yen* worth was imported from Japan. Almost 60 per cent. of the whole consumption in Korea was supplied from Japan. For the same period China imported cotton yarn valued at 31,522,583 *yen*, of which 872,805 *yen* worth was shipped from Japan,—that is 2.78 per cent. of the whole consumption. In 1895 the total value of cotton yarn imported into China amounted to 31,234,778 *yen*, of which the amount supplied by Japan was 683,087 *yen*. If these figures are correct, we have still large opportunities in China. Hongkong being the largest market in the Far East, all merchandise from Europe and Japan is gathered there first and thence distributed in the Straits Settlements, the southern islands, and Australia. During 1894 cotton yarn valued at 19,831,207 *yen* was imported into Hongkong, of which India supplied over 91 per cent., and England the remaining 9 per cent. The value of our cotton yarn shipped to Hongkong in the same period was 9,812 *yen*. We have then the chance of supplying 37 per cent. more to Korea, 98 per cent. more to China, and even far greater quantities to Hongkong. It will be seen that there are immense opportunities left open to us in supplying cotton yarn in competition with India and England. Turning to the market in Australia, we have much to do still. During 1894, Australia imported cotton yarn to a total value of 22,837,020 *yen*. Should the demand for our cotton yarn extend in that country the spinning industry of Japan would advance by leaps and bounds even if the demand from Korea, China, and Hongkong were lost. But I shall not dwell upon this point at present.

How many spindles are owed by our rival countries? Let us count them. England owns 45,270,000 spindles, and India 3,649,736 spindles, but we have only 984,557 spindles, a far smaller number than either of the rival countries with

whom we have to compete in the eastern markets. Now let us see what advantage or disadvantage we may have in this commercial competition to be undertaken in China and Hongkong. We hardly need say that the freight from England to China is far greater than the freight we shall have to pay to ship our cotton yarn to China or Korea. India, too, has to pay a higher freight than we pay. The freight on one bale of cotton yarn from Bombay to Shanghai is about 1.90 *yen*, while the freight from Japan to Shanghai is 70 *sen*. The rate of freight we are paying is only one-third of that paid by Indian shippers. As to the quality of cotton yarn we may add that whereas the Indian yarn is of a yellowish brown colour, our cotton yarn is pure white and bright, and Chinese consumers prefer ours to the Indian yarn. In the matter of freight we have already a great advantage, and in addition to this our manufactured yarn excels in quality that produced by our Indian rival and is liked more by the larger consumers. But the Indian spinners have the advantage of being in a position to buy the raw material much cheaper than we can, as a large quantity of raw cotton is produced in India, and they have also the advantage of being able to command much capital at a cheaper interest than we are able to. Moreover, they have the advantage of experience in this industry. On our part, however, we have some other advantages. Labour is cheaper here, and we have an abundant supply of cheap coal. Besides, our people are always ready to replace old machinery by modern and more improved types, whenever they find it beneficial to do so. I should think therefore there is some prospect of being able to compete with India and England in the Eastern market. In the meantime, I must point out that the mode of packing demands improvement, as the packing at present is too rough and the wrappers are liable to wear off before the goods reach their destination. This is one of the greatest faults in connection with the export of cotton yarn from this country.

Strictly speaking, the cotton spinning machinery is European machinery introduced into this country, and the cotton spinning industry is an European industry started in Japan. Cotton yarn is the first merchandise manufactured in this country by machinery after European style to be exported abroad. I should think that no other industry offers such promising results as the cotton spinning industry. As the people are now earnest to a degree concerning the export trade, the Government authorities should give an impetus to the development of such a well paying industry, and the people on their side should work zealously to maintain its growth. I hope that cotton yarn will become one of our important products in the markets of the East in future.—*Kobe Herald*.

 12—P takes Kt
 13—Kt takes P
 14—P to K 4
 15—P to K 5
 16—P to K Kt 3
 17—P to K B 4
 18—Kt (Q 2) to B 3
 19—R to Q B sq.
 20—Q to Q 2
 21—P to Q Kt 4
 22—B to R sq.
 23—Kt to Kt 3
 24—B to Q 4
 25—B to B 5
 26—Kt takes Kt
 27—P to Q 4
 28—Q to Q 3
 29—Kt to Kt 2
 30—R to Q R sq.
 31—P to R R 4
 32—P to R 5
 33—R P takes P (d)
 34—R to K R sq.
 35—R to R 3
 36—Q R to K R sq.
 37—Q takes Kt P (e)
 38—P takes B
 39—R to R 8 ch.
 40—Q takes B P ch.
 41—Q takes Q ch.
 42—Q R mates.

(a) Generally speaking, it is unwise to allow such an exchange, and Black could afford to waste a little time by retreating his bishop instead.

(b) The bishop should have been kept on the diagonal. B to R 3, followed presently by P to K Kt 5, seems better.
 (c) It appears necessary to at once capture the piece; but then Black's pawns would be strong and well advanced.
 (d) One of the prettiest finishes we have seen recently now occurs.
 (e) There is much that is charming in all Black's moves at this point. If now P takes Q, mate follows easily at once.

FROM THE "SYDNEY MAIL."

INTERCOLONIAL MATCH.

Mr. Charlick's awards on the unfinished games have come to hand. He gives wins to Victoria at Boards 4 (Younkman) and 8 (Noall), wins for Scott Board 6, and Mackenzie Board 9, and draws at Board 2 and 7. Victoria, therefore, wins by the odd game, as shown by the following table:—

NEW SOUTH WALES.	VICTORIA.
1. E. N. Wallace ... 1	1. R. K. Esling 0
2. W. Crane, Jun. ... ½	2. W. Tullidge ½
3. J. L. Jacobsen ... 0	3. — Wilson 1
4. G. B. Hall 0	4. — Younkman ... 1
5. A. W. Britton ... ½	5. R. L. Hodgson ... ½
6. P. M. Scott 1	6. E. B. Loughran ... 0
7. W. H. Jonas ½	7. J. Stanley ½
8. P. B. Walker 0	8. — Noall 1
9. C. Mackenzie ... 1	9. M. Heaver 0
10. S. Henderson 0	10. — Haviland 1
4½	5½

We give below the games at the first two boards. The *Weekly Times* writes highly of Mr. Wallace's "masterly play," but the *Leader's* annotations are confined to Mr. Esling's "antics." All blame to the Victorian, and no praise to the champion.

GAME No. 530.

QUEEN'S GAMBIT.

VICTORIA. Mr. E. K. Esling.
 1—P to Q 4
 2—P to Q B 4
 3—Kt to Q B 3
 4—B to B 4 (a)
 5—P to K 3
 6—Kt to Kt 5 (b)
 7—P takes Q B P
 8—P to Q R 3
 9—B to K 5?
 10—P to Q Kt 4 (c)
 11—P takes Kt
 12—K to K 2
 13—Q to R 4
 14—B to Q 4
 15—P to B 3
 16—B takes Kt
 17—Kt to Q 4 (e)
 18—P to K B 4
 19—P takes P
 20—K Kt to B 3
 21—Q to B 2
 22—P takes R
 23—R to R 2

NEW SOUTH WALES. Mr. E. N. Wallace.
 1—P to Q 4
 2—P to R 3
 3—Kt to K B 3
 4—P to B 4
 5—Q to Kt 3!
 6—Kt to R 3
 7—B takes P
 8—Castles
 9—Kt to K 5
 10—Kt takes Kt P! (d)
 11—B takes P ch.
 12—P takes P
 13—P to Q R 4
 14—Q to B 3
 15—Kt to B 4
 16—Q takes B
 17—R to Q sq.
 18—P to R 4! (f)
 19—B to Kt 5 ch.
 20—P to Q Kt 4 (g)
 21—R takes Kt (h)
 22—Q takes Q P
 23—Q takes P ch.

And Mr. Esling resigns.

(a) This revival of an ancient development has found favour with the masters, but we doubt if it is as useful as the well tried fianchetto development.
 (b) Altogether premature.
 (c) White has played five successive weak moves. His neglect to develop the King's pieces meets with swift punishment.
 (d) Nicely played. The Pawns and position gained more than balance the piece sacrificed.
 (e) B to Q 5 was threatened.
 (f) A strong stroke, which maintains the pressure.
 (g) Nicely timed, the object being to deprive White's R of the Q's protection.
 (h) A beautiful finishing touch to a capably played game on Mr. Wallace's part.

GAME No. 531.

RUY LOPEZ.

Mr. Crane, N.S.W. Mr. Tullidge, Vict.
 1—P to K 4
 2—Kt to K B 3
 3—B to Kt 5
 4—P to Q 4 (b)

 7—P to K Kt 3
 8—B to B sq.
 9—Kt to Kt 5
 10—B to Q 2
 11—Q takes B
 12—Q to Kt 5 (f)
 13—B to B 4
 14—Castles Q R
 15—Kt takes Kt ch.
 16—Kt to B 3
 17—B to Kt 3 (g)
 18—Q takes Q ch.
 19—R to Q 2
 20—R takes R
 21—R to B sq.
 22—Kt takes P ch. (i)
 23—B takes P
 24—R to B 7 ch.
 25—B takes P
 26—B to Q 3
 27—B takes P
 28—R to B 8

1—P to K 4
 2—Kt to Q B 3
 3—P to B 4 (a)
 4—P takes K P
 5—Q to R 5 (d)
 6—Kt to Q B 3
 7—Q to R 6
 8—Q to K 3
 9—B to Kt 5 ch.
 10—B takes B ch.
 11—K to Q sq. (e)
 12—Q to R 2
 13—R to B sq.
 14—P to Q 3
 15—P takes Kt
 16—P to Q 4
 17—Kt to Kt 5! (h)
 18—K takes Q
 19—R takes P
 20—Kt takes R
 21—Kt to Kt 5
 22—P takes Kt
 23—R to Kt sq. (i)
 24—K to Q 3
 25—Kt to B 3
 26—Kt to K sq.
 27—B to K 3
 28—K to K 2

29—R to B 3
30—B to Kt 6
31—P to Kt 3
32—P to B 4
33—K to B 2
34—P takes P
35—K to B 3
36—P takes P ch.
37—B to B 5
38—B to Q 3
39—R to K 3
40—P to Kt 4

Adjudicated a draw.

(a) A variation which should not yield a safe defence.
(b) The position has merged into a "Vienna" game, with White as second player, and a move (B to Kt 5) ahead.
(c) B takes Kt should have been played.
(d) Black might have gained the K P by exchanging Kt, followed by P to B 3 and Q to R 4 ch.
(e) White has slightly the better position.
(f) More promising was 12—B to R 3.
(g) Badly played. 12—B to K 2 made everything safe.
(h) A strong move, which gains a P.
(i) Best, otherwise the passed P will slowly but surely win for Black.
(j) If 12—Kt to K 6, 12—R to B 7 ch.—K to K sq., 13—B to Kt 3—Kt to B 4, 14—R takes B P!—Kt takes Q P, 15—B to Q 5—R to Kt sq., 16—B takes P and draws with ease.
(k) Black has played this "long and difficult" ending with great judgment.

GAME No. 532.

The following is one of the 34 games played simultaneously by Mr. Pillsbury at Hastings:—

KING'S GAMBIT DECLINED.

WHITE.
Mr. Pillsbury.
1—P to K 4
2—P to K B 4
3—Kt to Q B 3
4—R takes B
5—P to Q 4
6—P to Kt Kt 3
7—P takes P
8—Q to B 3
9—B to K 3
10—P to K 5
11—Castles
12—R to K sq.
13—Q to B 2
14—B to K B 4
15—B takes Q Kt P!
16—P to K 6!
17—B takes Kt
18—K R to B sq.
19—Kt takes Q P!
20—R takes B

BLACK.
Amateur.
1—P to K 4
2—B to B 4
3—B takes Kt? (a)
4—P takes P
5—Q to R 5 ch.
6—P takes P
7—Q to K 2
8—P to Q B 3
9—P to Q 4
10—P to Q Kt 4?
11—P to K R 4
12—B to Kt 5
13—P to R 5
14—P to Kt 4
15—Q to Q sq. (b)
16—B takes P
17—P takes B
18—Q to Q 2
19—R to Q sq. (c)
20—P takes R

White gave mate in three moves.

NOTES.

(a) Not good. P Q 3 is the correct reply.
(b) It is doubtful whether he could safely take either of the Bishops. If, for example, P takes K B, 16—Kt takes Q P, followed by P K 6, with a strong attack. And if 15—P takes Q B, 16—Kt takes Q P, followed by Kt B 6 ch., &c., and Q takes K B P, also gives White a fine attacking game.
(c) The Knight cannot be taken for obvious reasons, and if R takes B, White wins very easily by R takes B ch., &c.—Morning.

GAME No. 533.

The following game was played between Steinitz and Mongredien in the British Chess Association's Tournament of 1862:—

CENTRE COUNTER GAMBIT.

WHITE.
Steinitz.
1—P to K 4
2—P takes P
3—Kt to Q B 3
4—P to Q 4
5—Kt to B 3
6—B to Q 3
7—Castles
8—B to K 3
9—Kt to K 5
10—P to B 4
11—Q to K 2 (e)
12—Q Kt takes Kt
13—R to B 3
14—R to R 3
15—P to K Kt 4 (g)

BLACK.
Mongredien.
1—P to Q 4 (a)
2—Q takes P
3—Q to Q sq. (b)
4—P to K 3 (c)
5—Kt to K B 3
6—B to K 2
7—Castles
8—P to Q Kt 3
9—B to Kt 2 (d)
10—Q Kt to Q 2
11—Kt to Q 4
12—P takes Kt
13—P to B 4 (f)
14—P to Kt 3
15—P takes P

16—R takes P (h)
17—B P takes Kt
16—Kt takes Kt
17—K takes R

18—Q takes P
19—Q to R 5 ch.
20—Q to R 6 ch.
21—Q to R 7 ch.
22—Q to R 3 ch.
23—R to K B sq. ch.
24—Q to K 6
25—B to K Kt 5
26—B takes Kt P ch.
27—Q takes R ch.
28—R to B 8 ch.
29—Q takes Q mate.

(a) Not commendable, but pronounced by Mr. Potter to be "far removed from drawish tendencies."

(b) 1..... Q to Q R 4 is equally good and the game is continued:—
4—P to Q 4 Kt to K B 3
5—B to Q 3 Kt to B 3
6—K Kt to K 5 B to Kt 3

(c) The following is the main variation in this opening:—
4—P to Q 4 Kt to K B 3
5—B to Q 3 Kt to B 3
6—B to Q Kt 4 B to Q 3
7—Kt to B 3 P to K 3
8—Castles P to K 3
9—Q to K 3 Castles

(d) By the last few moves Black deviates from standard play, allowing his opponent to gain valuable time in forelaying a powerful attack.

(e) The intention probably is to play:—If 11..... Kt takes Kt: 12—Q takes Kt, Kt to Q 3; 13—Q, R to Q sq.

(f) White threatens:—14—B takes P ch., K takes B; 15—R to R 3 ch., winning in a few moves.

(g) The first move of a remarkably beautiful combination, terminating in checkmate 14 moves afterwards.

(h) When Mr. Steinitz sacrificed the Rook thus he probably foresaw the whole succession of moves which ended as it did: the time limit of 12 moves per hour allowed him opportunity for mature deliberation.

(i) 16—R to B 4 has been suggested as preferable, but White wins, though perhaps not so artistically.

TELEGRAPHIC MATCHES.

Mr. William Simpson, who is among the oldest of the surviving members of the "old brigade," acted at the last two telegraphic matches between Victoria and New South Wales as director of play in Melbourne. His experiences have prompted him to write the following letter, in which, after putting on record some comment that is, perhaps, rather too much tinged with the spirit of the "laudator temporis acti," he offers some very valuable practical suggestions:—

"Having since the year 1870 assisted in the conduct of each and every telegraphic chess match which has taken place between New South Wales and Victoria, I venture to write a few lines, in the hope that they may be of service to the present generation of chess-players.

"The matches of 1895 and 1896 were both unsatisfactory by reason, among other things, of so many games being left unfinished when play ceased at 11 p.m.

"Commencing at 10 a.m., ceasing at 11 p.m., which two intervals of an hour each, and the result only three or four games finished, makes one exclaim, 'Le jeu ne vaut pas la chandelle.'

"I trust the present controllers of proceedings at the telegraph matches will not be offended if I suggest that they should return to the system in vogue before they appeared upon the stage. It might be well also if they were to serve a short term of apprenticeship at 'Simpson's' (my namesake's) divan in the Strand in London. There the rule is 'silence'; here the practice is 'gabble.' How can a man play chess when there is a perfect buzz of audible comment going on in front of him, in rear of him, and at each side of him?

"If these intercolonial matches are to be of service to the game, the players should be in a room into which no person save the captain, the umpire, and the messengers should be permitted to enter. Other persons than those mentioned might ventilate their opinions over duplicate boards in as loud voices as possible, provided that the voices were not loud enough to disturb the players. The earlier matches, and the blindfold exhibition by Mr. Blackburne, were conducted in the manner here indicated with satisfaction to all concerned in them.

"No player should be eligible for the office of captain. It is quite enough for a player to attend to his own game. The loss of time caused on the 25th ult. by Mr. Crane in Sydney and Mr. Esling here having to leave their respective boards to adjust differences was serious; and no one will doubt that the quality of their play was deteriorated thereby.

The players should be relieved from keeping time. We want chess-players, not conjurers who can perform a great number of antics simultaneously. It happens now that one man forgets to stop his clock, and another forgets to start it; so the time record is not worth a brass farthing.

In the match between Mr. Goldsmith and Mr. Fisher no one was allowed to enter the room but the two umpires and the players. The umpires recorded the moves, and started and stopped the clocks. The combatants had nothing to distract their thoughts. A duplicate board was in another room.

"If I could I would relieve the players by telegraph of all recording, but I fear it is not possible

to do so. The trouble, however, might be much reduced, by supplying each player with a ticket-book, numbered move 1 and onwards. Then all that a player would have to do would be to jot down his move on a ticket and give the ticket to a messenger.

"The messenger should carry the ticket to the operator's assistant, who from a dial should take the time and mark it on the ticket, which should then be handed to the operator. The operator after telegraphing the move should return the ticket to his assistant, who should record the move; and the ticket might then be handed to a messenger, who might make the move on a duplicate board.

"The work of recording should be done as indicated on the accompany tabular form:—

Number of Move.	White.	Black.	Ans.	Time in Minutes.	Totals in Minutes.
1.....	A	10 15	...
2.....	a	10 17	2..... 2
3.....	B	10 24	...
4.....	b	10 25	3..... 3
5.....	C	10 29	...
6.....	c	10 30	4..... 4
	&c.			&c.	

"An assistant to the telegraph operator, three messengers, a captain and an umpire would be all the officials needed. Every other person, no matter how eminent he may be, or may think himself, should for the time being be only one of the public, and should show his sense and good manners by abstaining from all interference with the officials and their duties.

"Adoption of the methods which I have suggested might enable 10 games to be disposed of from 10 a.m. till 11 p.m., with two adjournments of an hour each, but I am disposed to think that not more than seven games could be got through.

"The question 'What is number so-and-so's time?' is continually being asked. To answer it the player's clock has to be referred to. By the plan I advocate the record would supply the answer, and none of the players would need to be disturbed."

MAIL STEAMERS.

THE NEXT MAIL IN DUE

From America	per P. M. Co.	Thursday, July 30th.
From Europe, via Hongkong	per M. M. Co.	Monday, July 27th.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tribu-
taries in Abyssinia," says—"I ordered the druggist Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining 'stock.'"
Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890

**MILKMAID
BRAND
CONDENSED MILK**

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 1ST, 1896.

SUMMARY OF NEWS.

H.I.H. THE CROWN PRINCE is staying at Nikko.

THERE is no Korean news of importance this week.

THE China-Japan Treaty of Commerce has been concluded at Peking.

THE Irish Land Bill has passed through Committee in the House of Commons.

CUSTOMS officials and policemen in Formosa are allowed to carry arms for self-defence.

So severe is the drought at Kurojo, Niigata Prefecture, that water is selling at 30 *sen* per gallon.

THE baseball team of the U.S.S. *Olympia* beat the shore nine at Yokohama on Saturday by three runs.

THE Turks are massed before Heraklion, seeking to enter the town, but the Governor opposes their entrance.

THE Wedding of Prince Charles of Denmark and Princess Maud of Wales has been solemnized. H.M. the Queen was present, but withdrew after

the ceremony, H.R.H. the Prince of Wales presiding at the wedding breakfast.

CHINA has refused the requests of Russia and Germany to establish banks in Peking to transact Government business.

By Imperial Notification No. 272, the Provisional Yokohama Harbour Construction Bureau will cease to exist on July 31st inst.

THE weather has been very hot throughout the week the temperature being above the normal for this time of the year.

THE Emperor is despatching a Chamberlain to Honolulu, by the *Mitsue Maru* to inquire into the health of Count Mutsu.

THE "Spray Cup" has been won by *Mary*, Mr. Laffin's yacht. This boat carries off the prize in every race she enters.

THE Czar has recovered from the attack of jaundice from which he was suffering and has made his state entry into St. Petersburg.

CHARLES VEITCH, an Englishman, long in the employ of the Tobe Common School, died on Sunday in Yokohama from heat apoplexy.

MAJOR-GENERAL TSUNODA, Prof. W. K. Burton, and some graduates of the Engineering College, have left by the *Saikyo Maru* for Formosa.

TELEGRAPHIC communication with the outer world is still greatly interrupted, the cable between Nagasaki and Shanghai being damaged.

A TELEGRAPH station will be opened on the 1st August at Futakawa, in the Atsumi district of Mikawa province, but for domestic service only.

NEGOTIATIONS have been concluded with German, French, and Russian bankers for a Russian three per cent. gold loan of four hundred million francs.

MR. GREGORIE DE WOLLANT, Secretary of the Russian Legation at Tokyo, has been promoted First Secretary of the Russian Embassy at Washington.

THE Goldite Democrats have resolved to hold a convention in September, when they will adopt a platform and nominate a candidate for the Presidency of the United States.

MESSRS. LANGFELDT and Co., after declaring a dividend for the half-year of 10 per cent. resolved to apply \$50,000 of their surplus assets to increasing the capital of the company.

LAING's column in the Matappo hills was attacked whilst laagered. After some fighting, the Matabeles were defeated with a loss of ninety killed. The British lost four whites and twenty-five friendly killed.

MR. KURINO, the new Minister to Italy, telegraphs that on the 15th of July, the Marquis Rudini organised a new Cabinet, and on the 20th Viscount Venosti was appointed Minister for Foreign Affairs.

THE Tokyo Chamber of Commerce have invited Marquis Ito and Saigo, and Viscounts Enomoto and Takashima, Lieut.-General Katsura, and Vice-Ministers Kitagaki and Kaneko, to the Kamei, Yanagi-bashi, on the 1st inst.

LORD SALISBURY, in laying the Venezuela papers on the table of the House of Lords, deprecated arbitration at the present stage, and said he was confident that after the Commission had learned the facts the diplomatic question would be easily adjusted.

MARSHAL MARQUIS YAMAGATA returned to Tokyo on Tuesday. He was enthusiastically received by the populace, and a most cordial

audience was accorded him by their Majesties the Emperor and Empress. The Marshal is greatly emaciated.

THE rates of passage money by the newly established Pacific line of the Nippon Yusen Kaisha are as follow:—From Kobe or Yokohama to Seattle—First-class, *yen* 240; second-class, *yen* 170; third-class, *yen* 50. To Honolulu—First-class, *yen* 170; second-class, *yen* 100; third-class, *yen* 35.

THE condition of the import trade in Yokohama is causing some alarm in view of the increasing number of godowns packed to the door-sill with unsaleable goods. The commercial activity of last autumn caused importers to buy freely; prices afterwards went up at home and things appeared roseate. With the New Year, trade opened fairly brisk, but as the year advanced the high hopes entertained at the beginning gave way slowly to despondency more or less acute. The scores of companies projected at the termination of the war are calling in subscriptions on the shares allotted to applicants, but in dozens of cases these demands must go by default. The land-tax and other imposts due in September, the recent disastrous storms throughout the length and breadth of Japan, and the depression in the principal staples of export—tea and silk—have brought matters to a crisis, and now nobody has any money to spare. Besides, the demand for many imported goods has dwindled to nothing since March. Yarns have actually been sold in Yokohama at figures that leave a substantial margin of loss; nothing can be done in Shirtings and T-cloths; Fancies are equally "off," and Woollens are somnolent. Tin Plates, that moved fairly well last week, are now depressed, dealers suffering from depletion, and "deliveries" are few and far between. Kerosene is weak, holders being inclined to come down a point or so to keep the market moving. Brown Sugars have been fairly in demand at quotations, but Formosa sorts are neglected, though Whites are enquired for. The Silk trade is in a desperate plight: the American demand has fallen to next to nothing, politics absorbing all attention on the other side. Waste Silk is equally lifeless—no settlements, no quotations. Tea is very quiet: prices being lower and easy for the second crop, though in all verity they are quite high enough considering the quality of the leaf now on offer. Exchange remains unaltered owing to absence of news from abroad.

WRECK OF THE GERMAN GUNBOAT "ILTIIS"

GREAT LOSS OF LIFE.

We have received a telegram from Nagasaki, stating that the steamer *Wosang*, that arrived at that port yesterday from Chefoo, brings a report that news reached Chefoo at noon on the 28th July from a place on the south-east of Shantung Promontory, of the complete wreck of the German gunboat *Ilitis*, in which the captain and officers were all drowned and only eleven of the crew saved. Two German cruisers, on receipt of the news, immediately left Nagasaki to search the scene of the wreck, but difficulties are anticipated on account of the fogs known to be now prevalent on the China coast.

The place indicated in the telegram is not quite plain, being "se promontory." But, from the position of Chefoo for receiving the first news of the occurrence, doubtless the south-east of Shantung Promontory is meant.

The *Ilitis* was a well-known vessel in Japanese waters, and had seen considerable service in the Far East.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The chief topics of discussion during the week were the return of Marshal Yamagata from his mission to Russia, and the disastrous inundations that visited Gifu, Niigata, and other prefectures.

The rice market has undergone considerable fluctuations, owing to climatic conditions, (which are most critical for the growth of the young plants), the recent floods, and also the collapse of the "bull" combination in Osaka. At the Tokyo Exchange the quotation, as compared with the figure ruling a short time ago, fell by as much as 1½ yen per koku in time bargains, and the drop was similarly great in Osaka. But the stock market has shown a slight change only.

The return of Marshal Yamagata has elicited much comment from the press. Opinions differ as to whether he started on his long journey with a fixed diplomatic problem to solve with Russia, and if so, whether that part of his mission was achieved with success. The *Nichi Nichi* places no credit in the alleged secret part of the mission, and its opinion is shared by the *Kokumin*. The *Chuo*, however, takes the opposite view. "While attending the Coronation Ceremony of the Czar, the Marshal," says the organ of the National Unionists, "held conferences on the Korean problem with the Sovereign and the Ministers of Russia, who met Japan's proposals in an affable and favourable manner, the result being that a definite understanding was arrived at between the two Powers on this subject." The *Chuo* is confident that the conscientiousness and prudence of the Marshal, and also his established prestige, alike as a soldier and a statesman, could not have failed to attract the confidence and sympathy of Russia. He probably achieved this *rapprochement* without resorting to any subtleties of diplomacy.

As to the other point raised in connection with the mission of the Marshal, namely, his alleged cool treatment in Russia, the *Nichi Nichi* observes that his treatment, when compared with that accorded to the Chinese Ambassador, may have been relatively cool. But such relative coolness was not confined to Japan's Ambassador alone; the same was the case with the Ambassadors of the Western Powers. No one that comprehends the special relations existing between Russia and China wonders at this, for is not China seeking to prolong her existence by courting in the humblest and most respectful manner the favour and protection of Russia? On the other hand, is not the motive that leads Russia to extend kindness to China easily conceivable? If treatment alone is concerned, even the Korean Ambassador received as warm a reception as the Chinese, though on a smaller scale. Do those that murmur about the relatively cool reception given to the Japanese Ambassador, extend their umbrella to a comparison with the Korean Envoy's case also?

The *Kokumin's* view of this affair is somewhat different. It can not profess complacency when it observes the want of cordiality displayed towards Japan's Ambassador, the conqueror of China, on the one hand, and the peculiarly warm reception accorded to the Representative of the vanquished Empire on the other. It holds that from such a display of partiality alone Russia's unwillingness to effect an *entente* with Japan is easily inferable. Further, it observes that two reasons underlie the earnestness with which the public welcome the return of the Marshal; namely, because men are anxious to learn his opinion about Russia's true disposition towards Japan, and because his presence is expected to exercise considerable influence on domestic politics.

The loss that the recent floods inflicted upon Gifu, Niigata, and other localities, must reach an enormous figure. The *Chuo* estimates that

the damages suffered by the cultivated lands in Gifu aggregates 70 million yen, exclusive of injury to roads, embankments, and so forth. A more trustworthy report is to hand from Niigata, whose Governor informs the Home Office that the loss caused by the floods in that prefecture is put at 9,147,153 yen in all. Naturally therefore many papers have something to say about the calamity.

The *Nichi Nichi* argues that, unlike the case of a phenomenon such as a seismic wave, disasters incidental to the outbreak of inundations can be effectively provided against in advance, and quotes as typical instances India and Holland, where, subsequently to the construction of durable and extensive preventive works, calamities from floods or tidal waves are practically unknown. Japan is in urgent need of some provision of the kind, for, according to official investigations, the average yearly damage suffered by the country from floods alone amounts to over 13 million yen, and the casualties to life aggregate 1,000. These statistics cover the period up to 1893. With the consent of the 9th session of the Diet, the Government has issued a Law relating to the Control of Rivers and Riparian Construction, and a large appropriation has been voted in the case of such specially unruly rivers as the Tone, the Mogami, the Shinano, the Oi, and six or seven others. But years must elapse before the contemplated works can be completed. The *Nichi Nichi* naturally feels much uneasiness at this prospect, though it thinks that patience is essential, in view of the magnitude of the enterprise. At least, however, the repair of the damages wrought by the present floods must be promptly attended to, for otherwise the calamity may be repeated next rainy season, namely, in the autumn of the year. At the same time, the Authorities should exercise great caution in the conduct of the affair, remembering the fact that the repairs undertaken in the sequel of the disastrous earthquake in Gifu and Aichi—repairs involving an enormous outlay—were rendered nugatory by the floods that visited those districts in the year but one afterwards. Our contemporary further urges the members of the Diet and publicists in general to deal with this grave question in a non-political and impartial spirit.

The *Mainichi* endeavours to make this occasion a pretext for convoking an extraordinary session of the Diet. The disbursement of only 450,000 yen, it says, by way of relieving the sufferers in the Sanriku Districts and providing for their future subsistence, has evoked loud complaints from the poor survivors and from their fellow provincials. What, then, can the Home Office do in the presence of another disaster following immediately on the heels of the first. There only remains a small sum of the Second Reserve, while any extraordinary appropriation from the Surplus is out of the question, the Liberals having voted against such a procedure as unconstitutional. On the other hand, the dilemma demands prompt measures. Hence the only way open is to convene an extraordinary session of the Diet.

The Liberals are apparently in an embarrassing situation, if we may judge from an article in their organ, the *Tokyo Shimbu*. In lieu of the positive and confident tone usually adopted by that journal, its language is ambiguous and halting. The question, it writes, whether an extraordinary session shall be convoked or not, is simply a practical point. If investigation of the damages can be promptly made, then there may be occasion to convoke the Diet; but if, on the contrary, two or three months must elapse before complete inquiries can be carried out, then the matter may be dealt with at the commencement of the coming regular session. There is, however, a mean route between these two extremes, namely, an extraordinary disbursement from the Surplus. The people are bound to repose confidence in the Government, just as the latter is bound to respect its responsibilities. Hence, when an occasion of great urgency arises, the people may suffer the Go-

vernment to meet the emergency by administrative process, of course with full responsibility for the step taken. The *Tokyo Shimbu* regards this as the most convenient expedient, and wishes to know whether it does not commend itself for adoption by the Authorities.

The *Fiji* offers a useful practical suggestion to the City Authorities of Tokyo with respect to the frequent interruptions of the water supply. This it considers specially baneful to health in the hot season, for the lower organisms found by microscopic examination to be present in tens of thousands in every cubic centimetre of the head waters of the Tamagawa, are known to multiply with fearful rapidity in summer, wherever a small quantity of water collects in a temporarily stagnant aqueduct. The aqueducts, being at present wooden, naturally require frequent repairs. But the Authorities must be previously taught, by long experience, when the conduit in a particular section of the city will have to be reconstructed, and should thus be able to avoid replacing old conduits with new during the hot season, and should also undertake work before the old conduits have become very rotten. The *Fiji* considers such want of precaution on the part of the Authorities to be entirely inexplicable, when the citizens have begun to pay so much attention to the hygienic condition of their dwellings, and when, in consequence of their care, the ravages of epidemic diseases have been remarkably abated.

With resolute persistency the same paper reverts once more to the opium question in Formosa. It has reason, it says, to keep this question constantly before the public, for it has received the alarming intelligence that signs of the fatal practice's gradually spreading to the Japanese settlers themselves are becoming apparent. The same cause that degraded the original Chinese settlers into opium smokers seems to be acting upon the Japanese immigrants with similar potency. That cause is the unwholesome climatic conditions in the island. The severe heat prevailing there is so enervating to the Japanese that the labouring classes are obliged, after the fatigues of the day, to have recourse to alcohol. This naturally leads to the copious use of water, and consequent derangement of the digestive organs. The trouble is fatal. The same labourers find, however, as their Chinese predecessors did, that opium is not only refreshing, temporarily, to the fatigue of mind and body, but also does not involve the subsequent use of bad water. Hence they regard it as the lesser of the two evils. Thus there is reason to apprehend the gradual and natural spread of opium among the Japanese labouring classes. The *Fiji's* contention is that the strict prohibition of the use of opium is a question of urgent necessity.

In another article the same paper urges the Authorities to deal with insubordinate Chinese, and also with all of suspicious loyalty, in a thoroughly drastic manner.

The *Tokyo Shimbu* writes of Count Okuma with unreserved severity. It rebukes him as greedy of power even at the expense of the national interests, and declares that the recent active exchange of calls among statesmen not in the Government, is primarily traceable to the Count's ambition to assume the portfolio of Foreign Affairs, though he knows well that the implacable hostility existing between him and the cabinet in power precludes his admission even were he to surrender his own views.

The *Official Gazette* of the 30th ult. contains several notifications concerning Formosa. One permits the wearing of weapons by Customs Officials and Police for self defence. Another gives the names of the localities where prisons will be established. Another deals with druggists; a fourth alters the appellation of the National Language Schools.

EDITORIAL NOTES.

BICYCLE-MAKING IN JAPAN.

THE *Mainichi* says that there are at present four bicycle workshops of note in Japan, one in Yokohama, one in Kyoto, and two in Tokyo. All were opened some three or four years since; Mr. Kajino's workshops in Yokohama and Mr. Sasaki's in Azabu, Tokyo, being the pioneers. One other big workshop is that of Mr. Morita in Honjo, Tokyo. The output of either shop does not exceed 130 vehicles or so per annum, the mechanics employed being 17 in one and only 10 in the other. They are not adepts at the work, their experience dating only a few years back. At present many different kinds of bicycles are manufactured in the workshops of Tokyo and elsewhere, the price of the machines varying very much. From a catalogue published by the Morita shop, a pneumatic tire of the first class costs 120 yen; a second class machine, 100 yen; but one of special make costs 150 yen. The pneumatic tire being difficult to repair, is not in favour with Japanese riders who prefer substance to fashion. They like the solid-tire bicycle which is more durable and costs less to keep in repair. The latter sell, for a first class machine, at 105 yen; second class, 95 yen; third class, 80 yen; fourth class, 70 yen. The high, thin-tired machines, though much in vogue formerly, are not now so popular, being difficult to manage and very liable to get out of order. Their price is comparatively low, a first class machine costing 65 yen; a second class 55 yen; and a third class 45 yen. Both the Tokyo shops are patronized by the Post Office, and one is under the patronage of the Metropolitan Police. Generally speaking, bicycle riding is not so popular in Tokyo as in Yokohama, riders in the former city being mostly confined to employees of mercantile and banking corporations, head clerks of large shops, young peers, and school teachers. In Tokyo the home-made machine and foreign makes are pretty closely balanced in point of numbers. With the increase of riders the patronage accorded to Japanese machines is on the increase. It is said that the Yokohama Bicycle Works have received an order from America for 100 bicycles.

THE JAPANESE SOLDIER.

From the *Kobe Herald's* reproduction of portions of Captain G. F. Elliott's report to the United States Naval Department on the subject of the Japanese soldier, we take the following:—

The quiet, soldierly discipline of the Japanese troops astonished all foreign officers who had the opportunity of observing them while disembarking on the march, occupying camps near, or while billeted in cities not their own. Japanese infantry regiments are homogeneous physically; the men do not vary more than 2 in. in height, seven years in age, or more than 20 lb. in weight. In the field they are not burdened with overfleshy men, neither with the 'faithful old soldiers' whose pride has outlived their strength. Forced marches did not leave a fourth of the regiment straggling in the road, and the endurance of the men could be counted on nearly as a unit. Undoubtedly they are brave, but have not been tried in large bodies up to a demoralising loss, although small parties on one or two occasions were cut off and fell together like true soldiers. Whether they will be subject to panic under heavy reverses is not known. They are fairly well set up, but do not show it as much as the regular foreign soldiers; good weight-carriers, but I believe slow marchers, although for short distances they get over the ground very rapidly on a trot, having what is known as good wind. Drill has in a great degree eliminated the native peculiarity of being pigeon-toed. In marching they step too much from the knees, and do not move out from the hips; this I think, is due from the use of the *kimono* in early life.

With regard to the rifle used by the Japanese and the nature of the wounds caused by it, Captain Elliott goes on to observe:—"All rifles are made at the arsenal in Tokyo, and are called by the inventor's name, Murata. They are of two patterns. The one used by the great majority of the troops was a single-loading bolt gun of .44 calibre, sighting to 1,400m, without wind gauge; the other a magazine gun of .315 calibre. The stocks are very short and the cheeks wide." As to the effect of the rifle bullet wounds, Captain Elliott reports:—"While in Tientsin, China, I visited several times the hospital under charge of Dr. Irwin, surgeon to Viceroy Li Hung-chang. Wounded Chinese soldiers were treated here during the winter. Surgeon-Major James, of the British Army, had charge of some of the wards, and was much interested in wounds made by the small calibre enveloped bullet. He kindly gave me every opportunity to see and much informa-

tion in regard to these wounds. I saw about thirty of the wounded. In no case were bones shattered to any extent, even at the exit of the ball. The puncture was clean; no bullet was found in the patient, so the casing was unknown whether of steel or a softer metal. They did not seem to deflect on striking, but cut their way through in the line of flight. Thirty patients testified they had received their wounds at distances varying from 150 to 400 yards. They healed readily, often by first intention. None of the wounds were in the leg, for the men had made their own way from the battlefield on foot or in carts to the railroad, more than 200 miles, and were several weeks on the road. All suffered more from frostbitten feet than the bullets. Out of thirty cases I saw I think probably the old .45 calibre lead ball would have left on the field nine of them dead."

NAGASAKI POST OFFICE.

THE Nagasaki paper says that on the 24th instant, it received its Kobe and Yokohama exchanges dated the 7th and 4th inst., respectively. To the wrapper of each was attached a slip of paper explaining that "the mail was delayed." It now appears that the whole mail was taken to Vladivostok and brought back thence on board the steamer *Taiyick*. We do not know who is responsible for such a piece of crass blundering, but the Communications Department should enquire into the matter. One prominent local firm, at least, has been put to serious inconvenience by this latest insane freak of the Postal Authorities. The Postal Service of Nagasaki is daily becoming worse and worse, letters and telegrams addressed to private residences are taken to places of business, telegrams get to their destination in the Settlement hours after being received at the Post Office, and a species of dry-rot appears to pervade the whole system. As far as we can gather, the local employees are overworked, various causes having rendered the staff as it is at present totally inadequate to the amount of business to be got through. Such complaints are general throughout the Treaty Ports of Japan. One of the causes of the lamentable breakdown in the Post Office is the smallness of the wages given: good men are not attracted to the service, and youths of any promise quickly leave it for better paid employment.

THE TOTAL ECLIPSE OF THE SUN.

THE Rev. Père L. Froc, S.J., writing from Sicawei Observatory, says that the coming eclipse of the sun on August 9th, will be visible in Shanghai under the shape of a partial eclipse. The obscuration will be greater the more one goes north; for instance, in Peking the moon will encroach on the greater part of the sun, whilst at Hongkong, but a small part will be obscured. As for the time, the more one is stationed in the W. the sooner the eclipse will be seen on the same parallel of latitude, or, to speak more accurately, on a line N.W.-S.E. parallel to the trajectory of the eclipse; thus Hankow will see the beginning of the eclipse before Nagasaki. The Rev. Father has drawn up the following computation regarding the duration of the phenomenon at Yokohama:—

AT YOKOHAMA (FLAGSTAFF OF THE HOSPITAL.)

	Day.	h. m.
Beginning of eclipse	August 9th	1.58.1 p.m.
Middle do. (max. phase)	"	3.10.6 "
End do.	"	4.16.5 "

To observe properly the phenomenon it is necessary to have good astronomical telescopes. The following methods may be recommended. 1.—To watch the progress of the eclipse through smoked glass. 2.—To observe the sun reflected in dark liquid, for instance water mixed with ink. 3.—To pierce a hole in thick paper or pasteboard and to watch the brilliant spot projected by this paper on a table or a sheet of white paper. Before the eclipse a white circle will be seen, during the eclipse the circle will change as the sun into a horned image. If watching the sun under trees, the little brilliant circles which are usually seen there, will, when examined carefully, appear horned.

THE REV. SYDNEY SWANN AT HENLEY.

KOBE's late Chaplain, the Rev. Sydney Swann, rowed in the second heat of the Diamond Sculls at Henley on the 8th June, but was beaten by a length by Mr. Vivian Nickals. The final heat for the Diamond Sculls was won by R. Guinness of the Leander Club, the present holder of the trophy, who beat R. K. Beaumont, of the Burton-on-Trent Club, the sculler who beat the American candidate, Dr. McDowell. In the final heat of the Grand Challenge Cup, the Thames Rowing Club had the favourable side of the river, but there was no question what the result would be. The Leanders were clear at the quarter, and won as they liked by two and three-quarters lengths in 7 m. 4 secs. In the sixth heat for the Thames Challenge Cup, for eight oars, Emmanuel College, Cambridge, beat Trinity Hall, Cambridge. In the seventh heat the crew of the Société d'Encouragement du Sport Nautique of Paris beat the Molesey Boat Club. In the final heat for the Wyfold Challenge Cup, for four oars, Trinity College, Oxford, beat the London Rowing Club. Time, 9 m. 41 secs. In the final heat for the Visitors' Challenge Cup, for four oars, Caius College, Cambridge, beat Magdalene College, Oxford. In the final heat of the Stewards' Challenge Cup, for four oars, the London Rowing Club beat the Thames Rowing Club.

"THE PANTHER."

THE Austrian man-of-war *Panther* arrived in Hongkong harbour on the morning of July 20th from Pola. The *Panther* is a torpedo cruiser, 224 feet long, 34 feet broad, and draws 14 feet. She is armed with two 4½ inch 2½-ton Krupp guns, ten machine guns, and four torpedo launching tubes. Her engines indicate 5,500 horse power, with a speed of eighteen knots an hour. She left Pola on the 1st May, calling at Port Said, Suez, Aden, Massowah, Bombay, Colombo, and looked in at Palo Way en route. The *Panther* is bound on a long cruiser which will last about two years. She has a complement of about 190 officers and men all told, and among them are a number of apprentices for the benefit of whose training the cruise is made.

POSTAL DELINQUENCIES.

THE *Kobe Chronicle* has started a Post Office pillory in which it will publish all records of Japanese postal delinquencies that come to its knowledge. At the end of a certain period it will present the list, nicely pasted together, to the head of the Postal Department in Tokyo "as a token of esteem, and a mark of appreciation of the valuable service he has rendered to us, to his country, and to humanity in general, in showing what limits of stupidity and indifference can be attained by a Japanese official when he really tries." That is pretty tall talk.

THE ARMY OF OFFICIALDOM.

IN the *Courier d'Haiphong* the *Daily Press* finds a cartoon entitled "Les Travaux de l'Empunt." The central figure is an Annamite bricklayer putting a few bricks together, and surrounding him, superintending the work, are twenty-three European officials whose titles, given at the foot, range from the Director of Public Works, through Engineers and Conductors of various classes, down to the Overseer of the sixth class.

"NEUCHWANG," "ON-WO" COLLISION.

THE *Hongkong Telegraph* says that it is rumoured in Chinese shipping circles that the owners of the steamship *Neuchwang*, which, in April last, ran down the *On-wo* near Woosung Bar, have agreed to pay to Messrs. Jardine, Matheson & Co. the full amount of their claim for damages caused by the collision.

HYOGO GAS COMPANY.

MESSRS. BROWN & CO., the General Agents of the Hyogo Gas Co., Limited, on Friday distributed warrants for an interim dividend of \$6 per share for the six months ended 30th June, 1896.

DEATH OF MR. WIRTH.

MR. HARRY WIRTH, the proprietor of Wirth's Circus, that recently played in Japan, died on board the steamer *Kwonglee* on the voyage from Shanghai to Hongkong.

DEATH FROM SUN-STROKE.

GENERAL DE MOULIN, the newly-appointed Governor of Acheen, died on the 8th inst. in Acheen of sun-stroke.

CURRENT TOPICS.

Mr. Ishikawa, an official of the Finance Department, has returned from an extensive tour through the Sanin and Sanyo districts and Kyushiu, where he went to report upon the ports that will be opened for special exports. The ports previously selected by the Authorities for the purpose were Shimizu, in Shizuoka Ken; Sakaye, in Tottori Ken; Nanao in Ishikawa; Shimonoseki in Yamaguchi and Moji on the opposite coast; Karatsu, in Nagasaki, and Otaru in Hokkaido. Mr. Ishikawa's report is believed to confirm this selection. With respect to Shimonoseki and Moji, however, the opinion of the Central Staff Board is against their opening, and the Financial Department may be obliged therefore to abandon the idea of selecting them. The establishment of Shimizu as a special export outlet is attended with drawbacks, for the principal commodity to be shipped thence is tea, which, so far as matters go at present, requires firing at Yokohama, and can not therefore be shipped direct to foreign countries. Hakata affords a poor anchorage, being very shallow. But a scheme of re-construction is on the tapis, and the opening of the port may only be postponed till the completion of that work. Karatsu, mentioned in this article, is not the harbour commonly bearing that name, but is situated on the Bay of Karafusa, a little west of the present Karatsu. The bay is sheltered by Oshima and is the terminal point of the Karatsu Railway. A pier will be built in water over 30 ft. deep at low tide, and as the bay is free from storms all the year round, steamers of 10,000 tons can always lie close to the pier. All these ports, after being declared special export outlets, are to be converted into regular open ports on the morrow of the enforcement of the revised Treaties, and the Authorities are deliberating the subject with great caution. Consequently, their decision may not be made known sooner than the fall of this year.

Surgeon Murata, who went officially to Cuba some months ago, has written home, and his letter is printed in some of the Tokyo papers. He arrived at Havana on June 4th. He broke his journey at New York, where he attended a meeting of the Cuban Independence Support and Charity Society. There he learned with surprise that this Society had forwarded no less than 25 million dollars to the rebel army. His description of the Spanish Government Hospital at Havana and the treatment afforded wounded soldiers, shows that he estimates the status of Spanish surgery as very low. He inspected a ward under the direct care of the Surgeon-Major-General, reputed as one of the most celebrated surgeons in the whole Spanish Army. One ward contained over 70 patients, but not one showed any signs of recovery. The surgery and nursing were slovenly and negligent; the nurses were apparently mere labourers, judging from their dirty limbs and manners. No consideration was paid to the poor wounded soldiers, their wounds being roughly treated both by the surgeon and his nurses. Surgeon Murata was shocked to see one patient suffering from tetanus lying side by side with patients afflicted with other diseases. But that is only a part of what he saw, for he can not bring himself to describe even more surprising things that he came across. He intends to leave for home in the latter end of July.

The Kagoshima *Yoshikan* (a higher middle school) is to be shortly abolished, there being no adequate funds to enable it to be converted into a higher school such as the Regulations of the Educational Department require.

The *Fomiori* has been writing a good deal about the alleged intrusion of Chinese troops within the neutral boundary at Weihaiwei, an intrusion in direct contravention of the provisions of the Shimonoseki Treaty. It now learns, from a trustworthy quarter, that the affair has attracted the attention of the Japanese Government and that the latter has enjoined its Representative in China to bring the matter to the notice of the Chinese Government. After the

usual procrastination, that Government has promised to attend to the matter. But it has not yet ordered its force to retire beyond the neutral line, and urges as a pretext that arrangements have not yet been completed. It has also excused itself by alleging ignorance of the doings of the troops at Weihaiwei, pretending that the trouble must have been caused by the Commander of the troops misreading the Shimonoseki Treaty.

The same paper says that the Chinese have erected a stone monument in a certain place in Shantung that was occupied by the Japanese troops during the war, the monument bearing an inscription that alludes to the Japanese troops and the invasion in highly contemptuous terms; stigmatizing the troops as *wob keu*, the *wob* being the same ideograph as that used in *wob jin*, and *keu* meaning banditti.

The Department of Agriculture and Commerce is to despatch one or two veterinary experts to England to purchase horses for breeding purposes. The appropriation provided for the purpose in the Budget is 46,250 yen, and the Department estimates that it can purchase 20 head or so, as recommended by the Horse Improvement Investigation Committee.

The discussion carried on by the medical Board of the Department of Education as to whether fencing should be included in the regular course of common schools, has concluded. The opinion of the Board is that though boys of and above 15 years of age should receive training, the practice would be injurious to younger lads.

The question of school hygiene has begun to receive proper attention from the Department of Education, which has organized a special board, with Dr. Miyake at the head, to attend to the matter. Nine Councillors have been appointed, Dr. Baelz being one. According to researches made by Mr. Mishima, a graduate of the medical College of the Imperial University, and manager of the Board, the physical condition of common school pupils is very alarming. He says that in a certain common school in Fukushima, 50.6 pupils out of 100 are not of sound health; in a certain common school in Hyogo the rate is 60 per 100, while pupils in a higher course of the same school are physically unsound at the rate of 40 per cent. Again, in a certain normal school in the vicinity of Tokyo, the average sick rate during the five years ending in 1895 was 50 per cent. In a certain normal school in Shikoku, the sick rate between April and November last year did not fall below 60 per cent.

The laying of a submarine cable between Ohama, on the coast of the Province of Osumi, and the island of Oshima, a distance of 260 nautical miles, was successfully completed on the 24th inst.

Government experts and merchants of Tokyo and Yokohama directly interested in the manufacture or sale of tea, met at the Seiyoken, Ueno, on Saturday last, to discuss the best means of rescuing the industry from decay. One of the resolutions arrived at was the voting of 2,000 yen to be spent on advertisements in American papers.

The citizens of Osaka have found powerful allies in the Army and the Navy with respect to their harbour reconstruction scheme. The War and Naval authorities had so much experience as to the relative convenience that Ujina afforded during the late war for the embarking and debarking of troops and ammunition, that they are said to be strongly in favour of the reconstruction of Osaka harbour. In that case the military transportation would be considerably facilitated in the event of emergencies. It is said that the Committee has decided to increase the expenditure to 20 million yen.

We read in the Tokyo papers that Mr. Kawashima Jun, M.P., will receive the appointment of President of the Central Industrial Bank, and that Mr. Narukawa, now Governor of Miye Ken, will be Vice-President. Both these gentle-

men held office for a long time in the Department of Finance when Count Matsukata was Chief, and are therefore on good terms with that statesman. It would appear, according to the *Hochi*, that Mr. Kawashima is the candidate best qualified and available for the post. He and the late Mr. Kato Sai, then Director of the National Banks' Bureau, were sent, several years ago, to Europe to investigate matters relating to industrial banks in whose establishment Count Matsukata was very much interested. Mr. Kato has since died, and Mr. Kawashima remains the best informed person upon this subject.

Various regulations and usages with respect to Japanese Government Bonds, that the Bank of Japan recently investigated in compliance with the request of the London Stock Exchange, have been completed, and versions have been printed in Japanese and English. As copies will be sent to London by next mail, it is expected that these Bonds will appear on the Stock Exchange list by about October.

The project of uniting the Naniwa and the Shirokawa Railways with the Kwansai is on the eve of consummation. The preliminary arrangements having been completed, the Kwansai Company decided at its last general meeting to raise an additional capital of 4,200,000 yen with which to purchase the two lines, and also to negotiate a loan of 700,000 yen to be used for certain necessary works contingent on the purchase of the lines.

THE "NICHU NICHU" & NATIONAL EDUCATION.

The *Nichi Nichi* has just concluded a series of articles on National Education that extended over four successive issues. After dwelling at length on the importance of elementary education, the articles give the latest common school statistics. From these we gather that, at the end of 1894, the attendance in common schools was 3,501,071, an increase of 163,511 pupils over the previous year. During the year, the number of children that attained a school-going age aggregated 7,320,191, of whom 3,501,071 attended schools, or an average of 61.72 per 100 children. This average in other years had been:—1890, 48.93; 1891, 50.31; 1892, 55.15; 1893, 58.73.

The *Nichi Nichi* thinks that the above is not a bad record. While expressing satisfaction at this feature, it can not but entertain great doubts on another, and equally important, point, namely, whether the education in common schools is conducted in an equally satisfactory manner; in other words, whether teachers are uniformly capable. The *Nichi Nichi's* doubt is reasonable, for so insufficient in numbers are the candidates for teachers that the Authorities have not concerned themselves much about their capabilities. The necessity for training capable teachers was seen long ago, and in every prefecture, as also in Hakkaido, an ordinary normal school has been maintained at the public expense. The statistics of graduates from ordinary normal schools throughout the country, during the last few years, are as follow:—1890, 942; 1891, 1,304; 1892, 1,142; 1893, 1,176; 1894, 1,205. These figures show a steady, though slight, increase, but not in a degree proportionate to the wants of common schools. Consequently, to supply the deficiency the Educational Department issued, ten years ago, regulations relating to the licensing of common school teachers, and after five years reissued them. These regulations were compiled with the special purpose of attracting recruits from the public at large. At the same time, a special lecture course was introduced at each normal school so as to more perfectly equip school teachers for the discharge of their duties. In 1894, the total that successfully passed through the licensing examination was 11,241, or more accurately, 10,036, as 1,205 were graduates of normal schools. Still the numbers were far from adequate. At the end of 1894, there were in Japan 24,046 schools containing altogether 59,939 classes. But there were only 37,565

licensed teachers, that is to say, about 1.5 teachers per school, and compared with the number of classes, the number of teachers lacking were 22,374. This deficiency had to be supplied with temporary licensed teachers. One of the reasons for the lack of teachers in common schools is that large numbers of them leave the service. In 1894, over 9,000 teachers were added to the ranks, but as 2,453 teachers left at the same time, the actual addition was only 6,735. In 1893, 3,221 left the service, and in 1893, 12,703. In these figures teachers that attained a pension age, and also those dismissed on account of delinquencies, are included, but such cases are very small, the great majority being composed of men that resigned. These resignations were decidedly due, in most part, to the meagre emoluments granted them. The *Nichi Nichi* again falls back on statistics to prove this contention:—

AVERAGE MONTHLY STIPEND OF LICENSED TEACHERS.

	Yen.		Yen.
Yokyo	11.938	Gumma	12.260
Miyagi	10.521	Kyoto	11.132
Shiga	10.644	Tottori	7.642
Kagawa	8.809	Saga	8.836
Kanagawa	11.043	Tochigi	10.965
Fukushima	11.516	Osaka	11.350
Gifu	8.530	Shimane	7.455
Ehime	9.636	Kumamoto	8.448
Niigata	8.91	Shizuoka	10.781
Iwate	10.599	Hyogo	10.018
Fuku	8.070	Okayama	10.732
Kochi	8.630	Miyazaki	8.325
Saitama	10.625	Yamanashi	10.158
Aomori	8.315	Nara	9.334
Ishikawa	7.642	Hiroshima	8.248
Nagasaki	9.378	Kagoshima	10.110
Chiba	12.906	Nagano	12.073
Yamagata	9.471	Miyagi	10.751
Toysama	9.000	Yamaguchi	9.148
Fukuoka	9.764	Okawa	11.841
Ibaraki	11.591	Hokkaido	12.533
Akita	9.139	Aichi	10.209
Wakayama	8.678	Tokushima	8.630
Oita	8.058		

The average monthly stipends of common school teachers ranging from yen 12.906 to yen 7.455, it is not surprising that so many give up the work in disgust. The *Nichi Nichi* calculates the average yearly emolument of licensed teachers throughout the country at 118 yen, and that of temporarily licensed teachers at 64 yen, or a monthly salary of 9.83 yen and 5.33 yen respectively. In other words, many licensed teachers receive only a little over 1 yen more per month than the lowest grade police constable or goaler, while the salary of a temporary licensed teacher is more than 3 yen per month less than this. The income of a school teacher is therefore less than that usually enjoyed by a jinrikisha-puller or a *bello*. The obvious inference is that young men of ability and ambition avoid becoming common-school teachers, or quit the service as soon as possible. It follows that, in order to enable teachers to remain in the service, the only efficacious measure that can be adopted is to give them better pay. The *Nichi Nichi* acknowledges that something has been done in the way of the law providing a sustenance for the survivors of teachers, and also the law granting additional salaries to teachers of long service, but this is far from sufficient. The last law, enacted quite recently, grants additional payment of 15/100 of present salary to teachers who have been in the service over five years, with the further addition of 10/100 when they have served another five. By this system, a teacher drawing 10 yen a month is entitled to 1 1/4 yen additional pay when he has served five years, and 2 1/4 yen when he has continued in the service for 10 years. The *Nichi Nichi* wonders whether such petty additions can serve the purpose that prompted the law? The Tokyo journal urges the Government to improve the pay of teachers as quickly as possible: with improved pay will come improved service, and with improved service a general raising of the scale of common-school education, and also a constant supply of teachers in sufficient number for all the common schools in the Empire.

POLITICAL TOPICS.

The *Fiji Shimpō*, generally well informed on such subjects, has a significant note with reference to the frequent meetings that have taken place of late between Count Okuma and Count Matsukata. "As yet," says our contemporary, "no attack has been openly made upon the present Government by Count Matsukata, but he has not hesitated to express his political views to several influential friends in private circles, and to criticise the Cabinet's procedure. Nevertheless, he has not entirely severed his relations with the Government, and in view of the fact that no fitting occupant has yet been found for the all-important post of Foreign Minister, it is probable that some Cabinet changes may be witnessed on the return of Marquis Yamagata to Tokyo, which event will take place about the 2nd or 3rd proximo. Count Okuma and Count Matsukata may then be seen entering the cabinet. Should nothing of the kind occur, it is said that Count Matsukata will definitely join the Opposition."

The *Kokumin* prints the following intelligence regarding Korean refugees in Japan and their doings. The ex-Home Minister, Mr. Yu, is compiling a history of the unification of Italy and the downfall of Poland. This book will be printed in Chinese and colloquial Korean. The grandson of the Tai Wōn-kun has removed from Tsukiji to Mita. In spite of the intervention of Mr. Fukuzawa, the relations between him and the other Korean refugees, are not very cordial, he being distrusted by a section of the latter. Pak Yong-ho's relations with Prince Wi-hwa are very intimate, the two living together since Pak's return from America. They are now in Kyoto. Besides these, there are in Akasaka the ex-chief of the Police Bureau and two or three others, while in the vicinity of the Dangozaka, Hongo, there are four captains of *Kumrentai* are living. The *Kokumin* says that the first topic of conversation that ensues whenever a Japanese friend calls on these refugees relates to the rumour of an understanding between Japan and Russia, or one between the former and England.

Below the apparently smooth surface of the Japanese political sea an undercurrent is running that is likely to eventually disturb the surface. This undercurrent is the growing intimacy of Count Matsukata and Count Okuma, who met again on the 22nd instant. The Opposition papers say that these meetings indicate the conclusion of a firm coalition between the two statesmen; that they are conferring how to face the political crisis that may break out upon the return of Marshal Yamagata; and that their endeavours are countenanced, if not actively furthered, by Count Inouye. We are told that the people of the Kei-Han districts are desirous of having Count Matsukata enact a special rôle, that is, take the direction of national finance; and they also say that foreign affairs should be undertaken by Count Okuma, as they are convinced that Japanese diplomacy is closely connected with economic affairs and ought to be directed by a statesman of Count Okuma's calibre. A deterrent to Count Matsukata's assuming a more open attitude is said to be his relations toward his fellow clansmen of influence. He is on good terms with Count Kabayama and Viscount Takashima, and can have their support. At the same time Marquises Saigo and Oyama, the seniors of the warrior statesmen of Satsuma, are bosom friends of Marquis Ito and act with him in everything. Can Count Matsukata hope to obtain their coöperation? Hence the necessity for Count Matsukata's forming an alliance with Count Okuma. Indeed, each statesman has need of the help of the other, as neither are great powers alone. The position attributed to Count Inouye is peculiar. The *Yomiuri* learns from a trustworthy source, that the Count has done much towards bringing Counts Matsukata and Okuma together, and that the Count's motive may be inferred from his well known dissatisfaction at the entry of Count Itagaki into the Cabinet. The name of Count Goto is even mentioned in this context, for we read in the *Kokumin* that the latter

lately visited Waseda twice, and always late in the evening. We may note here that Mr. Hayashi Yuzo, now the most influential leader in the Liberal Party, has been summoned from his retirement in Kochi, and he and Mr. Kono Hironaka, another influential leader of the Party, waited on the Premier a day or two ago together. These are supposed to be indications of big changes looming on the political horizon.

MR. MASUDA TAKASHI ON COTTON FABRICS.

Mr. Masuda Takashi, of the Mitsui Bussan Kaisha, contributes a long article on Cotton Fabrics to the *Oriental Economist*. He aims to clear up the situation and demonstrate the bright prospects of this industry in the East. After sketching the history of cotton manufacture in the West, he proceeds to show how important is the position these goods occupy in the markets of the East. He observes that, in 1895, the imports of cotton fabrics constituted over 30 per cent. of the total imports into China, and a little above 11 per cent. of the total imports into Japan; in 1890, they were over 51 per cent. of the imports into Hongkong; a little below 10 per cent. of those into Singapore in 1894; and in 1894 over 34 per cent. of those into Bombay, and over 40 per cent. of those into Korea. Cotton fabrics being such an important factor in the import trade of the East, Mr. Masuda argues that any country that supplies the largest amount of them controls the Eastern markets. He gives a lengthy account of the development of cotton spinning and weaving in England, and concludes with some interesting observations on the prospects of cotton weaving in the East. Mr. Masuda is of opinion that Japan will have no difficulty in becoming a leader among cotton-weaving countries. To demonstrate this, he refers to the astonishing progress that the allied industry, spinning, has attained in recent years, and observes that with respect to the relative advantages England and Japan enjoy in regard to carrying on this industry and exporting the output, Japan is better situated than England. In the first place, neither has an advantage over the other in the matter of procuring raw cotton and coal, though in machinery, skill of mechanics, and cheapness of money, England enjoys the greater advantage as compared with Japan. But it must be remembered that machines are easily procurable, that after the lapse of, say, 10 years, Japanese mechanics, judging from their characteristic skill in handicrafts, will become just as adept as the English mechanics, while as to cheapness of money, the matter need not cause any serious anxiety since the rate of interest will attain a worldwide level with greater development of means of communication and systems of exchange. Then, as a set-off to the advantages that England now enjoys, Japan is close to the doors of the greatest market for cotton fabrics in the East, and has, besides, command of the cheapest labour. In short, Japan is already qualified to enter the markets now monopolized by England, or at least to speedily become a leading cotton-weaving centre. Mr. Masuda thinks that after Japan, China will enter the same industrial field. Thus far the oppressive policy of the Government and the ignorance of the people have acted as deterrents to the development of new industries in the interior of the Middle Kingdom; but when, as the result of the Shimonoseki Treaty, Japanese capitalists and others start manufactories on Chinese soil, and when Chinese capitalists, who are at present troubled by the lack of safe channels of investment, discover how profitably and safely a manufacturing business can be carried on, in all probability, they will hasten to invest in manufactures and with characteristic shrewdness will attempt to push the industry to greater perfection and avail themselves of the cheap and diligent labour of their countrymen. The precedent afforded by the extraordinary development of filatures owned and managed solely by Chinese is an indication that China may one day become a great cotton-weaving centre. It behoves Japan, therefore, to anticipate this step and occupy the field before her.

CHRISTIANITY IN JAPAN DURING THE PAST YEAR.

From "the Annual Report of the American Board's Mission coöperating with the Kumiai Churches of Japan," for the year ended July 1896, we gather that the story of the year has been somewhat chequered. The Board had to carry on its labours with largely reduced grants, and that fact alone must have sufficed to import a tone of despondency to the report. It is not a question simply of tone, however: facts also are given. The strong growth of a spirit of business enterprise throughout the nation is declared to have interfered with people's interest in religious questions, a change attested by the circumstance that no less than 12 men connected with the Kumiai Ministry left that body during two years and went into commerce. It would seem, however, that this loss of earnestness was only temporary, for "during recent months there has been a steady gain in attendance and membership at various places." Dr. Greene writes in perhaps the most desponding strain of all. "In common with other parts of our mission field," he says, "Tokyo station has to record a year of scant progress. The minds of the people are absorbed in other matters and religion receives relatively little attention. The congregations in the churches and preaching places, while not on the whole noticeably smaller than last year, have been far from satisfactory. The year has been one of much discouragement." Evidently, things did not fare similarly with all the missions, for the recently published report of the Methodist Episcopal Conference says:—"The members are gathered together after a year of more than usual encouragement." But whatever the record of actual progress may be, we gather plainly enough from the report that "the day of distinctively foreign missionary service in Japan is passing." That is a point of very great interest. Two incidents from this excellently compiled little volume are worth quoting. The first is this:—

Tokyo station has to record a year of scant progress. The minds of the people are absorbed in other matters and religion receives relatively little attention. The congregations in the churches and preaching places, while not on the whole noticeably smaller than last year, have been far from satisfactory. The year has been one of much discouragement.

Persecution has been showing its good fruit. Last fall a young man was obliged to give up his position as teacher in a village school, because of his Christianity. Largely through his influence one of the lady teachers in the same school was led to Christ, and at once persecution began. Her mother forbade her to return home, and her fellow teachers indulged in all kinds of petty annoyances that were very trying. Fortunately, the neighbouring evangelist became interested in her, and through his representations the ladies of the station were induced to request her services as helper, and accordingly she resigned her position in the school.

Great was the indignation of the villagers when the facts of the case were brought to light. A public meeting was called, the teachers in the school were forcibly reprimanded for their shameful conduct, and every means possible was used to retain the young girl, but she decided to leave. Since then the way has opened for her to go to Kobe College, and a recent letter tells of her happy entrance there.

The second incident is that the methods of the Salvation Army were adopted in Osaka. The account given of this affair reads somewhat comically, but we re-produce it as it stands:—

How to reach the hundreds of thousands that are congested in this busy city is an ever recurring problem. For twenty years, at irregular periods, the Christians have tried to meet this problem in a practical way by banding themselves into societies, clubs, and associations, and thus moved forward with concentrated effort against this mass. The latest move is 'Missionary Army' whose rank and file are made up of a few active Christians from seven Kumiai churches, one Presbyterian and one Methodist church of the city.

Five members of any church can form a 'company' but every man must be a 'combatant.' Every Monday except the first in the month, several companies assemble at one of the churches and scatter in the neighbourhood about 3,000 hand bills, informing the community of a rally at the church that evening, where two or three volleys would be fired by prominent officers of the army. These officers are the pastors of the churches.

These are some of the shots fired: 'Is there a God?' 'What is God?' 'What is Man?' 'Why is he here?' 'Where is he going?' 'Sin and its Punishment.' 'Change of Heart.' The first Monday in the month is kept for a general muster, when every combatant must answer to the roll-call and when the heaviest artillery is fired.

Scattering the 3,000 leaflets every week in the vicinity of the churches is a feature of the 'movements' of the army. They have printed on them not only the names and addresses of the pastors, the places and time of meeting, but also a brief statement of the main teachings of Christianity. This is a most interesting movement, and although it may,

like other associations, give place shortly to some other form of Christian activity, it will sow a quantity of Gospel seed and do good in its day.

MR. ITO HEIZAYEMON THE ARCHITECT.

The *Yomiuri* gives a brief biography of Mr. Ito Heizayemon, the celebrated architect of Nagoya. Architecture has been a hereditary pursuit in his family for over three centuries. The founder of the house was chief architect to Tokugawa Yoshinao, a son of Iyeyasu, who received the fief of Owari in 1609. From the time of the 3rd Heizayemon, the fame of the house was widely spread, he having determined to undertake the building of temples and shrines not in the fief of his liege lord alone, but in all other places. The construction of the Higashi Hongwan Temple at Nagoya was his first great work. The porch (*sanmon*) of that temple, the mausolea of the Emperors Saga and Kameyama, and also the Hokkedo, in the premises of the Tenryu Temple, Kyoto; various edifices in the premises of the Chionin, Kyoto; the Tsushima Shrine, Owari; and also the superintendence of the erection of the Higashi Hongwan Temple, were the principal architectural works undertaken by the predecessors of the present head of the family, the 9th Heizayemon. Mr. Ito Heizayemon, born in 1830, was initiated into the art when young, under the direct guidance of his father. At the age of 18, he accompanied his father to Koya, where the latter was entrusted with the building of a certain temple. From 15 to 20, he devoted himself exclusively to the practice of wood modelling, and then he was promoted to be a draughtsman. For six years he and his father remained in Koya, and then he went to Kyoto, where he stayed for more than a decade, studying and investigating the architecture of the old religious edifices in the city and its suburbs, and also assisting his father in architectural work. The eighth Heizayemon died in 1877, and Mr. Ito succeeded to the hereditary honours, changing his name to Heizayemon. The works which he has undertaken are too numerous to be given in detail. Suffice it to say that all the important official buildings in Nagoya, the Kencho of Miye, the new edifices of the Higashi Hongwan Temple, Kyoto; the Branch Office of that Temple at Shanghai; the State Shrine at Yoshino, may be given as some of the noteworthy works constructed by this unique artist of Japan. The *Yomiuri* says that he has built already 43 temples, 36 shrines, 11 government offices, 15 school-buildings, and 47 residences or other miscellaneous buildings. He once travelled through a particular locality of China with the express purpose of investigating Chinese architecture. Rewards and certificates of merit have been frequently received by him, for he has exhibited models at several local and national exhibitions. The people of Hokkaido are very greatly indebted to him for the improvement he effected in their dwelling houses, for when he proceeded there, some eight years ago, to erect temples in various districts by special request of the Central Office of the Hongwan Sect, he was so much struck with the rude and unsightly appearance of the buildings in Hokkaido, that he spared no pains to transmit a knowledge of architecture to the carpenters of that northern district. Besides his central office in Nagoya, he has branch offices in Kyoto and Hakodate. The central establishment is composed of three buildings, one, 7 x 14 *ken*; another, 5 x 12 *ken*; and the third, 4 x 8 *ken*. He employs over 120 artisans. He is now engaged in designing or superintending the construction of nine buildings, the chief of them being the main edifice of the Houn Temple, Kyoto; the main edifice of the Minaguchi Shrine, Omi; a Japanese dwelling house for Mr. Elliot, Sydney, Australia; the main edifice of the Nanjen Temple, Kyoto; and several edifices for the Kōmpira, Sanuki.

Marquis Saigo, Minister of the Navy, left Tokyo by the 6.20 a.m. train from Shimabashi on the 29th inst. for his residence at Numadzu.

THE HOKURIKU RAILWAY.

A correspondent kindly furnishes us with the following notes of a trip on the above railway:—The first passenger train to run over the newly completed section of the Hokuriku railway between Tsuruga to Fukui, left the latter place at 7 o'clock on the morning of July 13th. A number of complimentary tickets had been distributed in Fukui and other places along the road, and about 400 persons availed themselves of the opportunity thus afforded to take a ride on the first train.

The section just opened is about 40 miles in length. After leaving Fukui it follows the main road towards Tsuruga for about 15 miles, or a little beyond the town of Takefu. It then turns to the left up a narrow valley to Imajo, a village on the old Takefu-Yanagase road. From Takefu to Imajo there is a good deal of up-grade, and on the way one rather long tunnel. After leaving Imajo, the road strikes through the mountains, and soon comes out near the shore of Tsuruga Bay at an elevation of perhaps a thousand feet or more. Here it passes through a number of tunnels with short spaces between, and as the train darts in and out exquisite views of Tsuruga Bay are obtained. There are thirteen tunnels on the road, but only three or four of them are of any considerable length. From the carriage windows one can see in two or three places great lines of white boulders, narrow at the railway but gradually broadening until they reach the shore, some two miles or so below. These mark the course of the torrents which during the long continued rains of last summer brought such destruction among the farms and villages along the sea coast there. The road-bed of the railway was also much damaged at that time, and for that reason the opening of the road was considerably delayed. Now, however, everything seems to be thoroughly repaired and in good order.

After following the shore of Tsuruga Bay for a short distance the road again turns inland, and finally comes out of the hills just before reaching the town of Tsuruga, at the head of the bay. From the easy running of the train, the road-bed seemed to be well made, only a few places leaving the impression of roughness.

This road will be a great convenience to travellers to and from Fukui and Kanazawa. The hard *jirikisha* ride of eight or ten hours over the hills from Tsuruga to Fukui has been shortened to something less than three, and Fukui itself has been brought within twenty hours of Yokohama. Kanazawa, too, is now only a day's ride by *jirikisha* from the railway. Work on the Fukui-Kanazawa section of this road is being pushed forward, and it is expected that in a year or a year and a half trains will be running into Kanazawa.

On the 15th of July, two days later than the date referred to above, the Tsuruga-Fukui section was opened for traffic with befitting ceremonies.

THE OPPOSITION.

The politicians belonging to the Opposition in the eastern and northern districts, writes an organ of the *Shimpo-to*, have determined that the Cabinet shall be held responsible for its administrative blunders. In pursuit of that aim a large number of them intend to come to the capital during the next session of the Diet, and organise a strong agitation. They are supposed to be particularly concerned about the Government's foreign policy. The six prefectures in that part of Japan sent two thousand delegates to the conference at which the above resolution was taken.

We hear constantly of these great movements in the vista, but they generally dwindle greatly as to their dimensions before the time of action arrives. Nevertheless, it is not to be denied that in the Korean policy of the Government plenty of room exists for diversity of opinion.

MARSHAL YAMAGATA.

Marshal Yamagata has returned from his mission to Russia. His Excellency looks emaciated as compared with his condition when he started a few months ago. His health, impaired from the first, has been affected by the strain that his duties imposed, and also by the voyage across the Indian Ocean. The Marquis, on reaching Tokyo, proceeded at once to the Palace in a carriage that had been sent by the Imperial Household to convey him. He was received in Audience by both the Emperor and the Empress, and graciously thanked for the labours he had undergone. He then had the honour of dining with Their Majesties, and subsequently he proceeded to his private residence at Meiji-dai, at half-past 1 p.m. The *Chuo*, which presumably enjoys special access to the Marshal on account of its relations with Viscount Shinagawa, the Leader of the National Unionists and one of the trusted friends of the Marquis, gives a long account of interviews that its representative had with a member of the Marshal's suite and also with the Marshal himself. Of the many things related by the member of the suite to the *Chuo*'s representative, one had reference to the story of the awkward position in which the Ambassadors of China, Turkey, and Korea, were placed since their national usages did not permit them to uncover their heads, the consequence being that they were precluded from being present at the coronation ceremony. The story is confirmed. Li Hung-chang was almost idolized in Russia, but his ignorance of etiquette frequently involved him in embarrassing situations, so that the Russian officers appointed to receive him got into a serious scrape on one occasion. The account of the interview between Marquis Yamagata and the *Chuo*'s representative is to the following effect:—When asked about the authenticity of the rumour that the Marshal had been coolly treated in Russia, His Excellency smiled, and emphatically denied the allegation. He then described his journey and the reception accorded to him in the various countries through which he passed, including Russia. Not being in sound health at the time of leaving Japan, his intention had been to avoid fatiguing ceremonies and publicity as far as possible, in the hope that his journey might prove the means of setting him up. But he was not allowed to adhere to any such programme.

So soon as he set foot in San Francisco, he was most cordially welcomed, and the hospitality extended to him grew more enthusiastic as he proceeded eastward. His whole progress was like a continuous fête. Though he declined all receptions that he could without discourtesy avoid, it was not possible, under the circumstances, to pay much attention to his health. Arrived at Havre, the same hospitality awaited him, so that he began to be very doubtful whether he should have strength to conclude his journey. It had been his original intention to stay a while in Paris both for purposes of recreation and also to procure an outfit for the Coronation Ceremony. But messages reached him from Berlin to the effect that the Kaiser, anxious about the ill-health of the Marshal, desired that he should come on as quickly as possible to Berlin, where better physicians were available than those in Paris. It thus became impossible for him merely to pass through Germany, and he stayed in Berlin for four days. During that brief period the German Foreign Minister was extremely courteous to him, and he was also received in audience by the Emperor. He consulted a noted physician in Berlin as to the condition of his health, and was told that there were reasons to doubt his capacity to attend the ceremony, so greatly was his strength reduced. At all events, he received injunctions to be strictly careful about his diet, to abstain from alcohol in all forms, and to observe a fixed routine. The suggestion as to the danger of attending the Coronation Ceremony, it was, of course, impossible for him to obey. In point of fact, he took part in every stage of the great pageant, though to do so he had to appear for hours in uniform every day during a

period of three weeks. As soon as the ceremony was over he found himself unable to bear any further strain, and consequently determined to hasten home, though Viscount Aoki was kind enough to make arrangements for his sojourn in the suburbs of Berlin during medical treatment. On returning to Japan, he was surprised to hear an absurd rumour that he had been coolly treated in Russia. For international reasons and on his own account, it was his duty to emphatically deny that wholly false story. In point of fact, he enjoyed a most warm reception at the hands of the Russian Court and Government. As to the ceremony, words failed him to convey any idea of its splendour. Sufficient to say that it was an assembly of over 300 of the world's princes, in the sense that the Japanese of old time used to speak of an assembly of 300 *Daimyo* as the grandest spectacle conceivable. Conspicuous among the group were the ambassadors of Germany, England, France, America, and Austria. All the rest seemed to be personages of inferior rank, and failed to attract the attention of the masses. Japan, however, certainly seemed to be classed with the Great Powers, primarily because of her Sovereign's high qualities, but also on account of her recent successes in war. He was convinced by what he saw in Moscow of the potency of military fame. Russia being a country with systems differing from those of other European Powers, soldiers and courtiers enjoy predominant influence. Consequently, the Marshal received the treatment that would be accorded to a royal prince elsewhere. Guards of honour were stationed in front of his temporary residence. The French Ambassador also, being a Marshal, was similarly treated. On the first occasion of Marquis Yamagata's audience with the Czar, a gorgeously decorated coach drawn by six horses, so magnificent that he at first supposed it to be a carriage of the Czarina's, was sent to convey him to the Palace. At the same time, a carriage drawn by four horses came for the accommodation of his suite. The whole thing was so splendid that he received the impression of having a State procession organized in his honour. What perturbed him most from the time of leaving Japan was the possibility that Czar might allude to the Otsu incident when receiving him in audience. As soon as the formal greeting was over, His Majesty asked the Marshal without hesitation whether he had met him in Kyoto. The Marshal felt embarrassed how to answer, so he simply replied that he had failed to enjoy the honour of meeting the then Czar, which, ill-health having compelled him to be absent. The conversation then took another turn.

The Czar seemed to be really fond of Japan and its scenery. One hot evening, during a ball, he spoke to the Marshal and asked whether he did not feel the heat as much as though he were in Nagasaki. Every day, during the ceremony, the Marquis met Royal Princes and Ambassadors who had come to attend the great pageant, and on each of such occasions he exchanged greetings with them all, a procedure in itself subjecting his weakened constitution to no small strain. On one occasion the Marshal met Earl Li, and accosted him heartily, saying how desirous he had long been of meeting him. Li made a suitable reply, and also asked after the health of Marquis Ito and Count Mutsu. Even such a simple conversation took much time, as it had to be carried on through the medium of interpreters. Several Ambassadors are said to have expressed surprise that a Field Marshal of the victorious country should hold a long colloquy with an aged official of the vanquished empire. The Marshal briefly referred, in conclusion, to the difference of treatment extended by the Russian Court and Government to Royal Princes and foreign Ambassadors.

MR. G. DE WOLLANT.

Mr. G. de Wollant, hitherto Secretary of the Russian Legation in Tokyo, has been appointed First Secretary of the Russian Embassy in Washington. We offer him our sincere congratulations.

THE SCHOOL OF THE MORNING STAR AND THE SEISMIC WAVE RELIEF FUND.

We mentioned in a previous issue that the pupils of the School of the Morning Star had contributed a considerable sum for the relief of the sufferers by the Seismic Wave, and that a collection made for the same purpose on the occasion of the School's graduation ceremony had been added to the amount. In order to explain the method adopted for the distribution of the money, the following letter, from Monseigneur Berlioz, Bishop of Hakodate, to M. L'Abbé Heinrich, Director of the School of the Morning Star, has been handed to us for publication:—

Evêché de Hakodate, Japan, le 21 Juillet, 1896.

CHER MONSIEUR LE DIRECTEUR.—Avant mon départ de Kamaishi, je vous ai déjà accusé réception de la somme de \$189.90, produit de la quête, faite à l'occasion de votre Distribution des Prix, en faveur des malheureuses victimes du raz de marée du 15 Juin dernier. Depuis lors, j'ai reçu par l'intermédiaire de M. Beuf, deux nouveaux dons, l'un de \$6, et l'autre de \$12, ce qui porte le montant des offrandes au chiffre de \$207.90.

Une telle somme témoigne bien haut en faveur de la générosité de l'assistance d'élite qui a fait honneur à votre invitation, comme aussi des nobles sentiments que vous avez su inculquer dans le cœur des chers élèves de la si méritante et déjà si florissante Ecole de l'Étoile du Matin. M. le sous-Préfet de Tono et M. le Maire de Kamaishi, à qui j'ai fait part de votre bienveillante attention, s'en sont montrés bien touchés, et ils m'ont chargé d'être l'interprète de leur reconnaissance auprès des bienfaiteurs de la malheureuse population confiée à leur sollicitude.

Jusqu'à présent nous avons distribué pour \$132 de secours dans les départements d'Iwate et de Miyagi. A Kamaishi, \$400 ont été mis par nous à la disposition de la Mairie et de l'Hôpital de la Croix Rouge. Le reste a été réparti suivant les indications du petit Comité que nous contrôlons et qui est présidé par M. Murai Gizo, Directeur du Télégraphe de Kamaishi, et M. Murai Gembai, Architecte au service des Mines. Après avoir pourvu aux besoins les plus urgents, ces Messieurs m'ont conseillé de réserver quelques ressources pour l'automne prochain. A cette époque la situation des nécessiteux se dessinera plus nettement qu'aujourd'hui, car beaucoup de ceux qui sont présentement dans l'indigence auront réussi alors à se créer un *modus vivendi*. Mais pour ceux qui n'auront pas cet avantage ce sera la misère dans toute son horreur; les distributions de riz auront cessé; l'attention publique pourra être portée ailleurs, et puis l'approche de l'hiver aggravera encore les difficultés de la situation. Tel sera le cas des vieillards privés de leurs soutiens naturels—et on m'en a signalé plusieurs. Les estropiés eux aussi n'auront pas d'autre ressource que la charité publique. On m'a parlé enfin de quelques orphelins remeillés provisoirement dans des familles qui elles mêmes sont dans le besoin; là aussi quelques secours seraient avantageusement placés.

Dieu à l'automne, Dieu veuille que nous arrivions à amasser assez de ressources pour faire face à toutes ces nécessités, ou du moins aux plus pressantes!

En vous priant de faire parvenir aux généreux souscripteurs l'expression de notre reconnaissance et de notre sincère dévouement, je vous offre.

Cher Monsieur le Directeur, la nouvelle assurance de mes meilleurs sentiments.

A. BERLIOZ, évê de Hakodate.

TEMPERATURE THIS YEAR.

The season called *Doyo*, otherwise the dog days, set in on the 20th inst. We read in the vernacular press that the temperature since that time has been much above what it was last year. The comparative records of the thermometer are given as follow, but with singularly unscientific carelessness we are not told whether the figures represent average temperatures, or only temperatures at a certain hour—certainly they are not maxima:—

1895.		1896.
July 20th.....	72.0° F.	80.2° F.
July 21st.....	76.5° F.	81.7° F.
July 22nd.....	72.7° F.	85.8° F.
July 23rd.....	85.8° F.	87.8° F.
July 24th.....	79.2° F.	91.2° F.

The two succeeding days, 25th and 26th, were much hotter in Tokyo than any of those tabulated above. The *Miyako Shimbun* says that on the 24th the heat was so severe that five or six tram-car horses dropped in their tracks, and many others becoming incapable of working special veterinary arrangements had to be made by the Company. Poor brutes! It is terrible to think of them dragging those heavy cars under such blistering suns as we have had lately.

MR. HATOYAMA, M.P., AND THE
TECHNICAL COLLEGE AT
WASEDA.

WE have refrained from commenting on the remarks attributed to Dr. HATOYAMA at the recent graduation ceremony of the Technical College at Waseda, because we were unable to suppose that he had been correctly reported. None of the vernacular papers contained more than the briefest epitome of his speech, and as the only journal that published anything like a comprehensive résumé was the *Japan Gazette*, no means of verification presented themselves. By direct reference to Dr. HATOYAMA, however, we have at length obtained assurance that, while a few inaccuracies occur in the *Japan Gazette's* version, it is sufficiently accurate on the whole.

Dr. HATOYAMA is President of the Technical College—a private institution, founded and largely supported by Count OKUMA. In that capacity he addressed the students, and the gist of what he told them was that the statesmen of their country were quite incompetent, that; the Constitution existed on paper only and could not be worked in practice; that the judiciary consisted of men having no proper qualifications to discharge their functions—mere dummies, in short; that the barristers were a parcel of sharks, uneducated; and that the graduates of the College, whom he was addressing, might regard themselves as the future saviours of this most unfortunate situation. There is only one way of accounting for such a sweeping indictment: either Dr. HATOYAMA'S judgment is warped by the pain of some bitter disappointment, or his faculty of discrimination is for the moment inoperative. Among the statesmen he denounces are men at whose feet he has hitherto been content to sit as a willing subordinate. His own political chief belongs to the older school of officials whose dotage Dr. HATOYAMA finds so conspicuous. Count OKUMA himself is one of the signatories of the Constitution now declared by Dr. HATOYAMA to be unworkable. The Judiciary and the Bar alike include many experts whose opportunities of acquiring knowledge have been fully equal, and in some cases superior, to those enjoyed by Dr. HATOYAMA. Finally, Dr. HATOYAMA is a Japanese: what warrant does he possess to set himself on a pinnacle so far above the rest of his countrymen? We shall not discuss this phase of the matter. Dr. HATOYAMA evidently laboured under the influence of some vertigo, and will by and by recognise the extravagance of his utterances.

But apart from the question of Dr. HATOYAMA and the objects of his criticism, we can not, in the interests of the Japanese public, too strongly denounce the fatal error of pouring such notions into the minds of students just as they emerge

from college. The curse of modern Japan is the half-educated youth, wholly without experience, who imagines that a little book knowledge suffices to equip him for a leading place in political, legislative, and literary fields. From the ranks of such callow fledglings the *soshi* are recruited, as is also the army of agitators that disturb the tranquillity of the country. We have often heard it said that the College at Waseda is a nursery of *soshi*. Who shall deny it, when the graduates are launched into life, their ears tingling with addresses such as that of Dr. HATOYAMA? Be Japan what it may, these graduates as well as the faculty of the College are Japanese, and although, in their eyes, the framers and administrators of the laws seem to fall below the standards furnished by the library at Waseda, it is their first duty as true citizens to respect the statutes of the realm and to assist those administering them, instead of sneering at the former and intriguing to replace the latter. No one denies Count OKUMA'S great abilities or underestimates the services rendered by him to his country. But if he has any regard for the character that historians will write of him, he should endeavour to make Waseda College an institution for turning out lads not merely possessing scientific and literary attainments, but also grounded in the first principles of good citizenship, love of law and order and a wholesome respect for those duly placed in authority. We can conceive no greater abuse of a commanding position and large resources than that a man should pervert a college into a political instrument for his own purposes; into a place for manufacturing young men who shall be elements of sedition in the country. No statesman has a shadow of right to deliberately disturb the moral equilibrium of the rising generation. Count OKUMA has only to consider what would be his own verdict were the Imperial University, the Colleges of Law, the *Keio Gijuku*, and other great educational institutions in Japan, conducted on the lines of the Waseda Semmon Gakko. In a few years the whole nation would be thrown into a fever of unrest; all peaceful exercise of authority would become impossible, since respect for authority would not exist; instead of engaging in productive pursuits, the young men men of the country would be occupied everywhere in promoting political agitation, and anything like national union for purposes of foreign affairs would be out of the question. More than once we have listened with profound amazement to the utterance of Professors and well known publicists at Waseda graduation ceremonies, and have marvelled what estimate of patriotism and public duty could exist in the minds of men so flagrantly violating the dictates of each. Another reflection, too, has suggested itself, and suggests itself with redoubled force as we read Dr. HATOYAMA'S ad-

dress; it is that the Japanese now in power must be endowed with very remarkable administrative faculties since they succeed in preserving order despite such disturbing factors. Still, nothing is more disheartening in the national outlook than to see men like Count OKUMA and Dr. HATOYAMA deliberately perverting a great educational institution into a hotbed for forcing political mushrooms.

THE "N.-C. DAILY NEWS" AND
VISCOUNT MIURA.

IT must remain an enigma why the *North China Daily News* persists in affirming that the murder of the Queen of KOREA was a crime planned by Viscount MIURA at the instance and with the approval of the Japanese Government. The idea that a Cabinet presided over by Marquis ITO, and including men like Count MUTSU, Marquis SAIONJI, Marquis SAIGO, Marquis OYAMA, Viscount ENOMOTO, and so forth, can for an instant be suspected of planning or countenancing such a barbarity, is extravagant in the extreme, and we have not the least hesitation in affirming that any newspaper attempting to ventilate such an accusation is guilty of a brutal slander, only a shade less heinous than the crime itself. From the very commencement of the war the Korean correspondent of our Shanghai contemporary astounded all readers of that journal in this country by his extraordinary stories. Nothing seemed incredible to him, provided that it made for the discredit of Japan, and though his assertions, palpably untenable from the first, were again and again falsified by events, he continued to be allowed free access to the columns of the leading Shanghai journal. Recently he repeated his worst calumny in an even more offensive form than usual, and his letter elicited a brief protest from us. That protest and the Shanghai journal's rejoinder to it, are contained in the following paragraph, to which we invite attention as an illustration of the methods that have become fashionable in the Far East:—

As a rule we take no notice of the outbursts against ourselves of the *Japan Mail*, for after all it is the business of that journal to attack any one who does not approve of everything done by its Japanese pay-masters. But the following which we find in the *Mail's* issue of the 27th inst. must be noticed because the writer has the audacity to impugn the honesty of our correspondent in Korea;

The Korean correspondent of the *North-China Daily News* continues to disgrace that journal by his displays of shallow prejudice and singular gullibility. In the sequel of various remarks not worth detailed reference his latest letter says that, were the king to return to his palace, "he would be killed (unless he had a strong foreign guard) by some fanatical *soshi*, if not by an agent of the Japanese Government, as was his consort." No person of the most ordinary honesty can any longer pretend to think that Viscount Miura acted as the Japanese Government's agent in the events culminating in the Queen's assassination.

Now Viscount Miura was the Japanese Envoy to Korea, and therefore the agent of the Japanese Government. A Japanese Court has declared in so many words that he compassed the death of the Queen of Korea, and he has never been punished by the Japanese Emperor or Government. He was a retired military officer when he was sent to Seoul as Japanese Envoy, and on his recall he was

allowed to go quietly back into retirement, retaining his rank and title. On which side is the dishonesty? The fact is the *Japan Mail* cannot forgive our correspondents—for we have had more than one in the last two years—for telling the truth about the Japanese occupation of the peninsula. The usefulness of the *Japan Mail* is a thing of the past. The Japanese Government does not now require such an organ; that Government should see for itself that to keep a through-thick-and-thin advocate does it more harm than good; if only for the repulsion the *Mail's* servility inevitably excites in all independent foreigners in the Far East. The Japanese Government can stand now on its own bottom.

Observe the spirit of this assailant. So conscious is he of the weakness of his case that he can not avoid gross personalities and the imputing of venal motives. To that stereotyped refuge of writers whose facts and knowledge are insufficient to controvert the *Japan Mail*, he flies at the very outset of the argument. His Korean correspondent not only repeats the foul calumny that the Japanese Government planned and compassed the assassination of the Queen of KOREA, but also affirms that the same Government would very likely now cause the King of KOREA to be assassinated were he to venture out of the shelter of the Russian Legation. Were grosser or more brutal slanders ever uttered against the Cabinet Ministers of a civilized country? Assuredly not. Yet because we briefly protested against them, we are declared to be venal, to be "a through-thick-and-thin advocate," and to be guilty of a servility that inevitably excites repulsion in all independent foreigners in the Far East." It is impossible to be more solemnly silly than the Shanghai paper shows itself in this matter. "Independent foreigners" forsooth! Does independence consist in publishing and endorsing the blackest calumnies, and in heaping insults upon the head of any one that ventures to contradict them? Yet the *North-China Daily News* would have been wiser had it confined itself to the resource of the proverbial controversialist without a case, abuse and personalities, for when it ventures into the realm of argument it becomes still more unhappy. Its one proof of the Japanese Government's complicity in the murder is this:—"A Japanese Court declared in so many words that Viscount MIURA had compassed the death of the Queen of KOREA, and he has never been punished by the Japanese EMPEROR or Government." Now the fact is that a Japanese preliminary tribunal declined to remand Viscount MIURA for trial, for though it was shown that he had used language inciting to the murder of the QUEEN, it could not be proved that the murder had been committed by any of those to whom the language had been addressed. After that, how could the EMPEROR or Government of Japan punish Viscount MIURA criminally? Could they ignore the verdict of the Law Court and sentence him, without trial to fine or imprisonment? A pretty uproar such an arbitrary act would have excited! Only one

kind of punishment was possible, an administrative punishment, and that was inflicted: Viscount MIURA was deprived of his post; dismissed from the public service. These are simple and well-known facts. If the *North-China Daily News* bases its abominable slander against the Japanese EMPEROR and the Japanese Cabinet—and we now have its own confession that it does base it—on the Japanese Government's alleged failure to punish Viscount MIURA, will it be so good as to state what penalty could have been lawfully inflicted other than diplomatic disgrace and deprivation of office. The truth will not be brought one hair's breadth nearer by personalities and vituperation against the editor of the *Japan Mail*. Let our contemporary burn or batter us in effigy, if it pleases, just to calm its nerves, and then try to think quietly over the unpardonable slander for which it is attempting to obtain credence on grounds that have not the shadow of substantiality.

THE IMPERIAL CHINESE CUSTOMS AND THE SILVER QUESTION.

A CORRESPONDENT, signing himself "X.," addresses us on the subject of an article that appeared in the *Japan Weekly Mail* of May 30th with reference to the great loss that the appreciation of gold has caused to the foreign employés of the Imperial Chinese Customs. It would seem that our article was not very carefully read by "X.," for he charges us with errors that we did not commit. Thus, he writes:—"It is not a fact that the leading mercantile firms and shipping houses have done nothing to ease the situation for their employés," and he then refers to the liberal spirit evinced by the Hongkong and Shanghai Bank, the evident implication being that we made some assertion in the contrary sense. But we did not. What we said was simply that the catastrophe of an immensely augmented burden of sterling debts and of interest, when expressed in terms of silver, had "fallen upon nearly all business concerns and residents in the East." "X." accuses us of another mistake also. "It is not a fact," he writes, "that the Indian Government has done nothing to relieve the situation for its silver-paid employés," and in support of his denial he quotes the cases of the Hongkong and Singapore Governments, both of which have granted a favourable rate of exchange to members of the Colonial Service. Admitting the force of these examples for the general purposes of our correspondent's argument, it is only just to remind him that our allusion was to "the servants of the British Crown in India," not to those in Hongkong or the Straits Settlements.

Such points are comparatively trivial, however. More important is the misapprehension that we discountenance public criticism of such a question. We do not

by any means assume that position. But there is criticism and criticism, and there are good and bad seasons for criticism. Criticism like that published by the *North-China Daily News* last May seemed indiscreet in tone and ill-timed. For the writer led his readers to suppose that it was entirely within the competence of the Inspector-General to correct the grievance complained of, and that his failure to correct it might fairly be counted an act of injustice. Now that certainly is not the case, as "X." himself, we make no doubt, will agree. Sir ROBERT HART has been proverbial for generosity when means to be generous were at his disposal. But a moment has arrived when the Government that he serves finds itself in great financial straits, and when the only revenue on which it can rely as a means of extricating itself from its difficulties, is precisely the revenue that would have to be cut into if the silver grievance of the Customs employés received practical recognition. Thus the season is most inopportune for ventilating that grievance, and the manner of its ventilation in the columns of the *North-China Daily News* appeared to us more likely to provoke umbrage than to promote a settlement. For the rest, we entirely agree with our correspondent. No policy could be more unworthy or less sensible on the part of a government than to turn a deaf ear to the legitimate complaints of its servants, and by taking advantage of circumstances beyond their control, to reduce them to such a condition that their zeal and their energy are maimed by financial anxieties. But surely to offer truisms of that kind for the consideration of Sir ROBERT HART is wholly superfluous. A man whose great skill as an organizer and administrator has been established by years of successful work, does not require to be reminded that a spirit of discontent among subordinates is fatal to the efficiency of a service. If such a spirit exists among the foreign employés of the Chinese Customs, the columns of the press can not be better employed than in making known its existence, though we are persuaded that Sir ROBERT HART is already fully cognizant of all the facts, and that, were means available to apply a remedy, he would not lose a day in employing them. In our previous article we explained pretty fully the weak points, as we conceive them, in the employés case. That ground need not be again traversed, especially as we agree with "X." in thinking that, within the limit of its capacities, the Chinese Government ought to bear some part of the heavy loss that has fallen upon its servants. But we must emphatically repeat our previously expressed conviction that no time could be worse chosen than the present for pushing such complaints, and that, hard as it may be to wait, and painful as has been the long patience already exercised, the Customs employés will best consult

their own interests and promote the permanency of the fine service to which they belong, by not placing the Inspector-General in a dilemma at this crisis. It is greatly to be regretted that an opportunity was not created for disposing of the question before the war broke out. Possibly Sir ROBERT HART is open to criticism for not appreciating the importance of taking some definite action three years ago. But without understanding the obstacles that then presented themselves, we are obviously incompetent to form any intelligent judgment.

THE JAPANESE IN FORMOSA.

IF Japanese troops have really been guilty of cruelty and excesses in Formosa, it is well that the facts should be published, and that the condemnation of the world at large should be invoked. But before we credit the statements thus far recorded, it is a duty imposed by justice to scrutinise them carefully; a duty all the more imperative when we remember that sweeping and terrible accusations of a similar character, brought against the Japanese on a previous occasion, were proved to be Chinese fabrications, entirely without basis in facts, and so clumsily invented that they bore intrinsic evidences of falsehood. Let us see, then, what warrant we have for crediting the things now written.

In the first place, we observe that not a single European or American witnessed the atrocities complained of: they rest entirely upon Chinese testimony. There were only two foreigners at Hoon-nim (Yun-lin) when the trouble commenced: "the rest had left the district a week or so prior to the outbreak." Of these two, one, Mr. OLLIA, was killed by the insurgents; the other, Mr. PATEL, barely escaped their rifles. It is true that the Amoy correspondent of the *North-China Daily News*, after describing the alleged atrocities in general terms, says:—"Some of the foreign residents of Anping have come over in the *Thales*, and this is their *vivâ voce* testimony." Anping is sixty miles from the scene of the insurrection. Not one of the foreigners in question could have had any information except what was derived from Chinese sources. We know, from the letter of another correspondent who refers to the death of Mr. OLLIA, that "no positive details of the tragedy have been obtained, owing to the present isolation of the disaffected districts." It finally results, therefore, that the cruelties alleged against the Japanese soldiery immediately preceding the insurrection are attested by Chinese witnesses solely.

Let us now turn to the insurrection itself, as described by two correspondents on the strength of Chinese testimony. At the outset we are asked to believe that everything like disaffection against the

new administration would have disappeared before now had not Japanese petty officials, soldiers, and coolies goaded the people to desperation by acts of barbarity and outrage. Is that credible? A foreign correspondent, who witnessed the original campaign for the subjugation of the island, as well as the rebellion that subsequently broke out, has placed on record his deliberate opinion that the great mistake made by the Japanese was excessive leniency. He predicted that they would suffer for forbearance, sure to be misinterpreted, and he described the treacherous ferocity of the inhabitants, who disguised themselves as peasants and worked peacefully in the fields whenever a considerable force of Japanese was in sight, but ran for their concealed arms and ruthlessly butchered any detachment too small to offer effective resistance. Then came the insurrection of last January. No one, at that time, suggested or imagined that the rebels had been goaded by Japanese excesses to take the field. Quite a different notion prevailed, namely, that the measures taken by the Japanese to stamp out the spirit of disaffection had been insufficient. The wholesale murders of peaceful Japanese and the barbarous methods pursued by the insurgents in January are matters of history, and it is further on record that repetitions of such outbreaks were foretold, in view of the intractable temper of some of the inhabitants. With these facts before us, can we believe that the Hoon-nim bandits consisted solely of men who had been driven to desperation "by the constantly occurring visits and raids of Japanese soldiery and gendarmes"? The Japanese Authorities allege that the bandits were remnants of the old insurgents and that Hoon-nim and its vicinity had for years been a focus of disaffection. Which of the two explanations seems the more credible? Moreover, it does not appear reasonable to imagine that the "constant-occurring visits and raids" referred to could have been acts of purely wanton cruelty perpetrated by Japanese soldiers and gendarmes. If such things were done, they must have been prompted by lawlessness on the part of the Formosans; a conclusion that throws additional light on the true character of the Hoon-nim bandits.

Coming now to the incidents of the insurrection itself and of the three days immediately preceding it, here is the story told:—The depredations of the bandits in the hills—comparatively a small body—"proving at last annoying to the Japanese," measures were concerted to exterminate them. On the 22nd of June, "a force of about one hundred and fifty Japanese troops arrived at Hoon-nim and gave out that they were on their way to Po-li-sia." These men were "a detachment of the main expeditionary force sent to continue the work of devastation." They marched out of Hoon-nim, and failing to dislodge the bandits from the hills, obtain-

ed re-inforcements and renewed the attack. But again they found themselves unable to grapple with the bandits. Accordingly, they changed their tactics; directed their line of march against the villages lying along the base of the hills; burned and pillaged these, to the number of from 70 to 90, so that "thousands of the inhabitants, rendered homeless, childless, and generally indifferent to their future, joined the robbers, who, it appeared, were well supplied with arms and ammunition; and the whole force, now enormously increased, swooped down on the plains, boldly attacking their late aggressors, and forced as many as escaped death to retreat to Khaghi," which place the rebels invested on July 1st. Now this story appears credible enough at first sight. But in truth it abounds with absurdities. Hoon-nim is an outpost of Khaghi (Chia-i), which place lies four days' march distant in a south-westerly direction. Po-li-sia is two days' march to the north of Hoon-nim. "The main expeditionary force"—a very large force, since 150 men constituted a mere detachment—must have left Khaghi not later than the 17th of June, and must have been within a day's march of Hoon-nim on the 22nd. What became of that force? Where was it when Hoon-nim was attacked by the rebels on the 25th? Had it turned back, without any apparent reason, without attempting to rout out the bandits, without even coming in sight of an enemy—had it turned back and retreated precipitately to Khaghi? And what became of the detachment of 150 men? Between 10 and 11 p.m. on the 22nd, it marched out of Hoon-nim. That night it reached a village 8 miles distant, and finding only women there, slaughtered them and burned the place. The next day, it burned three other villages, and "killed about 200 people, sparing no male, not even children." Then, so far as the particulars of their proceedings are concerned, these 150 soldiers disappear from the stage. We are simply told that they "burned and pillaged from 70 to 90 villages." It took them a day (the 23rd) to burn 3 villages; how long must the burning and pillaging of from 70 to 90 have occupied? And supposing that the villages were only a mile apart, that is to say, supposing the interior of Formosa to be one of the most thickly populated spots on the face of the globe, then it appears that this phantom detachment must have covered a distance of from 70 to 90 miles in one day, the 24th—for on the 25th the rebels had assumed the offensive—not merely flying, or bicycling, but burning and pillaging some four-score villages, besides "several farmsteads," and "killing without mercy as many of the inhabitants as came within reach." Then the rebels attacked Hoon-nim—on the 27th it is said, though we know that it was on the 25th. They did not proceed to extremities that day, and during the night

the Japanese garrison obtained a reinforcement of 33 men from Tanlak. Next day, the whole garrison together with the Japanese camphor merchants were slaughtered, only 10 escaping to Tanlak, though the force defending the place must have numbered fully 60, according to the above account, and the rebels mustered only 500. The method said to have been pursued by the rebels is also worth noting. They piled firewood round the houses and temple in which the Japanese were barricaded, threw oil on the firewood and set it on fire! That is what 500 Formosan rebels did while 60 Japanese soldiers and gendarmes were plying them with rifle bullets at a range of a few yards. Meanwhile, where was the "main expeditionary force" that had marched from Khaghi 10 days previously to exterminate these very rebels? Thenceforth, it was a walk over for the insurgents. Post after post was taken, 210 Japanese soldiers and gendarmes being killed at three places, and a general slaughter taking place at three others, all these operations requiring only half-a-dozen days. Such are the wild exaggerations and ridiculous impossibilities gravely strung together for the information of the public. Coming as the details do from Chinese sources, we are not surprised that they should be inconsequential and extravagant, but we are surprised that they should be repeated without scrutiny by responsible foreign correspondents.

Whether Japanese soldiers, petty civil official, and coolies have or have not been guilty of cruelty in Formosa, we do not pretend to say. Our own information goes to show that after the insurrection of last January, much roughness was shown by the soldiers towards the people, and some lawlessness by the military coolies, while neither the local officials nor the junior officers made any vigorous attempt to restrain these excesses. But between roughness and murderous cruelty, between lawlessness, in the ordinary acceptance of the term, and wholesale butchery, rapine and pillage, such as are now charged against the Japanese, there stands a very wide gulf. Until such charges are substantiated by evidence other than that of the Chinese themselves, and until the evidence in support of them, from whatever source it come, ceases to be intrinsically extravagant and incredible, no one is justified in believing them, or in publishing them without all reservation.

CHOLERA.

It is most satisfactory to think that little, if any, fear need be entertained, of an outbreak of cholera this year. We read in a Tokyo newspaper that the total number of cases up to the present has been only 130, throughout the whole country, and that they have all been sporadic. No symptoms of an epidemic have been observed anywhere, and as we are now approaching the end of July, and have passed through a week of the dog days, the prospect is most encouraging.

THE PHYSICAL BASIS OF LIFE.*

IN reviewing a work by an expert on an extremely technical subject, two courses are open to the reviewer. He may limit himself strictly to the field of his author, and within this field may critically examine the value of the fruits of the new research. That method is obviously unsuitable for the general reader, for the reason that the review becomes usually a degree or two more formidable than the original work, itself already beyond the comprehension of all but a select few. The other method consists in a presentation of the fruits of the new research in a popular manner, and a consideration of the bearing of the work on the general scientific and philosophical conceptions of the time. This latter course is the one that, without further apology, we shall choose in dealing with Dr. LOEW's book.

The course of physiology from its brilliant beginnings with HARVEY to the present day, has been the explanation of what used to be called "vital phenomena" in mechanical—chemical and physical—terms. Throughout this period, among physiologists that consider the philosophical aspect of their science, there have been two schools, the school that considered that all vital problems would ultimately be found to be explained in chemical and physical terms, and the school that considered that there must remain an irreducible residuum of distinctively vital phenomena. Those that held the mechanical theory pointed to each advance that was made in physiology as an indication of the correctness of their view; while the vitalists replied that the explanation in mechanical terms of some of the functions of living organisms left the essential question as to the true nature of vital activity entirely untouched. Professor LOEW's book is an initial attempt to answer this question, to describe the nature of vital activity in terms of molecular physics. There have indeed been other attempts of this kind, but they have all been hitherto fanciful operations on the "high priori road." Dr. LOEW is the first to attempt an answer based upon a sufficient quantum of actual research, and it is for this reason that the importance of his little book can hardly be overrated.

He approaches the problem from a consideration of the chemistry of living matter. The difficulty of this study is enormous, for the reason that the primary property of living matter is its sensitiveness to changes in its environment. The first result of an attempt to examine living matter by chemical reagents is that the substance we are examining undergoes the remarkable series of changes known as "death," and we are arrested at the very outset of our research. Of the

* *The Energy of Living Protoplasm*, by Oscar Loew, Ph.D., Professor in the Imperial University, Japan; London, 1896.

chemical constituents of living bodies immediately after death we have a fair knowledge, but of the chemical nature of actual living matter our knowledge is, and probably must always be, largely a matter of inference.

We know that the indispensable chemical constituents of living matter are bodies known as albumens, and the solution of the problem of "vitality," if it is to be solved by mechanical conceptions, lies in understanding the difference between "passive albumen," as we meet with it stored up in seeds and eggs and throughout animal and vegetable organisms after death, and "active albumen" as it exists in living cells, the essential constituent of living matter, on which "vital" activities depend. The nature of this difference Dr. LOEW believes he has determined to consist in the difference between a stable and a labile chemical compound. In stable chemical compounds the atoms are placed in comparatively fixed positions relatively to each other, and a change in the relative positions is not brought about except by a force sufficient to cause disruption of the whole compound. On the other hand, "a labile position exists if in a molecule one atom is influenced simultaneously by the affinities of two neighbouring atoms, and thus becomes subject to an oscillatory movement and possessed therefore of kinetic energy in the form of continuous atomic motion." By research into the physiology of plants, Professor LOEW has shown that such a labile albuminous substance does actually exist in vegetable cells; and he argues that the chemical characteristics of this labile proteid will satisfactorily account for the phenomena of vital activity. Actually established facts are that:—

"The transition of living protoplasm into dead protoplasm exhibits a far-reaching resemblance to the transition of a labile substance into an isomeric stable form by atomic migration."

"There exists, widespread in the vegetable kingdom, a highly labile proteid serving as reserve material, which undergoes chemical change by the same influences as those that cause the death of the cells"

Dr. LOEW continues:—"The evidence drawn from the information supplied by nature leads to the very same conclusions as those that I had already reached by deduction. They are (1) that a great activity, in the form of oscillation of certain atoms in labile position, exists in the proteids of living protoplasm, and (2) that this ever active chemical energy, leading to respiration and in turn intensified by it, is especially well adapted to do chemical work, since atoms can be set in motion by others already in motion, just as molecular motion (heat) can be imparted to other molecules, i.e. conveyed by impact . . .

I conclude that the peculiar mode of motion in the labile proteids is also the source

of vital activity. This energy is the necessary link in the chain of constructive and destructive metabolism. It must, on the one hand, help radiant energy to construct carbohydrates from carbonic acid in green plants, and on the other, lend its aid to burn up carbohydrates, fats, and amido-acids in the respiration process. . . . What I have attempted has not been an explanation of complicated vital functions, but merely that of the nature of the energy emanating from the proteids of living matter."

That the *functions* of living matter are explicable in mechanical terms, physiologists of all schools alike admit. Dr. LOEW'S merit lies in his offering us a plausible explanation of the mechanical basis of *vital energy*, of that *activity* in which, as is well said by BUNGE (one of the foremost of the vitalistic school), "lies the riddle of life."

Let us turn to consider a difficulty in connection with Dr. LOEW'S hypothesis—a difficulty involved in the whole conception of *lability*. The difficulty will be best explained by a concrete example. "One of the most interesting labile atomic groups," says Dr. LOEW, "is the aldehyde group, —C—O—H , in which the oxygen exerts an attracting influence upon the hydrogen connected with the carbon atom, this being generally tetravalent, but sometimes only bivalent. The hydrogen atom is thus ever oscillating between the carbon and the oxygen, as may be indicated by the following formulæ:—

The hydrogen atom may be conceived as oscillating between the carbon atom and the oxygen atom, as the contact-breaker of a faradic battery oscillates between the electro-magnet and the connecting point to the longer circuit. The defect in the analogy we have chosen serves to point the difficulty of which we have spoken. The oscillation of the contact-breaker depends on two forces that alternately become effective in opposite directions, the force of the electro-magnet overpowering the force of the spring, and the force of the spring when the electro-magnet has ceased to act. But can we find any similar play of alternating forces in our hypothetically constructed labile compound? It does not seem so. It is certain that the attractive force between two chemical atoms increases enormously as the distance between the atoms diminishes. Let us suppose our hydrogen atom to be placed initially between the oxygen atom and the carbon atom in such a manner that the pull is equal in both directions. If the hydrogen atom now moves in the direction of, say, the carbon atom, the attraction of the carbon atom at once becomes much greater than that of the oxygen atom, and the —C=O form should be permanently

assumed. The position of the hydrogen atom between the oxygen and the carbon rather resembles that of the historic donkey between the two bundles of hay. If the animal once abandons the mean position so that the attractive smell of one of the bundles becomes stronger than that of the other, his choice is irrevocably determined. No perpetual oscillation between two bundles is possible.

Does, then, Dr. LOEW conceive that in a labile group something takes place analogous to the changes in the faradic battery when the contact-breaker is vibrating? that the movement—to return to our example—of the hydrogen atom towards the carbon atom brings about a state of molecular forces within the group whereby the opposite form of the group becomes preferable; and conversely, that when the hydrogen atom has moved back past the mean position and approximated itself to the oxygen atom, the opposite phase now becomes superiorly attractive? That would seem to be implied, for in that way only would be rendered possible the persistence in the group of an oscillatory movement whereby kinetic energy is preserved in the form of continuous atomic motion. But if that is Dr. LOEW'S view, he has not expressed it clearly; nor does he anywhere indicate his conception of the mechanism by which this changing play of the intramolecular forces may be supposed to be kept up. To return to our original rough analogy, unless something can be imagined more or less similar in its mode of working to the alternate play of electric and mechanical stresses in the faradic battery, the hypothesis of the oscillating atom in the labile group seems difficult to maintain.

Another criticism we feel impelled to make is that Dr. LOEW'S theory does not, at first sight at any rate, appear to throw any light on the phenomena of death and of generation. Yet any theory of vital activity that fails in these points can hardly be called fruitful. For death is the true enigma of existence. Immortality is comprehensible, while of death we understand nothing, though we are convinced of its reality by the remorseless logic of facts. If this oscillatory movement be conceived as once started in the labile group, what should suffice spontaneously to bring it to an end? And how explain the phenomena of generation produced by the fusion of two sexual elements? The ovum contains within its plasma the germ of countless future existences, yet, after a few trifling changes, it will inevitably perish unless its energies are reinforced by union with the sperm cell. In what way do the vital energies of these two cells reinforce one another to render possible the phenomena of development? We cannot, at first sight at any rate, see how Dr. LOEW'S hypothesis will help us to solve this fundamental problem of biology.

Here, with regret, we must leave Dr. LOEW'S book. We have tried to give it what he asks for in his preface, "impartial consideration and positive criticism." We ask him to give the same to the difficulties we have pointed out in connection with a hypothesis that is of the greatest interest, but necessarily tentative, breaking as it does untried ground. If it can be sustained, it will unquestionably prove to be of the greatest possible assistance to the progress of biological science. Especially interesting and valuable would be the bearing of this view of the nature of vital energy on WEISMANN'S new theory of Germinal Selection. This also we commend to Dr. LOEW'S consideration.

M.E.P.

COAL IN JAPAN.

The output of coal in Japan, writes the *Tokyo Economist*, totals about three million tons a year, of which one half is consumed at home and the remainder is shipped abroad, chiefly to Hongkong, Shanghai, Chefoo, Newchwang, Singapore, and San Francisco. The exported coal is obtained from Miike and other collieries in Kyushu and also from the collieries of Hokkaido. In Hongkong, where about 600,000 tons of Japanese coal was imported last year, it is used by steamers and factories. The possible rivals of Japanese coal in Hongkong are the collieries of Tonquin and Australia, but they need not be regarded with any dread. Cardiff coal, so long as the silver price of gold does not appreciate, can not be exported East for ordinary use. In Shanghai, Newchwang, and Singapore Japanese coal is used for steamships, factories, and in the kitchen. In San Francisco it is used for generating gas. The price of the article is a great obstacle to extending its sale in San Francisco, and at present a reduction is out of the question, as ships that would carry coal to San Francisco find it difficult to get a return cargo. Coal mining has made remarkable progress during the last two decades, for whereas the output amounted to only a little over 560,000 tons in 1875, the supply was over 3,307,000 in 1893; the figures for 1894 are not yet obtainable, but those engaged in the business estimate the output at 10 to 20 per cent. higher than the previous year. The capacity of Japanese collieries is still a matter of conjecture. Some eight or nine years ago great doubts were entertained upon the matter and mining was suspended in coal fields owned by the Navy in Kyushu. Smokeless coal is produced in Wakayama and Kumamoto, but only in small quantity.

THE SHANGHAI LIBEL CASE.

The suit for libel instituted by the *Institution St. Joseph and Philomène Agoutin* versus John Dant Clark and Thomas William Kingsmill, proprietors of the *Shanghai Mercury*, has been heard and concluded in Shanghai by Sir N. J. Hannen, Chief Justice, and Messrs. F. Mann, W. Roberts, H. Wilcockson, J. H. Craven, and R. Macgregor, Jury. Mr. H. S. Wilkinson and Mr. H. P. Wilkinson appeared for the plaintiffs, the defendants being represented by Mr. W. V. Drummond, with whom was Mr. Sharp, and Mr. Gedge (Messrs. Johnson, Stokes, and Master). The Jury found that gross negligence had been proved, and the apology of defendants was insufficient, and awarded the plaintiffs £1,000 damages, with costs. The Jury suggested, that a full apology, dictated by the plaintiffs' legal adviser, be published in all the papers in which the libel had appeared. His Lordship entered judgment in accordance with the finding.

TIMBER.

The timber usually shipped to Tokyo for ordinary use mostly consists of *sugi* from Kishyu, and constitutes 43 per cent. of the total lumber brought to the Fukagawa lumber-yard. Next to Kishyu, Bishyu, which sends fir (*hinoki*) grown in Kiso and Hida, and Enshyu, whence it is carried down by the Tenryu, are noted timber centres, though their aggregate total falls below that of Kii. Besides these, Oshyu supplies pine, and Hokkaido a species of hard wood called *shioji*. The demand for timber has grown considerably in Tokyo, despite the marked diminution in fires of late, sales amounting every year to over 5 million *yen*. The supply can not keep pace with the demand, and naturally the market appreciates. The excess of demand over supply has specially raised the price of fir, so that boards formerly rejected are now used in building work. Hard oak timber has also considerably decreased, and its place is taken by the hard wood produced in Hokkaido. Railway carriages are mostly made of this wood. The extensive purchase of timber during the war still further pushed up prices, and though at present, owing to people's refraining from fresh building of any magnitude, deterred by the price of timber, the market presents a dull aspect, nevertheless, quotations are as high as ever; 20 per cent. higher than the average, compared with the prices ruling previously to the outbreak of the war. Recently a small quantity of Oregon pine has been imported, and it is quite probable that the import of this timber will be greatly increased after a regular service is opened by the Yusen Kaisha between Japan and Seattle. The diminution in the supply of timber, or rather the increase of demand, has attracted many capitalists to this question, and Messrs. Okura Kihachiro, Moroto Seiroku, and Dokura, are planting trees on an extensive scale.

One of the chief demands for Japanese timber comes from China, where sleepers are wanted for the projected railways. The Japanese Consul at Tientsin recently forwarded two reports on this subject. Lately three firms in England, France, and Russia secured contracts to supply 240,000 sleepers; the English have to supply 103,000, the French, 60,000, and Russia the rest. The French firm has already received a consignment of Japanese timber; and the English firm has given an order to Japanese merchants for a part of its contract. The export of timber from Russian Siberia being forbidden owing to the enormous quantity required in the construction of the Siberian Railway the contract made by the Russian firm in Tientsin must ultimately come to Japan. In short, whether a contractor be European or Japanese he must depend for his supply on Japan. The English and French firms obtained the sleepers from Japan at a rate of 7 *mace* (1 *mace* corresponding to about 1.43 Japanese *sen*) per sleeper delivered at Taku, where one sleeper is to be delivered to the Chinese Authorities at the rate of 7 *mace* 5 *fan* (1 *fan* corresponding to 1.43 *sen* in Japanese currency).

OBITUARY.

In Count Kamei, who died on the 18th inst., the peerage has lost a distinguished member. The deceased was the third son of Lord Tautsumi Tetsuo, a court noble, and was born in 1850. At the age of eleven he was appointed an attendant of the Emperor, then a few years older than the Count. When 17 years old he was adopted by the ex-Lord of the fief of Hamada, Iwami Province. Next year his adopted father retired from active life and Count Kamei succeeded to the estate. In 1876, he resigned from the Court service, with a view to prosecuting his studies, and in August, 1877, started for London, where he remained for three years, devoting himself to the study of æsthetics at University College. For a few years after his return home he busied himself with Chinese literature and chemistry. In 1883, he was appointed an official of

the Foreign Bureau of the Imperial Household, and was shortly afterward promoted to the office of Chamberlain. But his thoughts turned westward again, and in 1886, we find him prosecuting his favourite study, æsthetics, at the University of Berlin, where he remained for about five years. When the China-Japan War broke out, the deceased decided to accompany the Second Army, to take photographs of the battle scenes. He reached the Liaotung Peninsula on October 6th, 1894, and marched in the rear of the Second Army to Chinchow and Port Arthur, never omitting to photograph every scene or place that struck him as useful in compiling an account of the war. When the Second Army was quartered for the winter at Chinchow, the Count obtained leave to return to Japan, and presented a number of photographs to the Emperor, then at Headquarters in Hiroshima. In March of last year, he again started for the Peninsula in company with the Guards, but returned after a few weeks, in consequence of the conclusion of the Treaty of Peace at Shimonoseki. He had taken altogether above 600 photographs of scenes of the War. His merit was acknowledged in his lifetime, and a high class decoration was conferred upon him. Early this year, disease appeared in his respiratory organs; it gradually grew worse, and he finally succumbed. While confined to bed, he compiled a domestic law to be observed by his descendants; this obtained the approval of the Minister of the Household a few days before his demise.

STATISTICS ON DOUBLE SUICIDE.

Mr. Kure Bunso, a well-known statistician, gives in the *Waseda Bungaku* the result of his inquiries into the causes of double suicide, basing his figures on the cases that have appeared in the vernacular papers from January last year, to May. The total is 44. These he classifies as follows:—Species: 36 were due to previous agreement between the parties, the rest are uncertain. Reasons:—16 were attributable to the presence of obstacles preventing the parties from being legally united; 12, to destitution caused by prodigality; 2, to pregnancy; 6, uncertain. Results:—Consummation of death by both parties due to mutual consent, 17; survival of both, 12; survival of the girl, 1; survival of the man, 6; in forced double suicide, consummation of death of both parties, 3; survival of both, 3; survival of girl, 1; survival of man, 1. Mode of suicide:—Edged tools 12; poison, 9; pistols, 4; use of poisons succeeded by lethal weapons, 3; drowning, 3; hanging, 2; run over by trains, 1; uncertain, 2; in forced suicide, edged tools 7, poison, 1. Professions:—Men, merchants 10; medical students, 6; artisans, 5; farmers, 4; servants, 3; soldiers, 2; jinrikisha-puller, 1; male procurer, 1; unknown, 4; in forced suicide, artisans, 5; merchant, 1; unknown, 1; soldier, 1. Women, prostitutes, 32; daughters or wives of farmers, 4; *geisha*, 3; artisans' wives, 1; kept mistress, 1; servant, 1; female student, 1; no fixed occupation, 1. Married or unmarried:—Men, unmarried, 9; married, 7 (of whom five had children of their own, and one an adopted child), unknown, 20; in forced suicide, unmarried 4; married 4:—

Age.	Mutual Consent.		Forced Suicide.	
	Males.	Females.	Males.	Females.
Under 20.....	2	11	—	3
21—25.....	18	21	6	4
26—30.....	10	2	2	—
About 30.....	4	1	—	—
Unknown	2	1	—	1

Generalizing the above, the writer observes that the uniformity in the rate of double suicide points to a corresponding uniformity in the cause, while the preponderance of double-suicides in the two months of November and December shows that poverty, brought about by prodigality, is an important factor. That the resolution taken by parties about to commit suicide is firm, is proved by the fact that in general one-half of the number achieve their purpose. The relative preponderance of death in the cases of medical students must be due to their easy access to poisons and to their com-

paratively dissolute life; while that of mechanics, especially in forced suicide, must be due to their familiarity with edged tools. Two-thirds of the females were prostitutes. Double suicide by ordinary folks deserves more pity, especially when it is remembered that not a few legally married couples are at times driven to resort to this extremity in consequence of the intervention of parents. With respect to double suicides in the prostitute quarters, a word of explanation is needed to show the difference that exists between pre-Restoration times and to-day. Double suicide was chiefly prevented by the enforcement of strict regulations in pre-Restoration days. For instance, when parties failed to achieve death, both the man and the woman were exposed for three days at Nihonbashi, and were then degraded into *Eta* (pariahs). Moreover, all the furniture owned by a girl was confiscated and given to the *Eta*. The loss that a brothel-keeper incurred when one of his girls participated in a double-suicide was very serious, and he naturally kept up a strict system of inspection over the rooms occupied by the girls. When a girl survived her partner no legal punishment was visited on her, the presumption being that her brain must have been deranged; when a man survived, the case was entirely different. He was presumed to have forced suicide on his partner, and on that ground, was sentenced to death. About half a century ago a double suicide of the latter description happened in a certain Yoshiwara. Fortunately for the man, two razors were found in the room where the double suicide was attempted. It was judged therefore that the case must have been one of mutual consent, and the man was sentenced to banishment, not to capital punishment. Some persons argue that the relative greater frequency of suicide among girls belonging to small brothels must partly be due to the greater misery to which they are subject. A most natural conjecture!

THE POST OFFICE AGAIN.

A subscriber writes to us from Takow, in Formosa:—"The Japanese post here is so irregular and untrustworthy that there is not a particle of use in continuing to send me the *Daily Mail*. It comes to me, sometimes, the copy of the 15th, say, a week before that of the 1st of the same month, and occasionally whole weeks are missing altogether. From receipt of this, therefore, will you kindly discontinue sending me your *Daily* issue, and instead send me the *Weekly Mail*, addressing it so and so, care of so and so, Amoy." It is unnecessary for us to comment on this. We have already invited the attention of the Post Office Authorities to the apparent impossibility of getting letters or papers transmitted to Formosa with anything like regularity, and now there is the humiliating fact that a subscriber asks us to make use of the Chinese post in preference to the Japanese. It is true that a regular mail service has not yet been established to Formosa, and pending its establishment delays in transmission would not surprise us. But the complaint of our correspondent goes far beyond a mere question of delay: it suggests unpardonable carelessness. We can assure the postal authorities that the service is perpetually criticized, and with justice, within Japan itself, and that unless some efficient measures of re-organization are taken, the Japanese post will entirely lose its reputation. There is, of course, much material for constructing an excuse in the case of mail matter bearing addresses in Roman letters. It would be unreasonable to expect that the staff of every post office in Japan should be competent to deal promptly with such matter. But between great centres of foreign correspondence like Tokyo and Yokohama, regularity may fairly be expected, yet it is precisely between Tokyo and Yokohama that deviations from regularity are most frequently recorded.

FORMOSAN AFFAIRS.

The *Yomiuri Shimbun* alleges that the Formosan insurgents received aid from the mainland. It even descends to particulars, and assures its readers that the arms sent over from China to be used by the rebels were packed in coffins. That must have been an extremely expensive method of transport; for it can scarcely have been pretended that coffins filled with rifles were mere empty shells, and coffins containing corpses pay a very high freight. However, there is the alternative that the strange packing-cases were carried across by junks the masters of which were in the secret. The story is difficult to reconcile with intelligence published at the time of Marquis Ito's visit to Amoy, namely, that the Chinese at that place had no manner of sympathy with Formosan insurgents, and were only anxious that good order should be restored and trade pushed.

In the same journal—which, for the moment, appears to have a monopoly of Formosan news—we read that, according to telegraphic despatches from Major-General Tatum, the insurrection in central Formosa has been completely subdued, and it is considered that the duty of preserving order can be amply discharged by the Second Brigade alone. "Now that quiet has been restored, operations of general cleansing are to be undertaken. The rebels will be killed; their arms confiscated, and severe measures adopted." That sounds ominous, but what else can be expected? If gentle means effect nothing, a different policy is inevitable. That insurgents surrendering will not be put to death is proved, however—if any proof be needed—by intelligence contained in another paragraph, also of the *Yomiuri Shimbun*:—"The insurgents that surrendered to our troops at Tai-tung are all to be sent by *Fusan Maru* to the mainland. The *Fusan Maru* carrying a batch of them, touched at Keelung on the 21st instant, and thence steered for Amoy."

It has been announced with much assurance by journals whose record does not entitle them to ready belief, that the insurgents in Formosa obtained a supply of small-arms, and that these were carried across from Amoy packed in coffins. The *Nichi Nichi Shimbun* denies the story emphatically. It says a considerable number of weapons of all kinds have long been in the possession of the inhabitants of Formosa who were obliged in former times to protect themselves against the native tribes and the bandits. Recently the Japanese Authorities concluded that, in the interests of public peace and good order, these weapons ought to be confiscated. Large quantities of rifles, ammunition, and swords were seized accordingly, but there is no doubt that many other weapons were cleverly concealed by their owners. When the insurgents assembled in the vicinity of Yuen-lin, they mustered several thousands strong, but not more than one man in every three had a rifle. Nevertheless, owing to the extreme difficulties presented by the nature of the country, the officer in command of the garrison at Yuen-lin, though he had a force of some four hundred men, was obliged to confine himself to defensive operations.

It has also been stated that there were signs of a renewed outbreak in the north, near Taipei, that the temper of the people was generally bad, and that the civil administration of the island was in a confused condition. These tales seem to have been circulated by persons having an interest in deceiving the public—we quote from the *Nichi Nichi Shimbun*. Trustworthy intelligence shows that, in contradistinction to the disturbed state of the central districts, the north remained perfectly tranquil, and at no time were any indications of disaffection observable.

Another report circulated was that the well-known Formosan, Lin Wei-yuen, now residing in Amoy, had been engaged in a plot to recover Formosa from its conquerors, and had secretly assembled a number of adventurers whom he caused to be conveyed to the island for the purpose of assisting the insurgents. That, too, is emphatically denied by our contemporary, which says that no one having any

knowledge of Lin could credit such a report. Lin is the richest man in Formosa. He was formerly called Lin Pang-pien, and everybody in the island was acquainted with him by reputation. He has no concern at present except to remain secure is the possession of his large property, and, with so much at stake, a certainly abortive insurrection is the last thing with which he would be likely to associate himself. It is true that he was forced by the insurgents to give them money and rice during the first struggle against the Japanese, but he acted in that matter entirely against his will, and is not at all disposed to risk the confiscation of his wealth for the sake of killing a few Japanese soldiers.

Finally, the *Nichi Nichi* deals with the story published by some of the vernacular newspapers to the effect that Li Chun-shang and Ku Hien-yung were in secret collusion with the rebels, and that, during the severe struggle at Lo-chiang, they brought up a force of over a thousand natives, organized under the pretence of being friendly volunteers, who, however, though making at first as though they would assist the Japanese, were ultimately found fighting in the ranks of the rebels. That version is entirely opposed to the facts. It is known from a letter sent by an official of the Civil Administration that Ku Hien-yung did actually march to the assistance of the Japanese at Lo-chiang, at the head of a thousand volunteers. The Japanese, however, did not wait for his arrival, but, though greatly outnumbered, attacked the rebels, and after an engagement lasting nine hours, put them to flight. Ku's loyal action on that occasion was doubtless attributable, indirectly, to the fact that he has a Japanese decoration, but those that know him well assert that he is a man of most upright and faithful spirit, and that the last thing to be expected of him is treachery of any kind.

There has been no telegraphic news from Formosa since the 21st. The *Tokyo Asahi*, commenting on the fact, notes that the cable between Nagasaki and Shanghai is interrupted, which of course explains the silence. On the 20th, however, the state of affairs was that the insurrection had been completely broken, and that the Japanese had recovered and garrisoned all the places from which they had been obliged to retreat during the days of their first surprise. It would appear that the surviving rebels fled to the mountains, and our contemporary predicts that a campaign of extermination will now be undertaken against them. Of course that is almost inevitable, but we do not imagine that any movements on a large scale can be organized by the Japanese before autumn. The pursuit of the insurgents into their mountain fastnesses must, under any circumstances, be a work of immense tediousness and difficulty. It has hitherto been supposed that the hill districts of Formosa are virtually inaccessible for troops acting on the offensive. Such, at any rate, was invariably the experience of the Chinese in their attempts to subdue the aborigines. Doubtless when the so-called "campaign of extermination" is in progress, we shall hear terrible tales of atrocities perpetrated by the soldiery. If the Japanese Generals are wise, they will have a foreign correspondent attached to their troops, so that public need not be obliged to rely on Chinese inventions and exaggerations.

With regard to the troops that will form the permanent garrison of the island, it was the original intention that three Brigades should be stationed there, that is to say, a Division and a half. To that programme the Diet gave its consent last session. But to cope with the insurrection in January an additional Mixed Brigade was sent from Japan. These troops ought to have returned after tranquillity had been restored, but it was considered expedient to keep them in the island, and recent events have demonstrated the necessity of having four Brigades in permanent garrison there. The expenditures involved in the change of programme will be submitted to the next Diet in the form of a Supplementary Budget, but in the meanwhile they will probably be defrayed from the First Reserve. We take this information from the *Yomiuri Shimbun*.

KOREAN NEWS.

The following notes are taken from the latest Korean correspondence published by vernacular papers:—

The new Japanese Minister to Korea presented his credentials to the King on the 16th inst., at the Myong-ye Palace. That routine being duly concluded, the Minister intends to open negotiations with the Korean Government on various subjects, in the following order:—Damage suffered by the Japanese merchants in the interior of Korea owing to the late insurrections; the grant of a charter to Japanese capitalists for constructing a railway between Seoul and Fusan; the opening of Mokpho and the Tadong for foreign commerce; and, lastly, the extension of the Japanese settlement at Ninsan. The first matter will be taken up in a day or so—the date of the letters is the 17th inst. The indemnity to be demanded from Korea is said to be the same as that estimated by Mr. Komura, the predecessor of Mr. Hara.

The Korean Government has issued a notification relating to the construction of railways. It consists of seven articles, and provides that the gauge adopted shall be 4 ft. 8½ inches, English measure; that the fares and rates of freight shall be determined by the Minister of Agriculture, Commerce, and Industry, and that foreigners to whom charters have been, or may be, granted for laying railways in Korea must consult the said Minister before fixing the above charges.

The French Minister, not contented with having secured for his countrymen a concession to construct the Seoul-Wiju railway, is now, with the support of the Russian Minister, pressing for a similar concession in the case of the Seoul-Mokpho line. He argues that a charter for that road not having yet been granted to any one, though the Seoul-Fusan line is understood to have been promised to certain Japanese, he can not see any reason why his request should be refused. All the Cabinet Ministers, with the sole exception of Li Kwan-yong, the Minister of Foreign Affairs, are disposed to give a favourable hearing to this application. Li is said to be very much perturbed about it, for he learns that the construction of the Seoul-Mokpho road by French capitalists would seriously affect the proposed enterprise of Mr. Omiwa and others to whom he is orally pledged not to concede the Seoul-Fusan line to any other nationals. Mr. Omiwa and Baron Ozaki were to reach Seoul on the 17th inst. to definitely conclude the negotiation between the Korean Government and the Japanese projectors of the Seoul-Fusan Railway.

The Seoul statesmen, who were reported, only a short time ago, to have asked Russia for a loan, are said to be now perplexed by an offer of 5 million yen from France. Impeccuous as the Government is, it is believed to have declined the kind offer of France, and the latter has consequently changed its ground and made a similar offer to the Korean Bank, which is still in an embryonic condition. Opinions are divided with respect to the latter offer. The Finance Minister sees no reason why the Bank should not accept it, but the Organization Committee of the Bank and some of the Cabinet Ministers hold that, as the primary object of the Bank is to farm the land tax, the acceptance of such an offer would defeat the Bank's original purpose by giving the creditor a lien on the proceeds of the tax. The scheme for the organization of the Bank is still in the hands of Mr. Brown, now all powerful as an adviser in the field of Korean Finance. It is said that the practical preliminaries will be definitely settled on the arrival of two Englishmen from Shanghai, who are to be appointed Councillors of the Bank, and that one of the two was to arrive within a few days. An Kei-su is urged to become President of the Bank, but he recommends that Kin Sung-han, who is spoken of as Vice-President, should be placed at the head of the enterprise. The shrewd An anticipates trouble in connection with the officious offer of France, if not from other causes.

The abuse of forwarding documents to the King impeaching one influential Korean or

another, and sometimes even a whole batch, has just been illustrated by a memorial from Chông Sông-u, arraiging An Kei-su, "Philip Jaisou," Pak Ting-yong, and several others, in connexion with the affair of October. The impeachment collapsed miserably, for when the accuser was brought face to face with each of the defendants in the High Court, he not only failed to substantiate his charges, but had even to admit the total baselessness of the accusations. His wife also confessed that her husband had been instigated by certain friends to send in the memorial. In view of this overwhelming evidence, all the defendants were declared entirely free from blame, and their accuser was found guilty of libel. It is believed that the signal failure of the present case will put a stop to the repetition of such mischievous schemes.

Li Pâm-chin left Ninsen for his destination (Washington) on the 16th inst., in a French man-of-war, taking with him his wife and two children. There is reason to believe that the impeachment affair was his last effort to recover power.

CHINESE NOTES.

Speaking of the allegation that infanticide is not known in the north of China, the editor of the *Peking and Tientsin Times* says:—"A winter or two ago we saw two little twin baby girls (infants) exposed on a mound" under circumstances that gave conclusive evidence of deliberate exposure.

Chefoo is apparently too small to have a newspaper. The publisher of the *Chefoo Express*, finding himself unable to avoid giving offence to "several residents for whom he entertains the highest respect," has decided to give up the issue of his paper.

The *Peking and Tientsin Times* reprints the whole of the questions propounded to the students in the Imperial Medical College, Tientsin, at their summer examination. Evidently the foreign residents of Tientsin take no small interest in the success of the college. It is worthy of note that in answering 40 questions on anatomy, surgery, physiology, and materia medica, the leading student, Mr. King Hun-gen, obtained 1,523 marks out of a possible 1,600.

The new mint in Nanking has been completed and the work of coining silver dollars, subsidiary coins, and copper cash will commence, it is said, during the current month.

A biscuit 54 inches in circumference and an inch and a half thick is something to bite into. That is the size of the *Kuoaping* baked in Shantung. It is made of wheat and baked brown on a griddle.

The Viceroy of Nanking recently gave a very magnificent banquet to the officers of the two German men-of-war that were sent to that place in connection with the attack on Mr. Krause, a German drill-instructor. Nothing seems to have been spared on the Viceroy's part to show consideration for his guests. The most interesting feature of the affair is contained in the following paragraph, which we take from the *N.-C. Daily News*:—

After the banquet, the Viceroy made a eulogistic speech dwelling on the friendly relations always maintained between their respective countries, and the gratitude felt by China to Germany for the latter's help in the Liaotung Peninsula affair, thereby further cementing the friendly ties which bound the two Powers. Special stress was also laid on the recent understanding between H.E. Li Hung-chang and the German foreign Minister at Berlin. The speech, which was a rather long one, ended with a toast to the health and long life of the German Emperor, and the guests, and "the earnest hope that Germany and China would henceforth be always found side by side on the political chessboard of the Far East." All this was translated into German by Yü Taotai, and the reply made by the Captain of the *Prinzess Wilhelm* was quite as enthusiastic as his predecessor's, concluding with the usual toast to the health of H.I.M. Kuang Hsü, their host, and so forth.

The annual examinations commenced at the chief town of Hupeh on the 29th June. No less than eleven thousand students presented themselves for the ordeal. A sad accident took place in connection with it. A boat containing

18 students was upset coming up the river, and eleven of the youths were drowned.

The Mahomedan rebellion in Kansu seems to be developing much larger proportions. The General-in-chief of the Imperial Forces has apparently received commands to carry on a war of extermination. At one place in the disaffected region he slew three thousand tradespeople and sold their wives and female children. Such action, if indeed it has been taken, must provoke terrible resistance. The Mohammedans across the border in Russia are expected to take a hand.

An irruption of bandits has taken place from Shantung into Hsichon. They have been joined by some 3,000 local *confreeres* and are devastating and burning on a large scale, the two thousand men under the command of the Taotai being unable to cope with them. Fresh troops have been despatched from Nanking. The Shantung bandits are supposed to be old soldiers that deserted, carrying their arms with them, on the occasion of the Japanese invasion of that province.

A writer in the *N.-C. Daily News*, signing himself "Ob.," combats the generally received idea that steam communication with Yunna via the West River is impossible. The difficulty hitherto alleged is the existence of rocky rapids, where junks have to haul themselves up. But a steamer can haul herself up as well as a junk. A steam-capstan forward and a stern wheel would enable her to negotiate such obstacles much better than a junk can. There are, however, flats where the water shallows to 18 inches, so that a flat-bottomed craft would be essential. Over the first half of the way from Canton to Paksik, a steamer might travel full speed night and day, but the second half would be more difficult. The river assumes noble dimensions at times. Thus, just above Kuaiyunjen, there is a reach 720 feet across with a uniform depth of 10 fathoms and a current of only a knot. "Ob." denies that the provinces through which the West River runs are as poor as frequent reports of famines have led people to imagine. He attributes these calamities to the mismanagement and greed of the local officials, abuses that would speedily be corrected were quick steamer communication established with Canton.

Foreign missions in Chêngtu are exhibiting a phoenix-like propensity. They are re-constructing with brick and stone the buildings that mob tore down last year, so that the result of the anti-Christian riots is merely to re-invigorate missionary effort.

Here is an interesting paragraph from the *N.-C. Daily News*:—

The Emperor, according to a report from Peking, which we give with all reserve, has sanctioned the recommendation of the Board of Revenue, to demand from each Customs Taotai and from each Viceroy and Governor of provinces, except those of Kueichou and Kansu, which are too poor and have to be subsidised by other provinces, the sum of five million taels each. By this means it is expected the sum of 100 million taels can be raised by the autumn of 1897 as an emergency fund to pay off the debt of China to Russia.

According to present estimates, the Peking-Tientsin line will be open for traffic by March next.

German military instructors are working at Wuchang as well as at other places already recorded. One has been drilling and teaching there for some weeks, and two others are on their way thither. This was to have been expected when the great Viceroy Chang was transferred to Wuchang. If the Chinese do not make a good showing in their next war, it will not be because they lacked first-class military instruction.

On the 28th inst., at 3 p.m. a meeting of the *Jiyu* to was held to discuss their views on the Yokohama Water-works question and the proposed route of the Tokaido Railway. They defended the Government's measures against the arguments of Messrs. Shimada and Otani, whose lecture meeting was held at the Minatoza on the 24th inst.

RAILWAYS AND TELEGRAPHS IN KOREA.

The *Chuo's* correspondent writes from Ninsen as follows:—

SOUL-NINSEN RAILWAY.—Engineers are expected from America about the end of the month and will at once commence surveying. It is thought that the laying of rails will begin by March or April.

SOUL-WIJU RAILWAY.—The charter for the construction of this line has been secured by certain French capitalists. The stipulations were definitely decided about a week ago.

SOUL-WONSAN RAILWAY.—A charter was given two or three days ago to French capitalists, whether identical or different from the above group, we do not know; the agreement will be duly signed without delay. Though ostensibly to be built by French capitalists, the work is really undertaken by Russians. This is an open secret.

SOUL-FUSAN RAILWAY.—Germans have lately applied through the German Minister, with the backing of the Russian Representative, for the concession of this line. It is true that the Foreign Minister gave Mr. Omiwa an oral promise that he would give him the charter, but a promise of that kind can not be depended upon, especially as the Foreign Minister possesses no influence in the Cabinet, and is merely holding his seat by favour of the Minister of Finance. To what nation the right of constructing this line will ultimately be given is therefore still unknown.

SOUL-NINSEN TELEGRAPHS.—As everybody knows, a Japanese military telegraph connects the two places, and this line is also accessible to the public at large. The Korean Government has, however, decided to construct its own line between the places, has finished the survey, and moreover has set up the posts. Mr. Nienstead, a foreign telegraph expert in the employ of the Korean Government, is to superintend the installation of the wire brought to Ninsen by the *Genkai Maru* a week ago. The line will be opened about the end of the month. Though ostensibly put up by the Korean Government, the construction of the line is really undertaken by Russia, with the consent of the Korean Government. When the work is completed, Russian telegraph experts will be stationed at Soul and Ninsen.

SOUL-WIJU LINE.—The military telegraph constructed by Japan and presented to Korea after the War was laid over the route taken by the old Chinese line. These two lines are now to be availed of in reconstructing the telegraph between Soul and Wiju, and thence to Peking. The reconstruction has been finished as far as Phyang-yang, and offices at Soul and Haicheng will be opened shortly.

WONSAN-HAN-HUNG LINE.—Construction has already been undertaken between the two places, while a prolongation from Ham-heung to Kyông-heung, where junction will be made with the Russian line, will be undertaken as soon as the re-construction of the Wi-ju line is completed.

THE COMMERCIAL TREATY BETWEEN CHINA AND JAPAN.

The Plenipotentiaries of China and Japan affixed their signatures to the new Commercial Treaty between the two empires on the 21st instant, and the ratifications are to be exchanged in Peking within three months from that day. Pending the latter event, the contents of the document will doubtless remain private. We learn, however, from the *Nichi Nichi Shimbun* that the Treaty secures for the Japanese access to the interior of China for purposes of trade; invests Japanese Consular tribunals in China with extra-territorial jurisdiction, and guarantees most-favoured-nation treatment to Japan, none of which privileges are reciprocal.

THE INUNDATIONS.

The latest intelligence as to the inundations is as follows:—An official despatch from the Governor of Nagano *Ken*, dated the 26th inst., says that, according to the latest investigations, the floods caused 109 casualties to life, washed away 342 houses, wrecked 223 others, and flooded 14,788 houses in all. The area of devastated lands was 2,745 *cho* (6,862 acres), and a further area of 10,239 *cho* (25,597.5 acres) was inundated. Bridges to the number of 514 were carried away, embankments were destroyed throughout a length of 18,982 *ken* (37,964 yards), and roads to the extent of 25,610 *ken* (51,220 yards).

The damage done in the province of Mino was even more serious. Mr. Ono Kamesaburo, member of the Diet for a district of that province, has forwarded the following figures to the Central Office of the National Unionist Party, basing them on investigations carried up to the 24th inst.:—Suffering families, 60,928; total number of sufferers, 288,398; arable lands devastated, 67,235.5 *cho* (168,088½ acres); embankments broken, 20,820 *ken* (41,640 yards); casualties to life, 109; number of persons receiving relief, over 180,000.

These figures are exclusive of the province of Hida, where also the disaster is reported to have been serious. At various places landslips buried dwellings, and more than 30 persons were killed or wounded. The overflow of the river Kiso is reported to have spread ruin far and wide.

The injury done by these floods to farms, embankments, and roads in Miyagi Prefecture was more considerable than that inflicted by the seismic wave, as is shown by the following returns, carried up to the morning of the 25th inst.:—Houses washed away, 342; wrecked, 223; flooded, 14,788; embankments broken, 18,982 *ken* (37,964 yards); roads destroyed, 25,610 *ken* (51,220 yards); bridges washed away, 514; lands devastated, 2,745 *cho* (6,862.5 acres); lands flooded, 10,239 *cho* (25,597.5 acres).

Niigata, Miye, Tochigi, Toyama, and other districts also suffered, though fortunately to a less extent than the above-mentioned places.

The wide tract of country west of Gifu, between the two rivers Nagara and Yebi, is converted into a big lake. Travellers coming from the west have to leave the train at Tarui, whence they must walk, or proceed by *jinrikisha*, about 7½ miles, as far as the bank of the river Yebi. Boats are there in waiting to convey them to the bank of the Nagara, a distance of another 7½ miles. The charge for one person is about 2 *yen*, and as a boat rowed by five men usually carries 12 passengers, the disaster must for a short while prove a very profitable source of business to owners of boats. So exorbitant are the charges that a traveller reports having been obliged to pay 20 *yen* for the exclusive use of one boat. A district between Uyeda and Nagano, in Shinano Province, has also been temporarily converted into a lake.

SMART CAPTURE OF A BURGLAR.

On Monday afternoon last, the 27th July, Mr. J. H. Curtis, of No. 132, Bluff, reported to the police that during his absence in the country, his house had been entered, and two watches, a black silk coat, and nine other articles—including a revolver—had been stolen. The Kagacho Police officials put the matter into the hands of Mr. Nakajima, the divisional head detective, and this officer at once set to work to discover the thief. On Wednesday evening, as he was pursuing his investigations in China Town, he came across a lad named Nakamura Kin-suke, carrying a revolver. The detective arrested the lad on suspicion, and on arrival at the Police-station a confession was obtained. On the strength of this a straw-stack in the vicinity of the race-course at Negishi was searched on Thursday morning, and all the other stolen articles were found hidden there. Mr. Nakajima is to be complimented on his work.

THE DAMAGE TO THE JAPAN RAILWAY COMPANY'S LINE.

Persons intending to travel in a northerly direction may be interested to know that the delay resulting from the damage done to the Railway bridge at Shirakawa by the recent flood does not exceed 3 or 4 hours. On arrival at Shirakawa by train, passengers hire *jinrikisha* and go on to Izumisaki, distant 3 *ri*, which place they reach in about one hour and a half, in time to catch the train succeeding the one by which they would have travelled had no interruption taken place. The demand for *jinrikisha* at Shirakawa for people travelling northward, and at Izumisaki for those going southward, being great, it is well to telegraph ahead if possible. Passengers are allowed to walk along the railroad if they please, and in that case the distance is only 2 *ri*. Baggage can be sent by cart if there are no *jinrikisha*. The river rose to a great height at Shirakawa, weakening the supports of the railway bridge and sweeping the other large bridge away. Passengers row cross the river by means of narrow planks over which *jinrikisha*, sometimes heavily laden, are carried.

MURDEROUS CRIMES IN AMERICA.

Judge Parker, writing in the *North American Review*, tells an appalling story of the increase of murderous crimes in the United States:—"When we go to facts, we find that during the last six years there have been 43,902 homicides in the United States, an average of 7,317 per year. In the same time there have been 723 legal executions and 1,118 lynchings. These startling figures show that crime is rapidly increasing instead of diminishing. In the last year 10,500 persons were killed, or at the rate of 875 per month, whereas in 1890 there were only 4,290, or less than half as many as in 1895. This bloody record shows a fearful increase of the crime which destroys human life. We are all alike anxious for a remedy, but before we can obtain one we must know the cause. We can easily recognize that the greatest evil of any civilized age is confronting us, not only in the shape of crimes committed by individuals, but also of crimes committed by masses of men who are endeavouring by bloody and improper means to seek a remedy—I mean those who band themselves together as mobs to seek protection which they fail to obtain under the forms of law."

The cause of this very evil state of affairs is attributed by Judge Parker to uncertainty as to the final process of justice: in other words, to the facilities afforded by the appellate-courts for procrastinating punishment or obscuring proofs of guilt. "Courts of Justice," he says, "look to the shadow in the shape of technicalities rather than to the substance in the shape of crime." Here is the remedy that he proposes:—

To destroy the greatest of all promoters of crime, I would remodel the appellate-court system. I would organize in the States and in the nation courts of criminal appeals, made up of judges learned in the criminal law, and governed by a desire for its speedy and vigorous enforcement. I would have sent to these courts a full record of the trial, and they should be compelled to pass upon the case as soon as possible, according to its merits, and ascertain the guilt or innocence of the accused from the truth and the law of the case manifest on the record. I would brush aside all technicalities that did not affect the guilt or innocence of the accused. I would not permit them to act on a partial record, or on any technical pleas concocted by cunning minds. I would provide by law against the reversal of cases unless upon their merits innocence was manifest.

Judge Parker truly asserts that the certainty of punishment, not its severity, is the real deterrent of crime. But it will be apparent that the fervour of stating his case carries him beyond his mark. For if the courts of criminal appeals that he projects are to be restrained by so many vetoes, if they are to be forbidden to reverse any case unless on its merits innocence is manifest, then obviously there must exist some still higher tribunal to supervise them, and thus the clumsy system of repeated references is once more

constructed. However, that is not the Judge's intention. He aims at speedy finality, and his proposal has elicited wide approval.

In connection with this subject, it may interest our readers to learn that Theodore Durrant who, nearly sixteen months ago, murdered two girls in a church in San Francisco under shocking circumstances referred to at length in these columns at the time, remains still in prison. He was convicted and sentenced to be hung six months ago, but his case being appealed and stays being granted, it is expected that the affair will last another year, and that delay and technicalities will ultimately save his neck from the halter.

THE NEXT GENERAL ELECTION.

A question of some interest but no great importance is raised by a vernacular contemporary. The present House of Representatives was elected in September, 1894, and since by law the term for which it sits is four years, the members are entitled to retain their seats until September, 1898. But according to the Law of Election, the 31st of July is the fixed day for a general election. Hence, in order that these two provisions may not clash, it will be necessary for the Emperor to exercise his prerogative of dissolving the House, which will probably be done in July of the year after next. Such are the facts advanced by our contemporary, but we do not appreciate the difficulty ourselves. That the 31st of July is not an unalterable date for holding a general election, is proved by the fact that, after a dissolution, the Diet has to be re-invoked within 3 months, which provision could not be observed if the 31st of July had to be awaited before holding new elections. It is better to alter the routine of dates so as to suit existing conditions, than by adhering rigidly to a mere technicality, to violate the right of every member to sit for a full term of four years.

GRACIOUS GOODNESS!

On the evening of the 24th instant, Mr. F. Schroeder, a gentleman of chequered experience and uncertain nationality, now editor of a periodical called the *Eastern World*, without which no library is complete, was obliged by the police to leave a public meeting in the Minato-za, Yokohama. It is an awful incident, not unlikely to have international consequences. We dare not trust ourselves to write about it. An impartial local contemporary has devoted two whole columns of genial oburgation to the dreadful story, but our tea-pot would be shattered to fragments if we attempted to put such a storm into it. The shocking contingencies involved should not, however, be hidden from our readers. We therefore quote the final paragraph of the two graceful columns alluded to above:—"Illiberal and despotic laws administered by ill-disposed and ignorant policemen, and enforced by judges, some of whom are not altogether above suspicion, open a vista that may well serve to dismay the timid, or what is better, possibly serve to stimulate the oppositeness of the intrepid, if any such there be." Merciful providence, if haply it should fall out that Mr. F. Schroeder's oppositeness has been stimulated!

SHOCKING FATALITY NEAR URAGA.

News is published in the Tokyo papers this morning of a shocking fatality that has just come to light in Kanagawa *Ken*. A tunnel at Hashimidzu, connecting with the village of Otsu in the Miura district—a tiny fishing hamlet lying at the head of a deep indentation of that name in Tokyo Bay, and a few miles below Uraga—caved in at 8.40 a.m., on the 23rd, as a consequence of the heavy rains of the 20th and 21st. Twelve persons were passing through at the time and all were buried. The police proceeded to the spot and with the aid of ready helpers succeeded in rescuing alive two of the entombed persons. The others were all dead when reached.

DRAMATIC NOTES.

The *soshi* actors, we read in a recent number of the *Waseda Bungaku*, are approaching more and more in style to the performances of *bona fide* actors. This must be partly due to the reaction that has occurred in public taste against the rough and ready performances of *soshi*, leading to a significant decline of public patronage; and partly to the presence of many itinerant actors of the old school who used to pass themselves off as *soshi* actors, but who, as soon as the public began to exhibit signs of weariness at their simple and artless performances, have returned to their old paths and hastily put upon the stage performances better suited to the public's purer taste. The *bona fide soshi* actors also have taken some lessons in dancing, and are ambitious of displaying their new talents so as to demonstrate that they are not much behind the actors of the old school as to pose and step. In short, the characteristic marks of *soshi* performances are destined to disappear, and the question now is whether, by eliminating the defects of the *soshi* actors and of the actors of the old school, a new style can be inaugurated.

The objects kept in view by Danjuro when he speaks of the necessity of improving the stage, are refinement and realism, the former comprising classicism, moral instruction, and the rejection of vulgarity and immodesty. It is from the importance that he attaches to refinement that Danjuro is so greatly inclined to stage historical plays, his realistic tendencies making him fastidious as to costumes and surroundings. His detestation of vulgarity and immodesty leads very frequently to changes in the passages of the old drama, and this often, in the eyes of some critics, destroys their charm and tends to misrepresent the individual characteristics of the *dramatis personae*. His intention to cleanse a play no doubt is good, they write, but he often carries his reforming experiments to an extreme. Danjuro says:—"What I dislike most are the characters of *Sanemori* in the *Nunobiki* play and *Moritsuna* in the *Omi Genji* play, for as they are faithless warriors, I cannot take pleasure in representing them. I have played the two characters only once." We have to remember that it is Danjuro's grasp of the spirit of a character that makes him so successful in his effect upon the minds of spectators. He lays due stress on the necessity of actors learning dancing. He says that Japanese dancing is not such a simple thing as foreign dancing. In Japan, dancing and acting, though apparently different things, are closely related, and every actor must be well trained in the first art. An actor who has no training in dancing is comparable to a wrestler that has no strength. We may refer in closing to the opening of a special theatre at Misakicho, Tokyo, for the *soshi* troupe lead by Kawakami. It was opened at the end of last month, and the plays are reported to have drawn full houses.

AN INEXPLICABLE ASSERTION.

Mr. F. Schroeder alleges that, on the 27th instant, he addressed to this office the following letter by post:—

To the Editor of the *Japan Mail*, Yokohama.

Sir,—Referring to a paragraph in your to-day's issue, I beg to inform you that I am a German subject, and that I am registered in the German Consulate at Yokohama as such.

Yours truly,
F. SCHROEDER.
He further affirms that since, "for reasons of his own, the editor of the *Japan Mail* did not insert the letter," he, Mr. Schroeder, was obliged to send it to two of our local contemporaries. Mr. Schroeder had better make investigations. If he sent such a letter by post, it has not, up to this moment, reached us. As to our having any "reasons of our own" in connection with Mr. F. Schroeder or his affairs, the idea is laughable.

The scorching heat of these last few days has caused the price of artificial ice to rise considerably. At present the rate is 60 *sen* per 10 *kwanme*; natural ice is one *yen* less.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE CHINESE CUSTOMS SERVICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I recently saw your Editorial on the Customs Service, a critique on an article in the *N.-C. Daily News*.

While the general spirit of your article is not unfavourable, it is marred by mistakes. Seeing that the Customs Service contains in its ranks the relatives of many residents in China and Japan, and has openings for many more, I do not understand why you should discountenance public criticism—conducted in a friendly spirit.

It is not a fact that the Indian Government has done nothing to relieve the situation for its silver paid employees: it is a fact that the Straits and Hongkong Governments have both granted a favourable rate of exchange to members of the Colonial services: it is not a fact that the leading mercantile firms and shipping houses have done nothing to ease the situation for their employees. The leading Bank in the East has appreciated the difficulties of the times, and the engineers, instructors, *et hoc genus omne*, engaged by the Chinese authorities have all obtained most favourable rates of pay. I do not accuse the Inspector-General of any breach of contract—nevertheless the unwritten understandings and the traditions in the service have during the past ten years been much upset. Not only is the rate of promotion very slow, but salary has fallen 50 per cent. in sterling value—except in the case of a very few. Is it too much to hope from the Government that part of this heavy loss should be borne by it? Is it not natural for an employer to endeavour to so provide for his servants that, freed from undue anxiety, they may devote their best energies to their work? It is quite believed that the difficulties contended against are known to the Inspector-General, but long continued inaction must lead to continued discontent and this to general inefficiency. I do not venture to suggest remedies. As the leader in question pointed out, these should not present insuperable difficulties. But we do desire a just consideration of the case alike by the Government and by the Press.

I am, &c.,

Shanghai, July 9th, 1896.

X.

MAJOR-GENERAL TACHIMI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I note that you invariably speak of the gallant Major-General now in Formosa as "Tachimi." Linguistically this is the correct pronunciation, as the Major-General himself confesses; but for centuries the family has been known under the name of *Tatsumi*, and the veteran prefers to be so called. I write this as an acquaintance of his, so am sure that this is the correct reading.

Yours, etc.

Tokyo, July 24th, 1896.

F. W. E.

HOW IS JAPAN CONCERNED IN THE PROBLEM OF "FREE SILVER?"

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I must say that your editorial comments upon Mr. Morton Frewen's quoted opinion as to the effect of the legislative restoration of silver to its constitutional status as the unfettered regulator of the volume of the currency—and by consequence of the concurrent "value" of the dollar—in the United States of America, are a surprise to me, a newcomer to Japan. The article is appropriate to a paper published in the American "East," but to me quite out of place in the home of the Silver Standard. For a journal which I am informed holds a brief for the Government at Tokyo to watch its interests in the forum of the outer world, and, therefore, whose plain duty it is to inform the public mind of Japan of the trend of any world-movement which in its possible course can effect the prosperity or the safety of this country, I should have thought that it would be more to the purpose for you to study this question and declare its tendencies in the light of Japanese rather than American interests. If you fondly imagine that Japan is less vitally interested in this question than Colorado, you are sadly out of touch with the scope of the movement, and indeed it seems to me from a perusal of the article above referred to, and

one which I noted in an issue of your paper about a week ago, that you have a very narrow conception of this tremendous business, this stupendous conspiracy for the social (and eventually the political) subjugation of the civilized world to the direct and personal rule of an oligarchy as organized and definite in its *personnel* as the Council of the Rich who governed the city of ancient Carthage. The restoration of Silver to monetary sovereignty over the United States (which will sooner or later happen) will mean more to the whole world, and especially to Japan, than the restoration of the Bourbons meant to France and Europe three quarters of a century ago. The incident of the very limited consequent re-shuffling of the relative supplies of the precious metals will be a detail of almost insignificant economic affect by comparison with the cataclysmic effects of the re-establishment of the universal circuit of an automatic currency exchange. It is futile for you in Japan to waste brain power upon such speculations (which do not concern you), as are ventilated in the two articles of your paper to which I have referred; think out rather what it means for those of your constituents who are interested in the foreign trade of this very spot—for the restoration will come and the whole fortunes of the Orient will be transformed by it—and when it comes, if Japan is prepared (if she shall not have entangled herself in the web of the golden spider,) she will benefit by "free silver," but all those who put off preparation will find themselves in worse case than they of the parable who at midnight, rubbing their heavy eyes, cried weakly "give us oil."

Yours, &c.,

REGINALD FENTON.

Yokohama, 22nd July, 1896.

[It is pleasant to encounter such very fresh enthusiasm as that of our correspondent. People at this end of the world are not so blind as he seems to imagine, but for the moment the great question is, will the United States take the heroic step advocated by the silver men. We do not "hold a brief from the Japanese Government to watch its interests," but if we did, our advice would be "go slow." The world has not yet been much moved by the enunciation of the Democratic programme. Silver remains just where it was. What we have to consider first is the probability of America's legalizing the free coinage of silver at 16 to 1. When an extraordinary event is on the tapis, thoughtful people set themselves to debate, in the first place, the probabilities and improbabilities of its happening, and having reached some conclusion on that point, they then proceed to consider the effects likely to be produced by the event in any particular direction. If Mr. Fenton had been a reader of the *Japan Mail* for the past 15 years he would alter his notion as to our being "out of touch with the scope" of the silver movement. The *Japan Mail* has been the one and only journal in the Far East that appreciated and predicted the dimensions the silver question was destined to assume. But in 1881, when we began to write on the subject, it was a case of preaching in the wilderness. As for Mr. Fenton, he seems to us to have a very faint notion of the whole world's vital interest in the financial affairs of the United States.—Ed. J. M.]

RAILWAY MISMANAGEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I ask you to publish the following statement of an experience of the present management of the railway between Yokohama and Tokyo?

My family intending to go to Nikko by the train leaving here at 12.55 to-day, their baggage was sent to the station by my boy, the luggage arriving there about ten minutes after 12 noon, and a considerable time before the ticket office was open. As soon as the necessary tickets were obtainable my boy purchased them, but was utterly unable to induce the baggage men to check, or to take charge of, the packages.

When my family arrived at the station they made every effort to get the matter attended to, but were treated with absolute insolence by all concerned, being told repeatedly that the baggage had been sent too late! An appeal to the station-master was without effect, and the luggage was finally left behind, and, only with the greatest difficulty, was a receipt for it obtained, while any information as to when it would be sent on was refused entirely.

I may add that luggage arriving long after that of my family was duly checked in the usual manner.

Now, in this particular case, there was no chance for any misunderstanding due to want of knowledge of the language of the officials. My boy is an exceptionally bright and well-mannered servant, while two of my family speak Japanese like natives, and every effort was made by these to secure the attention to which they were entitled.

I can not account for what I do not hesitate to characterize as an outrage on the part of the railway officials, unless, which I am loth to do, I am to ascribe it to what, in most countries, would have ensured courteous treatment, the fact that the

ladies of my family were unaccompanied by a male escort.

I am induced to make these personal matters public in the hope that the proper authorities may be induced to instil into the management of the public thoroughfares a little of that civility and courtesy heretofore supposed to be national characteristics, and to suppress the carelessness, insolence, and neglect of duty of which the minor officials of the railways are now constantly guilty.

I am, Sir, sincerely,

STUART ELDRIDGE.

Yokohama, July 28th, 1896.

MR. LAFCADIO HEARN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A copy of the *Japan Mail* has been sent to me announcing that I have been engaged to teach in the University. The announcement is, at least, premature—unless an agreement can be made without the consent of both parties thereto.

Very truly yours, L. HEARN.

Matsue, Izumo, July 27th, 1896.

[Mr. Hearn's engagement is matter of general belief. But we apologise if we have been premature.—Ed. J.M.]

JAPANESE POSTAL SERVICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a further somewhat striking instance of the vagaries of the Postal Officials, may I bring the following to the notice of your readers. A letter addressed most clearly in "type-writing" to Mrs. Susan Gillet, Kenosha, Wisconsin, U.S.A., was found this morning in the Post Office Box reserved for the use of Messrs Mollison and Co., and in which all letters addressed to myself are usually deposited. The letter is under the regulation 15 grammes in weight, and bears 5 *sen* in stamps, two of 2 *sen* each, and one of 1 *sen*, the proper fee to carry it to its destination. On careful examination of the office marks, it appears to have been posted at Yokosuka on the 24th inst., then to have reached Kyoto on the 27th, and finally Yokohama on the 29th, and it may be that the officials thought that by delivering it to me they were ridding themselves of a troublesome customer already bandied about sufficiently, and will feel hurt at having it returned to them for re-forwarding.

To ordinary minds it would seem that the presence on the letter of the extra stamps, in excess of the requirements of an ordinary local letter, should have drawn attention to it specially, even had it not been so very clearly addressed, but then the minds of the Postal officials are apparently superior to such very ordinary considerations.

I may add that, in addition to the above letter, postal matter in printed covers addressed to Messrs. Carlowitz & Co., Tientsin, China, Messrs. Carlowitz and Co., Shanghai, China, Messrs. A. Meier, and Co., Post Box, 164, Yokohama, and E. Whittall, Esq., Yokohama, which arrived by the Mail from San Francisco this morning, were also found in the Post Box No. 145 reserved for Messrs. Mollison and Co.'s letters.

Yours truly,

FRANK GILLET.

Yokohama, 30th July 1896.

[We subjoin a postscript. A gentleman went from Tokyo to Yokohama on the 29th to visit a friend whom he had forewarned of his coming by means of a letter posted in Tokyo on the 28th. The letter had not reached its destination at noon on the 30th. Another gentleman wrote from Yokohama to a friend residing at Negishi. The letter reached the addressee in eleven days, having travelled to Nagasaki in the interval.—Ed. J.M.]

IMPERIAL RAILWAY DEPARTMENT.

ANNUAL REPORT OF THE IMPERIAL RAILWAY BUREAU FOR THE 27TH FISCAL YEAR OF MEIJI.

In continuation of the annual report for the present fiscal year beginning with April, 1894, and ending at the close of March, 1895, the following report is now made on the general condition of works and of financial features, including also a brief account of private railways, during the year under review. The report is sub-divided as follows:—

- General remarks.
- General condition of construction works.
- Railway lines and appendages.
- General condition of traffic.
- Financial affairs.
- Private railways.
- Grant of temporary charters.
- Existing state of affairs.
- Volume of traffic.
- Business accounts.

APPENDIX.

- No. 1.—Statistics of Passenger Traffic.
- No. 2.—Statistics of Goods Traffic.
- No. 3.—Locomotive Mileages and the amount of coal and oil consumed.
- No. 4.—Table showing Estimates and Settled Accounts of Expenditures in connection with the Railway Loan.
- No. 5.—Detailed Statement of Estimates and Settled Accounts of Revenue in connection with the Working Capital of Railways.
- No. 6.—Detailed Statement of Estimates and Settled Accounts of Expenditures in connection with the Working Capital of Railways.
- No. 7.—Detailed Statement of Estimates and Settled Accounts of Expenditures in connection with the purchase of materials needed by State Railways.
- No. 8.—Detailed Statement of Estimates and Settled Accounts of Receipts in connection with the sale of Railway Materials.
- No. 9.—Table showing details of Consolidated Railway Fund.
- No. 10.—Table showing details of Profit and Loss Account.

GENERAL REMARKS.

In reviewing the affairs of the State Railways during the 27th fiscal year, we find that the continuation works of the On and the Hokuriku Lines were the principal new construction works undertaken during the year, and the progress of these works, owing to the vigilance of the overseers, advanced very steadily, especially on the Aomori-Hirosaki section, so that that section was opened for traffic in December of the present fiscal year.

Private Railways have striven to extend the scope and area of their business, while applications for new Companies have been forwarded in rapid succession. Already during the year under review 157 miles have been opened for traffic after having been inspected by the Bureau. The total mileage of railways throughout Japan reaches over 2,100 miles, and railway communication from Hirosaki westward to Hiroshima has been completed, thereby considerably promoting facilities of communication.

During the first half of the year the War between Japan and China broke out, and troops were almost incessantly being conveyed by railway; Headquarters were also removed to Hiroshima and the increased railway travelling of military or civil functionaries and of private persons caused great activity on the lines. There never has been a time since the opening of railways in Japan when their merits have been more appreciated than during the war.

In glancing over the business features of the State Railways, however, though the business result was extremely satisfactory during the year, the chief cause that brought about such a result can not be regarded as a permanent feature. For, though receipts were unusually augmented, the volume of goods carried, owing to the War, was less, and that despite the transportation of stores and ammunition. Passengers showed a large increase in number, but as many of those who took passage by train were connected with the War, the increment of ordinary passengers is small, all things considered, and the permanent passenger traffic has not risen in volume.

The chief reason why receipts were out of proportion to the number of passengers and the quantity of goods carried was due to the fact that the mileage for one passenger and for one ton of goods was far in excess of ordinary years. The business features of the present year presented an exceptional phenomenon and cannot be compared with other years.

In private railways also, owing to the increased demand which the War entailed upon their services, to favourable market prices of coal, and also owing to insufficiency of steamers and the consequent suspension of maritime transportation, the condition of their business was very satisfactory. At the same time the War having tightened the money market, private Railways were obliged to postpone the date of payment of subscription, or, in consequence of the rise in the market price of commodities, postpone works of construction, and in these ways, must have suffered not a little in respect of development.

GENERAL CONDITION OF CONSTRUCTION WORKS.

The new construction works during the year under review were the continuation of the Hokuriku and the On lines and the doubling of the Kyoto-Kobe section. All were started in the preceding year, as also the construction of the southwestern branch from Shinagawa and the direct line from Kanagawa-Hodogaya; both of which

were undertaken in compliance with the request of the Department of War.

Of repairs and protection works, the repair of the portion that suffered from flood, and cuttings undertaken to provide against landslips principally engaged attention. In many places, the extension of sidings or construction of new buildings, in consequence of greater activity in the traffic, were undertaken.

NEW CONSTRUCTION.

HOKURIKU LINE (Tsuruga-Morita).—The construction of this line was started in the preceding fiscal year and, as it has since been steadily carried on, considerable progress has been made. Tunnelling, however, has given much trouble owing to the unexpected hardness of the ground. At the Hawara Tunnel, for instance, which measures 3,174 ft. the rate of boring per diem does not exceed 3 or 4 ft.; while at the Yamanaka Tunnel, which is 3,795 ft. long not only is the ground extremely hard but as the interior slopes at 40, an abundance of water floods the excavation. This water collects at the eastern mouth and renders pumping necessary. Three steam pumps are in use there. On March 3rd of the present fiscal year, explosives were applied to the rocks with a view to open out a space for a side way about 820 feet from the Western mouth of the tunnel. Fragments of the rocks struck the supporting works and destroyed them to an extent of about 100 ft. This debris blocked the passage, and 36 workmen then working in the tunnel were imprisoned. Exhumation was at once commenced, but only after the lapse of several hours was the work completed. Of the workmen, 35 were fortunately safe, only one being killed. Owing to this occurrence the boring of the tunnel is still incomplete. Of the contractors who engaged to bore nine other places, excepting the two tunnels of Hawara and Yamanaka, three have been released from their contracts, so that progress has been considerably interfered with. Still of the whole thirteen, five tunnels have been completed, while six have been bored through. As to bridges, out of 54, 36 have been completed (3 during the preceding year), while at the Hino-gawa, the Ashiwa-gawa, and three other places the work of building has almost been completed. At the Asamizu-gawa and nine other places temporary bridges have been constructed for the purpose of examining the condition of rivers when in a swollen state. It is only at the Kuzuryo-gawa and two other places that work has not yet been started.

For the construction of the upper portion of these bridges bricks have been made mostly between Tsuruga and Tanukikochi (4½ miles north of Tsuruga), and between Imasho and Morita, while between Imasho and Tanukikochi, owing to the close vicinity of quarries, stone has been used. For the foundation of bridges, in places where the nature of the ground is particularly solid, as between Tsuruga and Sabaye, concrete has been laid upon the natural bed; but as the ground is somewhat soft in places north of Sabaye wooden piles were first driven in, upon which the concrete was laid. Out of the 157 culverts, already 146 (of which 18 were finished during the preceding year) have been completed, one is in process of construction, while 10 are not yet taken in hand. With regard to the construction of the upper works, in 34 places between Kashiwai and Kitayuo and also in the vicinity of Fukui, masonry has been used, owing to contiguity to stone quarries. In other places bricks have been employed. Out of 10 other places not yet undertaken it is intended to make use of masonry at four places and bricks in six places. As to foundations, natural ground has been used at three places, concrete at 115 places, and piling and concrete in 29 places. Notice should here be made of the difficulty of transporting materials. Echizen, it should be remembered, is hilly, with the exception of the north-western district, and roads running from Tsuruga district to Nankyo district, which is contiguous, are carried over steep hills. All important materials needed in the construction of railways that are brought from Tsuruga for that part of the line lying north of Hojyo, must be carried over these hilly roads. Yet to depend upon such land transportation would involve not only great expense, but would at times be practically impossible. Consequently it was found necessary to make a long detour and to avail of the sea route to Mikuni, whence the transportation is made along the streams of the Kuzuryo, the Ashiwa, and the Hino rivers. This route is attended with another inconvenience, namely, the occasional suspension of voyages in winter between Tsuruga and Mikuni owing to the roughness of the sea; while even in summer the diminution in the volume of the streams frequently interferes with the transportation of materials needed for the railways. Again, bricks used for supports, cement, sand, and other substances used in the construction

tion of tunnels in the hilly places of Tsuruga have to be carried on the backs of men over hills steeper than 1 in 12, and the difficulty experienced in this direction is beyond description. To add to the troubles, owing in the War, the transportation of ordinary goods was suspended many times, and the supply of materials not being uniform, no small obstacles were experienced in the continuous execution of the works.

Despite such untoward incidents that greatly interfered with the progress of the works, much has been completed during the year. With regard to earthworks, altogether 144,527 *tsubo* have been undertaken in the form of embankments, cuttings, deviation of rivers and ditches, and the levelling of station yards; in masonry, 3,388 *tsubo* of stone-work in bridge-works and culverts, 33 complete works, 10 temporary bridges, and culverts in 128 places. Three tunnels have been completed, eight are still incomplete, while 7,671 ft., against 9,352 ft. in the previous year, of widening have been completed. Pipes were laid at 594 places, rails to the extent of 8 miles and 56 chains, while in the construction of station premises and other buildings 458 *tsubo* have been covered. In detail, nine-tenths of the earth-works, bridges, and culverts have been completed; five-tenths of the tunnelling, four-tenths of the permanent way and the construction of stations and other buildings; while all the drainage pipes have been laid. It may therefore be said that seven-tenths of the work for the whole line have been completed. It is calculated that with the exception of the two tunnels at Habara and Yamanaka and the bridge over the Kuzuryo, and also the two flood openings in the vicinity, the whole will be completed by August or September of next fiscal year.

O-U LINE (Aomori-Ikarigasaki Section).—The work on this line was started during the previous year, the Aomori-Hirosaki section having been opened for traffic on December 1st of the present fiscal year. For the sake of convenience, the report on this line has been subdivided into the Aomori-Hirosaki and the Hirosaki-Ikarigasaki sections. On the Aomori-Hirosaki section by the end of the preceding year, about eight parts of the earth-works, bridges and culverts were completed; and during the present year, the work was duly completed by November. In the Oshaka tunnel the work was temporarily suspended owing to the walls giving way. The work of restoration was commenced, but the nature of the ground being sandy, considerable trouble was experienced. At last, on July 27th, restoration was complete and the work of construction was steadily undertaken according to the original programme, so that the earth-works were completed in September and the tunnelling next month. Prior to this, the laying of rails had already been finished between Aomori and the eastern mouth of the Oshaka tunnel on August 12th, and though, for facility of transportation of construction stores the laying of rails between the western mouth of the Oshaka Tunnel and the Yamatozawa-gawa was necessary, this could not be undertaken in consequence of the temporary break-down in the tunnel, so that, between Tsurugasaka and the western mouth of the tunnel, materials were transported along the ordinary highway. As soon as the construction of the earthworks was completed, rails were laid, and during the month of August 15 miles and 40 chains were laid between the western mouth of the Oshaka tunnel, and the Yamatozawa-gawa, situated to the south. The interior of the tunnel was also completed in due time, and the whole work was completed in November of the present fiscal year. The section was opened for traffic from the next month, December. According to the original design, stone work to provide against the inflow of water was to be constructed between Hirosaki and Ikarigasaki, but as the earth-works and bridge work incidental to that scheme were judged to be too costly it was decided to alter the route to the one now taken. Consequently, in gradient and other designs, corresponding alterations were effected, and at last the work of construction was started on July 1st of the present fiscal year. At the outset the progress of the work was rapid and steady, but in August, owing to rain, and later in winter, snow and chilly weather, progress was more or less impeded. Considerable trouble was experienced in obtaining suitable earth for No. 1 embankment which had to pass through rice fields, while at No. 5 cutting an obstruction to the progress of the work appeared. The upper layer of ground was sandy, quickly followed by a peaty layer, which in turn rested on a rocky foundation. Again, in the construction of the Karasushi Tunnel, owing to the presence of boulders in the upper soil, which was hard and sandy in nature, recourse had frequently to be had to explosives. Fortunately there was not much water to be encountered and the heading went on at the rate of 19 ft. 4 in. a day. This fell to

7 ft. 7 inches when coming to the lower strata of peat. In bridge-works, the constant rain during the month of August and the rising of the water of the Hiragawa and other rivers, the washing away of Nos. 1, 2, and 3 scaffoldings at the Hiragawa and the Yamatozawa-gawa, and also the filling up of the basement holes, progress was much impeded, but at last, at the end of the fiscal year, with which this report deals, the basement works of the three rivers, Yamatozawa, Inari, and Sawa, were completed. In the construction of such culverts, bricks were used. For others it was originally intended to use stone, but as the supply of bricks was sufficient, and as it was easier to use bricks rather than stone in the construction of culverts leading into rice fields which afforded no pathway for transportation of stone, bricks have been used in place of stone.

The principal works undertaken in the 29th fiscal year were as follows:—In earthworks, in all, 53,434 *tsubo*, that is, eight parts, in the form of embankments, cuttings, and masonry for providing against landslides: 6 parts of one tunnel; 7 parts of bridge work and culverts; laying out the sites of two stations covering 1,841 *tsubo*; 218 *tsubo* of cuttings; and temporary platforms to an extent of 1,470 ft., that is, seven parts.

O-U LINE (Fukushima-Yonezawa line).—Work on this line having started in Feb., 1894, was continued during the following year, but did not amount to much owing to limit of time. The work was continued in the year under review, and the remaining portion of embankments, cuttings, and culverts started during the preceding year was completed. Rails were laid up to the compound of the Niwasaka Station, while to the west of the same station rails were laid a short time after. The whole length of rails, from the starting point at Fukushima was 5 miles 9 chains.

Arrangements were made to take in hand the work on sub-section A of the 2nd section (commencing at a distance of 5 miles 9 chains and terminating at 6 miles 55 chains), having been completed, work was duly commenced on July 21st of the year. The section is short, but the work of construction is very arduous. In front of the eastern mouth of No. 18 tunnel (993 ft.), the line passes along a precipitous cliff overlooking the Natsukawa at a height of 200 ft. On one side it almost touches the foot of a steep hill, and durable masonry works are required on both sides. The work on the river side required the erection of scaffolding along the face of the cliff. It was at first intended to cut the tunnel from both ends, but as the nature of the ground at the eastern mouth was extremely bad and liable to crumble during excavation, this idea was abandoned, and instead a shaft was dug out at the side of the bank of the river and excavation was commenced from there and from the western mouth. Progress was greatly interfered with through storms, and the prescribed period of the construction was delayed. At last, it was completed by February. Other works were duly completed, and sub-section A of the 2nd section having been finished, the rails were laid to Yoshigawara, a distance of 6 miles 55 chains. Sub-section B of the 2nd Section commenced on Sept. 25. This sub-section, starting at a distance of 6 miles 55 chains, extended for 8 miles 30 chains. The physical features of the land became more and more difficult and the work correspondingly laborious. Under the circumstances, progress could not go on at the rate originally estimated. The construction of No. 2 tunnel (2,020 ft.), was attacked from both ends and also from the place where the body of the tunnel was exposed; yet, owing to various incidents, as, for instance, a landslide from the hill-side in consequence of the storms in December, the cutting that was to have been finished by January was considerably delayed; while when the widening and bricking up of the tunnel was in process, the place where the body of the tunnel was exposed, suddenly gave way on March 9th—probably due to the loosening of the ground occasioned by the thawing of snow,—and more than one chain of the cavity was filled with *débris* and other portions threatened to come down. The removal of the *débris* and the restoration proved a heavy task, so that it was only during the latter half of this fiscal year that the cutting was completed. No such impediment occurred in No. 3 tunnel (811 ft.), and at the end of the year all, excepting 100 ft. of widening and 3 parts of the brick lining, had been finished. The cutting of No. 4 tunnel (1,056 ft.), was finished and widened for above 300 ft.; but the brick lining has only just been taken in hand. As the cutting between Nos. 4 and 5 tunnels was wholly through rocks, and as fragments of blasted rocks scattered on every hand in a very dangerous manner, thereby temporarily putting a stop to the conveyance of stores at the west of No. 5 tunnel, the work of this tunnel was markedly interfered

with. On Feb. 28th the cutting and brick lining were completed. Culverts and drains for this sub-section were finished, and the bridge-work and abutments for No. 2 and No. 4 bridges—(No. 5 is not yet commenced)—have been completed, and only the placing of girders along the bridges remains. Reviewing the rate of progress on this sub-section, seven parts may be said to have been completed, leaving only three parts to be subsequently taken up.

On this line the most arduous work is encountered in the construction of tunnels through the Itaya Pass in the fourth sub-section. Two tunnels, No. 15 and 16, are to be constructed there, and more than two years must elapse, it is estimated, before the completion of the work. As soon as the work was fairly started at sub-section B of the 2nd section, arrangements were made, and, in the latter part of Oct., 1894, work was commenced. No. 15 tunnel curves around the front of the pass and is situated along the bank of the Matsugawa for a length 1,501 ft. At one place the tunnel is exposed. A shaft has been excavated at a place where the strata is thinnest, and the work is carried on from three different places. The cutting is through soft rock and no particular difficulty is encountered in excavation. No accident has yet occurred, and the work is going on at a very satisfactory rate. No. 16 tunnel is 5,362 ft. long, and as the route at the eastern mouth is curved the work was at first extremely inconvenient. Consequently a shaft was sunk in a direction perpendicular to the cavity and the work was subsequently commenced from there. The rocks at the entrance are of medium hardness and fortunately no great trouble is encountered in the excavation. In the latter part of March of the year under review, the left upper side of the eastern mouth collapsed, in consequence of the thawing of snow, and the mouth of the cavity was blocked. The presence of the shaft made it possible for the men to escape and no material impediment was experienced in the progress of the work. The subterranean route of this tunnel passes under the main peak of the Itaya Pass, but as the configuration of the land is of uniform thickness it is not possible to sink a lateral shaft. Still, the two extremities of the tunnel being too far apart and the progress of the work liable to be suddenly obstructed, to say nothing of the inconvenience of slow excavation, at a depression in the hill side about 34 chains from the two mouths, a perpendicular shaft 330 ft. deep, is about to be sunk. Already over 280 ft. have been excavated. The farther the boring goes the harder the rock becomes and the work is not as easy as lateral excavation. Especially is it difficult to remove the *débris*, the difficulty increasing as the work advances. For a distance of 3 chains 50 links, at a place where the tunnel will debouch at its western mouth, the route passes under the bed of the head waters of the Haguro, and therefore under very thin strata. It being necessary to alter the direction of the water course, a tunnel 249 ft. long was constructed for a distance of 15 miles 23 chains and the deviation was effected, while to effect the deviation of some small tributaries of the Haguro a small tunnel 137 ft. long, was constructed across the top of the main tunnel for a distance of 15 miles 22 chains. Notwithstanding these precautions, the water constantly percolates through the main tunnel and greatly obstructs the progress of the work. At a distance of 15 miles 63 chains, the route against comes face to face with the river Haguro, and a deviation of the river bed was effected by constructing a tunnel 257 ft. long. In regard to No. 16 tunnel, the cutting has been finished for 1,815 ft., the widening for 1,418 ft. (upper portion), 695 ft. (middle portion), and 371 ft. (lower portion). Of the materials needed in the work of the Itaya Pass, those that were obtainable in the vicinity were availed of as much as possible, but they only included a small portion of the total needed, and nine out of ten parts had to be hauled over the Niwasaka. In such transportation beasts of burden were generally used, but sometimes it was necessary to have recourse to coolies. The only road that could be traversed by the carriers was a mountain path stretching 10 miles, which ascends gradually to the hamlet of Itaya. At places it was very steep, so that no beast of burden could carry a full load. Moreover, as one day is spent in the transportation of one load, the supply of materials was necessarily insufficient. From the hamlet to the eastern mouth of the tunnel, a light railway has been built and no trouble is encountered in the carriage of material after that point. At the western mouth, however, the ordinary mode of conveyance must be depended upon for a distance of over 2 miles, passing, in the interval, the famous Itaya Pass, and great difficulty is encountered in transportation. In winter the road between Niwasaka and

this place is turned into a field of snow from three to seven feet deep, and till the months of March or April the passage is much obstructed by frost and thaw. However, snow-sleds can be run, and thus the transportation of materials is fairly maintained. But all these obstacles can not but interfere with the progress of the work.

LIGHT RAILWAYS.—For convenience of hauling timber used in the work, a light railway has been laid from the compound of the Niwazaka station. This is entirely separate from the main track, but by turning to the right or to the left, it traverses the woods, crosses the Matsugawa by means of No. 1 temporary bridge, winds along the bank of the river and reaches, after passing No. 2 temporary bridge, the foot of the eastern mouth, 200 ft. below the top of the cliff. Here an incline is constructed and communication is made with the eastern mouth of the tunnel. The line stretches farther along the Matsukawa, passes under the western mouth of the tunnel, gradually ascends along the back after passing Nos. 3 and 4 temporary bridges, and at last reaches Yoshigasawa. (These four bridges were washed away during the storms of December of this year and the water in the Matsugawa rose; but they were subsequently re-constructed.) The road builders encountered the greatest difficulties in carrying the railway over a gorge on a scaffolding. The difficulty and danger encountered in the construction of this scaffolding and the laying of the rails, were beyond description. By means of this scaffolding, or trestle-work, the line made a detour along the cliffs and the steep banks of the Matsukawa, and thus the extremity of subsection B, of the 2nd section, was at last reached, via Kwannon-hira, a distance of 8 miles 30 chains. The direct distance between the starting point at Niwazaka and the other extremity is 3 miles 60 chains. By means of the light railway the supply and distribution of materials was effected. When, in the middle of February of the present fiscal year, the permanent line was opened to Yoshizasawa, and transportation to that place began to be relied upon, the light railway between Niwazaka and Yoshizasawa became useless for an extent of 1 mile 78 chains; so it was taken down with a view to further the work of the 3rd section. When the work of constructing the Itaya tunnel was started in September of this year, the transportation of light materials commenced, and the work of laying rails from the Itaya railway materials storage ground onward was taken in hand from the first part of October. The route which the line takes being along the mountain side or the brow of a precipice, the construction of trestle-work rather than excavation was more needed. Passing several temporary bridges the line reaches the two mouths of No. 15 tunnel and the eastern mouth of No. 16 Tunnel, a distance of 1 mile 40 chains from the starting point. In connection with the western mouth of No. 16 tunnel, a light railway is laid from the storage ground at Nikensuke and along the side of the Hagiogawa, and the line, after passing two or three temporary bridges, reaches the mouth, a total length of only half a mile.

The survey of the Fukushima-Yonezawa section has been undertaken on two or three occasions but with respect to that portion between Niwazaki and Sekine, in the middle of which the steep pass of Itaya occurs and which passes along on the east the Matsukawa, and on the west the Hagiogawa, in both cases passing along the cliffs—in consequence of the topographical difficulties, a more accurate survey has to be undertaken before the work of construction can be actually started. Therefore in April of this year, the final survey was undertaken from Jinai, Niwazaka-mura, a distance of 5 miles 9 chains, and was gradually carried on till Sekine was reached, a total distance of 16 miles 61 chains. To sum up, the principal works undertaken during the fiscal year under review were in earthworks; embankments and cuttings in 37 places aggregating 30,777 *tsubo*; masonry, 3 places, totalling 315 *tsubo*; bridge-work, 4 places (superstructure unfinished); culverts in 12 places; tunnelling, 7 places aggregating 7,397 *tsubo*; drain pipes, 24 places; laying of railway, 6 miles 50 chains; buildings, 437 *tsubo*.

REPAIRS.

TOKYO-KOBE.—Owing of the occurrence of a severe earthquake shock on June 20th, 1894, the railway for a distance of 2 miles 76 chains, stone work for 3 miles 37 chains, and embankments for 23 to 24 miles were damaged or gave way; while with regard to bridges and culverts, the piers of the Rikugo iron bridge were damaged, and drain pipes and brickwalls along a distance of 24 miles were cracked. In buildings, a brick chimney of the Engineering Building, Shimbashi, was cracked in the middle, and the broken portion was set at a different angle to the remaining lower portion, while the top of a chimney at the same station came down, so that traffic was interfered with for

a while. Repairs were at once undertaken and things restored to their former state. On Aug. 10th, a storm caused the swelling of the rivers; the river Sakawa in particular, having been swollen to an extent of 9 ft. above its normal height. At a distance of 56 miles 20 chains, crib-works provided along the embankments to weaken the impetus of water were washed away, and the rushing current struck against the base of the embankment, destroying submerged works and stone-work constructed for the protection of the embankment at a distance of 61 miles 20 chains. It was feared that the damage would reach the railway, but fortunately the water fell after the 11th, and by the 18th had returned to its usual level so that the line escaped damage. For all that the work of restoration proved no easy task. The cutting on the side of Saita Hill, between Kambara and Okitsu, owing to the steep gradient in the strata of the rocks and therefore susceptible to the action of storms beating in a slanting direction, and even to the vibration of trees growing close by, was a source of danger. Further cutting took place and the gradient was made less steep. Again, on the Ejiri-Shizuoka Section, at a distance of 115 miles, close by the foot of Minami Kunozan, the line, though rather high above sea-level is lower than the highway by which it runs parallel; and therefore, at times of heavy rain, water used to wash on to the track, converting it into a veritable stream, and not unrequently interfering with the passage of trains. Consequently for a distance of 27 chains the track was elevated, its gradient altered, and the original ditch of two spans was widened into one of 4 ft., while another ditch was made on the other side. Owing to the increased activity of traffic and the consequent insufficient accommodation provided by the present railway buildings and also to the insufficiency of sidings at stations, not a few have been either enlarged or built. The principal works of the kind are the addition or removal of sidings along the main tracks or sidings in the premises of stations at Fujisawa and 23 other stations; the new or additional building of waiting rooms at Suzukawa and 15 other stations; a flying bridge at Sumiyoshi and one other place; a water tank and ticket printing shop at Shimbashi, the removal of three official buildings in the old Railway Board's premises at Reimanzaka to the premises at Shimbashi, the construction of a goods car house at Kiyosu and of Station-masters' houses at Kambara and two other places; and the additional construction of iron work-shops and of a turn table at Kobe. Earthworks, repairs, and supplementary works totalled over 13,508 *tsubo*; masonry over 2,243 *tsubo*; extension of subsidiary lines, 5 miles 60 chains; new or additional construction or removal or repair of various buildings at 89 places over 1,951 *tsubo*. There were other works of minor importance, but these need not be mentioned here.

DOUBLING THE LINE.—The doubling of the line between Osaka and Sannomiya continued from preceding year and has advanced rapidly. The work between Nishinomiya, referred to in the previous report, has already been completed, and was opened to traffic on April 16th of this year. Between Osaka and Nishinomiya the laying of rails has been completed in the main, but owing to the want of materials for the three big iron bridges to be constructed over the Muro, Shimokanzaki, and Shimoyuzo rivers, and to the consequent suspension of work, the line is not yet completed. Although only nine-tenths are finished, the opening of this section for traffic will be consummated before long. Between Mukomachi and Suita, work was started in June of this year, and the additional construction of bridges at 22 places and of culverts at 15 places has been taken in hand. In December, the greater part was finished, while at the end of the fiscal year additional work was done to the abutments of 13 bridges, only the girders now remaining to be fixed. Well-holes for the abutments and piers of two bridges are now being sunk. On the whole, therefore, eight-tenths of the work on the Omi-Kyoto section was started in July and as earth-works predominate in this section seven-tenths have been completed. The throwing of a bridge over the Kamogawa, one of the greatest bridge-works in Japan, is in process of construction, that is to say, two abutments and seven piers are finished.

TEMPORARY MILITARY RAILWAY WORK.—Work undertaken in compliance with the request of the Department of War incidental to the conveyance of troops, was the construction of the south-western branch from Shinagawa and the direct line joining Kanagawa and Hodogaya. To obviate the inconvenience of making a detour, which was inseparable when Shinagawa has to be reached by the Akabane line from the military railway station at Aoyama, the south-western branch of the Shinagawa line was forked out to a distance of

79 chains from the Akabane line, and, after an oblique cutting through the south east of Shinagawa, was directly joined on to the Tokaido line between Omori and Shinagawa. The line was over 72 chains in length. Work was commenced in the latter part of July of the present year and was completed within a month. Between Kanagawa and Hodogaya, in order to avoid the delay of going on the Yokohama, from Kanagawa Station, at a distance of 16 miles 40 chains, a line branched out, and going straight south-westward, effected junction at Hodogaya Station at a distance of 20 miles 26 chains. This special branch having been constructed through wet land, embankments were wanted, and thus more or less difficulty was encountered. The prolongation was 1 mile 68 chains, and the work, started in the middle of August, was completed by the latter part of September. Besides the above, other works were brought about by military needs; as, for instance, the construction of temporary military waiting houses and of special branch lines at Nagoya and Osaka, while at Kobe a special line was laid to the military reserve magazines, besides the construction of three turn-tables. The work between Ofuna and Yokosuka merely consisted of the prolongation of the sidings at Ofuna and Zushi Stations, and additional constructions at Ofuna and Kamakura Stations.

In the Ofu-Taketoyo branch section, owing to the destruction of Kamezaki Stations—a station-master's house, and other accessory buildings—by fire on March 7th of the present year, temporary buildings have been erected to meet the immediate requirements. Other works undertaken were the adjustment of the surface of railway embankments and the construction of a passengers' bridge between Handa and Taketoyo, the replacing of timber at two places and the replacing of wooden girders at two culverts, and so forth.

In the Mayebashi-Tsuruga and the Nagahama-Fukaya Sections, besides the prolongation of a siding at Kinomoto Station and the replacing of wooden cross beams at the Koshiyagawa and three other rivers by iron beams, there are no works to be mentioned.

TAKASAKI-NAOYETSU.—This line also suffered damage from the strong seismic shock of June, the damage being especially heavy at Karuizawa, where the walls of a brick engine building and the offices were much injured. Subsequently, in the early part of August, a heavy rain-fall prevailed for several days in Shinshu, thereby causing the overflow of the rivers. On the 10th the embankment situated at a distance of 98 miles 10 chains, between Miyoda and Komoro was buried beneath the water, and earth was washed away. Next day the tank between Toyono and Mure was inundated and broke through the railway, destroying the embankment to the extent of over 60 feet. On the 13th the Hinazawa-gawa, situated between Sakashiro and Matsushiro, rose, and owing to the embankment at its upper course having been broken, the low ground north of the line at Sakashiro Station was submerged, and embankments in several places were washed away to the extent of about 330 feet. Moreover, the cutting and stone work gave way and the passage of trains was temporarily suspended. Besides these repairs, new or additional construction work and also reconstruction of permanent bridges, waiting rooms, and other buildings have been undertaken, the chief being as follows:—The slope of the cutting at a distance of 150 miles 20 chains and 150 miles 26 chains in the Mure-Kashiwabara section, having been made too steep the stones and earth are liable to come down; cracks appeared in the brick arches of Nos. 2 and 3 between Yokogawa and Karuizawa the interstices gradually growing wider; consequently the abutments and piers were further strengthened and the lower portion of the arches received an additional inner ring of bricks and the interstices were filled with broken stones. Taguchi-Sekiyaama is a section where the snowfall is heavy and snow-sheds 140 *ken* long were constructed in two places, to prevent the snow from accumulating on the track. The wooden waiting room at Yokogawa station having begun to decay, it was reconstructed with brick. An iron water supply vessel, a brick water reservoir, and the coal platform were also constructed at Yokogawa, as well as a 5-chain siding. At Karuizawa station the 1st class and the 2nd class waiting rooms were reconstructed, goods buildings at Tano, Shinaroi, Mure, Kashiwabara, and Arai built; goods building and lading and unloading platforms were constructed at Naoyetsu station; an engine building at Nagano was extended; a station-master's houses was constructed at Arai; and lastly, culverts were constructed at two places, while at six places wooden girders in culverts or bridges were replaced by iron.

RAILWAYS AND ACCESSORIES.

At the end of the 27th fiscal year, the State lines had 580 miles of railway, 122 stations, and 2,957 vehicles, and these, compared with the preceding year, show an increase of 23 miles in railways, 5 in stations, and 317 in vehicles, as detailed below:—

Section.	Length. m.c.	Total Prolongation. m.c.	Vehicles.			
			Stations.	Engines.	Cars.	Waggons.
Tokyo-Kobe (Bamba- Otsu inclusive).....	377.54	393.34	80	131	558	689
Ofuna-Yokosuka.....	10.03	12.07	3	3	16	10
Obu-Taketoyo.....	12.01	14.13	3	1	7	1,700
Maibara-Kanagasaki (Fukaya-Nagahama inclusive).....	40.68	45.68	9	4	26	30
Takasaki-Naoyetsu.....	117.10	127.33	22	18	60	228
Aomori-Hirosaki.....	23.80	25.51	5	3	21	54
Total.....	580.69	757.47	122	260	678	2,957
In process of construction.....	—	—	—	7	—	151
Total at the end of the preceding fiscal year.....	557.49	698.37	117	241	647	2,640
Balance, increase.....	23.20	59.10	5	19	31	317

The increased length of route and increased number of stations was due to the Aomori-Hirosaki section having been opened for traffic, while increase in the total prolongation was due to the laying of a double track and sidings and also the prolongation of sidings in station yards, all in consequence of the opening of the Aomori-Hirosaki section. The increase in the number of vehicles was occasioned by the greater activity in traffic, which necessitates the purchase or building and setting up of new vehicles. Even after all these additions the needs of the public are far from being met. The following figures show the relative rate of increase in rolling-stock during the last three years, as compared with that of passengers, and extended to the length of railways:—

	Passengers as extended to the length of railways.		Goods as extended to the length of railways.		Rolling stock.
	25th fiscal year.....	26th fiscal year.....	25th fiscal year.....	26th fiscal year.....	
25th fiscal year.....	10.3	10.3	10.3	10.3	10.3
26th fiscal year.....	10.3	10.3	10.3	10.3	10.3
27th fiscal year.....	10.3	10.3	10.3	10.3	10.3

During the 24th fiscal year the damage done by the Gifu-Owari earthquake considerably diminished the number of passengers and the quantity of goods conveyed, and the length of traffic having been much shortened, it would not be proper to compare the result of that year with the following years. The foregoing table shows how deficient is the stock of vehicles; the following is a detailed statement of the rolling stock as distributed over the various lines:—

Description.	Tokaido.	Shinyetsu.	O-u.	Hokuriku.	Total.	At end of the previous fiscal year.	Relative increase.
Engines.....	339	18	—	—	357	243	47 per cent.

Total.....	846	306	112	93	1,357	1,040	30 per cent.

CONDITION OF TRAFFIC.

Details of the passenger and goods traffic and receipts therefrom on Government lines during the year under consideration are given below. Compared with the previous year, the gross traffic receipts* show an increase of 16 per cent. over the previous year; coaching receipts, 12.7 per cent., and wagon receipts, 27.8 per cent. As to the volume of traffic, the number of passengers shows an increase of 3.04 per cent.; and of goods, a diminution of 5.4 per cent. The train mileage shows an increase of 12 per cent., passengers 13.4 per cent. on an average; and that of one ton of goods, 39 per cent. The causes underlying these results will be classified under the various lines.

TOKYO-KOBE (including branch lines).—On this line, passenger receipts show an increase of 12 per cent., goods receipts 38 per cent., and the gross traffic receipts 16 per cent. Yet the number of passengers shows an increase of only 3 per cent., whereas the volume of goods shows a diminution of 8.3 per cent. This apparently anomalous

* The receipts being earnings for traffic during the year, do not coincide with those given in the Section of Finance.

phenomenon was entirely due to the effect of the Japan-China War, and the reason that receipts show an increase is due to the distance of the average traffic mileage as compared with that of the previous year. This will be apparent if the result of the two years as to average mileage per passenger and that per ton of goods is compared:—

	Average mileage per passenger.		Average mileage per ton of goods.	
	Miles.	Chains.	Miles.	Chains.
26th fiscal year.....	23	66	53	69
27th fiscal year.....	27	41	78	57

During the previous year the average mileage per passenger shows an increase of 3 miles 55 chains, that is, 46 per cent. This explains why receipts, as compared with the volume of traffic, increased so much. The addition in the average mileage of traffic was due to the transportation of troops and war material for long distances, and, after Headquarters were advanced to Hiroshima, greater activity prevailed among Government functionaries and private persons in regard to railway travelling for long distances; and lastly to the facilities that goods trains carrying war necessities afforded for the conveyance of goods to a distance. This point will be made clear when the appended tables are examined, for they show that in spite of the diminution in goods carried by down trains, goods traffic by up trains greatly increased.

TAKASAKI-NAOYETSU LINE.—This line's coaching receipts increased 12.3 per cent.; goods receipts, 11.5 per cent., and the total traffic receipts 12 per cent. over those of the previous year. However, passengers show an increase of only 3.45 per cent. in number, while goods show a diminution of 1 per cent. in volume. On this line the volume of traffic has not been materially affected by the War, but the average mileage of traffic, as compared with that of the previous year, was much increased owing to the distance that goods and passengers were conveyed. The average mileage per passenger and per ton of goods, as compared with the corresponding figures of the previous year, are as follows:—

	Average mileage per passenger.		Average mileage per ton of goods.	
	Miles.	Chains.	Miles.	Chains.
26th fiscal year.....	21	75	32	53
27th fiscal year.....	23	65	34	44

In other words, the average mileage per passenger was increased by 1 mile 70 chains, and that per ton of goods by 1 mile 69 chains.

The Aomori-Hirosaki section was completed in November of the present fiscal year and was opened for passenger traffic from the 1st of December, the goods traffic commencing from the 11th of the same month. The season being winter and snow prevailing, and as the year was closed in four months from the opening of the line to traffic, the result cannot be taken as an indication of the general condition of traffic on this line. Still, as this section is considered to be better patronized by passengers than all the other sections of the O-u line, and as the district through which the railway passes is very rich in products, the line will prove, without doubt, one of the most profitable yet opened. The volume of traffic during the year under review is given in detail in an appended table. The volume of traffic concerning only the transportation of troops and war material (estimated) conveyed during the year in connection with the Japan-China war totalled 174,595, and fares 246,656 yen; while the war material aggregated 43,445 tons, and freights 258,708 yen. The total receipts were 505,364 yen. Compared with the total number of passengers and the quantity of goods conveyed during the year under review, troops corresponded to 1.2 per cent., fares 5.8 per cent., war material 4.3 per cent., and freights 16.3 per cent., corresponding to a total of 8.35 per cent. of the gross receipts.

OPENING OF LINES FOR TRAFFIC.—On December 1st, of this year the Aomori-Hirosaki section of the O-u line was opened for traffic, and passenger trains were run three times a day. Subsequently, on the 11th of the same month, goods traffic commenced between the three stations of Hirosaki, Nanioka, and Oshaka, and goods trains were run once a day, or twice when circumstances required.

CHANGE OF TIME TABLES.—During the year 23 principal changes were effected in the time tables of the railways, in consequence, in most cases, of the conveyance of troops. On April 16th, 1894, for instance, the time of service was changed on the Tokaido line, and ten additional departures on the trunk line and seven on the branch lines were effected. On the 16th and 17th of August, owing to the conveyance of troops between Ofuna and Yokosuka, passenger trains were made to stop both at Shizuoka and Hamamatsu, and the time of one train running between Ofuna and Yokosuka was altered. Between the 23rd and 25th of the same month, owing to the conveyance of troops

between Toyohashi and Nagoya, Hiroshima and Ujina, the time table was altered. Between the 29th of the same month and 6th of September the conveyance of troops from Nagoya and Tsuruga to Hiroshima caused an alteration in the time table. For 8 days from Sept. 22nd the conveyance of troops on a large scale caused either the stoppage of trains or a serious alteration in the running of trains, and this also happened between Nagoya and Kobe on the 30th; subsequent to October 11th the alteration in the departure of a mixed train from 8.45 a.m. to 7.25 a.m. was made. Subsequent to the 17th of the month, the 6.20 a.m. train that used to start from Shimbashi at 6.20 a.m. and run to Osaka, was made to proceed to Kobe, where it effected junction with the 2.10 a.m. train to Hiroshima. The 4.40 train, that used to start from Osaka, started from Kobe so that it might effect junction with the Hiroshima train that used to reach Kobe at 1.40 a.m. In consequence of these arrangements the 11 p.m. Kobe train to Osaka, and the 12.20 Osaka train to Kobe were suspended. From the 22nd of the same month the 3.10 p.m. Numazu train to Shizuoka was altered to 4.50 p.m.; while between the 21st of that month and the 6th of the next, owing to the conveyance of troops of the 2nd Military Division, trains were either suspended or times of departure rearranged. Subsequent to the 20th of November, owing to the passage of military trains backwards and forwards three times each way, the time tables were altered and seven additional trains were started. Between March 3rd and March 6th, 1895, the conveyance of troops involved alteration in the time of trains; while between the 24th and 27th of the same month the conveyance of troops of the Imperial Guards caused some dislocation, which was repeated between the 28th of March and 2nd of April in consequence of moving the troops of the 6th Division.

On the Shinyetsu line the alteration of the time table was effected simultaneously with that at Shimbashi, on April 16th, 1894, and four additional trains were run. Also, for the conveyance of troops, alterations in the time table were effected between Sept. 24 and Oct. 9th; between Oct. 10th and 24th; and between Oct. 25th and Nov. 9th. On Dec. 1st, the time table was again altered, owing to it being found unnecessary to run as many trains as before, and the scarcity of passengers during the winter season. From Feb. 3rd, 1895, the service was interfered with by a heavy snowfall in Echigo, and passenger trains, both first and third class, between Nagano and Naoyetsu were reduced by one, but this train was restored on April 4th.

Between Aomori and Hirosaki the time table was altered on Dec. 28th and reduced to two passenger trains and one goods train per diem, due to snow.

EXPRESS TRAINS.—During the year under review the number of express through trains run, in consequence of the journey of the Emperor and Empress to the South, was 11; that for ordinary passengers, 104; and that for goods, 885. This extraordinary increase in express goods trains, more than double that of the previous year, was chiefly due to the undertaking of double track work between Kyoto and Kobe, the opening of the Aomori line for traffic, and the running of ballast trains by the Kwaansai Railway Company in the vicinity of Furuwatari.

CASUALTIES.—The principal casualties during the year under review were—Tokaido line, the collapse of stone walls on April 3rd, 1894, between Yamakita and Oyama, rendering the line temporarily impassable, so that between Oyama and Numazu trains were obliged to suspend traffic 11 times. On May 4th, of the same year, the line between Shizuoka and Ejiri was flooded and damaged, the result being the stoppage of two trains on that section and also two on the Ejiri-Suzukawa section. On the Shinyetsu line a heavy rainfall on August 13th and inundations in the vicinity of Sakashiro, damaged the track, making the passage of trains very dangerous. Consequently, four trains between Uyeda and Karuizawa and two trains between Nagano and Toyama were stopped. But this year no particular interference was occasioned by snow on this line. Between Aomori and Hirosaki, from December 13th, 1894, the severity of the weather caused the storage tank to freeze and interfered with the departure of express trains five times. On the 18th snow drifted to a height of over 6 ft., and the passage of the last train was interfered with. Subsequently between January 13th and March 18th, trains with snow ploughs were obliged to stop three times on the road, owing to the accumulation of snow, and on each occasion the despatch of a relief car was necessary.

The number of casualties in connection with the passage of trains, and persons who violated the Regulations were as follows:—

	Tokyo-Kobe.	Takasaki-Nagoya.	Aomori-Hiroaki.	Total.
Derailed—

Deaths	123	12	—	135
Wounded	31	6	1	38

Of the casualties brought about by accident the most noteworthy was the collision of a train with an engine at Bamba on November 16th, causing the death of two conductors on the spot, the wounding of two firemen, a chief conductor, and a pointman.

COMMUNICATION BUSINESS.—Of the telegraphic messages dealt with during the year, railway messages numbered 1,214,972, or an increase of 387,945 over the preceding year; while messages dealt with on behalf of the public at large were 138,068, or an increase of 7,666. Receipts from the latter kind of messages totalled 7,909,558 yen, an increase of 751,907 yen over the preceding year. Money needed on account of maintenance of telegraphic instruments at various stations was 3,848,273 yen, an increase of 1,383,878 yen. At the end of year the total length of telegraph wires was 52 ri 2 cho and 64 ken; in other words, an increase of 37 ri 12 cho 40 ken. Telegraphic, telephone, and block instruments, are set at 118 places, an increase of 12 places. There are 153 Siemens printing instruments, an increase 15; 74 block instruments, an increase of 38. Telephones total 16, and are numerically the same as at the end of the preceding year.

FINANCE.

Before making a statement as to the construction expenses of the railways and profit and loss account, during the year under review, a few remarks ought to be made. In the reports for the preceding years, the financial affairs having been compiled with the chief attention devoted to capital account and to profit account, matters relating to estimates and settled accounts were necessarily wanting in clearness. Yet the adjustment of the credit and debit accounts must be based on fixed rules concerning estimates and settled accounts. Owing to this reason and also to the enforcement of the Government Railways Materials Fund Law from the present year, a radical departure has been made in the features of the financial account. Consequently, from the present year estimates and settled accounts of various revenues and expenditures, and also details of receipts and payments, will be stated in detail, together with the condition of the Capital Account and Credit and Debit Accounts.

ESTIMATES AND SETTLED ACCOUNTS OF RAILWAY CONSTRUCTION EXPENSES.

The estimated installment of construction expenses for the year under consideration was 1,520,000 yen, with another estimate of 1,802,444 yen brought over from last year's account; that is to say, a total estimate of 3,322,444 yen. Against this estimate, a sum of 2,661,532 yen has

been settled during the year, so that the balance of 660,912 yen is to be carried forward to next year's account. Detailed statement of this account is shown in Table 4. Of the estimates for the present year, travelling expenses constituted 6,120 yen and miscellaneous items, 13,432 yen; while of the estimates brought over from the previous year's account, travelling expenses were 637 yen and miscellaneous expenses, 8,380 yen; total travelling expenses, 6,757 yen, and miscellaneous expenses, 21,812 yen. However, judging from the result of preceding years, when the sum disbursed on account of these two items far exceeded the estimate, the foregoing estimate was not thought likely to meet the actual needs during the year under review, and therefore the extraordinary outlay of 13,861 yen on account of travelling expenses, and of 8,741 yen on account of miscellaneous items were applied for and sanctioned.

ESTIMATES AND SETTLED ACCOUNTS OF REVENUE AND EXPENDITURE RELATING TO WORKING OPERATIONS.—In consequence of the non-existence of estimates for the year under review, the estimates for the preceding year were adopted, and the estimated revenue was therefore 6,436,612 yen and estimated expenditures (after deducting 50,000 reserve fund) 3,653,111 yen. Besides the above there was a sum of 160,000 yen each for Revenue and Expenditures which, submitted to the Diet as a supplementary budget, which were approved, and intended to be applied for repayment to the Sanyo Railway Company, to which a large sum was to be refunded on account of the transportation of troops. Again, a certain sum was brought over from the previous year's account as "receipts and outlays yet unsettled," and this amounted to 54,045 yen for revenue and 150,290 yen for expenditures. Taking all these items together, the total Estimated Revenue for the year was 6,650,657 yen, and estimated expenditures 3,963,401 yen. Against these two estimated accounts, receipts duly settled as Revenue for the year amounted to 6,404,033 yen, and receipts yet to be settled 366,437 yen; while for Expenditures, outlays settled amounted to 3,558,397 yen, and those yet to be settled, 263,379 yen. Balancing these accounts, the Revenue exceeded the estimates by 209,813 yen, and the Expenditures fell short of the estimate by 141,625 yen. Details are enumerated in Tables Nos. 5 and 6. Receipts accruing from the sale of construction stores, which, in consequence of the enforcement of the Government Railways Construction Stores Fund Law, are to be appropriated this year into Revenue of Construction Store Fund Account, were included in the previous year's account in the Estimates of Operating Revenue. Yet, while in miscellaneous receipts a diminution of no less than 1,380,000 yen is apparent, Revenue has shown, as mentioned above, a surplus; and this must chiefly be due to the traffic receipts having increased, as compared with the previous year, by 1,509,146 yen. Again, in expenditures, despite the purchase of stores being totally transferred to Store Fund Account, the revenue, as compared with the previous year's estimate, which included that item, did not exceed 140,000 yen. It will be seen from the above that the Railways are steadily developing and the amount of Revenue and Expenditures is equally going up.

ESTIMATES AND SETTLED ACCOUNTS CONCERNING REVENUE AND EXPENDITURES OF GOVERNMENT RAILWAYS CONSTRUCTION STORES FUND.—The estimates this year for the Fund were 2,298,480 yen for Revenue and Expenditures respectively. But owing to the non-existence of the budget, while at the same time the Law for the Government Railway Construction Stores Fund was to be enforced from the present year, there were no previous estimates available for this year. The result was that the above mentioned sum, both for Revenue and Expenditures, was announced to be disbursed as outlays over and above the Budget. The sums disbursed for six months since the outlays were disbursed was 1,596,275 yen, and there remained only 702,205 yen, that is to say, a little over one-third of the whole sum. Yet the estimated cost of materials still to be purchased during the year amounted to 1,761,048 yen, that is to say, a deficit appeared of no less than 1,058,843 yen. This deficit was chiefly caused by the necessity of purchasing rolling stock and also rails and so forth needed for the construction of double tracks and branch lines, and was also attributable to the rise in the market price of commodities. Commodities generally rose by 10 to 20 per cent, this appreciation being especially significant in coal which is most necessary for conducting railway work. Thus, whereas to tons of coal cost last year about 29 yen, the price rose to as much as 60 yen this year, in other words, the appreciation was more than double the old rate. Consequently an application was for-

warded that the deficit might be made good. The application was acquiesced in; so that the total amount spent over and above the budget amounted to 3,357,323 yen this year. The accounts duly settled during the year amount to 3,014,999 yen, leaving a sum of 127,784 yen yet to be settled. The two items of disbursement, that is, a sum of 3,142,783 yen being subtracted from the total estimated outlay, there remains a sum of 214,540 yen, as shown in Table No. 7.

Receipts actually settled during the year amount to 2,110,535 yen, and those still to be settled to 111,504 yen; total, 2,222,039 yen, as shown in Table No. 8.

RECEIPTS AND DISBURSEMENTS. RAILWAY OPERATIONS.

Gross receipts during the year under review were 7,274,964 yen, while gross expenditures were 4,099,577 yen; the two items being balanced, a net profit of 3,175,377 yen remains:—

RECEIPTS.	Yen.
Receipts duly settled	6,494,033
Receipts still to be settled	366,437
Cash, Fixed Working Fund, brought over ..	283,100
Prices of Materials	131,384
Total	7,274,964

DISBURSEMENTS.	Yen.
Outlays duly settled	3,558,397
Outlays to be settled	263,379
Amount of Fixed Operating Fund	200,000
Price of Materials sold and accounts duly settled	69,225
Price of Materials sold and accounts yet to be settled	8,586
Total	4,099,587
Balance, Net Profit	3,175,377

Of the foregoing items, details relating to Receipts duly settled and Receipts yet to be settled, and Outlays duly settled and those yet to be settled, are shown in tables Nos. 5 and 6. In Receipts, a sum of 283,111 yen in cash belonging to be Fixed Working Fund was brought over from the 26th year's account, of which a sum of 147,188 yen represented the amount of previous year's outlays not yet settled, so that the balance of 135,922 yen really belongs to the Working Fund. As to the price of materials, amounting to 131,384 yen, 13,135 yen were brought over from the previous year's account, while 118,249 yen represented the materials used during the present year. Of this total a sum of 59,885 yen represents a sum that went to the Government Railways Stores Fund Account, 322 yen to the Construction Expenses, while 17,604 yen represent a sum that went to other quarters, so that the remaining 53,573 yen represents a sum for which sales had not been adjusted at the end of the present year. Besides the above there was another sum of 32,007 yen representing the repair of property at workshops.

In the section of outlays, a sum of 200,000 yen Fixed Working Fund, as compared with the sum of 2,000,000 yen Working Fund at the end of the previous year, shows a diminution of 1,800,000 yen. This was due to the enforcement of the Government Railways Stores Fund Law and because of the transference of the fund to that account.

A sum of 69,225 yen representing the price of materials sold whose account is settled, and another sum of 8,586 yen on account of materials sold but which account is still to be settled, are sums transferred from the total price of materials used, that is, 131,384 yen, to the Railway Stores Fund Construction Expenses, and other accounts. Of the foregoing Receipts and Expenditures the credit and debit account, at the end of the present year are as follows:—

CREDIT.	Yen.
Working Fund	200,000
Contractors yet to be paid in cash	263,379
Total	463,379
DEBIT.	Yen.
Cash	43,369
Materials used	53,573
Purchasers of materials yet to be paid ..	8,602
Contractors yet to be paid in cash	357,835
Total	463,379

Remarks.—The reason the item headed "Purchasers of materials yet to be settled" is greater by 16 yen than the sum representing the "Price of materials sold, with account yet to be settled" given in the Section of Expenditures in the Receipts and Expenditures Account, is because wear and tear and depreciation of workshops, buildings, and machines, and also interest are included over and above the original price of materials. Profits for the present year as compared with the aggregate sum of Fixed Capital and Fixed Working Fund

altogether amount to 40,591,454 yen, a little over 7.8 per cent.

GOVERNMENT RAILWAYS CONSTRUCTION STORES FUND.

The present account begins this year, when the total receipts amounted to 7,127,883 yen and disbursements to 7,121,946 yen, the profit of 5,937 yen being as follows:—

RECEIPTS.	YEN.
Receipts duly settled	2,110,535
Receipts yet to be settled	111,504
Cash belonging to the Fund, brought over	1,030,942
Value of stores	3,874,902
Total	7,127,883
DISBURSEMENTS.	
Outlays duly settled	3,014,999
Outlays yet to be settled	127,784
Fund	1,800,000
Amount previously received	165,445
Value of stores whose prices have been duly settled	1,884,414
Value of stores whose prices have yet to be settled	107,046
Value of stores to be included in Loss Account	22,258
Total	7,121,946

Balance, net profits

Of the above items; those headed "Receipts duly settled" and "Receipts yet to be settled," belong to the Revenue, and those headed "Outlays duly settled" and "Outlays yet to be settled" are shown in detail in tables Nos. 7 and 8. The amount of 1,030,942 yen in cash belonging to the Fund is a portion of 1,800,000 yen received at the beginning of the year from the Railway Operating Account. The amount of 3,874,902 yen as value of stores in stock consists of 709,058 yen brought over from the previous year's account, and the amount of 3,101,479 yen as value of stores purchased during the present year, and lastly a sum of 4,365 yen representing the value of coal in stock. Of that sum total, if 1,991,460 yen, representing the stores sold toward construction and traffic, and 22,258 yen, representing the value of stores to be included in loss account, that is to say a total of 2,013,718 yen, be subtracted, the remainder, 1,861,184 yen, represents the sum to be carried over to the next year's account.

The amount of 1,800,000 yen was the sum divided and transferred at the beginning of the year from the Fixed Working Fund of 2,000,000 yen, of the Railway Operating Account in accordance with the Government Railways Construction Stores Fund Account. The amount of 165,445 yen headed "Previously received" was the sum which, in accordance with the Railways Bonds Account Law, was previously received from the Construction Expenses; but during the present year it has not been settled at all. The amount of 1,884,414 yen representing the value of stores for which accounts have been settled, consists of 1,154,060 yen representing stores sold to the Working Fund, of 707,996 yen to the Construction Expenses, and of 52 yen to the Railway Route Investigation Expenses, and of 22,306 yen to the Department of War. The amount of 107,046 yen value of stores account yet to be settled, consists of 73,904 yen representing stores sold to working expenses, 29,514 yen to the Construction Expenses, 4 yen to the Railway Route Investigation Expense, and 3,624 yen to the Department of War, all which payments have not yet been received. The amount of 22,258 yen, as value of stores to be included in loss account, consists of 21,797 representing the diminution in value of stores as a result of reappraisal during the present year, of 363 yen representing stores entirely lost or damaged, and of 98 yen representing stores which, becoming useless, were included in the loss account with a view to their sale.

Of the foregoing account the pure credit and debit at the end of the year are as follow:—

	CREDIT.	YEN.
Total amount of Fund	1,800,000	
Sum previously received	165,445	
Contractors yet to be paid in cash	127,784	
Total	2,093,229	
	DEBIT.	
Cash	120,541	
Stores	1,861,184	
Buyers of stores who have not yet paid their accounts	110,258	
Contractors yet to pay in cash	1,246	
Total	2,093,229	

Comparing the profit realized during the present year with the Fund of 1,800,000 yen, the ratio stands at about 33 per cent. This, as compared with the traffic profits, is exceedingly small; but it

ought to be remembered that the account of this Fund was specially established for the purpose of purchasing and keeping in stock construction stores, so as to meet requirements of traffic and construction, and is specially intended to provide conveniences in connection with the use of stores for the two accounts of traffic and construction. Hence the present account does not keep the realization of profit in view.

CONSOLIDATED CAPITAL.

The total brought over from the previous year's account was 36,103,252 yen. During the year under review the settled account of 647,405 yen has been adjusted for the purpose of supplementing Railway Property, while the sum settled with Railway Bonds during this year and last totalled 3,140,797 yen, so that the consolidated capital existing at the end of this year, aggregates 40,391,454 yen, as shown below.

Tokaido.—Sums defrayed on Tokyo-Kobe Section Ofuna-Yokosuka Section, Obu-Taketoyo Section, and Maibara-Tsuruga Section as old and new industry promotion funds, and also a sum defrayed in accordance with the old Railway Finance Regulations and the Government Railways Finance Law as Construction Expenses and Supplementary Expenses:—

Sum brought over from the previous year's account	Yen.
Sum increased during the present year as Supplementary Expenditure	30,225,421
Total	606,729

Total

Shinyetsu Line.—Sums defrayed on Takasagi-Yokogawa Section, Yokogawa-Karuizawa Section, and Karuizawa-Naoyetsu Section as Construction Expenses and Supplementary Expenses in accordance with the Railway Finance Regulations and the Government Railways Finance Law.

Sum brought over from the previous year's account	Yen.
Sum increased during the previous year as Supplementary Expenditure	5,877,830
Total	40,677

O-u Line.—Sum defrayed on Fukushima-Aomori Section during the 26th fiscal year, and this year in the shape of Construction Expenses in accordance with the Railway Bonds Finance Law.

Sum for the first time included in the Consolidated Capital during this year	1,994,119
Hokuriku Line.—Sum defrayed on Tsuruga-Toyama Section, the same as above.	
Sum for the first time included in Consolidated Capital during this year ...	1,646,678

Grand Total of Consolidated Capital at end of the year

Formerly it was only after the completion of a given section and its opening for traffic that the Construction Expenses were included in the Consolidated Capital, but from this year the method has changed, so that as soon as Construction Expenses are adjusted, they are to be included in the Consolidated Capital. Consequently, the sums with regard to the two lines of the O-u and Hokuriku coming under the previous year's account have been included. However, the two lines being still in process of construction, it is not yet possible to give the cost of construction per mile and other comparisons. Therefore, by deducting from the grand total of the Consolidated Capital, amounting to 40,391,454 yen, a sum of 3,640,797 yen on account of the two special lines, and by distributing the remaining 36,750,657 yen into various items, the amount required per mile and the ratio it bears to the aggregate capital are shown below, as is also a comparison with those of the previous year:—

Items.	Average amount per mile on open lines.	Ratio borne to the aggregate amount of capital.
	End of 27th year.	End of 26th year.
Preliminary Surveys	366	350
Superintending Work	3,414	3,415
Right of way	3,042	3,082
Earthworks	20,516	19,456
Bridges (including culverts)	16,247	15,585
Tunnels	5,763	5,765
Permanent Way (including drains, fences, boundary posts, and telegraphs)	20,455	20,332
Stations	3,373	3,308
Transportation (including construction trains)	2,923	2,924
Wharves	202	212
Locomotives	4,273	3,866
Other Rolling Stock	4,820	4,686
Buildings	721	707
Shops and Machinery	2,467	2,361
Construction Plant	317	178
General charges	1,001	1,001
Total	65,861	64,707

It will be seen that the average cost of construc-

tion per mile at the end of this year was 65,861 yen, which, compared with that of the previous year, shows an addition of 1,160 yen per mile. Again, the average construction cost per mile, at the close of the year, of different sections open for traffic is shown and compared in the following table:—

Sections.	Total length of open lines..... Miles.	Average cost per mile.
Tokyo-Yokohama	558	65,861
Kobe-Otsu	58 (double)	163,558
Tsuruga-Ogaki	58 (of which one mile is double)	146,246
Takasagi-Naoyetsu	49	71,681
Yokohama-Ogaki	110 (exclusive of 25 miles double)	35,699
Ofuna-Yokohama	20	49,033
Otsu-Nagasaki	48	34,312
Yokogawa-Karuizawa	7	281,524

The above lines were already completed, and the more or less augmentation in cost of construction of various sections is due to a deficiency in fixed property having been supplemented.

CAPITAL ACCOUNT.

From the commencement of railway business till the end of March, 1894, the grand total of capital of the Government Railways was 39,567,731 yen. The capital increased during the present year as follow:—

Defrayed from the Treasury during the present year with Bonds	Yen.
Defrayed with Bonds issued for the 26th year's account	2,661,532
Amount settled for supplementary works of existing lines during the present year	39,243
Total	647,405

When the above is added to the total capital at the end of last fiscal year, we get 42,915,911 yen, of which the following have been deducted during the year:—

Amount paid to the Treasury on account of sale of stores belonging to construction expenses of old lines	56,787
Sales of stores during the previous year but account settled this year, and duly paid into the Treasury	13,724
Of the amount of Public Bonds, a remnant entrusted during the previous fiscal year to Paymasters and duly paid into the Treasury this year	184,196
Of the amount of Public Bonds, a portion that was miscalculated and settled during the previous fiscal year and paid into the General Revenue this year	37
Total	254,744

The foregoing amount being deducted, there remains a sum of 42,661,167 yen, which is the grand total of Railway capital at the end of the 27th fiscal year. This total is divisible into five parts, namely, fixed capital, fixed working capital, Government Railways Construction Stores Fund, price of stores belonging to old construction not yet settled, and advance payment and unsettled stores belonging to the expenditure on the Railway Bonds, as follows:—

1. Fixed Capital	40,391,454
2. Fixed Working Capital	200,000
3. Construction Stores Fund	1,800,000
4. Old Construction Stores, price yet to be settled	11,461
5. Railway Bonds Expenditure, advance payment	165,445
Unsettled stores price	92,807
Total	42,661,167

Of the foregoing items the first having been detailed in the Consolidated Capital Section and the second and third in Receipts and Disbursements Section, no further details are needed here. The items coming under the 4th and 5th heads have already been set out as Construction Expenses, but as the account of stores for works is not yet settled, they could not be included in the consolidated capital. It follows, therefore, that the amount of money settled on account of expenditure and the amount included in the consolidated capital do not tally with each other. The productive capital and the non-productive capital of the foregoing grand total being distinctly set forth, the result is as follows:—

Productive Capital	40,055,953
Amount belonging to Consolidated Capital	38,055,953
Total of Government Railway Stores Fund	1,800,000
Fixed Working Capital	200,000

Capital not yielding profit	2,605,214
Amount belonging to the Consolidated Capital	2,335,501
Unsettled price of Stores belonging to Old Construction	11,461
Advance payment of unsettled stores } belonging to expenditure on Bonds }	165,445 92,807

Total 42,661,167

Out of the productive capital, consolidated capital amounting to 38,055,953 yen has to be taken and analysed, when it is found to be a sum settled on account of the whole portion of the Tokaido Line and the Shinyetsu Line, and also a sum settled at the Aomori Out-office of the O-u Line. The amount settled at that Out-office represents the construction Expenses of Works coming under the control of the Office, and though the portion opened for traffic during the year was the Aomori-Hirosaki section of 23 miles, there being no special heading set apart for the Construction Expenses of the Aomori-Hirosaki section, the account has been included in the Settled Account mentioned above. Of the non-productive capital a sum of 2,335,501 yen consolidated capital represents the amount settled on account of the whole portion of the Hokuriku Line, and also the amount settled on account of a portion of the O-u Line, that is to say, at the Fukushima Out-office; but as the two have not been opened for traffic during the year the sum has been temporarily included in the non-productive capital.

REVENUE ACCOUNT.

The total mileage of railways opened for traffic was 581 miles at the end of the year, an increase of 23 miles over that of the previous year. Traffic receipts for the year as compared with those of the previous year show an increase of 434,958 yen, working expenses an increase of 239,321 yen; that is to say, an increase in profits of 195,637 yen. Details are as follows:—

TRAFFIC RECEIPTS.		Yen.
Traffic Receipts—		
Coaching Receipts	4,295,838	
Goods Receipts	1,430,530	
Miscellaneous Receipts	93,045	
Total	5,819,413	

DISBURSEMENTS.		Yen.
Working Expenses—		
Maintenance Expenses	519,838	
Locomotive Power	1,058,313	
Traffic Expenses	500,406	
Several charges	103,139	
Total	2,181,696	

Balance, Profit 3,637,717
The rate that working expenses for the year under review bear to traffic receipts is a little over 37 per cent., which, as compared to the rate for the previous year, shows an increase of about 1 per cent. Transportation and communication have in general, been very much developed this year, but as the transportation of troops and military stores involved, side by side with an increase of receipts a corresponding increase of expenditures, this fact, and also the rise in the market price of commodities, must have brought about a comparative increase in expenses during the year.

INCREASE AND DECREASE OF REVENUE AND WORKING EXPENSES AND THEIR CAUSES.

The average amount of Receipts and Expenses per diem and the same per mile of open line on various lines during the year, and also as compared with the corresponding results for the preceding year, are as follow:—

AVERAGE RECEIPTS AND EXPENSES PER DAY.			
	Receipts.	Expenses.	
	97th year.	96th year.	97th year.
	Yen.	Yen.	Yen.
Tokaido	13,979	13,019	5,063
Shinyetsu	1,927	1,733	863
O-u	115	—	157

Total 15,944 14,752 5,977 5,322

AVERAGE RECEIPTS AND EXPENSES PER MILE.			
	Receipts.	Expenses.	
	97th year.	96th year.	97th year.
	Yen.	Yen.	Yen.
Tokaido	11,570	10,775	4,190
Shinyetsu	6,011	5,407	2,691
O-u	1,740	—	2,379

Total 10,282 9,650 3,855 3,481

The O-u line, in other words, the Aomori-Hirosaki Section, having been opened for traffic on December 1st, 1894, the average per diem was obtained for 122 days, while the average per mile was obtained by calculating the average amount per one-third of the whole line of 23 miles, that is, 8 miles.

Open lines at the end of the year totalled 581 miles, but the average traffic mileage was 566 miles.

In the above table the four sections of Tokyo-Kobe, Ofuna-Yokosuka, Obu-Taketoyo, and Maibara-Tsuruga distinctly set apart till the previous year, have been combined in a new denomination of Tokaido Line; Shinyetsu Line to a new denomination for Takasaki-Naoyetsu section, while O-u line means Aomori-Fukushima section, which is still in course of construction, only the Aomori-Hirosaki section having been opened for traffic from Dec. 1st, 1894. Earnings for various lines show a more or less increase this year, a fact that is probably due to the development of railway traffic, though for the Tokaido Line the transportation of troops and military stores must also be taken into account in this connection.

In regard to the Working Expenses on various lines, that for the Shinyetsu Line, because of the absence of casualties properly so called and therefore owing to diminution in maintenance expenses, the amount spent on that line shows a decrease. The total for the whole, however, considerably increased in consequence of the rise in the market price of commodities, especially coal, the heaviest item in the working expenses, and also in consequence of the transportation of troops and military stores.

Gross receipts for the year were 5,819,413 yen, which are subdivided into coaching, goods, and miscellaneous receipts.

Receipts.		Rate of Various Receipts to Gross Receipts.		Receipts.	
97th year.	96th year.	Com-parison.	97th year.	96th year.	Comp.
Coaching.....	4,295,838	3,677,086	7.38	7.39	*0.01
Goods.....	1,430,530	1,206,397	2.46	2.48	*0.02
Miscellaneous.....	93,045	100,972	0.16	0.19	*0.03
Total.....	5,819,413	5,384,455	1.000	1.000	—

The causes that have brought about such a marked increase, as compared with the previous year's result, in coaching and goods receipts have already been explained in detail. The decrease in the amount of miscellaneous receipts was due to the fact that while the profits accruing from the construction and repair of materials for the Nippon Railway Company and Ryomo Railway Company, and also the profit accruing from the sale of stores, were included in this item in the previous year's account, the former has been included this year in Work-shops Receipts, and the latter in the Stores Fund Revenue. The gross expenditures for the year were 2,181,696 yen, which are subdivided into maintenance, locomotives, traffic, and general expenses:—

Maintenance.		Locomotives.		Traffic.		General.	
97th year.	96th year.	Com-parison.	97th year.	96th year.	Com-parison.	97th year.	96th year.
519,838	610,494	*200,656	1,058,313	775,386	*282,927	500,406	306,580
103,139	—	—	103,139	—	—	—	—
Total.....	2,181,696	2,044,375	10,000	9,750	*2,500	70,14	—

The figures bracketed show the ratio toward Gross Expenditures, while the other figures show the ratio toward Gross Receipts. This year, as compared with last year, the two items of maintenance Expenses and General Charges show a diminution. The former was due to the postponement of maintenance works, except those that were absolutely unavoidable on account of risk, owing to the extraordinary activity of railway operations brought about by military needs, and also to absence of calamity or accidents. Diminution in the item of general charges was due to the transference of a portion of superintending expenses incidental to imported stores and of miscellaneous allowances, both of which were heretofore defrayed out of the present expenses, to the stores fund account, and also to the marked diminution in the amount of grants of money allowed to retiring officers and experts. On the other hand, the two items of locomotive power and traffic expenses show an increase, the former to the mileage of locomotives in operation having reached 4,926,585 miles, that is, 800,457 miles more than in the previous year, and to a rise in the market price of coal.

By dividing the traffic receipts and working expenditures under their respective heads, and by finding the respective units by dividing them by their proper divisors, and also by comparing the result with that of the last two years, the following table is obtained:—

Receipts.		Receipts per mile in operation.		Receipts per mile in operation.	
Average mileage open for traffic.	Coaching.	Goods.	Miscellaneous.	Total.	
Miles.	Yen.	Yen.	Yen.	Yen.	
27th fiscal year	566	7,590	2,528	10,118	10,282
26th fiscal year	558	7,128	2,341	9,469	9,650
25th fiscal year	551	6,328	1,850	8,178	8,313
Average	7,016	3,239	100	9,415	—

WORKING EXPENDITURES.		Tariff.		Genl. charges.	
Maintenance.	Locomotive.	Per mile in operation.	Per mile in operation.	Per mile in operation.	Per mile in operation.
Divisor.	Working mileage.	Divisor.	Working mileage.	Divisor.	Working mileage.
97 year.....	566	918	4,926,585	2.93	5,726,368
96 year.....	558	2,148	4,116,198	2.18	5,483,483
95 year.....	551	1,854	3,958,099	2.02	4,580,938
Average	575	2,197	4,000,000	2.04	5,263,463

Details of Receipts and Expenses of the various sections for the year under review are given in table No. 10.

NET PROFITS.

A sum of 3,637,717 yen representing the net profit accruing from traffic, together with another sum of 5,937 yen representing net profit arising from Stores Fund, and the total being compared with the gross capital of 42,661,167 yen, and the productive capital of 40,055,953 yen at the end of the present year and also to the results of the last four years, the following table is obtained:—

	Rate of Net Profit to Gross Capital.	Rate of Net Profit to Gross productive capital.
	per cent.	per cent.
27th fiscal year	8.5	9.1
26th fiscal year	8.7	9.5
25th fiscal year	6.4	7.2
24th fiscal year	4.6	5.1
23rd fiscal year	6.3	6.8

In computing the ratio to the productive capital, those figures computed up to last year to show ratio borne towards the construction expenses and amount of settled accounts have been made use of.

In order to show the relative rate of yearly increase of gross capital and that of gross receipts, and also to show the relation which the capital duly settled bears to the revenue during the last four years, the increase of mileage and also amount of capital is shown below:—

	Increase of Mileage in Operation.	Increase of Gross Capital.	Rate of Increase of Gross Capital.	Relative Increase of Gross Receipts.	Relative Rate of Increase of Receipts.	Rate of Gross Receipts compared with Gross Capital.
	Miles.	Yen.	Per Cent.	Yen.	Per Cent.	Per Cent.
97th.....	581	3,603,437	0.72	434,958	0.81	1.26
96th.....	558	3,073,418	0.54	303,833	0.75	1.36
95th.....	551	2,723,257	0.47	276,491	0.74	1.53
94th.....	544	2,613,416	0.40	203,603	0.44	1.13
93rd.....	534	2,416,669	0.35	144,374	0.37	1.00

The net profits given in this section being 3,637,717 yen, there is, as compared with the amount of the net profit given in the section of Receipts and Expenditures Account (3,175,355 yen), a balance of 462,340 yen, the cause being attributed to difference in the manner of making up the accounts. The relation between the two systems of accounts will be explained below.

Items included in property and receipts in the traffic account but not in the account of receipts and expenditures, and also items not included in loss account in the former, but included as such in the latter:—

Supplementary Expenses	647,405
Amount of Receipts not settled last year and settled this year (prices of stores excluded)	42,821
Amount of expenditure not settled this year (construction work cost excluded)	244,821

Total 935,047
Items not included in loss account of receipts and expenditures account, but included as such in the other, and those that are included in receipts in the former, but not included as such in the latter:—

Amount of expenditures not settled last year and settled this year (prices of stores and wages excluded)	114,857
Amount of receipts not settled this year (working receipts excluded)	357,850

Total 472,707
Balance increase of net profit of traffic account 462,340

PRIVATE RAILWAYS.

GRANT OF CHARTERS.—During the year under review provisional charters have been granted to the Kyoto Railway Company and 25 others, representing 903 miles of railways and 39,530,832 yen of capital; while permanent charters have been granted to the Hatsuse Railway Company and 4 others, their aggregate mileage and capital amounting to 257 miles and 10,627,559 yen. The number of companies to which temporary charters have been granted this year shows an increase of 20 over that of the previous year, mileage by 811 miles, and amount of capital by 36,502,242 yen. The number of companies to which permanent charters have been granted diminished by 6, but mileage shows an increase of 111 miles and the amount of capital by 5,017,809 yen.

		Mito-Iwanuma ...	140.27	3.6	5,640,000	do	7 years.
		Tsuge-Nara ...	31.57	3.6	1,540,000	January, 1895	5 years.

At the end of the year applications for temporary charters numbered 51, representing 2,000 miles, and 103,091,831 yen, while companies that applied for permanent charters numbered 4, their total mileage aggregating 77 miles, and their capital 2,178,512 yen.

Existing Conditions:—Existing joint stock railway companies at the end of the year numbered 29, their capital totalling 86,693,200 yen (of which 63,928,649 yen were paid in) and their mileage 2,190 miles, of which 1,538 miles were in operation. Compared with the corresponding figures of the previous year, one has been added to the number of companies, 11,880,200 yen to capital, and 257 miles to total mileage and 157 miles to railways open for traffic. This was due to permanent charters having been granted, or additions to capital licensed, or the opening of lines for traffic approved, by the Authorities. The existing companies which, by permission of the Authorities, have increased their capital, were the Nippon (10,000,000 yen), the Chikuho (1,200,000 yen), the Iyo (30,200 yen), the Naniwa (100,000 yen); total, 11,330,200 yen.

The sections, mileage, and date of opening for traffic during the year by permission of the Authorities, are as follow:—

LINE OPENED.

Name of Companies.	Sections.	Mileage.	Date opened.	Name of Companies.	Sections.	Miles.	Date opened.
Sanyo ...	Itozaki-Hiroshima ...	46.22	June 10, 1894	Sobu ...	Honjo-Ichikawa ...	6.40	Dec. 9, 1894

				Total ...		157.32	

The present condition of the various railway companies carrying on business either at the end of the 27th fiscal year or at the end of the 28th (1894) year are shown in the following table:—

It must be borne in mind that for the six companies, Nippon, Hankai, Iyo, Kwansai, Kushiro, and Sobu, the figures was carried to the 27th year, while for others the figures relate to the present fiscal year.

Volume of Traffic.—The number of passengers and quantity of goods dealt with by the respective private companies either during 1894 or the 27th fiscal year are shown in the following table. Generalizing and comparing it with the previous year's results, passengers show an increase of 21.1 per cent., fares thereof 26.7 per cent., goods 35.2 per cent., freights thereof 35.7 per cent. (as children travel at one-half fares, adults have been reckoned without discrimination, whereas two were reckoned as one in the previous year's account and the comparison can not be exactly accurate). The chief reason of the increase was due to the opening of 157 more miles this year as compared with the previous year; the extraordinary activity in the transportation of military stores and troops in consequence of the war, the favourable condition of the coal market; and also the insufficiency of marine transportation, by which facilities afforded by overland transportation were much more availed of than in ordinary years. Consequently, ordinary passenger and goods traffic was more or less affected by the War and some companies which exclusively dealt in them could not help but increase their receipts.

Receipts and Working Expenses.—The amount of receipts and working expenses of the respective private companies during the 27th fiscal year or the 27th year (1894) are shown below. Generalizing and comparing the result with that of the previous year, Receipts show an increase of 23.5 per cent.; expenses, 27.9 per cent., and net profits, 21.1 per cent. Comparing the rate of net profit and cost of construction, that of the Hankai Company was largest, 19.9 per cent., and that of the Tanko Tetsudo, Hokkaido, smallest, 4.1 per cent.; the average rate being 7.9 per cent., which shows an increase of 1.2 per cent. over that of the previous year. This may be taken as a good indication of the progress of railway enterprise. Railways opened for traffic this year and also special railways, as for instance, the Kushiro railway, built for the purpose of conveying sulphur, regarding ordinary traffic as a secondary matter, have been excluded in computing the foregoing percentages.

NOTE.—In the second column the figures coming opposite the letter S. in the line of the Nippon Railway Company represent Government subsidy; figures marked by a dagger (†) mean "sum brought over from the previous year's accounts," while those marked by the asterisk (*) mean that in the figures given directly above so much was brought over from the previous year's account.

In the last column the figures given for the Iyo, the Kobe, the Kyushu, the Hokkaido, and the Sano lines represent interest on company's debts; the figures given for the Osaka line and the lower figures in that of the Sangu show the sum liquidated; the two figures for the Chikuho's line represent interest on debts and temporary loans; those for the Kansai's line, emergency fund; the five figures in the Sanyo's line, present interest on debts, charges on rolling stock borrowed, interest on old loans, loss incidental to sale of shares, and sum appropriated for repairing damaged tracks, respectively. The upper figures for the Sangu's line is a contribution to the Great Shrines and Parks Fund.

LANGFELDT & COMPANY, LIMITED.

INCREASING THE CAPITAL.

The 11th ordinary semi-annual general meeting of shareholders in Langfeldt and Company, Limited, was held on Tuesday afternoon at the Chamber of Commerce. There were present Messrs. F. J. Lowder, in the chair, F. Retz, F. H. Bull, O. Keil, H. Klengen, Jas. Walter, E. Berger, R. Bleifus, H. Mahi, and J. Feick, Secretary.

The CHAIRMAN announced that the first business was the adoption of the report and passing of the accounts of the Directors for the past half-year. They all had doubtless read them, and as they were so satisfactory he thought no questions would be asked.

Mr. KLINGEN moved, and Mr. WALTER seconded, that the report and accounts be passed.—Carried.

REPORT.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the half-year ended the 30th June, 1896, accompany this Report.

The Net Profit for the half year, including balance brought forward from the 31st December, 1895, and after providing for General Expenses, Directors' and Auditor's fees, Interest, Depreciation and Losses, amounts to \$60,786.89 which it is proposed to apply as follows:—

In payment of a Dividend of 10 per cent. for the half-year \$10,000.00
Balance to be carried to new account..... \$50,786.89

According to Article 35 of the Articles of Association, the Amount of the Directors' Fees for the year ending June 30th, 1897, will have to be settled at this meeting.
Mr. T. Meyerdiria having resigned the office of Director on leaving the country, Mr. F. H. Bull has accepted the invitation of the Board to fill the vacancy thereby occasioned; and Mr. Cecil Guinness has assumed the duties of Auditor vice Mr. Baker, who has left the port.

J. F. LOWDER, } Directors.
O. KEIL, }

Yokohama, July 21st, 1896.

J. FRICKS, Secretary. } J. F. LOWDER, } Directors.
O. KEIL, }

Yokohama, June 30th, 1896.
I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.

Yokohama, July 15th, 1896.
The CHAIRMAN said that the question of the Directors fees for the year ending June, 1897, had to be decided at that meeting. When the Company was first started the directors fees were fixed at \$500 a year apiece, and in addition there

was a managing director who had a fixed salary of \$3,000 a year, a free house, and all provisions at cost price. As many present were aware, the business of the Company at first was not so prosperous as some of the shareholders had expected, and in consequence the directors' fees were cut down to \$200 a year apiece, and there was no managing director at all. Subsequently it was found necessary to have a managing director, and one of their board of directors, Mr. Keil, very kindly took the position at a fixed salary of \$1,200 per annum, the other directors' remuneration remaining at \$200 annum. I give you these figures merely as information that may guide you in the matter.

Mr. WALTER—There are four directors, are there not?

The CHAIRMAN—Yes, three directors and one managing director.

Mr. BERGER—Does Mr. Keil take a director's fee?

The CHAIRMAN—Yes, he takes the \$200 and thus brings up his salary to \$1,200, or \$100 per month.

Mr. WALTER—It is clear that \$200 a year as a director's fee is a mere honorarium for the amount of business that this Company is doing. I should be glad to move that the directors' fees be raised to \$300 per annum to each director.

Mr. KLINGEN seconded.—Carried.

The CHAIRMAN—I have great pleasure in thanking you, gentlemen, on behalf of myself and my brother directors for the substantial appreciation of our services that you have shown. This closes the meeting. I shall now call to order

AN EXTRAORDINARY GENERAL MEETING.

The CHAIRMAN said that this extraordinary general meeting of shareholders had been called to consider the following resolution:—

That the capital of the Company be increased to \$150,000 by the creation of 500 new Shares of \$100 each: that the said Shares be paid for out of the balance of undivided profits at the credit of the Company as shown in the accounts for the half-year ended the 30th June, 1896, and that the said shares be distributed among the members in proportion to the shares registered in their names respectively on the date of such distribution.

Those shareholders who had followed the history of the Company since its establishment will bear in mind that our trade has been developed greatly within the past two years. I will say in passing that this addition in large measure is due to the manner in which our interests have been protected, guarded, and developed, through the energy of your Managing Director, Mr. Keil—(hear, hear)—and those who have served with him. Perhaps you do not know, but I as a Director do know, how hard the servants of the Company have worked for it: all those in the service of our company have never spared themselves where its interests were concerned. From small beginnings we have thus worked our way to very large undertakings. A glance at our balance-sheet will show you that we now have assets, realisable assets, tangible assets, that can be converted into money to the amount of \$50,000 or \$60,000 over the amount of our capital. We, and when I say we, I mean more particularly our managing director, have long felt the absolute necessity for increasing our capital; and your Board of Directors consider this to be a convenient time in which to appeal to the shareholders to assist us to increase the capital. This can be done through the means of our assets. As I said just now, we have a balance of over \$50,000 on paper, which, when realised, as they can be within a few months, could be divided among shareholders as a dividend. We cannot declare it now because they are not realised, and your Directors have thought it better to credit each shareholders with \$50 per share *pro rata*, in the form of new shares, and thus raise our capital to \$150,000. The result of such a step may be that in the market our shares at the outset may not stand so high as they do now. But that is not a matter for the Board of Directors: they have only the interests of the Company to serve, and those interests demand that the capital should be increased to \$150,000. I need hardly warn you that if this resolution is carried it will have to be confirmed at another meeting convened at not less an interval than 14 days. Any amendment that you may like to make to the resolution must be made now, no amendment is possible at a subsequent meeting. I now beg leave to submit the resolution to the meeting.

Mr. BLISFUS seconded.—Carried.

Votes of thanks to the directors, employes, and chairman closed the meeting.

EXPERIMENTS FOR THE IMPERIAL IRON FOUNDRY.

(CONCLUDED FROM JULY 15TH.)
PROF. NORO'S REPORT.

The following is a *résumé* of a report by Prof. Noro on the result of experiments that he carried on at Kamaishi between the latter part of July and the first part of October, 1895, the objects of the experiments being:—

1. Experimental founding of crude wrought iron in accordance with the puddling process.

2. Experimental founding of crude wrought iron in the mass, and spongy iron obtained direct from iron sand ores in accordance with a process newly devised by the experimenter.

3. Experimental founding of crude wrought iron in the mass and spongy iron from iron sand ores by the use of a "stuck" furnace.

4. Experimental founding of iron articles with lamp steel made at the Tokyo Arsenal and the wrought iron previously mentioned. The main object kept in view in the first, second, and third experiments was to manufacture cheaply crude wrought iron or spongy iron, to be used for making steel according to the Martin process, as in Japan iron suitable for this purpose is very scarce. Ordinary iron ores, being liable to contain certain obnoxious ingredients, such as sulphur, are not directly adapted for the manufacture of wrought or spongy iron, but the iron sand ores specially found in Japan are of excellent quality; and that they are adapted for the purpose was successfully proved at the Tokyo Arsenal. The experiment of making crude wrought iron from those ores by first deoxidizing them was originally conducted at the Kamaishi mine.

EXPERIMENTAL MANUFACTURE OF CRUDE WROUGHT IRON ACCORDING TO THE PUDDLING PROCESS:—The following table gives the result obtained at the different experiments, each experiment having been repeated three to five times:—

Quantity of Pig-iron used. Catty.	Quantity of Wrought Iron obtained. Catty.	Quantity of Coal consumed. Kwamme.

2,271	1,811	180

It will be seen from the above that the proportion of loss of iron was inordinately great, and this was chiefly ascribable to the inexperience of the mechanics, to the smallness of the furnaces used,—two in number,—and to their being of an old style; while the proportionately greater quantity of coal consumed was due to the defective construction of the furnaces and to their having been left to cool on each occasion. Taking all these things into consideration, the result obtained must be said to be decidedly satisfactory.

EXPERIMENTAL MANUFACTURE OF CRUDE AND SPONGY WROUGHT IRON OBTAINED DIRECT FROM IRON SAND ORES ACCORDING TO A PROCESS RECENTLY DEvised BY THE EXPERIMENTER:—In this experiment a perpendicular deoxidizing furnace, somewhat resembling a chimney in shape, was constructed at one end of the reverberatory smelting furnace, the object of the deoxidizing furnace being to utilize the waste heat from the other furnace and to supply heat from outside. The experiment had three objects; namely, 1st, to place iron-sand ores mixed with charcoal powder in the deoxidizing furnace, to deoxidize them by heating the material from the outside, or to use them for the purpose of making Martin steel; 2nd, to remove them to the smelting furnace and, by making them fuse somewhat, to make spongy iron; 3rd, to make them fuse entirely, resulting in a crude wrought iron mass. The experiment was repeated five times, with no particular modification in the relative quantities of raw materials. The time required for deoxidization differed from 6 to 9 hours, while fusing was effected in from one to two hours. In one case, when 1,000 catties of ore, containing about 58 per cent. of iron, were used, 538 catties of wrought iron were obtained, that is, about 52 per cent. of the total quantity of iron in

the ore; in another, for 700 catties of ore used, 253 catties of crude wrought iron and 100 catties of spongy iron were obtained. The experiments were incomplete, but were definite enough to show that the process could be utilized in the following cases, viz.:—

1.—To remove the deoxidized iron-sand ore at once to the Martin steel furnace without fusing.

2.—To fuse the ore at once into a crude wrought iron, or into spongy iron, and to use it in making Martin steel.

3.—To manufacture refined wrought iron from crude wrought iron. One special advantage of the new process is the economizing of fuel and the simplification of machinery.

THE MANUFACTURE OF CRUDE WROUGHT IRON AND SPONGY IRON FROM SAND ORE BY THE USE OF A STUCK FURNACE:—The following table shows the results obtained from the later and more complete experiments:—

Order of Experiments.	Quantity of ore. catty.	Flux.	Quantity thereof. catty.	Quantity of charcoal packed in furnace. catty.	Quantity of charcoal subsequently put into furnace. catty.	Nature of output.	Quantity thereof. catty.
5th Ex.	270	Limestone	37	68	195	Spongy	93
6th Ex.	270	do	36	68	170	do	98
7th Ex.	270	do	46	68	119	do	98
8th Ex.	300	Slugs	30	68	230	Crude wrought	48
9th Ex.	200	do	25	67	200	do	48
10th Ex.	300	do	25	67	200	do	69

These experiments, compared with the process in which coke is used, were considerably better in result, the spongy iron and crude wrought iron produced being perfectly satisfactory material for manufacturing Martin steel. When compared with the smelting of iron-sand by the process hitherto in vogue in Japan, the quantity of charcoal consumed was extremely small. The new process may be utilized with profit in districts where sand-ore and charcoal are not scarce, and by manufacturers that have only small funds at their disposal.

THE CASTING OF RAILS AND OTHER OBJECTS WITH LAMP STEEL MANUFACTURED AT THE TOKYO ARSENAL, AND WITH CRUDE WROUGHT IRON MANUFACTURED ACCORDING TO THE VARIOUS PROCESSES ABOVE SPECIFIED:—Repeated experiments have proved that though when casting plate iron the lamp steel manufactured at the Arsenal is somewhat harder, rails that did not differ in any way from the samples provided at the Agricultural and Commercial Department could be produced. This was the more satisfactory when the inexperience of the mechanics employed upon the work is taken into consideration. Unusual consistency in the material and a defective rolling machine were at the root of the trouble in the experimental manufacture of plate iron with the same lamp steel. The following table gives the result of the experiments:—

Order of Experiment.	No. of Experiments carried on each occasion.	Quantity of material. catty.	Quantity of output. catty.	Quantity of coal consumed. catty.
1st Ex.	2	1,615	1,399	3,500
2nd Ex.	1	881	392	3,000
3rd Ex.	2	1,054	771	3,000
4th Ex.	2	1,430	1,018	2,661
5th Ex.	3	1,002	891	3,000
6th Ex.	3	1,251	919	2,250
7th Ex.	3	2,247	1,813	3,500
8th Ex.	3	1,795	1,322	3,500

A comparatively large quantity of coal was consumed, because the furnace was suffered to cool down on each occasion. The objects manufactured were rails, plate-iron, ball-iron, and two kinds of square iron. In concluding this report, it may be mentioned that the substitution of coke made from small coal supplied by the Yubari Colliery, Hokkaido, for charcoal, at the Kamaishi Foundry, gave very excellent results, in spite of the fact that the coke was extremely brittle. This proves that home-made coke is well adapted for foundry work.

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday-season; it will reopen on Friday, the 2nd of Oct.

SOLUTION OF PROBLEM NO. 239.

WHITE.	BLACK.
1—P to K 5	1—B to Kt 7
2—R takes P, mate	1—B to B 6
2—Q takes P, mate	1—B to Q 5
2—Kt to R 3, mate	1—B takes P
2—Kt takes B, mate	1—R to Kt 6
2—Q to Q B 6, mate	1—R to Kt 7
2—R to K R 4, mate	1—Kt moves
2—Q to Q 3, mate	1—K B P moves
2—B to Kt 8, mate	1—Q B P moves
2—Kt takes P, mate.	

Correct answers from W.D.C., Omega, and J.D.

This nice little specimen of Planck's work contains a trap; into which some of our solvers have fallen, viz., 1—R to K R 3. Black's reply 1—B to B 3 upsets this little arrangement. Curiously enough, one of the correct solvers (in commenting on the problem) calls the R on R 2 "its one weak point!" He evidently did not even see the snare. Perhaps "the heat has blinded his chess-eye!"

PROBLEM NO. 241.

By S. LOYD.

BLACK.

White to play and mate in two moves.

GAME NO. 534.

The following game was played by Mr. W. Steinitz during a short visit to Berlin, en route to the tournament at St. Petersburg. Mr. Steinitz was opposed by five players of the Berlin Club.

GIUOCO PIANO.

WHITE.	BLACK.
W. Steinitz.	The five allies.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to B 3	4—Kt to B 3
5—P to Q 4	5—P takes P
6—P takes P	6—B to Kt 5 ch.
7—Kt to B 3 (a)	7—Kt takes K P
8—Castles	8—B takes Kt (b)
9—P takes B	9—Castles (c)
10—P to Q 5	10—Kt to R 4 (d)
11—B to Q 3	11—P to K B 4 (e)
12—R to K sq.	12—P to Q 3 (f)
13—Q to R 4	13—Kt to B 4 (g)
14—Q takes Kt	14—Kt takes B (h)
15—B to Kt 5	15—Q to Q 2
16—R to K 7	16—P to Q Kt 3
17—R takes Q	17—P takes Q
18—B takes B P	18—R to B 2
19—B to K 7	19—Kt to B 4
20—B takes P	20—Kt to K 5
21—Kt to K 5 (i)	21—Resigns.

NOTES.

(a) Mr. Steinitz's new attack, as adopted by him against Bardeleben and Schlechter in the Hastings tournament.
(b) According to the "Modern Chess Instructor," the best for Black in Castles, and if R takes Kt, P to Q 4, to B to Kt 5, P to B 3, if B to Kt 5, P takes B, to Q Kt takes P, P to K R 3, and wherever the Knight may retreat will proceed with B to Kt 5, and have the advantage.
(c) The instructor, however, gives the following continuation as winning for White, after P to Q 4, to B to R 4, P takes B, 12 R to K sq., P to B 4, 13 P to Q 5, Kt to K 5, 14 Kt to Q 4, Kt to Q 3, 14 Q to R 5 ch., K to B sq., 15 R to K 5, B to Q 2, 16 Q R to K sq.
(d) But here they should have played Kt to K 5.
(e) If Kt takes Q B P, 12 Q to K sq., Q to B 3, 13 B to Kt 5.
(f) Any attempt to save the pawn would have been still more unfavourable.
(g) P to B 3 was, perhaps, better.
(h) If P to Q Kt 3 White purposed playing 15 Q to Kt 5, giving up the Q for three minor pieces if B to R 3.
(i) Prettily played. If now Kt takes B, 20 Kt takes R, Kt takes Kt, 21 R to K sq., followed by Q R to K 7 and wins.—*Salisbury News*.

GAME NO. 535.

Played at Birmingham in a simultaneous exhibition.

SCOTCH OPENING.

WHITE.	BLACK.
Blackburne.	Mackenzie.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—P to Q 4	3—P takes P
4—Kt takes P	4—B to B 4
5—B to K 3	5—Q to B 3
6—P to Q B 3	6—Kt to K 2
7—Kt to Q 2	7—Kt takes Kt
8—P to K 5	8—Q to Q Kt 3
9—Kt to B 4	9—Q to R 3
10—P takes Kt	10—P to Q 4
11—Kt to Q 2	11—B to Kt 3
12—B to Q 3	12—B to Q 2
13—Castles	13—Castles Q R
14—Q to Kt 3	14—P to K B 3
15—P takes P	15—P takes P
16—P to Q R 4	16—Q R to Kt sq.
17—P to K Kt 3 (a)	17—P to B 3
18—Q to B 2	18—P to K R 4
19—P to R 5	19—P to R 5
20—K R to K sq. (b)	20—P takes P
21—B P takes P	21—R takes R P
22—B to K B 4	

And Black announced mate in five moves (c).

NOTES.

(a) If 17 P to R 5, Black plays 17.....Q to Kt 5 winning White's Q P.
(b) White dare not take the B at move 20 because Black obtains an overwhelming attack by 20 P takes Kt P.
(c) The game is well played by Black.

GAME NO. 536.

IRREGULAR OPENING.

WHITE.	BLACK.
Rev. J. Owen	Gesa Maroczy
(Liverpool.)	(Buda-Pesth.)
1—Kt to K B 3	1—P to K Kt 3
2—P to Q 4	2—B to Kt 2
3—P to R 3 (a)	3—P to Q 3 (b)
4—B to Q 3	4—P to R 4
5—P to B 3 (c)	5—B to Kt 5 (d)

7—Q takes B	7—P to Q B 3
8—Kt to R 3	8—Kt to Q 2
9—Kt to B 4 (e)	9—Q to B 2
10—P to Q 5?	10—Kt to B 4
11—B to B 2	11—Kt to K 2
12—P to K 4	12—P takes P
13—P takes P	13—Kt to Q 2 (f)
14—B to Kt 3	14—P to Q Kt 4
15—Kt to K 3	15—P to B 4
16—Q to K 2	16—R to Q Kt sq.
17—Castles	17—P to B 5
18—Kt to B 2	18—P to Q R 4
19—Kt to R 3	19—Q to B 4
20—P to B 4	20—P to Kt 5

21—Kt to Kt 5
22—K to R 2
23—P to R 3
24—B to B 2
25—B to K 4 (h)
26—P to Kt 4 (i)
27—P takes P
28—Q takes Kt
29—K takes Kt
30—B to K 3
31—B takes Q
32—P to K R 4
33—K to Kt 2
34—Q to Kt 4 (k)
35—K to R 3
36—Q to B 8 ch.
37—Q to B 7 ch.
38—Q takes R (l)
39—Kt takes P
40—Q to Kt sq.
41—R to Kt 2
42—Resigns.

NOTES.

- (a) 3 P to K 4 would be more mettlesome.
(b) Obtaining a favourable form of the "Indian Pianchetto."
(c) White makes but little of his opening.
(d) Herr Maroczy's methods of play are certainly original, but he is evidently a master in the art of developing a game of chess.
(e) The proper post for the Knight was on Q B 3, which would have saved that piece from a chapter of accidents.
(f) Very well played.
(g) To make way for the Knight.
(h) B to Kt sq. is still less satisfactory.
(i) B to Q 4 might be tried here, the text move is rather desperate.
(j) The beginning of a really magnificent and far-seeing combination.
(k) To 34 Q to Kt sq. threatening Kt to B 3, the reply would be B to Q 7.
(l) The depth of Black's calculations is now seen by his remarkably fine 38th move. Of course, if K to R 4 threatening mate, 39 Q to Kt sq., and Black cannot afford to win the Q, as Kt to B 3 would arrest the advance of the Kt P.

GAME No. 537.
VIENNA OPENING.

WHITE. I. Gunsberg.
1—P to K 4
2—Q Kt to B 3
3—P to K Kt 3
4—B to Kt 2
5—K Kt to K 2
6—P takes P
7—P takes P
8—P to Q 3 (b)
9—P to B 3
10—P to Q R 3 (c)
11—B to Q 2
12—Q to B sq.
13—Kt to Q sq.
14—Kt to B 2
15—Castles
16—K to R sq. (f)
17—P takes P
18—P to Q B 4 (g)
19—K to Kt sq.
20—B takes Kt (i)
21—Kt takes P
22—Q to K 3 (j)
23—Q R to B sq.
24—K R to K sq.
25—Kt to K 2
26—Q takes Kt
27—Q to B sq.
28—P to B 5
29—Q takes B

BLACK. W. H. K. Pollock.
1—P to K 4
2—K Kt to B 3
3—B to B 4
4—Castles
5—P to Q 4 (a)
6—P to B 3 (a)
7—Kt takes P
8—B to K Kt 5
9—B to K 3
10—B to Kt 3 (d)
11—P to Q R 4
12—R to B sq. (e)
13—Kt to Q 4
14—P to B 4
15—P to H 5
16—P takes P
17—R to B 4
18—R to R 4 ch.
19—Kt to B 5 (h)
20—P takes B
21—Kt to Q 5!
22—R to R 3
23—Q to Kt 4
24—Q takes P
25—Kt takes Kt ch.
26—R to Kt 3
27—B to R 6
28—B takes B
29—Q takes Q mate.

NOTES.

- (a) This makes a very lively game of it. White, of course, is bound to take the Pawn, or submit to an inferiority of position without the Pawn plus.
(b) To show the hopelessness of taking the Knight 8 B takes Kt, P takes B; 9 Castles, B to R 6; 10 R to K sq., Kt to K Kt 5; 11 Kt to K 4, Kt takes B P; 12 Kt takes Kt, Q to Q 4, and wins.
(c) Almost a lost move; B to Kt 5 seems better.
(d) Kt to Q 4 is more aggressive. The text move provides for 11 B to Kt 5, P to K R 3; 12 B takes Kt, Q takes B; 13 Kt to K 4, Q to K 4, followed by P to B 4.
(e) This has considerable influence on White's game, and makes it almost impossible for him to stir the Kt from K 3, on account of the attack on both sides by Kt to Q 5.
(f) It would be highly dangerous to attempt to win a second Pawn at this point.
(g) Of no avail. He should have defended himself with P to K Kt 4 here, or B to R 3, followed by K to Kt 3.
(h) A successful bid for brilliancy.
(i) If 20 P takes Kt, Q to R 5 and wins.
(j) The position is very curious. White obviously dare not move a Knight; 22 R to K sq. is probably his best.
We are indebted to the "Baltimore News" for the score and notes. The game is a fine specimen of Mr. Pollock's brilliant attacking style.

GAME No. 538.

THE TOURNAMENT AT SIMPSON'S.
Appended is an instructive specimen from the above Tournament—

25—Q to B 2
26—Resigns.

The game illustrates the danger of playing openings by rote, in imitation of a successful expert, without personal investigation of the reason that prompted such variation—e.g., 4... P to B 3—an inferior defence—is made on the off chance that it might be possible to defend the Gambit pawn. Black was fortunate enough to have this opportunity by White omitting to play 5. P to K 3 instead of bringing out the K Kt. In reply to this Black should have continued 6... P to Q Kt 4; 7. P to Q R 4, B to Q 2. As a matter of course, White would have obtained a temporary attack; but a pawn ahead is a substantial advantage not to be dissipated.

Lee, perceiving his error, had to resort to the inferior 7. B takes Kt in order to regain the pawn, whereupon Black should have had little difficulty in maintaining an even position. Passing over 8... Kt takes Kt, which strengthens White's centre, and 11... Q to B 3 instead of 11... Q to B 2, he could still have kept an even game had he moved 12... P to K 4, opening his game, and liberating the queen's bishop. He further weakened his position with 13... P to K B 4, and after White got his looks in play, Black was quite helpless.

After the one mistake of 5. Kt to B 3 Mr. Lee played the game with commendable skill.

Black having chosen an inferior variation with 3... B to Kt 5 (the correct moves being either 3... P takes P, or 3... Kt to K B 3) got into difficulties early, leaving White the choice of various favourable continuations, one of them besides that in the text being 5. P takes B, P takes P; 6. Q takes Q ch., K takes Q; 7. P to K B 4, &c.; but the game would then have been won by a slow process, thus depriving the reader of such a sparkling specimen as the above game. Black defended an uphill game ingeniously enough, as may be gathered from the following enumerated features of interest—

11... B to Q 5 is better than 11... B to Q 3 as White would reply 12. Kt to Kt 5. 13. P to K 5 to make room for the Kt is the initiation of a fine attacking combination, culminating in 21. R to K sq. threatening R to K 6. 23... P takes Kt is immediately destructive, although not easily transparent. Better would have been 23... R to Q 3. 24... Kt to R 4 is as good as anything else, the game being equally over after 24... R takes R. White finished now with the brilliant sacrifice of the queen, and Black resigns, for if 28... Q takes B mate follows in three moves.

GAME No. 540.

29—Resigns.

A fundamental principle in close openings has been disregarded by Black, viz., 5... Kt to B 3 before playing P to Q B 4. Logically, if White tries to establish a strong centre, Black's object should be to prevent or to break it, and that is the reason for P to Q B 4. Lohman, with good judgment, opens his game with 6. P to K 4, thus converting the game into a French Defence, in which the advance of the Q B P, neglected by Black, is essential. After the initial mistake Black could have still somewhat mended matters with 8... Kt to K 2 and Kt to Kt 3 or Q 4, whereas he lost time by moving the developed K B twice more, enabling White to institute an immediate powerful king's side attack, which, however, could have been somewhat lessened with 17... B takes Kt; 18. P takes B, Q takes P; whilst in retiring 17... Kt to Q 4 he enabled White to practically terminate the game with 19. P to Kt 6. The ending is very prettily played by Lohman. He disdains justly to win the exchange; but takes off the knight, as the open king's file is of more value. For the final combination he has to play 24. K to Kt sq. before attacking the queen with B to B 4, otherwise Q takes B ch., and the bishop's move is followed by 25. B to Q 2, and the game is over. If 25... B takes B, then 26. Kt takes B, and mate in two moves follows.

MAIL STEAMERS.

THE NEXT MAIL IS DUE
From America per O. & O. Co. Friday, Aug. 2th.
From Europe, via Hongkong per N. D. Lloyd Wednesday, Aug. 5th.
From Hongkong per F. & O. Co. Saturday, Aug. 8th.

PASSENGERS.

ARRIVED.

Per British steamer *Empress of China*, from Vancouver, B.C.:—Mr. and Mrs. G. Marshall Allen, Captain and Mrs. J. F. Allen, Mr. and Mrs. F. Anderson, Mrs. A. P. Bowes, Mrs. D. E. Brown, child and nurse, Prof. W. H. M. Christie and son, Mr. Henry Cecil, Mr. W. H. Decker, Mr. T. M. Garland, Mr. J. R. Gleason, Mr. E. H. Grimani, Mr. H. B. Hitchings, Mr. J. T. Hoyt, Mr. W. Harrison, Mr. Stanley Leathes, Mr. J. A. Norcross, Mr. and Mrs. Nutter, Mr. W. Nutter, Jun., Rev. and Mrs. W. A. Noble, Mrs. Post, Mr. Richardson, Mr. J. Calder Turner, Mr. T. Wooyeno, Mrs. H. A. MacLeod and 2 children, and Miss Effie Tucker in cabin.

Per British steamer *Myrmidon*, from Shanghai:—Mrs. Bois, 2 children and nurse in cabin.

Per French steamer *Yarra*, from Marseilles via ports:—Marshal Marquis Yamagata, Mr. Tsudzuki, Colonel Ikeda, Lieut.-Colonel Tojo, Dr. Hirai, Mr. Kawasaki, Mr. Kadji, Mr. Terasaki, Mr. Kojima, Mr. Eugend, Mr. Poular, Mr. and Mrs. Meiten, Mr. Bent, Mr. Albares, Mr. Mounier, Mrs. Tenny, Mr. Lee Leng Bee, Mr. Pokotelow and boy, Miss Wassilief, Mr. Gradwell, Mr. Van Nicrop, Mr. G. Thomas, Mr. H. Botel, Mrs. Miotto, Mr. Tsuruya, Mr. J. B. Perl, Mr. and Miss Zialliacus and 2 children, Mr. and Mrs. Collins, Miss Schmidt, Mr. Fukuda, Mr. Jones, Mr. Hori, Miss Lots, Mrs. Toyama, Mr. Georgeani, Mrs. Sauze and 3 children, Mr. Kei Chow, Mr. Vingit Poon, Mr. Ch. Fun, and Mr. Grantoff in cabin; 2 Chinese in steerage.

Per British steamer *Glenesk*, from London via ports:—Mrs. Cain, 4 children and nurse in cabin.

Per American steamer *City of Peking*, from San Francisco via Honolulu:—Miss Clara Sutto, Mrs. Dr. Cushing, Lieut. V. S. Nelson, Lieut. H. F.

Barroll, Lieut. Lucien Young, Lieut. and Mrs. C. E. Colohan and child, Lieut. and Mrs. John Gibson, Captain S. A. Day, Ensign B. F. Hutchinson, Mr. A. A. Grieg, Mr. H. J. Holm, Mr. Paul De Witz, Mr. W. F. Sands, Mr. J. R. Duff, and Mr. Chas. Duff in cabin, and Mr. E. Prinz in European steerage.

Per British steamer *Empress of Japan*, from Hongkong via ports:—Mrs. and Master Haskell, Mr. R. Henderson, Mr. Bhesawai, Mr. M. Irving, Mr. W. Gage, Mrs. A. Campbell, 3 children and nurse, Mrs. Davis and child, Mr. and Mrs. A. Gregson, Mr. and Mrs. Kragh and 2 children, Miss A. Ballard, Mr. G. Duff, Mr. T. Brower, Mr. R. Ehlers, Mr. E. S. Bell, Captain Welman, Mrs. Grant and infant, Mr. and Mrs. S. Rosendale, Mr. G. Miller, Mr. C. Holliday, Mr. and Mrs. Liddell and infant, Mr. H. Wilcox, Mr. E. Smith, Captain Froberg, Mr. E. Irwin, Miss T. Stewart, Surgeon-Major Heuston, Mr. T. Okamoto, Mr. H. Walker, and Mr. and Mrs. D. Braidwood in cabin. For Vancouver, B.C.:—Mr. F. Deacon, Miss Archer, Mr. and Mrs. Suenson and 3 children, Mr. and Mrs. W. Shearer and 2 infants, Mr. Igarisheff, Mr. and Mrs. M. Gillem, Admiral Dunlop, Mr. J. Hawes, Mr. D. Hay, Mr. S. Shikato, Mr. Botel, Mr. J. Geen, Mr. and Mrs. A. P. MacEwen, Misses MacEwen and maid, Mr. Kolod, Mr. Abakumoff, Mr. M. M. Konosseswitsch, Mr. R. Allen, Captain J. P. McEwen, Mr. A. Heath, Mr. M. Matsuyoshi, and Mr. F. Bailey in cabin; 14 passengers in second class, and 313 passengers in steerage.

Per British steamer *Coptic*, from Hongkong via ports:—Mr. C. E. Finlason, Rev. H. Taylor and family, Miss J. Giffin, Miss N. Clark, Mr. G. E. Stewart, Lieut. R. R. Belknap, U.S.N., Mr. A. A. Thomas, Mr. Jubier, Mr. and Mrs. A. C. James, Colonel Preston, Miss Slade, Dr. V. Adriance, Mr. A. W. Frances, Mr. Y. Okita, Mr. Alfred Williams, Mr. L. M. Oberkotler, Mr. and Mrs. C. R. Gagan, Mr. James Flood, Mr. Lon Foo Kai, and Mrs. Quan Yuen and daughter in cabin; Mr. S. White and Mr. N. Van Horn in European steerage, and 190 Chinese in steerage.

DEPARTED.

Per French steamer *Salasia*, for Shanghai via Kobe:—Mr. G. Suchi, Mrs. G. Suchi and child, Mrs. V. Colomb, Mr. Colomb, Mrs. Colomb and child, Mr. A. A. Delmége, Mrs. A. A. Delmége, Miss Waters, Miss R. N. Martin, Messrs. F. J. Bailey, da Roza, G. Remedios, A. Souza, Schwob, M. Delbourgo, R. Finch and boy, Mrs. R. Finch, Mr. W. James Hancock, Mr. Raud, Mrs. Raud and 2 children, Miss E. Hawes, Mr. Ch. Strähler, Mr. Sato, Mrs. Sato and child, Messrs. O. Hayashi, K. Nishimura, S. Schieno, Consul-General Lu Hein Sang and boy, Messrs. Lo Joson, A. Laing, Chow Lung, J. M. Cotta; Shozo Tomonaga, Ogawa, Lam Pak Tsun, and Ku Mo Cheong in cabin.

Per British steamer *Empress of China*, for Hongkong via ports:—Mr. F. W. Reid, Mr. W. G. Bird, Mr. W. J. Tyack, Surgeon-Major S. Westcott, Mr. and Mrs. F. C. Heffer, Bishop and Mrs. Joyce, Rev. I. H. Correll, Rev. E. R. Fulkerson, Mr. and Mrs. J. S. Nazer, Mrs. C. W. Van Petten, Mr. F. L. Crompton, Mr. R. H. Woolfall, Mr. C. Radclyffe, Mr. J. McD. Gardner, Mr. Barnes, Mr. Currie, Mr. M. Peden, Miss Kidwell, Mr. and Mrs. M. Mess, Mr. V. E. Abraham, Lieutenant D. Power, and Mrs. G. K. Moore in cabin; Messrs. Chow Kong Sing and Chan Tsy Ming and infant in third class.

Per Japanese steamer *Saikio Maru*, for Kobe:—Mr. A. Katayama, Admiral Tsunoda, Engineer I. Ishiguro, Mr. A. Ishibashi, Mr. M. Ihara, Mr. Senda (Governor of Miyasaki), Mr. S. Megata, Mr. and Mrs. Notting, Master Drummond, Mrs. S. Tejima, Mr. G. Mitsui, Mr. M. Kawabuchi, Colonel Akimoto, Colonel Kuratsuji, Miss Case, Mr. T. Yokoi, Mrs. S. Baba, Master S. Takata, Mr. S. Kimura, Mr. Y. Nishimura, Mr. C. Morioka, Mrs. T. Nakamitsu, Mr. T. Kashimura, Mrs. Kashimura, Mr. and Mrs. Davidson, Mr. N. Koga, Mr. U. Hayakawa, Mr. W. Somekawa, Mr. Y. Kawakata, Mr. S. Kobayashi, Mr. S. Yamaguchi, Mr. K. Kashiwagi, Mr. Maltan, Mr. Y. Tamano, Dr. Moriya, Colonel Kaburaki, Mr. T. Machida, Mr. Yamagata, and Mr. Fukuhara in cabin; Mr. D. Satow, Rev. N. Clark, Miss Clark, Mr. S. Kadono, Mr. K. Okura, Mr. Y. Kusumoto, Mr. T. Tsukamoto, Mrs. and Master Akimoto, Messrs. Tejima, K. Ito, T. Tsurumi, J. Itami, and Masters M. and J. Shibayama in second class. For Shimonoeki:—General Isechi, Mrs. Isechi, Master M. Isechi, Mr. and Mrs. Nagai, and Mr. M. Hosoki in cabin; Mr. and Mrs. Ono, Mr. and Mrs. Sasaki, Mrs. I. Motomura, and Mr. C. Hirose in second class. For Nagasaki:—Messrs. I. Kaneko, A. Ferguson, and K. Nambu in cabin; and Mr. S. Asakura in second class. For Shanghai:—Mr.

H. D. Hawks, Mr. N. Nabekura, Miss Monti, Miss H. von Holton, Mr. W. S. Simpson, Mr. E. W. Monkhouse, Mr. R. E. Bredon, Mr. O. A. Madar, and Mr. Barnes Dallas in cabin; Mr. K. Inouye and Mr. K. Kimura in second class; 138 passengers in steerage in all for Kobe and ports.

CARGOES.

Per French steamer *Salasia*, for Shanghai via Kobe:—Raw Silk for Europe, 61 bales; Waste Silk for Europe, 59 bales.

Per Japanese steamer *Saikio Maru*, for Shanghai via ports:—Treasure, \$2,000.

REPORTS.

The American steamer *City of Peking*, Captain J. T. Smith, reports:—Left San Francisco the 11th July at 4.05 p.m. Arrived at Honolulu the 18th at 2.46 a.m. and left the same day at 5.27 p.m. Crossed 180° meridian on the 22nd. Arrived at Yokohama the 30th July at 5.42 a.m. Had fine weather and light breezes throughout the passage.

The British steamer *Coptic*, Captain I. Sealby, reports:—Left Hongkong the 22nd July, Amoy the 24th, Nagasaki the 27th, and Kobe the 29th at 6.40 p.m.; thence to port, light winds and smooth seas. Arrived at Yokohama the 30th June at 5.11 p.m. Passage from Kobe, 22 hours and 31 minutes.

LATEST COMMERCIAL.

IMPORTS.

Poor business all round. Yarn—A small sale at about previous rates. Grey Cloth not a single sale reported in either Shirtings or T-Cloths. Fancies—Nothing done since the sale of 3,000 pieces. Turkey Reds at a fractional decline. Woollens—Somnolent.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—3 1/2 yds, 38 yds, 39 inches	\$2.40 to 2.80

Sheet Iron	4.60 to 4.70
Galvanized Iron sheets	9.20 to 9.60
Wire Nails, assorted	5.30 to 5.40
Tin Plate, per box	5.00 to 5.30
Pig Iron, No. 3	1.65 to 1.67 1/2

KEROSENE.

Weak market and poor business. Holders want to be moving; and we shall probably see lower prices ere long.

American	\$2.15 to 2.25
Russian	2.10 to 2.30
Langkat	—

SUGAR.

Brown—A fair business at quotations. For-mosa sorts neglected. White—A moderate demand at previous rates.

	PER PICUL.
Brown Takao	\$3.75 to 3.80
Brown Manila	5.00 to 5.10
Brown Daiteng (New)	3.60 to 3.65
Brown Canton	3.45 to 4.25
White Java and Penang	6.50 to 7.00
White Refined	7.00 to 9.25

EXPORTS.

RAW SILK.

A few small purchases have been made, and the market may be said to have opened on the basis of quotations given below. The only transaction for America has been a parcel Kaimeisha Filature (from alien cocoons) at \$660. Settlements for the season to date are only about one-tenth the quantity at 31st July, 1895.

BISSET & URE'S SHARE REPORT.

Yokohama, July 30th.

Latest mails advices from Hongkong bear dates up to the 21st instant, and report the following changes in the share market:—

	18th July.	21st July.
H. & S. Banks	185 1/8 B.	187 1/8 B.
National Bank Founders'	\$115 S.	\$100 S.
North Chinas	Tls. 200 S.	Tls. 195 N.
Yangtze Insurance	\$152.50 Sa.	\$145 Sa.
Straits Insurance	\$28 50 S.	\$27 50 S.
Indo-China	\$55.50 S.	\$55 S.
Douglless Steamships	\$64 50 S.	\$64 50 B.
China Sugars	\$11 50 S.	\$11 N.
Luzon Sugars	\$67 50 S.	\$68 S.
Oliver Freehold A Share	\$8 Sa.	\$7 S.
do. B do.	\$3.75 Sa.	\$3.50 S.
Hongkong Lands	\$73 B.	\$76 B.
H. & W. Wharfs	\$52 N.	\$54 B.
Hongkong Hotels	\$23 B.	\$26 B.
Hongkong Electric	\$7 S.	\$6.75 S.
Dakin Crickshanks	\$6.56 S.	\$1 B.
Campbell Moores	\$5 N.	\$6 Sa.

The Report and Accounts of the H. C. & M. Steamboats have been distributed amongst shareholders. Besides paying a dividend at the rate of

6 per cent. (\$1.20 per share) and after allowing for repairs to the "Honam," the sum of \$17,000 is carried forward to a new account.

The crushings at the Raub Mines during the month ending 6th instant, gave an output of 1,000 ounces of smelted gold, being the yield from 2,550 tons of stone.

Local stocks remain unchanged. Grand Hotels are wanted at \$160, Japan Breweries at \$225, Langfeldts at \$185, and Debentures of most local Companies at quotations.

A BERLIN MANUFACTURER of SPIRITS requires an AGENT in YOKOHAMA and HYOGO, for the sale of his Spirits in Cases and Casks. Please address, stating full Particulars and references: J.W. 8566, care of RUDOLF MOSS, Berlin, S.W.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BARNES, in his work entitled "The Nile Tribu-
taries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

In certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining 'stock.'"
Sold by all Chemists and Medicine Vendors throughout
World, May 1st, 1896

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 8TH, 1896.

DEATHS.

On the 3rd inst., at Karuizawa, ALDORTH CRESSWELL, youngest child of Mr. and Mrs. W. Silver Hall, of Tokyo, aged three and a half years.

The Sisters of St Infant Jesus, of Yokohama and Tokyo regret to announce the loss that they have just suffered by the death of their beloved Sister Sr. EMMANUEL, who expired, after having received the sacraments of the Church, on the 4th instant, at the age of forty-nine years.

SUMMARY OF NEWS.

THE House of Commons has passed the Irish Land Bill.

THE *Ronin* has won the "Petrel Cup" this year.

MORE floods have occurred this week in the districts recently inundated.

RUMOURS are again current of several impending changes in the Cabinet.

MR. W. BARRIE, Supt.-Engineer of the N.Y.K. was assaulted in a dastardly manner in his private house on Thursday evening, by some

stokers recently dismissed from the service of the Company.

THE run on the new War-commemoration postage-stamps has been phenomenal.

THE thermometer at Shizuoka on the 1st inst., registered 94° Fah. in the shade.

LIEUTENANT THOMPSON, Queen's Edinburgh Rifles, has won the Queen's Prize at Bisley.

MR. CECIL RHODES has offered to come to London and stand his trial if the prosecution desire him to do so.

THE German gunboat *Illis* has been lost off the South-east Promontory, Shantung. Only ten persons were saved.

DETAILS of the recent fighting in Formosa come to hand very slowly, and even then require careful analysis to understand.

SEVENTEEN graduates of the Law College of the Imperial University were lately engaged by the Nippon Yusen Kaisha.

H.I.H. PRINCE FUSHIMI arrived at Shanghai on the 5th by the M.M. steamer. He is expected here on the 12th inst.

A TYPHOON has done an immense amount of damage at Shanghai and Hongkong. Some Europeans have lost their lives.

THE *Milke Maru*, the inaugural steamer of the N.Y.K.'s American service, left Yokohama for Tacoma, on Wednesday.

THE author of the attack on President Faure is named Francois. He is a lunatic, is poor, and his object was to attract attention to himself.

LIEUT.-GENERAL KATSURA, Governor-General of Formosa, now staying in Tokyo, will not return to the island until about the latter part of October.

REUTER announces that Li Hung-chang has bought artillery in Germany, and rifles in France, but intends to have the new Chinese navy built in England.

THE Imperial Meteorological Central Observatory Authorities have established a branch Observatory at No. 4, Kaigandori, Ichome, Yokohama, from 1st inst.

AT Okuzawa, Koma district, Yamanashi Ken a deposit of gold has been discovered, and the finders have applied to the authorities for permission to work it.

AN important letter despatched by the President of the Doshisha, Kyoto, to the Prudential Committee of the American Board Mission, has been published this week.

AGITATION still proceeds against the elimination of Yokohama from the Government's new double-railway scheme. The Government says that the plans are not yet completed.

DETECTIVE NAKAJIMA, of the Settlement Police, has succeeded in running to earth two burglars, who lately got away with various foreign property from houses on the Bluff and in China Town.

VISCOUNT ENOMOTO, Minister for Agriculture and Commerce, opened the Yokohama Silk Conditioning House on Wednesday, in the presence of a large and distinguished company of Japanese and foreigners.

MARQUIS ITO, in a speech delivered before an assembly of Tokyo and Yokohama merchants,

declared that the Government did intend to repeat the Hokkaido blunders in opening up Formosa. Private enterprise, not Governmental, was to be solely encouraged.

THE insurgents of the eastern part of Cuba are divided amongst themselves on the election of a successor to the late José Maceo in the command held by the deceased. It is said that many are in consequence going over to the Spaniards.

MR. JAMES WALTER, Chairman of the Yokohama General Chamber of Commerce, in a speech at a luncheon given on Wednesday, appealed, in the interests of public morality, that steps be taken to stop the import of the vile potato spirit now flooding the country in such large quantities.

MR. MAYEDA MASANA made a brief address concerning the matting traders of Japan, at the Gonikai meeting held on July 29th. He pointed out that the dealers themselves are much to blame for putting a bad article on the market. He urged the formation of a Union to see to the raising of the standards of quality.

THE news from Korea speaks of various resignations of Cabinet Ministers being sent in but not accepted; of a petition to the King for his return to his own palace; of the arrival in Seoul of \$40,000 deposited by the late Queen in the Hongkong and Shanghai bank; and of the overflow of the Han river at Seoul.

SIR MATTHEW WHITE RIDLEY, Secretary of State for the British Home Department, has advised Royal clemency being extended to Dr. Jameson—who has received 15 months' imprisonment—and his fellow prisoners—whose terms vary from 10 to five months—all of whom therefore have been returned to Holloway Gaol as first class misdemeanants.

FRANCE, RUSSIA, GERMANY, and AUSTRIA are in favour of the blockade of Crete to prevent the landing of Greek volunteers and the supply of arms to the insurgents, leaving the Turks free to restore order in the island. To this proposal Great Britain dissents, though agreeing to joint mediation of the Powers to induce Greece to fulfil her duties towards the Porte, and to bring the Cretans to accept a reasonable compromise. The German and Austrian press accuse Great Britain of acting in a spirit of selfish isolation to disturb the concert of Powers.

VERY little can be said about the Import trade, which remains much as reported last week. In Yarns and Manchester goods the business done is retail in character. Dealers in Metals hold aloof, the season, as usual, telling against much work in this department. In Kerosene, business is as dull as it can be, and further arrivals from America and Europe tend to a decline in values. The Sugar trade is not great; Browns go off slowly at gradually weakening rates, but for the business done in Whites prices have been fairly maintained. In the Silk market a few purchases have been effected, but these are only retail in extent. Directly a few small bargains were concluded in Filatures and Re-reels, holders tried to force up prices, thus at once checking whatever tendency there might be to operate; while news came from Shanghai that the trade is stagnant, and that holders are inclined to except less money. In Waste Silk nothing has been done, but samples of new fibre have arrived and been shown round. There is very little moving in the Tea trade, and the leaf on offer remains unchanged in value. Exchange has been steady and unaltered till yesterday, when rates declined one-sixteenth all round.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Exceptional dullness has characterized the writings of the vernacular press during the week. In no journal do we find anything striking or interesting. Such unusual torpor may have been induced by the heat of the dog days, or it may be the calm that precedes the storm.

The *Nippon* has a long article, the writer of which employs the *nom de plume* of "Nichinan." He treats of the nobility of Japan. After casting a shower of invectives and rude jests at the nobles, he advises the Government to adopt two measures for keeping the number of titled persons within a reasonable limit. The first is to reduce a title by one degree each generation, so that a Prince would revert to the ranks of the *heimin*, or commoners, in the sixth generation. This system which "Nichinan" declares to be in force in China, would effectually lessen the number of title-bearers. The second measure recommended is to create life peers. "Thus and thus alone, Japan's peerage can be purged of unworthy members." These are hacknied contentions, but being brought forward again just at the time when the granting of so many patents of nobility to soldiers, statesmen, and other worthies is yet fresh in public memory, they may have roused some little interest. The same paper has also something to say about Princes and Princesses of the Blood, but that part of its writing we need not take the trouble of reproducing, so entirely worthless is it. Years ago similar views about Japanese peers were ventilated in the columns of the *Nippon-jin* by Mr. Kikuchi Kumataro, reputed to be one of the deepest thinkers among the rising generation, but being evidently out of touch with the spirit of the nation, they remained unheeded.

The *Nichi Nichi* has only two articles of any importance; one entitled "On the Guild of Exporters of the more important Staples," and the other "The Administration of Formosa." An epitomized reproduction of the latter deserves attention:—Nothing is more urgently required in Formosa than to increase facilities for communication, especially those between Japan and the new territory. As yet, there are only a small number of merchants in the island, but few though they be, they are in no enviable situation, so considerable are the difficulties to be overcome in carrying merchandise from Japan. They are unable to make any confident calculations, and are often obliged to lose opportunities for securing large profits. Under these circumstances, consumers have to pay exorbitant prices for things of Japanese production, and the mere problem of living is beset with hardships unknown under ordinary conditions, while comforts are practically inaccessible. Of course, while things remain thus, anything like brisk immigration must be altogether out of the question. The ships now plying between Japan and Formosa for the benefit of the public are only three in number and of small size, and the service is limited to three trips monthly. It is essential that steps be taken to increase the number of ships to six or seven, of from two thousand to twenty-five hundred tons, and to arrange that there shall be at least ten sailings each way per month. Further, a regular service must be established along the coast of Formosa; that is to say, between Kelung, Tamsui, and Taku (a distance of about 240 miles); between Formosa and the Pescadores, and between Formosa and Amoy, Hongkong, and other places in China. On land a grand trunk railroad, traversing Formosa from north to south ought to be built, preferably as a State road. But should financial considerations forbid the Treasury to undertake the construction, the Government may fall back on private enterprise, under strict provisions as to the completion of the work in the shortest possible space of time. Another matter demanding urgent attention is the making of ordinary roads communicating with the proposed railway on both sides, there being now no roads in

Formosa worthy of the name. The article further urges the Authorities to find means for laying another cable between Japan and Formosa in addition to the one now nearly laid, and then goes on to argue that some of the powers vested in the Governor-General should be transferred to the local Governors. In our contemporary's opinion, somewhat less centralization of power is necessary to enable the local Governors and their subordinates to act more vigorously and efficiently. The number of prefectural offices and the force of police should also be increased, and it is of pressing importance that the Authorities should endeavour to restore a thorough *entente* between the civil and military functionaries, whose differences are now a source of much embarrassment. Numerous other improvements and changes are suggested by our contemporary, but we shall limit ourselves to merely indicating them. They are, a radical alteration in the *personnel* of the Civil Administrative Office; the adoption of strict sanitary measures, there being four sick persons out of every hundred, whereas the ratio in Japan does not exceed three per cent.; the encouragement of the study of the Japanese language, and the establishment of a sound system of taxation, so as to make the island self-supporting. We have spoken of this article as one, but in point of fact it has extended over four issues of the *Nichi Nichi*, and is not yet concluded. We may therefore have occasion to refer to it again.

A well-known publicist whose social standing renders the *Tokyo Asahi* a scarcely suitable vehicle for the expression of his opinions, says that those who from the platform of the Press discuss Japan's foreign policy, may be divided into two classes; namely, men that advocate the necessity of forming an alliance with England, and men that look for a similar union with Russia. Since the Liaotung fiasco, the majority of the vernacular journalists have ceased to think it possible to maintain peace in the East by Japan's unaided efforts, and have devoted themselves to looking for a Foreign Power with which Japan might form an alliance for offensive and defensive purposes. Surely, says the writer, this is like groaning when one has no disease. Japan's present circumstances do not seem to justify her in assuming an aggressive attitude towards any Power. No alliance looking to that end comes within the field of practical politics. Neither has she any cause to seek an alliance with a Great European Power for defensive purposes. Further, without any exercise of very profound reflection, one can understand that neither England nor Russia would be prepared to involve herself so closely with Japan as to accept a share in all the latter's belligerent risks. Anything of that kind is no better than the unpractical fancy of political dreamers. Under the circumstances, Japan's best policy it to stand alone, boldly erect, taking all possible measures to make herself respected by foreign Powers. We (*Yapan Mail*) may note that the view expressed by the above writer seems to be obtaining increased allegiance daily among Japanese publicists.

The *Kokumin* has an article entitled "Russia and the Sôul-Fusan Railway," the gist of which is as follows:—The Sôul-Jinsen railroad is to be built by Americans, the Sôul-Wiju line by Frenchmen, and the road, or roads, to the north of Gensan by Frenchmen also. If now the concession for the Sôul-Fusan line be denied to Japanese, it will be a bitter blow to our country's prestige. Whether the Korean Cabinet will grant the Japanese application seems to depend entirely upon Russia's volition. From Russia's standpoint, it is natural that she should exert her influence to bring about the rejection of the Japanese proposal, if she thinks the Ito Cabinet capable of going to war on occasion, for then the possession of such a line would be of great military value to the Japanese. But if, on the contrary, she judges the Japanese Cabinet unwilling to fight under any circumstances, she

will urge the Korean Ministers to have the line constructed by Japanese promoters. Hence the question of the railway lies, not between Japan and Korea, but between Japan and Russia. Under the present aspect of affairs, our contemporary regrets to say that the proposed railroad, though built by Japan, may one day confer advantages, not on its builder, but on Russia, for what would become of it should the great Northern Bear take Korea wholly within his embrace? It goes without saying that this article is profusely embroidered with abuse of the present Government, but that kind of thing is so hacknied in the columns of the *Kokumin* that we omit it. Perhaps, however, we ought to assure our readers that we have not travestied the *Kokumin's* interpretation of Russia's attitude towards the Sôul-Fusan railway.

The *Mainichi Shimbun* and the *Foros Choho* have each a leader relating to Marshal Marquis Yamagata. Both write in a remarkably similar strain, though in a very different style. The former adopts a statesmanlike tone, self-contained and dignified, whereas the latter adopts the language of a political agitator. Neither journal attaches any political importance to his Excellency's return from the Coronation fête. They grant that he is a sincere patriot, but refuse to count him a great statesman. Nothing in the way of political change, they emphatically allege, will result from his return, and they advise their readers not to be troubled by rumours pointing to the possibility of the Marshal's influence being exercised to cause a Ministerial change.

The *Kokumin* urges Japanese noblemen to take upon themselves the work of encouraging and patronizing science, art, literature, and the drama. If they pursue their present courses they will forfeit all their dignity in the eyes of the people. This old-fashioned advice is addressed, if we do not mistake, to peers now playing rather a prominent part as buyers of shares, bonds, lands, and objects of virtu.

The *Chu-o Shimbun* reproduces an opinion said to be held by a certain diplomat, that Japan will not do well to insist on the letter of the Shimonoseki Treaty in the matter of Chinese import duties. If China yields to Japan with regard to these duties, the most-favoured-nation clause, formidable in the eyes of the Peking Government, will immediately come into play and deprive China of one of her chief sources of revenue. In that event, not China alone but also Japan will suffer, for Japanese manufacturing industries hereafter started in China will encounter terrible competition from American and European manufactures imported free of duty. Again, a concession by Japan on this item of the Treaty may, in the future, purchase more valuable concessions on China's part in other directions. This question is one that persons having pretensions to diplomatic skill ought to reflect upon profoundly.

The *Kokumin* advances the strange opinion that official life makes a man silly, whereas non-official life sharpens his wits. For example, Count Matsugata has made a great advance in knowledge and perceptive power because he has been out of office for some time. Marquis Ito and Count Kuroda, on the contrary, have taken many retrogressive steps because they have been so long in office, surrounded by none but adulators and flatterers.

The same paper assumes the air of a statistical prophet, and reminds its readers that an act of violence by Russia against Korea may be expected soon, inasmuch as the Great Northern Power's history shows that it deals a blow against some foreign country once in every period of about twenty years. In support of this view, our contemporary, points to 1828, 1853, and 1877 as the years in which Russia attempted the occupation of the Balkan Peninsula.

The *Tokyo Shimbun* passes severe criticisms upon Counts Okuma and Matsugata, but the feeling of antagonism now existing between the

Liberal Party, of which the *Tokyo Shimbun* is the organ, and the old Progressionists is so bitter that their attacks upon each other do not fall within the category of reasonable discussion, and need not be reproduced.

The *Chugai Shogyo Shimpō* (Home and Foreign Commercial News), warmly congratulates the Nippon Yusen Kaisha upon the inauguration of the American service, and gives a hearty send off to the *Miike Maru*. Our contemporary says, in this context, that the sailing of the *Tosa Maru* for London and that of the *Miike* for Seattle are two important facts to be specially noted in the history of Japanese navigation. It predicts that the public will soon see the Yusen Kaisha's line to Australia opened, and concludes by declaring that the State ought to extend as much aid and protection as possible to a company so thoroughly imbued with the spirit of maritime enterprise.

EDITORIAL NOTES.

A REVOLUTION IN THE MANUFACTURE OF IRON.
THE following very interesting matter is taken from a recent issue of *Fairplay* :—

Industrial revolutions are wrought so quietly that to the common crowd they frequently appear startlingly sudden. And an industrial revolution is in process just now that, if the auguries are sound, will play the dickens with the iron and steel trades of the world. The satisfactory part of the prospect is that the impending change is to be all in favour of this country. Some vague and inaccurate statements have been circulated lately about some experiments in the manufacture of iron proceeding in the neighbourhood of Glasgow—so vague that the general public merely stared, and so palpably inaccurate that the "trade" merely grinned. I happen to know a little more about the matter than my neighbours, though I have thought it more discreet to let them expose their ignorance. The fact is that a small but powerful and wealthy syndicate are working out now two separate ideas which if carried out, as I believe there is every reason to believe they will be, will both solve the land problem in Scotland and Ireland, and give us the supreme mastery of the steel trade of the world. The first of the processes has reference to the utilisation of peat bogs in the manufacture of fuel. Of course, everybody who has been in a Highland shanty or an Irish cabin, knows that peat makes a splendid smokeless fire, and most people who have been abroad, and kept their eyes open, have seen peat on sale and in use even in the towns of Germany and Holland. Now, dried peat, as we see it stacked against a Highland cottage, is one thing, and a peat bog is another. The problem to solve is how to convert the sodden mass of the bog into combustible material, at a cost which will make it cheaper than coal? This problem has been solved by an invention, the principle of which is kept secret, but the point of which is the utilisation of the natural gas in the peat-moss as fuel to dry the whole mass.

By a clever arrangement of furnaces the slimy mass of bogs is converted into a hard, dry material absolutely free from sulphur, which, when converted into charcoal, is as near as possible pure carbon, and superior to the best oak charcoal. So far good, and if works are erected on Irish and Scotch peat bogs it is claimed that the fuel can be delivered into the towns for sale at a lower price than the best coke, and without its deleterious constituents. But that is only one part of the design; as the charcoal made from peat is absolutely free from sulphur and phosphorus, its utilisation in the smelting of iron and the manufacture of steel is of the very first importance. When you smelt iron ore with coal or common coke you impart to the iron some of the impurities in your fuel, and your iron requires to go through a purifying process before it can be turned into steel. If, however, you can employ pure fuel in your smelting operations you should have as a result pure iron ready for adaptation to the highest purposes. Peat carbon is a pure fuel, and by smelting ores with it a pig iron is obtained which is both malleable, ductile, and tensile in the highest degree. This pig in fact is pure charcoal iron, and thus we are on the way to making steel direct from ordinary iron ores without any intermediate processes.

This means a very big thing indeed, and the remarkable thing about smelting with peat carbon is that it produces as good results in iron from the commonest ores as from the best Swedish or Spanish ores. This is the claim, and the aim—that the enormous deposits of low-class and (at present) almost worthless iron ores in Ireland and Scotland can be used to make pig-iron as good as is now smelted from the best and dearest imported ores. Here is a double result in the utilisation of native products. A third result claimed is that peat charcoal is more beneficial and more economical to use in the hardening of armour-plates than the ordinary Harvey process, and that by it a harder plate can be produced in a third of the time. Now, these claims are not mere chemical theories

and laboratory illusions. The processes are now actually in operation on a practicable scale in an experimental works which the syndicate have started in the West of Scotland, with the object of obtaining an exact record of costs, etc., before operations are begun on a scale to revolutionise the iron trade. In that syndicate are included a Cabinet Minister of great influence in the Midlands, one of the foremost steel manufacturers in Scotland, and a territorial magnate of Argyllshire with thousands of acres of peat moss at disposal. It is not intended to offer the process on royalties, but to erect works for the manufacture of peat-carbon steel, and a Company will be formed out of the syndicate.

We commend the above to the notice of the officials of the Department of Agriculture and Commerce, who are now so zealously and industriously engaged in making arrangements for the establishment of an iron foundry in Japan.

JAPANESE WAR-SHIP ORDERS.

THE London correspondent of the *Manchester Guardian* has learnt how the orders for the vessels included in the new Japanese naval programme are to be distributed, the programme itself having been worked out in detail and approved by the Japanese Parliament. It has been decided that out of fourteen vessels (excluding torpedo-boats) twelve are to be constructed in England and two in the United States. The twelve include four ironclads and four first and two second-class cruisers. The vessels ordered in the United States are second-class cruisers. An effort will be made to build the remainder of the vessels included in the programme in Japan itself. We (*Japan Mail*) give this note for what it may be worth.

RIVERS, THE BEACH COMBER.

RIVERS, the ex-circus hand, who came from Shanghai a year or so ago as a super in a theatrical company, went on the beach at Yokohama very quickly. After passing several terms in the U.S. Consular jail here, he wandered down to Kobe. Again his life at a treaty port was varied with periods of incarceration in the American lock-up. Next Nagasaki received the unwelcome visitor and there the local police found him a thorn and a weariness whenever he was out of jail. In some mysterious way he managed to get to Shanghai. But Shanghai will not have him, the Mixed Court there, before which he appeared on the old charge—"drunk and incapable"—informing him that he would be sent back to Nagasaki, to which he replied, "Oh, Lord, Lord, that's awful."

THE LOSS OF THE "ILITIS."

THE *Nagasaki Shipping List* has been supplied by Mr. G. Müller Beeck, H.I.G.M. Consul at that port, with the following list of the officers of the ill-fated gun-boat *Ilitis* :—

Commander—Capt.-Lieut. Braun.
1st Officer—Lieut. Von Holback.
Lieut. Franstaedter.
Lieut. Praske.
Dr. Hildebrandt.
Assistant Paymaster—Loss.
Engineer—Hill.

The *Ilitis* was in Japan in October last, under the command of Capt.-Lieutenant Ingenohl. In May last a portion of the officers and crew were relieved, including the captain.

H.M.S. "EDGAR."

At ten o'clock on Tuesday morning, July 28th, the *Edgar* left Hongkong for England. Unfortunately, a heavy shower of rain fell soon after the buoy was left, and consequently the hundreds of sailors who had mounted the rigging of the men-of-war in the harbour to give their departing friends a warm send-off got drenched, but nevertheless there was no mistake about the heartiness of their lusty cheers, and, judging by the ringing responses, the *Edgar* men warmly reciprocated the friendly feeling evinced. —*Daily Press*.

THE LOST "NARONIC."

A TELEGRAM appearing in the American press says:—A dispatch from London stated that word had been received at the White Star Company's office in London that a bottle has been picked up recently at Hoylake, near Birkenhead, containing a piece of paper with this message :

"Struck an iceberg; sinking fast; mid-ocean, *Naronic*—Young." No word of the find was received at the White Star office in New York. The *Naronic* was one of the largest of the freight steamers of the line and was lost in mid-ocean with all on board in February, 1893. She left Liverpool on February 11th of that year, bound for New York with a cargo and crew of ninety and a company of cattle-men. In the following October the captain of the Norwegian ship *Emblem* reported at Buenos Ayres that on July 21st, south-west of the Azores, he picked up one of the *Naronic's* boats, bottom side up and covered with barnacles. It had a hole knocked in the bottom. No other trace of the lost steamer was ever found.

DETECTING A THIEF.

DETECTIVE NAKAJIMA has run another thief to earth in the person of Mihori Tatsugoro, who stole a clock and other articles valued at \$80, from Lai Ping-won, compradore of the M.M., during the confusion caused by a recent fire in China Town. The man happened to pawn a blanket that was among the treasure trove, and this led to his arrest. Most of the stolen articles were recovered.

NARROW ESCAPE OF MISSIONARIES.

SEVERAL of the missionaries staying on Mount Hiezan, near Kyoto, had a narrow escape last week, says the *Kobe Herald*. During the storm that was raging two trees about a foot from Dr. Gordon's tent were struck by lightning. A long scar from the top of each tree to the base now marks the course of the electric fluid. The shock was felt by the occupants of the tent.

SIR JOHN PENDER'S SUCCESSORS.

ADMIRAL SIR LEOPOLD HEATH has been elected Chairman of the Eastern Extension, Australasia, and China Telegraph Company, in place of the late Sir John Pender. As regards the Eastern Telegraph Company, the Marquis of Tweeddale is elected Chairman in the same succession, and Mr. Denison Pender, the Manager Director, becomes Vice-Chairman.

H.M.S. "GRAFTON" AND THE WHALE.

DURING the outward voyage of H.M.S. *Grafton* a somewhat curious incident occurred. A large whale (about 60 feet long) was caught on the ram of the ship one day out from Colombo. Between Aden and Colombo heavy weather and a strong monsoon were experienced and the ship rolling, the main top-mast, which was rigged with a big semaphore, was carried away.

THE LOSS OF THE P.M. "COLOMBIA."

It appears that the P.M. steamer *Colombia* was going at the rate of 14 knots when she struck the rocks near Pigeon Point, Pescadero, California, on the morning of July 14. There was a dense fog at the time, and Capt. William A. Clark mistook a fog-whistle at Ano Nuevo for the signal from Pigeon Point, which place is 38 miles from the Golden Gate.

CAPTAIN NORMAN JOY.

CAPTAIN NORMAN JAY, says the *N.-C. Daily News*, who is reported drowned in the recent typhoon in Hongkong, was formerly an officer on the blue-funnel steamer *Memnon*, and has recently been making a good living as an artist in Hongkong. He was a brother of the well-known artist in London.

GENEROUS CONTRIBUTIONS.

NAGASAKI contributed \$799 towards the relief of sufferers by the Seismic Wave. Admiral Alexieff, the officers and men of the Russian fleet at Vladivostok, subscribed over \$1,000 for a similar object.

THE "ZAROGOSA."

THE Mexican cruiser *Zarogosa* is making a cruise around the world. She is commanded by Admiral A. O. Monasterio, and carries a number of naval cadets, for whose benefit the trip is being undertaken.

LIEUT. MORRISSEY.

LIEUTENANT RICHARD MORRISSEY, R.N., late of H.M.S. *Mercury*, has been appointed to H.M.S. *Mersey* at Navigating Lieutenant.

FORMOSA.

August 3.

Detailed accounts thus far received of the operations undertaken for the suppression of the rebels in Formosa extend only to July 10th, and were published in our issue of July 22nd. Later news, by telegraph, placed us in possession of the main facts down to July 20th, by which date the insurrection was virtually suppressed, Yun-lin (or Hoon-nim) having been recovered and the insurgents driven back to their mountain fastnesses, whence their final dislodgement and extermination remained to be accomplished. The last movement of Japanese troops recorded in our detailed account was that, at 10 a.m. on the 10th of July, Lieut.-Colonel Imahashi's force attacked Peh-tou and took possession of it. Some 1,500 rebels had been assembled there originally, but the bulk of them fled during the night of the 9th, so that the number actually opposing Imahashi's attack did not exceed 400. Of the movements between the 10th and the 15th, we have no exact record, but on the latter date we find the Japanese forces working in four bodies, and routing out the rebels from place to place, until finally, by the 20th instancé, the plain districts are completely relieved of the bandits' presence, and the Japanese garrisons are once more in possession of their former stations. To attempt to unravel these operations without the aid of a map would be a hopeless task. We have had a map prepared, with the intention of publishing it for our readers' assistance, but there is no possibility at present of obtaining the local pronunciations of the place names. Only the Chinese pronunciations of the ideographs are within our reach, and these differ so radically from the terms used locally that identification is generally impossible.

With regard to the doings of the Japanese during the fortnight immediately previous to the outbreak of the insurrection, we find a very interesting account in the *Fiji Shimpō*. It is to be observed that to these doings the whole cause of the insurrection is referred by foreign correspondents relying on Chinese information. Hence the story told by Mr. Mogi Keijiro, the *Fiji's* correspondent, actually present with the forces, is specially worth consideration. Speaking of the state of affairs at Yun-lin, the correspondent quotes Hwang Tang-yung, formerly an Inspector-general in the Chinese army. "Yun-lin," this officer is represented as saying, "has always been a nest of bandits. There are practically no law-abiding citizens there. They are always ready to rebel when an opportunity occurs. The most influential man among them is Chien I, at one time a general in the army of Liu Yung-fu. It is this man's habit, once a year, to visit Teu-liu (Tew-lak?), when all the inhabitants send him presents of money, half of which he divides among the lower orders to court popularity, and the remainder he keeps for himself. The officials bribe the bandits to leave them undisturbed, and the well-to-do folks purchase immunity from robbery by large payments. Thus the bandits have grown so powerful that the officials of the Chinese Government, previously to the Japanese occupation, never attempted to meddle with them. If they are to be dealt with, it must be in the most thorough manner. In January of this year, when the insurrection took place at Taipei, the leader of the northern rebels planned with Chien I that an insurrection should take place at the same time in the central districts. The rapid suppression of the northern rebellion, however, and the severance of communications with the central districts, defeated this scheme. Chien I escaped to the hills, where he lay concealed, from time to time making raids into the plains."

From this point the *Fiji's* correspondent takes up the narrative as follows:—"Our troops made two or three attempts to rout out the bandits, but these, whenever a detachment of any size appeared, would disperse and engage in peaceful occupations, only to re-assemble and resume their raids and robberies when they saw the coast clear. Thus it fell out that no really effective steps were taken against them, and

things culminated in the recent disturbance. For the bandits gradually acquired confidence from the immunity they enjoyed, and whereas at first they had not ventured farther into the lowlands than a village several *ri* distant from Teu-liu (Tew-lak), they made their appearance by and by in Teu-liu, and committed daring outrages there. On the 9th of June, they burglariously entered houses, and on the 12th of that month they fired a volley at the offices of the local administration. After that, strict measures of precaution were adopted, day and night, the head of the local administration and the officer in command of the garrison and of the gendarmes acting in concert. Three of the bandits were arrested, and they confessed, on being examined, that they had come to reconnoitre the position, under orders from their chief, Chien I. Subsequently, over a hundred suspicious characters were apprehended, and some twenty of them were proved to be connected with the bandits. Considerable information having thus been obtained, Captain Furuichi, the Commandant of the garrison, placed a detachment of 20 soldiers and 2 gendarmes under the command of Lieutenant Nakamura and sent them to search Ta-ping-ting. This detachment fared very badly. It was surrounded by the brigands, and lost full half of its number in killed and wounded, Lieutenant Nakamura himself being killed. Intelligence of this disaster having reached Chia-i, Colonel Ito set out from that place on the 15th of July with a company of infantry, and arrived in the neighbourhood of Ta-ping-ting, where the bandits were assembled, on the 17th. But before proceeding to attack the place, he decided to await the coming of his artillery. Meanwhile, the bandits, seeing the resolute measures about to be adopted against them, decamped, for the most part, during the night, or went into hiding. On the 18th, Colonel Ito's force searched the various hamlets in the vicinity, and apprehended several bandits, who were decapitated or bayoneted, the houses where they had been found concealed being all burned. The bandits, finding it impossible to lie *perdu* in the face of this vigorous search, assembled once more in Ta-ping-ting and made preparations to fight, which fact being communicated to Colonel Ito, he advanced, on the 21st, to Lin-pa-pu, and delivered an attack from the bandits' rear, whereupon the bandits fled to their mountain fastnesses. Colonel Ito's force then scoured the district westward of Chin-hung-lin, after which his troops were withdrawn. This was on the morning of the 23rd of June. The next day, Mr. Matsumura, head of the local administration, assembled the principal men of the villages in his district, and explained the situation to them in a conciliatory manner, with the result that they expressed regret for having connived at the concealment of the bandits, and gave in a list of the ringleaders. But no sooner were the bandits assured that the Japanese troops had been withdrawn than they emerged from their mountain fastnesses, and assembled once more in Ta-ping-ting. A reconnoitering party sent out on the 25th found a number of the bandits at Lin-tsz-tow, a place some 5 miles south of Tew-lak. Two of these were killed, and the detachment, pushing on to the neighbourhood of Ta-ping-ting, found the place in a state of military defence. On the 27th, over 30 bandits attacked the gendarmes in Liu-pa-pu, and, the following day, the attack being renewed in force, the gendarmes were driven from Liu-pa-pu, losing 4 killed and having 7 wounded. The bandits numbered over 300. They levied supplies of provisions from the villages around and made all dispositions for a campaign. On the 30th, at three in the morning, a cannon was fired, and immediately afterwards the bandits were seen approaching Tew-lak from the four points of the compass. What happened at this crisis is obscure, but communications seem to have been temporarily severed between the garrison and the civil administration. At 7 o'clock, the bandits renewed their attack with great resolution, and as the garrison's outposts were seen to be gradually losing

ground, the chief of the civil administration waited upon Colonel Ito and Captain Furuichi, the two senior officers of the garrison, whereupon Captain Furuichi said that, in view of the enemy's strength, the civil officials had better beat a retreat if they hoped to get away at all. Mr. Matsumura, the chief of the civil administration, replied that so long as the garrison stood its ground, the civil administration need not desert its post. Before this difference of opinion was adjusted, some of the bandits succeeded in getting into a house only three or four metres from the head quarters of the garrison, and their fire from thence struck down one of the military coolies. By degrees the enemy developed such strength that resistance became hopeless, and a retreat commenced in the direction of Ta-li-wu. Galled by the fire of bandits lying concealed in the forests, they reached Peh-tow that night, and, the following day, pushing on through Chang-hwa, arrived finally at Tai-chung."

To the above account, which contrasts curiously with the stories circulated from Chinese sources, and yet contains incidents that may easily be recognised as the bases of the latter's exaggerations, the correspondent adds this strange paragraph:—"With regard to the origin of this outbreak, the Japanese civil administrators and military men entertain strong suspicions against the foreigners residing in the Yun-lin district. It appears that a number of the bandits have been in the habit of attending the missionaries' services every Sunday, and there is proof that religious encouragement was given to them, for a banner taken from them at Ta-ping-ting bore the device 'We pray the Lord of all things to grant us victory.' Pere Leniran (?), for example, a Roman Catholic missionary in Tew-tai, can bring together at any moment two thousand converts of whom a very large proportion are bandits. Perhaps the strangest thing is that, three days before the bandits attacked Liu-pa-pu all the foreigners in the district, as if by common agreement, removed to An-ping, a British subject, Mr. Ollia, alone remaining, and he was killed. It is rumoured that, at the outset, this Mr. Ollia went about the place on horseback, directing the rebels, but that finally, being mistaken for a Japanese on account of his dress, he was killed by the rebels. These stories are not to be lightly credited, of course, but granting that the alleged relations between the foreigners and the bandits have no political significance, it does not follow that there may not be a strong commercial tie between them. We are not disposed to attach too much credit to the rumours that the rifles and ammunition used by the bandits came to them through foreign hands, or that the pistols in their possession were transmitted to the foreigners who concealed them in their personal effects."

Apropos of the above statement concerning the missionaries, it is worth noting that *The Times* correspondent in Hongkong, on the strength, avowedly, of information supplied by missionaries, has sent a telegram to that journal, accusing the Japanese of having burned villages and slaughtered innocent people.

August 4.

For the sake of completing the detailed narrative of the movements of the force sent from Taipei to subdue the rebels in the central districts of Formosa, we translate here the record from the 11th of July, inclusive, as given in official despatches:—"Lieut.-Colonel Imahashi's force arrived at Tsz-tung-kang on the 11th instant, and a detachment under Major Suzuta was at once sent in the direction of Ta-pu-lin. This detachment formed a junction with Major Sato's force at Ta-li-wu. As for Lieut.-Colonel Imahashi's force, considerations of commissariat transport, and a reconnaissance of the enemy's condition, suggested the advisability of a direct advance against Yun-lin. Orders were accordingly issued for a general advance on the 11th instant, the immediate programme being to cooperate with Major Matsui's two companies of infantry and one battery of artillery which had marched from Tai-tsi (Chip-chip) to drive out the rebels in the neighbourhood of Liu-pa-pu.

With regard to the movements of the Third Mixed Brigade in the Tai-tung district, Staff-Captain Shiba reported that the troops reached Hwa-lien river on the 5th instant; that 200 Chinese soldiers surrendered to them; that Liu's followers as well as the remnant of the brigands were practically broken; that the operation of seizing arms and ammunition was now going on, and that order had been restored in the country between the Hwa-lien river and Pi-nan-hsien.

On the 13th instant, Lieut.-Colonel Imahashi's force, having encountered but slight resistance, entered Yun-lin and Teu-liu. It was ascertained that some 400 rebels were lying concealed in a bamboo grove about 2,000 metres distant, and artillery was used to drive them out.

On the 14th Liu-pa-pu was taken, and a junction was effected there with Major Matsui's force, which had marched from Nan-tow *via* Chio-shui. Lieut.-Colonel Imahashi's troops halted for a time in Liu-pa-pu and Yun-lin.

Pu-li-sho having been invested several days previously by a large force of rebels, and the garrison having been compelled to retreat to Peh-kang-chi, the commandant of the Brigade ordered Captain Ishizuka to recover the post, Major Matsui's force being directed to move against it at the same time *via* Tsi-tsi (Chip-chip) and Shui-sho.

On the afternoon of the 10th instant a body of rebels attacked Chia-i but were driven off, and the country in the neighbourhood of Tai-nan was reported quiet.

The casualties in the above operations were: At Nan-tsu, on the 13th instant, 2 killed and 4 wounded; at Liu-pa-pu on the 14th instant, 4 wounded; at Peh-kang-chi, also on the 14th instant, 1 man killed and 2 (including a gendarme), wounded.

Concerning Formosa, we find in the *Yiji Shimpō* an article so sensible and statesmanlike that our readers can not fail to be interested in it:—"In order to give to Formosa the blessings of secure life and property and to establish there public place and good order, measures must be taken, first, for completing the land and sea defences; secondly for constructing roads; thirdly, for improving and protecting the harbours; fourthly, for building railways and erecting telegraphs; fifthly, for inaugurating works of sanitation; sixthly, for opening regular lines of steam communication by sea; and seventhly, for organizing an efficient force of police and gendarmes. All these things will require an expenditure of over a hundred million *yen*, to meet which the income now derived from the island is totally inadequate. On the other hand, the economical conditions now existing in Japan do not warrant the withdrawal of so much money from the national treasury; the country can not afford more than to contribute a certain sum annually towards the achievement of the desired result. How many years would be needed to complete the work in that manner? It is to be feared that the development of the island's resources could never be completed. If, for example, bandits raise an insurrection as they have just done, they can, of course, be easily subdued for the moment by employing military force; but what then? Experience has shown that police and gendarmes are not competent to preserve the public peace or to prevent such disturbance, and the bandits, taking advantage of that state of affairs, defy the administrative authority of Japan. There are certain foreign countries that have long turned longing eyes upon Formosa and are most anxious to gain possession of it. If, in view of these repeated disturbances and failures to administer the island, the world finally decides that Japan is not competent to hold it, what a bitter disgrace that will be to her. Were it really true that the Japanese are thus incompetent in practical affairs, there would be no help for it, but in truth the question is wholly one of finance: if money were forthcoming the necessary measures could be adopted at once. It is essentially a case for the Japanese to show what kind of stuff they are made of. As to finding the required funds, it has to be acknowledged that hundreds of millions of *yen*

are not to be lightly spoken of. To impose such a burden upon the people is out of the question for the moment. The only feasible course is for the Government to take the really bold step of raising a loan, domestic and foreign, on the security of the island. If Formosa be placed in pledge, there would be no difficulty in obtaining hundreds of millions of *yen*. Foreigners would be delighted to go in for such an investment. Then, if with the funds thus procured the requisite measures were resolutely inaugurated, they could be carried within sight of completion in five or six years. But supposing that after spending so much money and taking such pains, the results obtained were comparatively insignificant, then the Japanese would have no one to blame but themselves. It would have been conclusively demonstrated that they are without capacity for colonizing or administering countries beyond the sea. They would have to resign themselves to that fact, sell Formosa, pay off the debt, and wash their hands of the whole affair. The basis of territorial aggrandisement is profit. If it be practically demonstrated that no profit can be secured by holding a place, then there is no occasion to hold it. To continue the wavering, half-hearted measures adopted up to the present in Formosa, is merely to incur the reproach of administrative incompetence and to bring humiliation on the country. Now is the time to come to a final decision on the subject.

August 5.

Further movements of the Japanese troops in Formosa are officially detailed by telegraph. They make a veritable Xenophon's *anabasis*, though the good old Greek never perplexed, however much he wearied, us with his "parasangs" and "stadia," whereas these Formosan records are both tiresome and tangled. However, as we have kept our readers up to date thus far, it will be well to continue the history.

A telegram dated 12.30 p.m. on the 27th July, says:—"Major Naito's force—two companies of infantry and a detachment of engineers—left Liu-pa-pu on the 26th, and cleared the rebels out of the district along the upper part of the Tsin-shui, through a distance of some 17 miles. At the same time the two companies under Major Suzuta were to conduct a second search in the neighbourhood of Tai-hei-mo. There has been nothing unusual to report with respect to Pu-li-sho since the date of the last telegrams. A certain number of rebels are daily captured. No rebels remain in or about Yun-lin, or in the lowlands."

Another telegram, dated 4.10 p.m. on the 30th July, says:—"On the 27th instant, Major Suzuta's force marched out of Yun-lin, and Major Naito's out of Liu-pa-pu, and the two, acting in co-operation, drove the rebels out of the uplands of To-wan, and came together again in Yun-lin on the 29th. The casualties during this operation were Surgeon Kuwabara and 6 non-commissioned officers and men killed, and Lieutenant Toyama, Ensign Akimoto, and 27 non-commissioned officers and men wounded. On the same day (29th) a small force of rebels again attacked Liu-pa-pu, but they were driven back by the garrison. It would appear that the inhabitants of the Liu-pa-pu and Ta-ping-tung districts are all rebels, and that resistance is to be everywhere expected in that quarter. Up to to-day, the total casualties in Lieut.-Colonel Imahashi's force have been 115 killed and wounded."

In the *Tokyo Asahi* it is stated that the Peninsular and Oriental S.S. Company applied for permission to establish a service of steamers between Kobe, Nagasaki, Kelung, and Hongkong, but the Japanese Authorities refused the application, being anxious that the service should be undertaken by Japanese ships.

The same journal says that very possibly the Government may decide to issue Formosan Bonds, placing them on the Home and Foreign markets, in order to procure funds for the speedy and thorough development of the island.

ARMS USED BY THE REBELS IN FORMOSA.

In the *Yiji Shimpō* we find a statement purporting to be a report compiled by certain Japanese officials who had received orders to make inquiries as to the source from whence the rebels in Formosa obtained arms. The report runs thus:—"Having been instructed to watch the movements of Lin Chao-tung, Lin Toh-hsin, and U O-chin, we found, after continuous observation, that Chao-tung opened a shop by the sea-shore in Yen-hai-tsun, and that Toh-hsin and O-chin were despatched to Canton and Hongkong, where, in the course of a month, they obtained several hundreds of pistols and carbines which they caused to be packed in boxes for purposes of transport. Their professed business being to trade in deer-skins with the native tribes, they caused three boats manned by natives to leave the island, for the purpose of receiving the arms, but what part of the coast they chose for landing, we have not been able to find out. It appears that they arrived from the south with the weapons towards the end of June, and succeeded in getting them transhipped at some Chinese port, the name of which all our endeavours have failed to elicit. They had procured 600 breech-loading carbines of German make and 300 pistols, together with a supply of ammunition. Both pistols and carbines were packed in boxes and sent by junks, and although we have not been able to ascertain the port at which they were transhipped for Formosa, our information goes to show that they were transferred to three small junks which had left Formosa for the purpose, under the command of the rebel leaders Hu Lin and U Lin, 10 carbines or pistols being packed in one box. These small junks were able, with a southerly wind, to run over from the neighbourhood of Chung-wu in some 5 hours."

COUNT MUTSU.

Count Mutsu is expected to return to Japan by the mail reaching Yokohama on the 18th instant. Many people imagined that His Excellency's stay in Honolulu would be much longer, or, at all events, that he would not take the risk of spending any portion of the very hot season in this country. But Count Mutsu himself never contemplated a long absence from Japan. We learn that on the outward voyage His Excellency's health showed marked improvement, and that, during his sojourn in Hawaii, the improvement has been fairly continuous, though not so conspicuous. It seems a pity that the Count cannot persuade himself to abandon politics completely for a year or so, when he would be able to re-enter the Cabinet with health fully restored. There can be no such thing as entire rest for a man of his prominence so long as he is in Japan.

FLOODS AND THE RICE CROP.

A letter from Niigata states that the recent inundations appear to have done so much damage to rice-fields that the harvest will be reduced to something less than half a usual crop. The *Chugai Shogyo Shimpō*, from which we take the above information, states that such a reduction in the crop is difficult to believe, but that Tokyo and Hokkaido, which import some 350,000 *koku* of rice from Echigo annually, will certainly be unable to obtain that quantity from the inundated province this year. The Prefect of Niigata, Mr. Asada, once Governor of Kanagawa Prefecture, has done wisely in issuing instructions to the local officials to advise rice dealers not to export their grain until the misery of the poor sufferers has been alleviated to a reasonable extent. Mr. Asada states that unless such a course is taken the poor and starving will rise against the rice merchants, whom they at no time love.

THE CABINET AND FOREIGNERS.

The *Kokumin* has a curious article on the subject of the present Cabinet and foreigners. "The Ito Cabinet," we read, "is clever in pleasing foreigners, but unskilled in using them for its own purposes. Hence it meets with many *contresens* in its foreign policy. The Russians in Korea have succeeded in employing for their own purposes not a few Americans and other foreigners. In China, they have Germans, Americans, and Danes working in their interests. Have we not seen how, in the Chefoo affair, they made use of an American. When China was about to engage an English naval officer as chief organizer of her new navy, Russia interfered, and compelled her to employ a Dane. Moreover, the Russian Government pays money from the secret service fund to editors of foreign newspapers and periodicals and gets them to advocate the Russian cause. The remarkable success of Russia's foreign policy is due not merely to her diplomatic skill in treating international questions, but also to the fact that she has so many allies and supporters in all parts of the world. The methods pursued by the Ito Cabinet suggest that to show friendship towards the Representatives of the Great Powers is deemed sufficient. We see no evidence of any attempt to make use of the services of foreigners so that Japan's interests may be boldly pushed. Had our Government made skillful use of foreigners in Korea, things would not have fallen into their present evil condition for Japan, even though an alliance with foreign Powers might not have proved possible. Did not the indifferent treatment shown by our officials towards Creelman, the *World's* correspondent, result in the circulation of damaging statements about atrocities committed at Port Arthur? Had proper steps been taken to utilize that correspondent, no such disgraceful intelligence would have found its way into print. So in the case of Mr. Beckett, a member of the British House of Commons, that visited Japan: he was not treated with sufficient hospitality, and consequently when he returned to England he spoke ill of Japan, alleging that Japan's victories over China were due entirely to the latter's weakness, and could not be taken as any indication of Japan's fighting capacity. Yet again, when Mr. Porter came here lately as a delegate of the Republican Party in America to conduct inquiries of the greatest moment to Japan, since they must affect the question whether or no Japanese manufactures should be excluded from the United States, special steps should have been taken to treat him courteously, but the matter was neglected. It would seem that the Ito Cabinet either looks up to or dreads foreigners, but as to using them adroitly in the interests of the country, we observe nothing of the kind. Such incapacity suggests little hope that the country's proper place among the nations will be secured or its prestige asserted."

The *Kokumin* seems to be slightly at fault. Probably it is right, in the main, about Mr. Creelman. If that gentleman's estimate of a special correspondent's importance had received practical recognition in Japan, if he had been specially presented to the Emperor, as he desired, and otherwise bowed down to, the Port Arthur atrocities might have remained an unwritten page of history. But Mr. Beckett's case was different. He told one story to the Japanese in Tokyo, and has been telling, the telegraph says, a different story in London. Of course he had a perfect right to change his opinion. We do not venture to suggest that he deserves blame for doing so. We merely note the plain inference that his treatment by the Japanese can not have had anything to do with his conclusions about the lessons of the war, since he must have modified those conclusions after he left Tokyo. It is very strongly to be doubted, however, whether he really used the language attributed to him by the telegraph. Mr. Porter belongs to a wholly different category. He came here simply to boom protection by demonstrating that the United States have still need of that vicious system in order to prevent fatal competition on the part of Oriental industries. His business was to vitalize that

skeleton, and no treatment accorded to him here would have turned him from his purpose.

JAPANESE ENTERPRISE IN CHINA.

While the Opposition papers are wrangling over the alleged concessions to Japan contained in the Treaty of Shimonoseki and the Treaty of Commerce, shrewd Japanese merchants are pushing their enterprises in China, according to the latest correspondence the *Fiji* has received from its Shanghai correspondent. The pioneer in the new field is an oil refinery firm managed by Mr. Shirakawa Shinji, the raw material used being cotton seed. From July of last year this enterprising Japanese began to undertake the work. He succeeded after much difficulty in leasing a plot of ground in the American settlement, at Shanghai, and set up a plant. But it was not until April last that he put his machinery in motion, the market rate of cotton-seed leaving fallen by that time to what he considered a paying figure. At present some 25 Japanese are employed, but these will be increased shortly by a batch of fifteen workmen. The Refinery now yields in 24 hours 3 *koku* of refined oil, which the proprietor intends to sell at Shanghai for kitchen use, for though quotations for this oil at Osaka are now about 24 *yen* per *koku*, as against 21 *yen* at Shanghai, he thinks it more profitable to place the oil on the latter market. He intends to ship home the oil-cake. Mr. Shirakawa at the outset encountered trouble with the Chinese Authorities, as indeed he anticipated. The oil refined by him is so strikingly superior to the discoloured and sticky oil hitherto manufactured by the Chinese, that it awakened the jealousy of the latter, who, in their usual way, caused the Authorities to issue an edict prohibiting the use of pure refined oil in the preparation of food, on the alleged pretext that it was injurious to health. The Taotai even ordered the seizure of oil purchased from the refinery. Mr. Shinagawa protested that his oil did not contain lime, that it was perfectly harmless, and succeeded in getting back the seized oil. The capital invested in the business is a little over 10,000 *yen*, and as yet the Refinery is not subjected to any tax other than the ordinary duties on industry. What those duties are we do not understand.

The Tokiwa Spinning Mill, projected by a number of Osaka capitalists, has concluded a contract to purchase a plot of ground in Shanghai measuring over 12,000 *tsudo*. The ground being low, the proprietor, according to the stipulations, is to raise it to a certain level, before the transfer is effected. The earthwork is to be completed in greater part during the current month, and the Company expects to commence the erection of the first shop and subsidiary buildings early next month. The company is specially eager to hasten the erection of the buildings as the mills projected by Messrs. Jardine, Matheson & Co., and others are more than half completed. The Company has purchased another plot of ground over against the site occupied by Messrs. Jardine, Matheson & Co.'s Mill and has obtained the title-deeds. The ground, however, being a graveyard, objections have been raised against its use, and the matter is now before the local law court. It is expected, however, that the work of preparation will begin early next year, and the mill will be set in operation by April or May next.

Messrs. Miyake Zenzaburo and Shiraiwa Ryuei have projected a towage business between Shanghai and several newly open ports on the Yangtze-kiang. The former started this business in conjunction with certain Chinese in whose name the ships were registered. On her first cruise, when the first vessel arrived at a port up the stream, she was seized by the Chinese Authorities. The reason for such procedure is not clear. Mr. Shiraiwa's scheme has received the approval of the Japanese Consul, but the consent of the Chinese Customs is not likely to be obtained so readily.

ECONOMIC AND INDUSTRIAL TOPICS.

A certain business-man of note, writes the *Mainichi*, entertains doubt as to the benefit that the free import of machinery into China will confer on Japan. The insertion of this clause in the Treaty of Shimonoseki is traceable to the trouble that Japan previously experienced in China in connection with the import of spinning machinery. The Chinese Government objected to its import, and though Mr. Otori, then Japanese Representative in Peking, repeatedly opened negotiations on the subject with the Chinese Government, no definite issue was arrived at. Warned by this experience, the Japanese Plenipotentiaries obliged Earl Li to assent to the insertion of the clause in the Treaty of Shimonoseki. But, asks this business-man, did they really think at that time that the insertion of such a provision would prove beneficial to Japan? Did it not enter into their minds that the development of the spinning industry in China would seriously impair that of Japan, for China commands almost inexhaustible supplies of the cheapest labour? The position might be viewed with equanimity if Japan were able to supply the machinery needed by China, but at her present stage of development she cannot do much in that way, and the lion's share of benefit will fall to other Powers.

The Clock Factory in Osaka has thus far been unfortunate, not succeeding in realizing any profit. The losses in the first half-year are above 6,000 *yen*. The chief causes of the trouble are said to be the lack of hands and the consequent meagreness of output. In order to place the business of the Company on a better footing, it has been decided to reduce the salaries of the foreign experts and give them in compensation a small share out of the first profits. Moreover, it has been decided to gradually supersede foreign mechanics by Japanese.

The following is a return for the special commercial ports of Shimonoseki, Hakata, Kuchinotsu, Otaru, Yokkaichi, Moji, Karatsu, Misumi, Fushiki, Kushiuro, and Mororan, showing the business done in rice, barley, wheat, flour, coal, and sulphur:—

	Coal, Yen.	Rice, Yen.	Others, Yen.
1890	1,399,094	—	1,042
1891	1,757,212	487,478	—
1892	2,119,350	253,848	—
1893	2,937,921	1,114,009	487
1894	4,489,723	542,507	43
1895	5,173,552	764,324	198
1896 (1st half)	2,942,080	1,347,756	291

In coal Moji, Kuchinotsu, and Shimonoseki stand far above the others, while rice is exported from Shimonoseki, Moji, and Fushiki, the first port shipping the most.

THE NEW STAMPS.

It would seem as though the philatelic mania had bitten Japan as sharply as it has bitten any other country, though we imagine that in the case of the Japanese it is chiefly a question of speculation. With the exception of pigs and rabbits, it is not on record that the people of Japan have ever developed any marked taste for an object neither artistic nor decorative. Why they took to pigs and rabbits with such gusto is a point remaining to be elucidated. Roses which followed rabbits, and orchids which succeeded roses, are intelligible fancies. But pigs and rabbits! To us, owing doubtless to some moral lacuna, stamps appear to belong to the same category as pigs and rabbits from an art collector's point of view, but they have so long held their place in public esteem that it seems futile to hope for their relegation to a becoming rank. The specimen stamps recently published by the *Official Gazette* were so eagerly bought up that within two days of the *Gazette's* issue, not a copy was to be obtained. We ourselves, though we had sufficient prescience to recommend our readers to buy these specimens, did not have sufficient energy to follow our own

advice, and thus we became speedily acquainted with the feverishness of the demand excited by the appearance of the official journal. We are informed, though we do not vouch for the truth of the story, that a certain Foreign Representative instructed his staff to purchase a hundred copies of the *Gazette* for him, but with difficulty secured ten. There was a similar rush for the stamps themselves when they were offered for sale on the morning of the 1st instant. All the stamps constituting the first batch issued by the Government were sold off by 8 o'clock, and the vendors had to procure new supplies. The reason of this haste was, of course, a desire to pass the stamps through the post on the first day of their issue. One-*sen* Silver-Wedding stamps bearing the postmark of the day of the celebration, now sell for ten *sen*; a margin of profit quite wide enough to tempt speculators in this country. We see no reason why similar value should attach to correspondence between passage through the post and date of issue in the case of the war-commemoration stamps, but other folk evidently think differently.

The *Nichi Nichi Shimbun* says that the number of the new war-commemoration stamps sold throughout the empire on the 1st instant—the day of issue—was 3,117,800, and that not a solitary stamp is now to be procured at any post office. Our contemporary says nothing as to the denominations of the stamps thus disposed of, but presumably the chief run would be upon the five-*sen* stamps, as only two millions each, or four millions in all, are to be issued of these. The demand for the stamps being still brisk, it has been decided that the next batch, consisting of 1,466,800, will be distributed very soon, but that the third batch will not be issued until November. It would be interesting to know what the Treasury nets by a transaction of this kind. The face value of the total issue—ten million two-*sen* stamps and four million five-*sen*—is four hundred thousand *yen*, of which certainly three hundred thousand ought to be pure profit.

AN ARMY SURGEON ON OPIUM.

Mr. Fujita, an Army Surgeon, in an interview with a representative of the *Kokumin Shimbun*, stated that from a medical standpoint he cannot by any means agree with the prohibition of opium smoking in Formosa. The chief argument of those that advocate the prohibition of opium is their fear that the habit may be introduced among the Japanese; this fear in his opinion is utterly groundless. To quote the Surgeon's words:—"The people of Formosa and the Japanese are entirely different in nature. The former are dull and solitary, the latter active, gregarious and pleasure-seeking. Opium is enjoyed in the solitude of a close room. This form of pleasure therefore suits the Formosans well, but it would fail to attract the Japanese. *Saké* is best enjoyed in a group, amid the cracking of loud jokes and clatter of merry voices; it brings, so to speak, the social qualities into play; while opium gives pleasure to solitary men only. The Japanese delight in *saké* with its necessary concomitant, a merry crowd; they are by nature unsuited for the solitary vices of opium smoking." Proceeding to discuss the effect that opium has upon a man's life and the increased amount of labour he is able to perform in consequence of its use, the surgeon states that the drug has not the sustaining powers ignorantly attributed to it. He says that all the Chinese labourers of Formosa indulge in opium smoking twice or thrice a day. But the labours they perform, such as the carrying of sedan-chairs or palanquins over mountains and across rivers, or cultivating the soil under a burning sun, can undoubtedly be done equally well, if not better, by Japanese labourers, who do use not opium. It would really be advisable not to resort to prohibitory measures at once, but to find means whereby the bad habit can be prevented from reaching the young.

PROBABLE MINISTERIAL CHANGES.

The *Hochi* prints an article on some alleged facts foretold by a person who is said to be gifted in the art of political meteorology. It says that some changes in the Ministry may be expected within a fortnight or three weeks. The Tokyo paper is in high spirits at the prospect, and prints the following rumours respecting several Japanese statesmen, declaring them to be not entirely groundless. Marquis Ito, it says, is quite prepared to leave the Cabinet: although there is a strong suspicion that this is a rumour started by some interested people. The only possible candidates for the position of Prime Minister are Marquis Yamagata and Count Kabayama and Marquis Saigo. The Tokyo paper, commenting on this, says it seems very strange to be talking of a new premier while Marquis Ito is still in office. The new Foreign Minister has been decided upon, but the person that the Cabinet have selected has not yet given his consent. Marshal Marquis Yamagata will not make such high demands upon the Cabinet as the public are disposed to imagine, for various all sufficient reasons. The coalition known in Japanese politics as the Choshu Union, will again be formidable in the political world, especially in the cases of Marquis Yamagata and Count Inouye.

The reason why Viscount Takashima has not yet set out on a tour in Hokkaido must of course be chiefly due to the urgency of Formosan affairs. The Budget for the coming fiscal year is still in process of construction and this also engages the Viscount's attention. That two or three Ministers of State are fearful of losing their portfolios in the near future, and that these Ministers are just now busily engaged in paying calls on their elders, is patent to all the political world: they devote more attention to paying calls than to seeing the work of their Departments efficiently carried out. When a certain follower of Count Matsukata told him that a great personage of Satsuma extraction had said, "Matsukata gives me no small amount of trouble," the Count replied with a smile that he was already sixty years old. Such are the *Hochi's* political rumours. They seem to be chiefly remarkable for confusion and mystery.

COMPARISONS.

To show the quality of the information possessed by the An-ping correspondent of the *Hongkong Telegraph*, we may note that, writing under date of July 14th, he says:—"Confirmation has come to hand of the fall of Lok-kung into rebel hands." Now we know from Major-General Tatsumi's official despatches that the rebels made their attack on Lok-kung on July 8th, the very day on which the force sent from Taipei to quell the insurrection moved out of Chang-hwa, a town 7 miles due east of Lok-kung. After a protracted fight—protracted because Lok-kung had only a small garrison, no fear having been entertained that the insurgents would attempt its capture it in the face of a strong movement against their own fastnesses by the Japanese Brigade—the rebels were completely beaten back, leaving 100 dead upon the field, and the next morning re-inforcements entered the town. Thenceforth the expeditionary force drove the rebels steadily from place to place, and by the 14th the insurrection was virtually crushed. Yet on that very day the *Hongkong* journal's correspondent talks of "confirmation having come to hand of the fall of Lok-kung into rebel hands." Evidently his Chinese informants are ill-supplied with trustworthy news.

The *North-China Herald's* Amoy correspondent says that, during the first six days of the rebellion, 210 Japanese were killed at three places, and a general slaughter took place at three others. Now we know from Japanese official reports that, up to the date of the latest advices (July 20th), the casualties on the Japanese side totalled 51 killed and 73 wounded. Evidently the Chinese informants of this correspondent also are ill-supplied with trustworthy news.

CABINETS.

As a certain interest attaches to the public's idea of the manner in which the statesmen of the day are likely to group themselves, we reproduce three hypothetical cabinets suggested by the *Kokumin Shimbun*:

MARQUIS ITO AND HIS ADHERENTS.

Prime Minister—Marquis Ito.
Minister of Foreign Affairs—Count Inouye.
Minister of Home Affairs—Count Itagaki.
Minister of Finance—Count Matsukata.
Minister of War—Marquis Oyama.
Minister of the Navy—Marquis Saigo.
Minister of Agriculture & Commerce—Baron Ito.
Minister of Communications—Viscount Watanabe.
Minister of Justice—Viscount Yoshikawa.
Minister of Education—Marquis Saionji.
Minister of Colonization—Viscount Takashima.

CABINET OF COMPROMISE.

Prime Minister—Marquis Yamagata.
Minister of Foreign Affairs—Count Okuma.
Minister of Home Affairs—Count Inouye.
Minister of Finance—Count Matsukata.
Minister of War—Marquis Oyama.
Minister of the Navy—Marquis Saigo.
Minister of Education—Count Itagaki.
Minister of Communications—Count Goto.
Minister of Agriculture and Commerce—Viscount Enomoto.

Minister of Justice—Viscount Yoshikawa.
Minister of Colonization—Viscount Takashima.

CABINET OF ALL THE POLITICAL PARTIES.

Prime Minister—Marquis Yamagata.
Minister of Foreign Affairs—Count Okuma.
Minister of Home Affairs—Count Inouye.
Minister of Finance—Count Matsukata.
Minister of War—Marquis Oyama.
Minister of the Navy—Count Kabayama.
Minister of Education—Count Itagaki.
Minister of Communications—Mr. Shirane.
Minister of Agriculture and Commerce—Viscount Shinagawa.
Minister of Justice—
Minister of Colonization—Viscount Takashima.

TREATY REVISION.

The *Fiji Shimpō* says that the work of Treaty Revision is now practically concluded with nearly all the Great Powers. Signatures have actually been appended in the cases of England, the United States, Germany, Russia, Denmark, and Belgium, and it is expected that the French and Dutch Treaties will be signed within a week, agreement having been come to on every point and the drafts having been accepted. There will then remain only Austria-Hungary, Switzerland, Spain, and Portugal. Negotiations with Austria-Hungary are already progressing, in the hands of Mr. Takahira, and do not promise to present any difficulties. The *Fiji* remarks that as the increased rates of import duties will be leviable immediately after the conclusion of the last treaty, it is to be hoped that all possible expedition will be employed, so as to get the whole business settled before the close of this year.

FOREIGN EXPERTS FOR THE IRON FOUNDRY.

We read in the *Tokyo Shimpō* that the journey of Mr. Oshima—a well known Japanese mechanical engineer—to Europe is for the purpose of selecting and making an agreement with the two foreign experts who are to be employed in the new Iron Foundry. Permission to engage these gentlemen and an appropriation on account of their salaries and travelling expenses were voted in the last session of the Diet. We do not know why the expense should be incurred of sending a professional man specially to Europe to engage them: the Japanese Government surely has correspondents that might be trusted to that extent. Probably Mr. Oshima's mission is connected with some other business also.

A process for separating gold from sea-water at a cost of \$1 for each \$10,000 of metal obtained, every ton of water yielding 2 to 4 cents worth gold, is claimed by Prof. Hunnicke. The calculated mass of the ocean being 1,320,000,000,000,000 tons, the possibilities of this new source of wealth are open to computation.

FORMOSAN AFFAIRS.

ANOTHER account, of considerable length, has now been published with reference to the alleged atrocities committed by the Japanese in Formosa. It is from the pen of "an occasional correspondent" of the *Hongkong Telegraph*. He writes from Anping, and in common with the correspondents whose letters have already been referred to in these columns, he derives his information wholly from Chinese sources. On the other hand, we ourselves being without any intelligence except that furnished by the Japanese, which we put aside for the moment, nothing remains but to scrutinise the tales obtained by these foreign correspondents from their Chinese informants. Doing so, we find that the gravest contradictions exist, and that all are disfigured alike by obviously incredible assertions.

The first correspondence—commented on by us yesterday—made Hoon-nim (Yun-lin) the scene of the disturbance, and said that the trouble had its origin in depredations committed by bandits having their fastnesses in the hills. A party of Japanese soldiers sent to rout out these bandits, fell into an ambuscade, and failed to accomplish their object, whereupon they turned their arms against the peaceful villages lying along the base of the hills, and destroyed from 70 to 90 of them, together with several farmsteads, killing every one of the inhabitants and burning the villages. Driven thus to desperation, the people joined the hill bandits, and the whole swept down into the plain, attacking Hoon-nim, in the first place, and then taking town after town till they reached Khaghi. Now, in the latest account (*Hongkong Telegraph*) Hoon-nim and hill bandits disappear altogether. The scene is laid at a totally different place, Tau-lak, and the story commences with an incident that would be extravagant even in the pages of BOMBASTES FURIOSO. On the night of June 20th, burglars break into a Chinese shop. Next day, the inhabitants of the town warn the Japanese gendarmes that a similar burglary will probably be again committed. The gendarmes taken no notice. On the night of the 22nd the expected burglary comes off; still the gendarmes take no notice. "Encouraged by this carelessness" another burglary is planned for the night of the 23rd. But on this third occasion, a Japanese shop being the projected victim, "steps are taken to prevent any possible attempt on the part of the gendarmes to come to the assistance of their countrymen." What are the "steps"? "A lighted torch is put at the gate of the gendarmes's office and a strong guard is posted in the opposite house." That is quite enough to terrify Japanese gendarmes! They confine themselves to peering over the high wall that surrounds their quarters. But, the next day, these

gendarmes, whom a lighted torch and the semblance of some Chinese robbers in an opposite house had sufficed to scare into inaction, suddenly wake up and arrest every one they can find, to the number of 200. These things happen on the 24th. "Petitions are then sent in by the friends of some of those arrested, giving security, and about 150 are released, but the rest are beheaded without trial." All done in one day: two hundred persons arrested; a hundred and fifty petitions received and examined; a hundred and fifty persons released and fifty beheaded! Moreover, on that very same day, a party of thirty-five soldiers is sent out upon the most colossal raid in history. There is no mistake about the number, 35, for we are explicitly told that when this same party was ultimately attacked and exterminated by the infuriated Chinese, it aggregated 60, having received a reinforcement of 25 in the interval. Observe what this squad of 35 giants accomplish. Between the 24th and the 29th they burn more than 70 villages, and massacre all the inhabitants, men, women, and children. Nothing so stupendous has ever been recorded outside the pages of a fairy tale. Finally they arrive at Lim-kee-poo. But they do not burn it. They send for the most influential man and "demand of him the surrender of the robbers." What robbers? We have hitherto had no hint that the 35 Japanese are in pursuit of a band of robbers: we have been led to suppose that they are engaged simply on a raid for burning villages and massacring innocent folks. And observe what the head-man of Lim-kee-poo is represented as answering. "He replies that he can not give up the robbers, as he is not in a position to fight them in their stronghold, and moreover his town is as much in fear of them as any other." So then it is a question of hill bandits after all, and bandits of such a character that every town in the plain is in dread of them. These bandits, their stronghold, and the headman's expression of fear ought to have been kept out of the story. However, the 35 giants threaten that they will burn the town unless the robbers are given up. At first the citizens don't believe the threat, for there is foreign property in the place, and foreign property is sacred. But the arrival of a reinforcement of 25 gendarmes dispels this hope, especially since the new comers "are hidden in a private building." Why they went into hiding we are not told, neither is it easy to divine. But that is only one among the many mysteries of the tale; not at all more curious than the notion that men who had been burning villages at the rate of 20 per diem for four consecutive days, should have hesitated 24 hours before adding another to the list. The 25 men in hiding settle the question. The citizens seeing no chance of saving their town otherwise, fall upon the Japanese and kill 49 out of the

60. Eleven escape, and what men they were these eleven! Flying for their lives from Lim-kee-poo to Tau-lak, "they shoot every native they meet, whether man, woman, or child." Considering that they have just burned down 70 villages in the very district through which they are now flying, and massacred all the inhabitants, men, women, and children, there ought not to be many left to slaughter. It is not usual, too, that half a score of men in such a dire plight should exhibit such ferocious aggressiveness. However, we had a precisely similar story during the insurrection last January: Chinese invention evidently is not fertile. After this slaughter by the flying eleven, "the rebels kill every Japanese they catch." "From Lim-kee-poo the rebellion spreads from village to village as each sees the futility of expecting Japanese mercy, and realizes that unless they rise and follow the example of Lim-kee-poo, they will meet the same fate as the others." What a region for villages, to be sure! Over 70 have been laid in ashes, but there remain an apparently limitless number. The villagers are "an unorganized rabble." Here let the correspondent speak for himself:—

To show that the rebellion was not a pre-arranged one, but one to which the rebels have been deliberately goaded by a continual system of cruel, inhuman, and barbarous oppression, I might point out that there is no supreme chief, the headman of each village being the leader of the inhabitants thereof. Their actions are individual, each village doing its own work in killing all the Japanese it can lay hold of, for mere self-preservation. As soon as one village has done its part, its headman writes a letter to the next, reminding the village of what awaits it unless its inhabitants rise, and asking them to do their "duty." So the word has gone from village to village, until now, that is twelve days after the commencement of the rebellion, the following towns have fallen into the hands of the Chinese:—Pai-li-chia, Po-tan-ah, Tau-lak, Lam-tau, Chiangwha (reported, but not yet confirmed) Hun-lin, Lim-kee-poo, Tung-twa-tun, Chui-tong-hun, Tar-lee-boo, Twa-pai-nar, and Lok-kung (reported, but not yet confirmed). The rebels are now advancing in three parties or columns, one going north, another west towards the coast, and the third south towards Tainanfoo, from which it is now only 55 miles distant.

At the beginning of the above paragraph the rebels are an unorganized rabble, each village acting for itself and doing its killing on its own account. At the end of the paragraph, the whole of the villagers are advancing in three columns, one going north, another west, and the third south! Then there are other marvellous tales: how any coolie not strong enough to carry the sick and wounded is beheaded; how sixty men are beheaded because they use the corners of the streets as closets, and so forth, one tale after another each more wild than the last. If any of these things are to be credited, they must at least be embodied in a story not intrinsically ridiculous. We repeat that we do not profess to know what has really happened, but until we have some better authority than Chinese rumours, abounding in evident impossibilities, inconsistencies, and exaggerations, we intend to reserve judgment.

YOKOHAMA RAILWAY OFFICIALS.

IT is decidedly unpleasant, but perhaps wholesome, for the Railway Authorities to hear complaints of the nature now preferred against their employés at the Yokohama station. "An Old Resident" has sent to the *Japan Gazette*, and Dr. ELDRIDGE has addressed to us, letters that decidedly call for attention. It is true that in the case described by "Old Resident," right was technically on the side of the Yokohama ticket-collector. A lady missed the connecting train that should have carried her direct from Akabane, on the Japan Railway Company's line, to Shinagawa on the State line between Tokyo and Yokohama. Thus her only method of avoiding a night's detention was to push on from Akabane to Tokyo, drive across to the Shinagawa terminus of the Tokyo-Yokohama line, and there enter the train for Yokohama. Sometimes that route is deliberately chosen by persons wishing to break the journey in Tokyo. But they are of course obliged to purchase a fresh ticket at Shimbashi in order to ride thence to Yokohama, for a through ticket over the roads of the Japan Railway Company and of the State is issued on the supposition that its holder strikes the State line at a station (Shinagawa) nearer than Shimbashi to Yokohama. Under ordinary circumstances, no traveller provided with a through ticket from Karuizawa (the place where the lady entered the train) to Yokohama, would be allowed to pass the wicket at Shimbashi by exhibiting such a ticket, unless an explanation were offered, when, as a matter of course, he or she would be expected, on arrival in Yokohama, to pay the fare from Shimbashi to Shinagawa. How the lady in question passed the wicket at Shimbashi we do not know. Unless she went through without showing her ticket at all, it is difficult to imagine how she could have escaped some inquiry and explanation. At all events, there is no manner of doubt that in Yokohama one of two courses only was properly open to her; either to pay the cost (a very few *sen*) of a second-class ride from Shimbashi to Shinagawa, or to ask for an interview with the station-master and lay her case before him. The ticket-collector could not have had any competence whatever to remit the additional payment technically due on her ticket. That discretion could have been exercised by the station-master only, in consideration of the fact that unpunctuality on the part of the Japan Railway Company's officials had compelled the lady to travel *via* Shimbashi. Had the ticket-collector accepted her ticket, he himself would have been responsible for the insufficient payment. Ignorant of that, the lady, according to the account given by "An Old Resident," declined to pay, when asked by the ticket-collector, and added, more-

over, that she ought to receive the difference between the cost of her *jinrikisha* ride across Tokyo and the price of a ticket from Shimbashi to Shinagawa. What happened then? Did the lady endeavour to force her way through the wicket? Very likely she did, since she supposed herself to be sinned against rather than sinning. But if she did so, what course was the ticket-collector to take? These are questions that our readers can answer for themselves. The fact is, however, that something in the nature of a struggle ensued, and the unfortunate lady, already wearied and worn out by a long, tedious journey, had her bundles shaken out of her arms, to the serious detriment of her lunch-basket's fittings. Of course, the first feeling of every one hearing the story is indignation that a petty railway official should have ventured to lay hands on a lady. Had any Englishman been present at the time, the official would probably have had painful cause to rue his rough zeal. But the incident requires a little more careful consideration. Transfer the scene to England, for example. Is it conceivable that a lady travelling in England would defy the verdict of a ticket-collector at a wicket, and attempt to pass the wicket by means of a disputed ticket? However firm might be her belief in the justice of her case, she would quietly ask to see the station-master, or agree to observe any other routine prescribed by the ticket-collector. But that is not the rule of conduct observed by all foreigners in Japan, and allowance must be made for the fact when difficulties arise. We ourselves have seen a party of foreigners utterly refuse, and persist in their refusal, to show their tickets to a railway guard because they had not been accustomed to have them examined at the station where the demand was preferred. Such arbitrary conduct would not be thought of in Europe or America. On the other hand, there is not the least doubt that Japanese often exhibit towards foreigners a demeanour that would be absolutely rude were their own countrymen concerned. Here is an instance, the more apposite in that it relates to these very railway employés in Yokohama. One night, a foreigner went to the station-master's office and asked whether the departure of the next Tokyo train was likely to be delayed. The answer was given civilly enough, but as the foreigner closed the door of the office, one of the employés called out "*gooro naito*," and the sally elicited a chorus of laughter from his fellows. Now as to the abstract fact of being bidden "good night," by whatever degree of person, no one would be such a churl as to complain. But had a Japanese traveller entered the railway office under similar circumstances, not a man there would have dreamed of saying "*sayonara*" or "*oyasuminasai*" to him as he went out. Such a greeting would have been grossly rude, and the manner in which the thing

was done in the case we are describing was distinctly insolent. As an almost invariable rule the treatment experienced by foreigners on railways in Japan is essentially courteous and obliging: too much so, indeed, for we have more than once heard Japanese complain that no such attention is ever paid to them as to foreign travellers. In Yokohama, however, the case appears to be different. The employés of the railway seem to have lost something of their natural courtesy, and to have replaced it with a little of the rough and bumptious spirit characteristic of open-port Japanese in general and of Yokohama Japanese in particular. We shall not pursue the subject. There is a loss of the sense of proportion in taking, as the theme for a long dissertation, one or two rare exceptions to a general rule of great civility and helpfulness. The interest of the question lies, however, not in the incidents themselves, but in the relations they suggest, and it is for the purpose of directing attention to these that we write. The incident described by Dr. ELDRIDGE belongs to a different category. We fail altogether to discover any explanation, and can only hope that the railway authorities will make a searching investigation. Possibly it would be advisable to arrange so that a longer interval shall elapse between the sale of tickets and the departure of the train, though we have never before heard of any such difficulty as that described by our correspondent.

THE DOSHISHA.

WE print elsewhere the letter addressed by the President of the Doshisha to the Prudential Committee of the American Board Mission. The letter has not been published previously. It may be well to explain, although the facts are probably known to many of our readers, that the Doshisha is an educational institution in Kyoto almost attaining the dimensions of a university. It was conceived, many years ago, by an eminent Japanese Christian, the Rev. JOSEPH NISHIMO (commonly written "Neeshima"), who succeeded in enlisting the sympathies and coöperation of the American Board Mission, and thus obtained not only funds to erect several handsome and commodious buildings, but also the assistance of a large staff of thoroughly competent foreign instructors. No one residing in Japan needs to be told about the quality of the men sent to the Far East by the American Board; they are worthy of all praise. The Doshisha prospered from the outset, and grew, after a time, to be one of the most respected educational institutions in the empire. But there was always in its constitution an element inevitably destined to become a stumbling block. This element it shared with many similar institutions established by foreign missions in Japan, and the story

of the Doshisha consequently derives larger interest from its bearings on the general field of missionary enterprise. Are such institutions intended primarily for educational purposes, or does the idea of propagandism enter appreciably into their origin? The question can not be lightly answered. When we consider the fact that each of the great sects of Christianity has established in Japan a school, or college, supported by the funds of the sect, conducted under the auspices of the sect, and having its faculty chiefly composed of members of the sect, it becomes difficult to suppose that propagandism is not a prime object. On the other hand, whatever differences of dogma may hold men apart, all can agree on the value of education as a means of elevating mankind, and from that point of view it is easy to believe that the schools and colleges established under missionary auspices in Japan, are honestly intended to be vehicles of general culture rather than instruments of propagandism. But they can never be purely secular institutions. They can never be devoted to intellectual development only. The people that pay for their establishment and support expect that they shall contribute to the spread of Christianity, and the men engaged as teachers are impelled by conscience and conviction alike to conduct the moral instruction of the students on Christian lines. The natural result has been that these institutions have actually proved a potent means of winning converts, as many as a hundred, or even a hundred and fifty of their students being baptised into one form or another of the Christian faith every year. But although it has been customary with some critics to charge the Japanese with being purely imitative, the criticism certainly does not find justification in the field of religion. There the nation has shown a determination to think for itself, and has declined, for the most part, to answer PILATE'S great question as orthodox Christianity would have it answered. This independent tendency was bound to display itself in the schools, and it did so at the Doshisha, producing a dilemma of much perplexity. One of the Professors, himself a graduate of the college and a man of brilliant parts, possessing a powerful pen and remarkable eloquence as a speaker, broke away from the tenets of orthodoxy, accepting HEGEL'S conception of GOD, refusing to acknowledge the divinity of CHRIST in the ordinary acceptance of the term, and regarding the immortality of the soul, not as an unquestionable fact, but merely as the universal hope of humanity. These doctrines he enunciated from the platform—not from his professorial chair, which had nothing to do with theology—and the question at once arose, could it be maintained that an institution where such philosophy found free expression, was an instrument of

Christian education in the sense understood by the American Board Mission and by the persons subscribing for its support? The Missionaries answered in the negative, and required that the Professor should be dismissed. The Trustees of the Doshisha declined to accede. Their view of "moral culture founded on Christianity" did not exclude discussion of the great problems agitating human thought at the close of the nineteenth century, neither did they think that a man could not be a good Christian because he denied anthropomorphism, refused to regard CHRIST as anything more than the greatest ethical teacher of all time, and considered the immortality of the soul as an inborn hope, not as an established fact. The *impasse* thus created was of immense difficulty. On the one hand, the Trustees of the Doshisha could scarcely doubt that they were acting in the best interests of the college as an educational factor. Moreover, they thought that their attitude was in accordance with the spirit of Mr. NISHIMA, the founder of the institution, for in his public announcement at the time of establishing the college, that remarkable man had stated:—"We do not mean to establish this University in order to propagate Christianity; but as we are convinced that there is a living power in the principle of Christianity in moulding the spirit and conduct of our young men, we do mean to apply this principle in education, and to produce men whose character is formed by this principle. * * * This University is not the organ of any religion or of politics in any sense. And it is taken for granted that our object could not be attained by relying on the power of any one party or locality." It must have seemed to the Trustees that an announcement like the above precluded them from interpreting Christianity in the sense attached to it by any one sect, and that what they had to think of and hold by was the principles of the Christian religion not the technicalities of its creed. On the other hand, the missionaries of the American Board, looking at the matter from their point of view, could not be expected to concede the term "Christian" to a college where ideas like those of Professor UCHI-TA obtained enunciation, nor could they conscientiously associate themselves with the teaching faculty of such an institution. A Committee sent out from America to investigate the question did not accomplish anything, for while the members are understood to have satisfied themselves individually about the Christian character of the Doshisha, the Committee as a whole deemed it necessary, in deference to American public opinion, to require that the Trustees of the College should subscribe to certain indicated tenets, and the Trustees declared their inability to take any such step. In fact, while acknowledging that much of the success achieved by the Doshisha has been due to

foreign workers, the Japanese claim that the result would have been different had not their own moral teaching possessed the force derivable from personal conviction only; in other words, had not freedom of conscience been substituted for the routine of belief and conventionalism of exposition that impair, according to their view, the vitality of missionary propagandism in Japan. As to the great interest of the whole question, we need say nothing. Neither need we express any judgment about the points at issue. Our purpose is simply to state the case, giving due weight to the difficulties that confront both sides. An earnest effort to restore coöperation is said to be now on foot, but its success looks problematical. We may mention, in conclusion, that a paltry question of right of property, constituting a mere side issue, has been magnified by some critics into the main feature of the schism. Any one taking the trouble to read the explanations furnished by President KOZAKI'S letter will see that the action of the Doshisha Trustees in this matter does not offer any room for censure. For the rest, however the affair ends, we ourselves are persuaded that the Doshisha will continue to act as a powerful factor of Christian influence and moral culture in Japan.

"THE PRABUDDHA BHARATA,"
OR "AWAKENED INDIA."

IF Christianity did not count a single convert in Japan, its propagandists could still claim the great credit of having created a religious awakening in this country. Their attempts to destroy Buddhism have galvanized that religion into life, and although some may not regard such a result as a blessing, it is, nevertheless, a most undoubted blessing. In India, too, the old faiths appear to be blossoming into renewed youth. The esoteric doctrines, first presented to the Western world by Mr. SINNET, aroused men's keenest interest; then ensued a kind of Buddhist revival, counting apostles among earnest men in the Occident itself, and now we have the Hindu faith introducing itself bodily to public observation. *The Prabuddha Bharata*, the first copy of which lies before us, is the organ of the new movement. Curiously enough the editor of this interesting periodical tells us that to contact with Christianity Hinduism owes the stirring among its dry bones. "I came not to destroy but to fulfil" seems to be receiving its supreme verification at the close of the nineteenth century. "Christian Missionaries," says *The Prabuddha Bharata*, "in their eagerness to vilify the Hindu, have opened an ancient magic chest, the very smell of whose contents caused them to faint. Oriental scholars, the LIVINGSTONES of eastern literature, have unwittingly invoked a deity, which it was not in their power to

appease. As philologists are succeeded by philosophers, COLEBROOKS and CALDWELLS give birth to SCHOPENHAUERS and DEUSSENS. The white man and his fair lady stray into the Indian woods, and there come across the Hindu sage under the banyan tree. The hoary tree, the cool shade, the refreshing stream, and above all the hoarier, cooler, and the more refreshing philosophy that falls from his lips enchant them. The discovery is published; pilgrims multiply. A SANVASIN from our midst carries the altar fire across the seas. The spirits of the Upanishads makes a progress in distant lands. The procession develops into a festival. Its noise reaches Indian shores and behold! our motherland is awaking." Among the clashing of discordant creeds, the noisy war of intellect and faith, that has deprived our era of all sense of religious rest and confidence, the quiet, peaceful attitude in which Hinduism offers itself has an emphatic attraction. "Really speaking, all religions are simply different phases of the same Truth, different methods of approaching GOD. 'I am in all religions as the string in a pearl garland' says the LORD. What humanity is to man, what existence is to living beings, that, Vedantism is to religions: it is their common essence, their inner unity, and as such, it can possibly have no quarrel with the past. On the other hand, it approves of the existing differences, and even welcomes their multiplication, so that no man might be left godless for want of a religion suited to his nature."

Is that the true interpretation of the NAZARENE'S comforting assurance, "In my Father's house are many mansions"? We have sometimes thought so. Yet if men accepted such a doctrine, the result would surely be moral numbness. There can be no agreement to differ in a world of intellectual activity. The more sincerely and strongly each holds by his own creed, the more anxious must he be to win his brother to the same view. We shall never witness that reconciliation of faiths towards which so many good men are labouring to-day. Nor yet will the Japanese ever succeed in constructing for themselves a skeleton of Christianity, jointed and articulated in such strict accord with the dictates of moral science that all must agree to recognise and worship its cold perfection. Flesh and blood will be wanted sooner or later, and then by degrees will ensue the same discordant conceptions of form that are troubling the West so greatly. Buddhism and Hinduism—closely allied creeds—appeal momentarily, for the sake of their tolerance and restfulness, to minds tired of the clamour of dogmas and disgusted by the incongruous fierceness of mutual condemnation and bigotry of self-confidence that unessential variance of views has produced among men worshipping the same GOD and following the ethics of the same

JESUS. But civilized men are irrevocably condemned to intellectual warfare in matters outside the purely objective sphere. It would be very delightful could we hope to reach the ideal society of the Vedānta; "not a millenium upon earth, nor a reign of angels, where there will be nothing but thorough equality of men, and peace, and joy; but one where religious toleration, neighbourly charity, and kindness even to animals form the leading features, where the fleeting concerns of life are subordinated to the eternal, where man strives not to externalise, but to internalise, himself more and more, and the social organism moves, as it were, with a sure instinct towards GOD." Such a condition is impossible in this world. We are no nearer it to-day than our remote ancestors were when the Crown of Thorns was woven. There is no common creed large enough to hold all sorts and conditions of men within its pale; no universal balm for every conscience.

"Alone, each heart must cover up its dead;
Alone, through painful toil, work out its rest."

The Prabuddha Bharata may, perhaps, have a "mansion" for some still wandering in the wilderness of doubt. At all events it has much interest for every thoughtful person. It offers its teachings mainly in the form of stories. We select one by way of specimen. KRISHNA, wandering one moon-lit evening by the banks of the Jumna, accompanied by the gopis and RADHA RUKHMAIN and SATYABAMA, observes a dead calf. He tells the beautiful maidens that it can be restored to life if each of them will speak out sincerely what she most desires:—

This was agreed to, and the ladies began one after another to speak out their hearts. One gopi said 'I should most like to undisturbedly enjoy the music of thy magic flute, O, my Krishna! That I value above all others.' Another said 'I wish to swim with thee in this delightful moonlight in this Jumna which flows on like melted silver.' A third said 'I have always been longing, and desire is now intensified, O! Krishna, for as much independence as man has longing to set at naught all social superstitions about woman's modesty, weakness, and so forth, all of which merely mean woman's slavery, to wear male attire, and walk about with a stick in hand and shoes and turban just wherever I please. Woman's life, as it is, is simply a curse.' A fourth said 'I should like to be a rishi saying his prayers on the Himalayas and performing ablutions on evenings like these at the very birthplace of the Ganges.' Another said 'I wish to go about helping the poor, looking after the sick and the wounded and carry consolation and peace to desolate homes. What selfish enjoyment could be desired in this world so full of misery?' 'I should like to be a great orator' said another 'delivering, on evenings like these, eloquent speeches on the reform of society, advancement of civilisation, and so on, and be talked about everywhere.' 'These do not please me' said another, 'I should like to be the very harmony that reigns in this hour, the inner calm that pervades the world this splendid evening.' The turn passed on—one wanted wealth, another jewels, another beauty, and so on—till it came to Satyabama and she said 'my only wish, at all times, is to have you my Krishna, incomprehensible cunning Krishna, all for myself.' Then followed Radha saying 'Beautiful as our bodies are, I wish that we should cast them off and be the very Love that binds us both. I wish to be all Love and nothing else. There is nothing sweeter or more beautiful.' Last came Rukhmani's turn and she said, 'My Lord, what a curious drama you have caused in so short a time! All my sisters here have spoken the truth, but what pleased one did not please the rest, and that is because the things desired have no intrinsic

virtue of their own. One thing, however, is common among all here, namely a desire for happiness and that too for that kind of happiness, knowing which the mind does not wish to know further and where it permanently abides. It is this stability, this fullness of knowledge and this happiness that all seek alike, but they seek for them exactly where they are not. The large catalogue of things now desired by them itself shows that it is not in the power of any external thing to give what they seek. I have learnt this, sit calm: and in the 'myself' or rather the self that alone remains (for the 'my' is a changing external thing) are all the three—permanence, bliss and knowledge. All I desire is, that I should desire nothing and be the self alone.' No sooner were these words spoken, than the calf, which had already begun to show signs of life, rose up and danced with joy before the lovely group.

THE SŌUL-WIJU RAILWAY.

The editor of the *Korean Repository* writes thus about the Sŏul-Wiju Railway:—"It may be set down on the credit side of Korea's account that a railroad is to be built between Sŏul and Wiju by a French syndicate. The contract was signed on the third of July. The name of the company or syndicate is the Five-Lille Co. The work is to commence as soon as the survey can be made and is to be completed in twelve years. The general terms of the contract in other particulars are the same as those between the Government and the American syndicate which is to build the Sŏul-Chemulpo road. That means that Korean labour will be used as largely as possible, that the Government gives the whole site of the road-bed, but no mining or other concessions, and that in fifteen years, or at the expiration of any subsequent ten years, the Government shall have the option of purchasing from the syndicate. We wish there had been in both these contracts some provision for assessment of the value of these roads when the time comes for the Government to purchase, but that is a good way ahead now and the advantages to be reaped by the Government meanwhile will be so tangible that she perhaps can afford to be liberal in the term of contract. Those who look at Korea merely as she is to-day may wonder how such a road will be made to pay. The through traffic from Wiju to Sŏul is of course little or nothing. Pyeng Yang is still a closed mouth, and the people of that place get goods largely across country from Wonsan. It seems then that this road will succeed through what Korea is going to be and not what she is. In the first place it will be surely mean the opening of Pyeng Yang, and it is difficult to estimate the effect of this move. The northern people are exceptionally energetic and business-like, and it would mean more than the opening of any two ports in the south. There are, to be sure, vast capabilities in the south along the line of rice culture and exportation, and as Japan becomes more a manufacturing people the rice fields of southern Korean will be drawn upon to a greater extent, but while the south is thickly populated and the cultivable land is mostly utilized it is not so in the north. There we find a great variety of possibilities as yet unrealized. A railroad in the south would give an outlet to present products, but in the north it would mean the opening up of resources at yet untouched. Coal, gold, and lumber are as yet practically virgin soil, and the building of this road will give an impulse to the exploitation of these fields and the north will vie with the south for the honour of being called the treasure house of Korea. Then the possibilities of wheat culture, fruit culture, sheep and cattle raising, and other kindred industries will draw people northward, and the railroad will thus be both the cause of good things and their effect. It will not be what we would call a terminal road. That is it will not depend on its termini for its trade, but it will be a distributor from Pyeng Yang as a centre, opening up a vast and productive territory.

At Okuzawa, Koma district, Yamanashi Ken, a deposit of gold has been discovered, and the finders have applied to the authorities for permission to work it.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

It will be remembered by readers of last month's summary that the *Nihon Shukyo* was stated to have invited an expression of public opinion on the following six questions: (1) What kind of a religion should be chosen? (2) What should be the attitude adopted towards existing religious sects in Japan? (3) Can the sacred writings and the articles of belief of religious sects be retained? (4) How should religious bodies be constituted? And how should places of worship be erected? (5) What are the best methods of propagandism? (6) How best may households and society generally be taught and reformed? Eleven answers to these questions had been received up to the time of the publication of the last issue of the *Nihon Shukyo*, which we now proceed to give in a condensed form. Dr. Kato Hiroyuki replies:—The choice of a religion to suit the times in which we live is a function which only philosophers can perform. The religious devotee is expected to believe certain dogmas implicitly. This belief I regard as mental slavery, a slavery to which learned men in modern times give no encouragement whatever. However desirous we may be to choose a religion, the task is impossible. What we select will be philosophy and not religion. Beyond this I have nothing to say on the subject.

Mr. Naito Chiso, the well-known Chinese scholar, observes:—(1) There is no necessity for choosing a religion, since we already have one. Respect for our national institutions and for the never-ending Imperial Dynasty is our religion. The Emperor is our God. (2) It is not essential to institute a persecution of religious sects; all that is required is to cause the light of nationalism to shine brightly: thus that which is heterodox will become orthodox. (3) As Sacred Writings I would recommend the Imperial Rescripts bearing on education. (4) The schools and colleges of the empire should be converted into temples where the Imperial Rescripts should be read. No other method or organisation is necessary. (5) School teachers and Buddhist and Shinto priests should unite in preaching the doctrines of nationalism. (6) The instruction of households and society generally must be entrusted to the Education Department.

Mr. Shaku Soyen, head of the Engakuji Sect, is of opinion that before the questions put by the *Nihon Shukyo* can be satisfactorily answered, it is necessary that a large meeting of leading Buddhists and Christians should be held, and that, after shaking hands with each other, they should discuss the various topics in a friendly manner.

Mr. Kitano Gempo, of the Shiba Seishoji, writes to say that it is beyond his knowledge or capacity to reply to the questions—*Mushiki mono nite bumpitsu ni fuji suru koto atawasu*. He concludes his short letter by complaining of want of leisure, which probably was the real reason of his not giving his opinion on subjects with which he is well acquainted.

Mr. Ebina Danjo, a Christian, replies as follows:—(1) The religion to be chosen is Christianity of course. By Christianity I mean the religion founded on the life and teaching of Christ, the Son of God; I am not in favour of making the rites and dogmas of the ancients binding on any Christian Church. Each church should be at liberty to decide on its own formularies. Rites and ceremonies and articles of belief must be adapted to locality, education, sentiment and to the age in which men live. (2) I would allow existing sects to fight their own battles. The fittest will survive. (3) I would retain the Old and New Testaments, and two maxims, Love God and love your fellow-men. (4) Existing Christian churches in Japan furnish good models of properly constituted religious bodies. (5) Unless funds are available, it is vain to talk about methods of propagandism. The use of foreign money for the purpose of spreading Christianity among the Japanese is a national disgrace. This practice must be discontinued before Ja-

panese Christians will be at liberty to discuss freely modes of propagandism. (6) It is not to be supposed that the Christianity which will be received into our Japanese households will be an exact counterpart of the Christianity known to Europeans and Americans. The Christianity to be taught here must assimilate to itself certain Shinto, Buddhist, and Confucian truths, in order to assume a character suited to our national requirements. Mr. Ebina describes these truths as 天賦ノ真理, *Tenpu no Shinri* (Heaven-taught truths).

Mr. Tanimoto Yutaka, a teacher in the Higher Normal School, Tokyo, thus expresses himself:—(1) The characteristics which, in my opinion, the religion to be chosen must possess are, (a) Thorough harmony and even approximate identification with the educational principles of our nation; (b) accord with the ever progressing truths of science; (c) ability to render familiar to ordinary ears well established metaphysical ideas. In my opinion none of the existing religions fulfils these conditions. A new form of faith is needed. (2) With the exception of absolutely injurious forms of belief and worship, which ought to be forbidden, I would be for leaving existing sects alone. Let those accept their teaching who are so inclined. Their influence can only last for a short time. (3) The choice or compilation of sacred writings is not a task that could be easily accomplished. The fixing of certain articles of belief, however, and the selection of a few appropriate ceremonies is desirable. (4) On this subject I have come to no definite conclusion beyond the opinion that religious bodies should be permeated with nationality. (5) Religious propagandism and school education should be made to assist each other in every way possible. (6) There must be an endeavour to produce good impressions on people by inquiry as to their condition, by assisting them in various ways, and by teaching them to help each other.

The Rev. Arthur Lloyd sends the following answer to the questions put by the *Nihon Shukyo*. (1) Christianity is the only religion based on Divine Revelation. (2) The answer to this question is given in Matt. xiii., 24-30. (3) The Bible is ample as a rule of faith. (4) I would draw your attention to Ephes. iv., 11-16 as furnishing an adequate reply to this question. (5) Ephes. iv. 15. (6) The carrying into practice the teaching of the Sermon on the Mount.

Mr. Yamaji Yakichi, the editor of the 護教, *Gokyo*, thus replies: (1) Christianity pure and unaltered. (2) Leave the sects alone. That which God has not planted will be rooted up. (3) Without articles of faith there is no religion. (4) Religious bodies should be comprehensive and thoroughly united. (5) Living amongst the people and being supported by them. (6) The reform of individual hearts, and, by their means, the reform of households and society.

Mr. Watarase Tsunekichi, the Editor of the *Kirisutokyo Shimbu*, thus expresses his opinion on the topics under discussion:—(1) That part of Christianity which possesses living power should constitute our religion. (2) The time for the sects to be all brought under one control has not arrived. The sects must be left to develop themselves in a natural manner. There is no use in trying to force the situation. Natural development is the only kind of development that will last. Let Shintoists, Buddhists, and Christians each work on their own lines and borrow as much from each other as they feel disposed. This will prove the best preparation for centralism and union in the future. (3) Sacred writings being the original source of existing religions, must be considered indispensable. Yet, since the stream of truth flows through all the works of nature, it is not advisable that a man should confine his attention exclusively to sacred books. Men's belief is not to be restricted within narrow bounds. Still, from time to time, the preparation of articles of faith, designed to show the character and tendency of religious belief, may prove beneficial. (4) To me it appears that a church has two functions, one being the service of God and the instruction and spiritual nourishment of members by making them acquainted with the

teaching and character of Christ; the other, the cementing of the members together in one body, consisting of brothers and sisters whose hearts beat in accord. (5) I am in favour of relying on the unconstrained efforts of individual believers in the matter of propagandism. The practice of employing itinerant preachers is a good one. Every church should employ two or three of such evangelists. (6) In the case of a church whose members are all active propagandists of the Gospel, households and society generally will reap the benefit of instruction. Men able to solve the social problems which everywhere present themselves will make their influence felt on every hand.

We cannot find space for the answers of Mr. Anezaki Masaharu, of the Literary Section of the Imperial University; and of a student called Kugimiya. Mr. Anezaki is in favour of great liberty being permitted in religious matters. He is for allowing people to use what sacred books they please, and sees no use in articles of faith. Churches should be organized on the principle that members all have great liberty. In the attempt to improve society, he is in favour of making use of music, poetry, and romance, and thinks that, in addition to this, the influence of an Association of pious women would be found to be most powerful. Mr. Kugimiya is evidently a Christian; with slight modifications his views resemble those already given.

The editor of the *Awoyama Hyoron*, a Christian organ connected with the Awoyama Gakuin, earnestly advocates a revival of the faith of the early Christians. The nineteenth century, says this writer, will be remembered as an age of criticism and free inquiry, but there is no denying that some of the chief elements of religion have been well nigh lost. Religious minds and scientific minds should combine in the endeavour to restore the religious feelings that characterised the ancient Christians. We know that it has been customary for a long time to extol reason at the expense of sentiment, to speak of religion as though it were nothing more than theology; but men's minds will never be satisfied with the merely intellectual qualities of religion, that is, with philosophy; they want more than that: they need religious emotion. Forms of faith lose their influence on men's minds when they become the mere exponents of certain religious theories. You have only to compare the Unitarianism of to-day with the Unitarianism of Boston years ago to acknowledge the truth of this remark. Religious sects that make theology the foundation of their religion have no power whatever. The essence of religion is devotional feeling, and in order to maintain the position of religion in the world this feeling must be fervent. It is only those that have never experienced any real religious feeling who lay undue stress on the necessity of rendering prominent the philosophical aspects and the political bearing of forms of faith. Pitiable, indeed, are the views of such men!

In the pages of the *Seikyo Shimpō*, Mr. Kitakawa Sadayuki refers to the absurd reports that have recently gained currency relating to the Greek Church and Japanese Government. According to certain foreign newspapers, says Mr. Kitakawa, an agreement has been come to by the Russian and Japanese Governments whereby Japan is to be allowed to maintain her ascendancy as a naval power in the East. In return for this she promises to make the Greek Church form of the Christian faith the established religion of Japan. Marshal Yamagata is said to have effected this arrangement during his late visit to Russia. We do not believe, continues Mr. Kitakawa, that there is any truth in the report. It no doubt originated in the mistaken notion that the Greek Church is a mere Government organ and that the Czar is the head of the Church. The connection of the Russian Government with the Greek Church is confined to solely temporal affairs. The Emperor is not the head of the Church in a spiritual sense. His relation to it is political and not religious. The 日新報, *Nichi-shu Shimpō*, in referring to

this report, expresses the opinion that there may be some truth in it. So low are popular notions concerning religion, says this organ, that we are not surprised to find that proposals to convert a creed into an article of barter between one State and another have been made. No such reports would be believed were men's ideas about religion raised to a higher level. To intelligent men, observes the *Nichi-shu Shimpō*, it ought to be plain that religion has an important part to play in the consolidation of an empire and that it is quite impossible for it to fulfil its functions when degraded to the level of an instrument for furthering State interests in foreign countries.

The Editor of the *Uchushinkyo* (the *Universalist*), writing under the title of "The Religion of this Life," insists on the importance of religious teachers becoming aggressive. In the busy world of competition in which we live, says this organ, the seclusive habits of many of the representatives of Christianity are a great obstacle to its progress. Christianity is eminently a religion suited to the every-day life of men and women of the world. To make its influence felt it is necessary that its professors should mix with their fellow-men.

In a contributed article published in the same number of the *Universalist* from which we have just quoted, Mr. Nunokawa contends that the following are the three most urgent topics of discussion among religious thinkers:—(1) Is religious feeling in Japan deep or shallow? (2) What will be the future of religion in this country? (3) Can Buddhism and Christianity amalgamate?

In the pages of the *Hakko*, issued by a Literary Society connected with the Tsukiji Rikkyō-gakko, Mr. Takahashi Goro contributes a learned article on the limits of the intelligence of birds and animals. After quoting numerous instances of the display of remarkable sagacity on the part of these living creatures, from Japanese, Chinese and foreign works, Mr. Takahashi answers the question, "Have birds and beasts a religion?" in the negative.

Among the articles published in No. 78 of the *Shinri*, are the following:—"The Seismic-wave disaster and the Christian," by the Rev. E. Schiller. "The doctrine of the Chinese philosopher (列子) Licius" (concluded), by Dr. Faber. "Religion among the Semites," by the Rev. Dr. Christlieb. Mr. Schiller discusses the religious aspects of the disaster in the north at some length. He is of opinion that, regarding the calamity as sent by God, it is useless to try and find out the reason of its being sent, but there is no doubt that the lesson we ought to learn from it is that death may overtake us at any moment without giving us any warning. The other inferences drawn by Mr. Schiller resemble those with which Christian preachers incite their hearers to increased devotion on occasions like that recently experienced in Miyagi and adjoining districts.

In the *Rikugo Zasshi*, Mr. Ukita Kazutami discourses on the connection of religion and history. After defining the function of history and showing how, aided by the light it throws on almost every subject, mankind has progressed and aimed at greater perfection age after age, Mr. Ukita points out that in religion as in other branches of knowledge the fittest survives. The idea of there being a moral ruler of the Universe still survives, and no one can study the history of the past without being convinced that in all times men have believed in the existence of God. "The existence of God and future reward and punishment," says Mr. Ukita, "are, of course, nothing but ideas;" (*Jōtei no sonzai, raise no shōbatsu moto yori sōō ni sugisau*), yet as ideas they have effected great good. Men have regulated their lives as if they would be held responsible for their actions in the future, and as if the God that is assumed to exist took notice of their conduct. The credit of having brought about this result

belongs to religion as a whole, though not to every form of it.

The magazine from which we have just quoted contains a notice of the second volume of a recently published work entitled *Bukkyō Shoshi* (a Short History of Buddhism), of which Mr. Fujii is the author. The first 390 pages of this book give the history of Buddhism during 600 years, dating from the beginning of the second Century after Shaka's death. Maps are appended in order to show the rapid strides the religion made in its prosperous days, and the last 70 pages are devoted to a glossary of Buddhist terms. The work, in addition to showing signs of great research, possesses the advantage of being written in a lucid style, the author having taken great pains in furnishing explanations of abstruse terms and allusions. The *Bukkyō Shoshi* is said to be worthy of ranking with the best foreign books on the same subject.

A publication called the *福音義誌*, *Fuku-in Soshi*, just started, has struck out in a new line. It purposes devoting itself to the work of writers on religious subjects as expressed in foreign magazines. The *Fuku-in Soshi* remarks that few foreign missionaries even see the best foreign religious organs, and that Japanese are wholly unacquainted with their contents. The task undertaken by this new magazine is a formidable one and likely to prove expensive, but, if well edited, there is no reason why the venture should not succeed, specially as there is in the literary world a decided movement in favour of translations.

The *Shukyo*, a Unitarian organ, has articles on the Epicurean doctrine of pleasure as the chief object of life, "The Life and Character of Societies," "The Development of the Feelings," "Traditional Buddhism and Mr. Soga." The Unitarians are in the habit of commemorating the birth of Socrates on June 21st by holding a meeting at which speeches suitable to the occasion are delivered. This year's meeting is reported in the magazine that we are now quoting.

We observe that Dr. McCauley's reply to Bishop Bickersteth's attack on Unitarianism has been translated into Japanese by Mr. Haseguma Iwao. It bears the title of *史觀の基督教*, *Shikwanteki Kirisutokyo* (Christianity viewed from a historical standpoint). The work consists of 163 pages and is said to be a very clear exposition of the Unitarian view of Christian doctrines.

In a recent number of the *Rikugo Zasshi*, Mr. Tanimoto Yutaka writes on the subject of Christian Schools. After observing that among men of influence not a few have renounced Christianity and religion, or adopted some other form of faith in the place of Christianity, this writer proceeds to refer to an article in No. 17 of the *同志教育*, *Doshi Kyoiku*, entitled, "The Decline of Christianity," by Mr. Shigemori Keisei, more especially to that part of the article that refers to the waning influence of Christian Schools. In Mr. Shigemori's opinion these schools are defective in three particulars. (1) The methods of teaching are imperfect. (2) The proper proportion between the relative importance of the subjects taught is not maintained. (3) Foreigners exercise too much control over the practical management of the schools. The views of Mr. Shigemori here expressed, observes Mr. Tanimoto, are held by many Christians. The first thing important to insist on, is that the subjects taught in these schools should correspond with those taught in Government *Junjo-chugakko* (Ordinary Middle Schools). This practice is followed to a large extent in the most noted of Christian Schools, such as the Osaka *Momoyama Gaku-in*, the Nara *Shiritsu Junjo-chugakko*, the Azabu *Junjo-chugakko*, the Middle School Department of the Aoyama *Gaku-in*, the *Rikkyō* (立教) Ordinary Middle School, the *Meiji Gaku-in* and the *Tōwō-gijyū* (at Awamori and Hiroaki). But even in these schools the relative importance attached to the subjects taught needs

readjustment. But the question of how best to possess themselves of the power now wielded by foreigners in these establishments, is one that the Japanese connected with the schools find most embarrassing. In my opinion, concludes Mr. Tanimoto, the chief cause of the failure of Christian schools, regarded from a national point of view, is the fact that the principle on which they are based is individualism and not nationalism. The only way to insure their success is to make them serve State purposes, and in order to do this, they should be conducted in a manner similar to government schools. The various ordinances and regulations issued by the Department of Education should be observed by Christian Schools.

Under the heading "the Religious World" the *Waseda Bungaku* discusses the present state of Buddhism. A few words of introduction are needed to render the remarks of this organ intelligible. Buddhist awakening may be said to have commenced some eight or nine years ago. Prior to that date there was no such thing as Buddhist modern literature. Any one desirous of becoming acquainted with its doctrines had no alternative but to join the priesthood. In those days, the object of propagandists was not the imparting of knowledge, but the persuading of people to believe. The Buddhist faith was represented as being transcendent, far removed from the comprehension of ordinary mortals. The spread of Christianity in this country led to an entire change of tactics. Buddhists discovered that successful competition with Christianity involved the adoption of many of its methods, and that, with the view of making Buddhist teaching intelligible to the masses, it was necessary that doctrines hitherto obscured by the technical character of the terms in which they were expressed should be explained in the language of everyday life. From this time forward Buddhism entered on a new career. The various sects started literary organs of their own, and devised numerous schemes for popularising the creed whose doctrines had hitherto been monopolised by the initiated few. Scores of books and pamphlets of an entirely new description, bearing such titles as *講話*, *Kowa* (Colloquial Exposition); *一夕話*, *Issetkiwa* (An Evening Talk), and *義演*, *Giyen* (Popular Explanations of Religion), made their appearance. Suitable reading matter for believers of all grades of intellect and learning was supplied; the children of the poor were taught and maintained; and various benevolent schemes were freely and earnestly discussed. Thus Buddhism assumed an entirely new character. But now, the party known as the "New Buddhists," while approving of the above named reforms, maintain that they have not gone far enough. They claim that not methods only need reform; but that the doctrines taught and the whole organization of the Buddhist sect require alteration, in order to harmonise with the spirit of modern times. This struggle between the new and old schools of thought is the first subject discussed in the article in the *Waseda Bungaku* already alluded to. The writer is of opinion that the advocates of radical reform lay themselves open to the charge of immoderation, flippancy, and general impracticality. Orthodox Buddhist organs warn their readers against the wholesale destruction and the wide-spread doubt advocated by members of the new sect. The *Mujinto* (The Inextinguishable Light) observes that no truly religious man can approve of flippancy and jocose criticism, a destructive policy and the encouragement of doubt. The *實洞教報*, *Soto Kyōhō** speaks of the men of the new school that figure so prominently in modern religious controversy as delighting in fault-finding and violent attacks on existing institutions, as sowers of the seeds of doubt by the use of secular agencies, as violators of the sacredness of religion. The *反省雜誌*, *Han-sei Zasshi* asks what claim men armed only with the weapons of science and philosophy have to be heard on religious subjects.

* So and To are the names of mountains in China that were centres of the Zen Sect; hence the terms are used here in the sense of Zenitsu.

On the most vital topics of religion, on life and death, and the end of all things, they can tell us nothing, says this organ.

The *Nihon Shukyo* takes a different view of the parts played by the contending Buddhist devotees. It is frequently said, observes this magazine, that moderation is the best of all virtues, that the stolidity and blindness to defects characterizing the conservatives, and the destructiveness and desire for change shown by the progressionists in religious matters, are alike to be condemned. But in our opinion—we are quoting, of course—there is no surer way of bringing about social and religious deterioration than by the adoption of the lukewarm policy recommended in certain quarters. Our advice to the opponents now engaged in assaulting each other is “be extreme,” for *seal* that runs to extremities is infinitely preferable to sleepy indifference that finds favour among easy-going religious believers.

Under the heading of “The Secular works of Buddhists,” the *Waseda Bungaku* informs us that educational questions, benevolent schemes and plans for instructing prisoners are receiving much attention. The *Dento* (Transmitter of Light) discusses the subject of education in Formosa. The *Hanshi Zasshi* deals with the question of how best to keep released prisoners from committing further crimes. The *Bukkyo* calls attention to the rapid increase of poverty and urges its readers to devise measures for relieving distress. The *Shohorin* expresses the hope that the time has come when men will relinquish their excessive regard for their own interests and when Buddhists will explain their religion in a manner suited to the needs of modern society. Hitherto, observes the *Waseda Bungaku*, the discussion of urgent social questions has been mostly confined to Christian publications, but now it would seem that the Buddhists have come to see the necessity of paying attention to these subjects.

The Buddhists have imitated Christians in the matter of employing women for certain classes of evangelistic work. There exist in Tokyo not a few Buddhist Female Societies engaged in benevolent and religious work. The *Shohorin* advocates the employment of nuns in this kind of effort. There are, says this organ, no less than 379 nuns connected with the *Myoshinji* (妙心寺), the sect to which we belong, so that if the nuns belonging to other sects could all be made available for use in evangelistic and other kinds of work, a very large number would be obtained. But the *Taiyo* is of opinion that the majority of nuns are in no way fitted in point of education to become teachers, and adds that the employment of women for the purpose of religious propaganda is attended with more evil than good. The *Fogaku Zasshi* also writes unfavourably of the movement. It says that female evangelists have been guilty of most unseemly conduct. The course recommended by this organ is the restriction of the efforts of female religious zealots to the instruction of their fellow-believers, preparatory to their being entrusted with evangelistic work.

The evil tendencies of the teaching of the *Tenrikyo* sect and the abuses that have arisen among its adherents, form the subject of severe comment in various Buddhist publications. There is little new to be said on the subject. All well-meaning Buddhists are agreed that the methods employed by this popular sect for influencing the masses are most unworthy and pernicious.

A writer signing himself Sakai-no-Tekkai, observes, in the pages of the *Bukkyo*, that in modern days Buddhism has been reduced in the eyes of the world to a performance of traditional ceremonies and a means of deceiving ignorant people. There is no denying that Buddhists have been remiss in the study and exposition of the scriptures and in the good works which ought to accompany pious

study. What is the secret of the success of Christianity? How is it that this creed retains its hold on men's minds? Because it is able to adapt itself to the changes that time brings. At the beginning of the Tokugawa era, there were among Buddhist believers many learned men. The prosperity of modern Buddhism is to a large extent the result of the discussions and differences of opinion of that age. It is precisely such an interest in the creed that the representatives of what is known as reformed Buddhism are endeavouring to arouse. But they find that they have to encounter a listlessness and satisfaction with low standards in the priests of various sects beside which the opposition of Christianity shrinks into insignificance. Buddhism need fear no external foes. Her enemies are within her own pale.

No small stir has been caused in the Buddhist world by the acceptance of secular honours, in the form of recently conferred titles, by the chief representatives of the *Shin* sect, Otani Kōson and Otani Kōyei, and by four other prominent men belonging to the priesthood. As is known to many of our readers, the *Shin* sect is more lax in its priestly *régime* than most other sects. Its priests are allowed to marry, to eat meat, and to bequeath their livings to their sons. Moreover, the Otani family, being originally of noble blood, have from time to time received special favours from Government officials, and, on the occasion of Prince Sanjo's Chancellorship, were brought into close contact with the supreme secular power, Prince Sanjo having married into the Otani family. This state of affairs has created constant jealousy among other Buddhist sects, and when, on June 9th last, it became known that the leading members of the sect had actually been elevated to the peerage, a storm of opposition arose. The reason for conferring secular honours on the head of the *Shin* sect is said to be the zeal shown by this sect during the late war. But, according to articles that have appeared in various organs during the past few months, the *Shin* priests that accompanied the Japanese troops to China were by no means a credit to the religion they professed. The *Kokumin Shimbum* has been specially severe in its attacks on the sect, predicting even its final downfall. It is alleged by some writers that the *Shin* priests serving as chaplains to the army made use of their positions for purposes of trade, and that they resorted to other ways of enriching themselves. It is contended that these abuses must have been known to the head of the sect, and that his acceptance of a reward from the Government for services that he knows were not rendered, was outrageous. A writer in the *Bukkyo*, over the signature 漫言子, adopts a most scornful tone when alluding to this subject:—“The significance of titles changes from age to age. The term *Tonosama* (Lord) was formerly applied to one entitled to the highest respect and honour; now it is an epithet applied to men ignorant of the affairs of the world and besotted. The same may be said of the word *Daimyo*. The term *Okusama* was formerly used in reference to women of the highest rank. Now, with a slight modification, the substitution of *san* for *sama*, it is used by greengrocers, fishmongers, and the like, in reference to each other's wives. The *jūgoi* (第五位) *sama* (the second grade of the fifth rank), was one in which Minamoto Yoshitsune gloried as a rank worth attaining, but it is now applied to *ex-daimyo* or to newly created peers, with a meaning anything but respectful. And so it seems to be with the title *Hakushaku* (Count): after being applied to such eminent personages as Matsugata, Okuma, Ito, Yamagata, and others that might be named, it is affixed to such names as Otani and Hongwanji. Somehow our ideas of fitness are outraged by such a use of a patent of nobility. The time was when men gloried in their religion, and when the titles *o-shōnin-sama*, *go-monseki-sama* carried with them associations and honour of the most sacred character, and when such titles as Count and Baron to religious ears savour-

ed of secularity; but things have altered and we are now told that the doctrines of religion need to be backed by secular titles in order to make headway. The Government seems to be following in the footsteps of Russia and to be attempting to give an impetus to Buddhism in foreign lands by allowing its chief representatives to bear with them signs of their official connection. For purposes of propaganda in foreign countries this device will prove utterly futile, and as regards Japan it is almost unnecessary to remark that the newly acquired titles have no significance whatever.”

In two recent numbers of the 佛教史林, *Bukkyo Shirin* a writer signing himself Washinow Junkei discusses at considerable length the combination of Shinto and Buddhism in a manner that shall bring discordant elements into harmony. The greater part of the articles consists of a historical summary of the amalgamation of Buddhism with Shinto and other religions in the past, a subject tolerably familiar to students of comparative religion. Buddhism is sufficiently elastic, says the *Bukkyo Shirin*, to allow of its adapting itself to its surroundings. It has amalgamated with other forms of faith to a certain extent in India and China. In the latter country it adopted many of the doctrines of Confucianism and Taoism. In Japan, from the days of Shotoku Taishi, who earnestly advocated this course, the amalgamation of Buddhism and Shinto has been going on. The *Nara Daibutsu* was intended to be an emblem of the union of the two creeds. Shinto divinities are worshipped in Buddhist temples. Among Buddhist sects there are some characterised by strong Shinto tendencies. The two religions are practically one. Irrespective of the truth of the assertions made, the articles are well worth reading on account of the vast array of facts, culled from various sources, that they furnish.

Dr. Kato Hiroyuki, the well-known President of the University, in an article published in the *Nihon Shukyo*, invites an expression of public opinion on the following questions:—(1) Is it true, as frequently alleged, that the Japanese have no deep religious feeling? (2) If true, to what source is this deficiency to be traced? The following is an epitome of Dr. Kato's remarks on the subject:—Prior to the Restoration (1867) Buddhism among the lower classes, and Confucianism among the upper, claimed a very large number of sincere and devout adherents. After the Restoration, both these creeds lost their hold on men's minds, but not to the same extent. Buddhism was regarded with so much favour that, although there was talk of abolishing it, such a measure was deemed an impossibility, and no attempts were made to carry it out. It would seem, then, that the charge of coldness and indifference in religious matters is baseless as regards pre-Restoration days, but we have no doubt that it is founded on fact as far as the upper classes are concerned in the present era. In certain quarters educated men have been paying some attention to Buddhist teaching, but this has been done as a learned study rather than as a religious inquiry preparatory to belief. And as regards Christianity, it now wields no such influence over the minds of educated men as it did when it was first introduced—its progress has met with a check. So that it is quite correct to say that, with the exception of the lower orders, Japanese regard religion with supreme indifference. To what origin is this phenomenon to be referred? In China and Turkey from age to age religion holds its own. In Europe, whatever else changes, religious feelings remain unaltered. In many cases, when to outsiders it appears that belief in the traditional teachings of religion is the chief cause of the decline of national power, the inhabitants of the countries whose power is on the wane are utterly unconscious of the evil effects of their belief and regard their creeds with supreme satisfaction. That a precisely opposite feeling should exist in Japan is surely one of the most remarkable of national phenomena. An inquiry into its

origin is a duty incumbent on learned men to discharge.

The article from which we have culled the above is entitled, "A solicitation of the opinion of noted scholars on certain moral questions." The second subject on which Dr. Kato asks for an expression of opinion is prostitution. His views on this subject are stated in terms precisely similar to those reproduced in these columns some weeks ago, and hence need not be repeated here. The editor of the *Nihon Shūkyō* has offered to throw open his columns to a discussion of this subject and urges learned men to give the public the benefit of their views thereon.

The 惟一, *Yui-itsu*, a Shinto organ issued by the Jikkō sect, complains of the rank that money holds in the minds of certain persons, and points out that many of the most valuable things in life are not to be purchased by money. Another writer in this magazine speaks regretfully of the disfavour with which divination is regarded among people that have imbibed materialistic views. Divination being the only means of ascertaining what is the Divine will in reference to a variety of contemplated actions, the disuse of the practice of consulting the gods by this means is regarded as a sign that there is a serious lack of religious feeling among the masses.

DASTARDLY OUTRAGE BY JAPAN. ESE.

A cowardly assault was committed by some Japanese firemen about 9 o'clock on Thursday evening, upon Mr. William Barrie, Superintending Engineer of the Nippon Yusen Kaisha. Dissatisfaction had been engendered among the firemen in the employ of the N.Y.K. through some of their number being threatened with dismissal, and Chinese taken on in their stead, in the case of one of the foreign bound steamers. A party of these men proceeded to Mr. Barrie's house on the Bluff armed with iron hammers and crowbars, and demanded to see him. Upon Mr. Barrie's appearing they at once struck him on the head, inflicting two wounds, one over the eye, the other upon the scalp. Mr. Barrie, bleeding profusely, managed to escape, and then the ruffians proceeded to break every pane of glass and piece of furniture they could reach, and to jostle and insult Mrs. Barrie. Meanwhile, neighbours hearing the noise of the disturbance, came out to Mr. Barrie's assistance, and the police were sent for. Dr. Wheeler was also called in and he dressed the wounds. Two of the ring-leaders in the cowardly attack were arrested that night, and by four o'clock next afternoon twenty more were captured and held for examination: meanwhile, police are guarding the house. Mr. Barrie, we understand, is progressing favourably, and hopes to get out of the house next week. We trust that an example will be made of these insubordinate ruffians.

"WHAT IS TRUTH?"

Here is what the *Western Weekly News* of June 20th says about the Seismic Wave of June 15th:—

Yokohama, Wednesday.

A fearful earthquake has occurred in the northern province of Japan, involving terrible loss of life and immense destruction of property. The day had been oppressively hot, and the sky became densely overcast. Then the thunder roared and the lightning played, the earth seeming to move and upheave. Great chasms were made, and clouds of lava, debris, and ashes spouted up, the scene being one of appalling grandeur. Around the town of Kamaishai the volcanic eruptions raged with unremitting fury, and the picturesque little houses of bamboo fell in hundreds at a time, the unfortunate people being either maimed or killed as they fled wildly for the open country. The persistence of the earthquake was astonishing, the shocks being renewed every twenty minutes during the whole day, and far into the night, when the spectacle of horror and desolation was awful, whilst wretched groups, in terror, huddled at the highest points, in order to escape the water which, rising from the sea in overwhelming waves, had swept the country for miles around. The disturbances lasted for nearly twenty-four hours, and when the morning broke the face of the country had been in many places transformed, and the chaos and wreckage were

suggestive of a city of the dead. The Emperor has sent supplies for the destitute and suffering.

Would it be possible to find a greater liar than the writer of this paragraph? His mendacious invention certainly does not exceed that of the Central News Agents in London who expanded the telegrams in the war between Japan and China, but still his utter disregard for truth is very remarkable. He simply sat down and fabricated a story such as might startle his readers, without the faintest care whether facts in any degree accorded with his fancies. Talk of Oriental medacity, indeed! The only difference between the East and the West is that the Occidental does it on a bigger scale.

TELEGRAPHIC COMMUNICATION BETWEEN AMERICA AND ASIA.

In the Senate of the United States, on May 13th, 1896, Mr. Gray introduced the following bill; which was read twice and referred to the Committee on Foreign Relations:—

A BILL.

To revive and amend and extend the Act of Congress of August fifteenth, eighteen hundred and seventy-six, to encourage and promote telegraphic communications between America and Asia, across the Pacific Ocean, from the western shores of the United States to the Hawaiian Islands to Japan and China.

Whereas on the fifteenth day of August, eighteen hundred and seventy-six, the Congress of the United States passed an Act granting to Celso Caesar Moreno and his associates the right to construct, lay, land, and maintain a line or lines of telegraph or submarine cable or cables on the Pacific coast of the United States of America to connect the American and Asiatic coasts by telegraph lines, wires, or submarine cables and

Whereas several of the associates mentioned in said Act are now dead, and certain others, from other causes, are unable to act in the revival of this enterprise: Therefore,

1. Be it enacted by the State and House of Representatives of the United States of America in Congress assembled, That Celso Caesar Moreno, of the State of California, and his associates shall have the right to construct, lay, land, and maintain a line or lines of telegraph or submarine cable or cables on the Pacific coast of the United States of America to connect the American and Asiatic coasts by telegraph lines, wires, or submarine cables: Provided, That said C. C. Moreno and his associates shall begin to lay said cable or cables within three years from the Passage of this Act.

2. That any telegraph line or cable laid by said C. C. Moreno and his associates shall be subject to the following conditions, stipulations, and reservations, to wit: The Government of the United States shall be entitled to exercise and enjoy the same or similar privileges with regard to the control and use of such line or lines of cable or cables that may, by law, agreement, or otherwise, be exercised and enjoyed by any foreign Government whatever; secondly, citizens of United States shall enjoy the same privileges as to the payment of rates for the transmission of messages as are enjoyed by the citizens of the most favoured nations; thirdly, the transmission of dispatches shall be made in the following order: First, dispatches of State, under such regulations as may be agreed upon by the Governments interested; secondly, dispatches on telegraphic service; and, thirdly, private dispatches; fourthly, the lines of any such cables shall be kept open to the public for the daily transmission of market and commercial reports and intelligence, and all messages, dispatches, and communications shall be forwarded in the order in which they are received, except as hereinafter provided: fifthly, before extending and establishing any such line or lines of cable or cables in or over any waters, reefs, islands, shores, and lands within the jurisdiction of the United States a written acceptance of the terms and conditions imposed by this Act shall be filed in the office of the Secretary of State by the said C. C. Moreno and his associates.

3. That nothing in this Act shall be construed to limit the United States in granting to other persons or companies similar privileges herein contained.

4. That the right to alter, amend, or repeal this Act at any time is hereby reserved to Congress.

This project of a trans-Pacific cable, is one of the grandest opportunities and possibilities of the present and will be one of the grandest facts and factors of the future, being the last link needed for encircling the World with submarine cables and terrestrial electric wires—length, 6,850 geographical miles.

C. C. MORENO, Projector.

A THIEVING COOK.

Ching Tong-han, a cook, was recently discharged from service by a German resident on the Bluff. Next day he went back to the house, No. 148, and stole a mantel-timepiece. This he put in pawn with a compatriot, thus leading to his detection. The Kagacho police effected the man's arrest yesterday.

"JAPANESE TOPSY-TURVYDOM."

Every one has observed that the ways of the Japanese are not as the ways of Europeans or Americans, and to this radical difference of method self-contented Americans and Europeans have given the name of "topsy-turvydom." There is no manner of justification for the term. For example, when an American or a European counts with the fingers of one hand, he closes the fingers first, and then opens them one by one, beginning with the little finger. Some folks, it is true, employ both hands in the operation: in that case they keep the left hand open and fold down its fingers one by one with the right, the little finger, as before, being the starting point. But we are not talking of the two-handed performance: we are talking of the case where one hand only is used. Now the Japanese proceeds quite differently. He holds out his hand—right or left—and begins to count by laying the thumb upon the palm, after which he closes each finger in succession, from the index to the little finger. Which of those methods is natural and which is topsy-turvy? Try the two, and you will find that the European method involves, in the case of most people, a kind of awkward struggle at the last moment when it comes to opening the digit finger and still keeping the thumb closed, whereas, in the Japanese method, the closing of the thumb first gives an easy routine, free from any muscular struggle. None the less, the average foreigner when for the first time he sees a Japanese count with his fingers, exclaims unhesitatingly:—"Look at that extraordinary specimen of digital arithmetic! How thoroughly Japanese!"—meaning by "thoroughly Japanese" that it is thoroughly what it ought not to be. Consider, again, the Western and the Japanese fashions of beckoning and repelling. The European, when he wants to beckon, bends his digit finger into the shape of a hook, and agitates it in the most finikin manner conceivable, with the point up. The Japanese turns the palm of the hand down, droops all the fingers and waves them gently. The former motion, the hooking of a person towards oneself, is utterly ungraceful: even a beautiful girl can not make it pretty. The Japanese motion, on the contrary, is at once caressing and graceful. Which is topsy-turvy? The foreigner, without pausing to reason, ridicules the Japanese method as absurd. And he passes the same judgment when he observes that where he himself throws his hand outwards to signify repulsion, the Japan merely raises the hand and waves it parallel to the face with the thumb outwards. Ask a lady to make each of these motions and then decide which is the prettier. Yet we call the Japanese custom topsy-turvy! The best essay ever written on this subject was from the pen of the late Major-General Palmer. He did not attempt to make any choice between the fashions of Japan and of the West, but he described the differences with all the acuteness of observation for which he was remarkable. Mrs. E. S. Patton has now published a little book on the same subject. It is printed on crepe and very prettily illustrated in colours—in short, one of those attractive volumes supposed to be distinctive of modern Japan, though even in its most praiseworthy features it falls far short of the Japanese novel of a century ago. Mrs. Patton's range of observation is not very extensive, but what she has to say she says in an artless, unaffected manner that makes her book very pleasant reading. Her enthusiasm carries her a trifle too far when she classes the inverted image of Fuji-yama, often seen in Hakone Lake, among examples of topsy-turvydom, and especially when she attributes that simple effect to "refraction." But she makes a good point when she notes that whereas the vast majority of foreigners come to Japan with absolutely crystallized notions of what is right and what is wrong, and with a pre-disposition to ridicule everything unfamiliar to themselves or incongruous with their stereotyped ideas, the Japanese goes to the West ready and anxious to discover and adopt anything better than what

he has left at home. We congratulate the publisher, Mr. T. Hasegawa, on the admirable "get up" of this work, and add that it may be procured of Messrs. Kelly and Walsh.

THE JAPANESE IN FORMOSA.

We take the following from the London *Economist*:—"A recent report to the Foreign Office on the trade of Formosa is mainly interesting because of the contrast it draws between the results achieved by the vigour and energy of the Japanese, and the state of things under the slothful, inert administration of their predecessors in the government of the Island. Japanese enterprise has been particularly conspicuous in the construction of railways and means of communication, one of their first undertakings having been the building of a Decauville tramway of 20 inches gauge. This, though primarily intended to be used for military purposes, will be equally useful for commercial transportation, as the line already connects several of the principal cities, and has some 90 miles in operation. It is added that surveys have been made for a line of rail between the two chief towns, Takow and Anping, and scores of miles of good road have been constructed, so that the discomforts of travelling in Formosa bid fair soon to be regarded as things of the past. The Japanese are, the writer says, showing laudable energy in the development of the internal communications, and during the five months that passed since they landed have left more marks of their presence on the face of the country than their predecessors effected in as many decades."

MODERN METHODS OF WARFARE.

In Mashonaland Englishmen have been hard-pressed to hold their own and have become excited by the difficulties against which they have to contend. Nothing tries the temper of troops more than a guerilla warfare, when the enemy confines himself to swift and harassing raids, flying for refuge, when in danger, to mountains whence he can not be dislodged. "General Carrington has found it needful to issue a sharp order that women and children and the wounded are not to be put to death." What does such an order mean? The *Spectator* explains:—"For the moment the white policy may be summed up in the American pioneer's sentence, 'Indians is pizon wherever found.'" Had there been no killing of women, children and the wounded, General Carrington's order would never have been issued. Such dreadful deeds lose nothing of their horror because their perpetrators would shrink from them with loathing in calm moments. They are always to be denounced whoever commits them. But let us remember that the record of our own troops in this year of grace is not stainless, before we apply ugly epithets to others similarly guilty. War is brutal at all times, but sometimes it becomes more than savage.

THE "SHANGHAI TIMES."

Shanghai is to have another newspaper, *The Shanghai Times*. We learn that the first number will be issued on September 1st, and that it will be an evening journal. The editor is Mr. W. H. Smith, formerly Manager of the business and editorial departments of the *Japan Gazette*. We may expect to see much of Mrs. Smith's writing also, and very welcome it will be, for her graceful style, conscientious methods, and courageous energy won golden opinions for her during her editorship of the *Japan Gazette*. Mr. Smith is a man of extensive travel and varied experience. He has been content, hitherto, to play a somewhat self-effacing part, but his capacity is known, and we look forward with pleasure to a direct expression of his views. Under his direction, *The Shanghai Times* is not likely to assume the tone of indiscriminating hostility to everything native that disgraces so many journals in the Far East, and deprives their criticism of all efficacy.

THE ECLIPSE.

It appears that the Japanese astronomers have chosen Esachi in the province of Kitami, and Atsugeschi in Kushiro as the places for erecting their observatories in connection with the coming solar eclipse. Professor Terao, Astronomer-in-Chief, with a considerable staff of assistants, proceeds to Esachi, and Professor Hirayama, of the College of Natural Philosophy in the Imperial University, to Atsugeschi. In Tokyo and Yokohama we shall have a very good view of the phenomenon. The eclipse will not be total, but twenty-one twenty-fifths, of the sun's face will be obscured. The first contact—commencing on the right-hand side of the sun—will beat 1h. 39.1m. p.m., and the moment of greatest obscuration will be 2h. 51.6m. p.m. At 3h. 57.5m. the sun's disc will be completely uncovered.

THIS SEASON'S HEAT.

The dog days (*Doyo*) come to an end on the 7th instant. We have already published a table showing the maximum temperatures on each day, as compared with the corresponding day last year, up to the 24th ultimo. We now carry the table up to the 1st instant:—

	1895.		1896.
July 25th.....	90.5° F.	81.0° F.
July 26th.....	93.6° F.	81.7° F.
July 27th.....	74.7° F.	78.3° F.
July 28th.....	80.4° F.	80.4° F.
July 29th.....	87.1° F.	76.5° F.
July 30th.....	88.7° F.	78.3° F.
July 31st.....	85.6° F.	80.1° F.
August 1st.....	88.7° F.	76.3° F.

THE NEW POSTAGE STAMPS.

The first installment of the new war-celebration postage stamps have been bought up with such rapidity that it is now difficult to procure the stamps in Tokyo, but as another installment will immediately be issued, people need have no fear of being unable to get as many as they please very shortly.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your interesting extract from the *Nichi Nichi's* articles on National Education, I find the following mistake: you give the number of children of school going age at 7,320,191; of children attending schools at 3,501,071 and state this gives an average of 61.72%. In fact it gives 48% of children going to school and 52% of children not going. This throws doubts also on the averages given for 1890-1893. Might it not be made clear in one of your following issues?

I remain, I am Sir, yours truly,

INQUIRER.

Nikko, July 28th, 1896.

[Our figures were wrong—3,501,071 should have been 4,528,131.—Ed. J.M.]

THE RAILWAY AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On Saturday last my family left for Hakone. Being aware that the trains were crowded at this season, I sent my boy, fully half an hour ahead, to get tickets and register the luggage. This he did, but to my great annoyance, on arrival at Kodzu, I was told on presentation of my luggage receipts, that the baggage had not come on by the same train; but might do so later in the day. Surely, if receipts are given and the luggage is at the station in good time, there can be no excuse for such annoying delays. It eventually turned up at 9 p.m.!

Another word; the springs of the tram cars from Kodzu to Yumoto, the first-class especially, are not looked after at all, and are so loose that a trip in the cars is like a ride on a rocking-horse. A competent mechanic could soon fix this and save much discomfort, besides the wear and tear.

Yours truly, AN OLD RESIDENT.
August 3rd, 1896.

THE YOKOHAMA ENGINE & IRON WORKS, LIMITED.

The ninth yearly meeting of shareholders in the Yokohama Engine and Iron Works Company, Limited, was held at Keil's Building, Yokohama, on Monday afternoon. There were present, Mr. Jas. Dodds, Chairman; Messrs. Jas. Walter, C. Giussani, F. Gillett, A. B. Walford, C. K. M. Martin, W. Tresize, and G. C. Charlesworth, Secretary.

There being a sufficient number of shareholders present to form a quorum, and the requisite number of shares also being represented,

The SECRETARY read the notice calling the meeting, and further announced:—"The sanction of the shareholders will be required to the calling in of the present certificates and the issue of new ones in accordance with the special resolution which was passed and confirmed last year and sanctioned by the Court at Hongkong."

The CHAIRMAN—Strictly speaking, this meeting ought to have been held, under Section 109 of the Articles of Association, prior to 31st July, but absence of members of the Board from Yokohama during the present hot season, has prevented the formation of a quorum necessary to pass the accounts, and the Directors crave the indulgence of the shareholders in this respect. The report and accounts having been in your hands for the last two days, I will, with your permission, take them as read. I need scarcely say it is a source of great satisfaction to the Directors that they are able to put before you so favourable an account of the working of the Company as that now submitted to you. It has proved the most successful year the Company has ever experienced. At the annual meeting held on 31st July, 1895, the Chairman was able to announce to you that, owing to favourable circumstances, the Company had surmounted all previous difficulties, had been able to pay off the debt to the Oriental Bank, which had so hampered our operations in past years, and were even able to pay a small dividend. That was the turn of the tide. Since that time prosperity has flowed in upon us, and as it seldom rains but it pours, we were able to make a most favourable sale of our Kobe property, recouping all previous losses made in that quarter, and yielding a profit on book value of \$26,000, so swelling our available assets. Our earnings have enabled us not only to put aside the amount required for reduction of capital determined on by you in December last, but to pay interim dividends of 10 per cent. and 20 per cent., and now to recommend to you a final dividend of 10 per cent., making together 40 per cent. for the year, so that those shareholders who have been fortunate enough to hold on through the bad times now get more than the whole of their original capital returned to them in one year—\$102 per share. This is after writing off depreciation on plant and buildings, as also all bad and doubtful debts. Under the latter category you will notice an amount of \$716.18, which will account for a similar amount in Suspense Account to which it has been placed in view of there still being a chance of its recovery. As announced from the chair on 20th January last, plant, property, and stock had then been revalued by independent experts at upward of \$150,000 as against the book value of about two-thirds of that amount. To these assets may be added the present cash balance with the Bank, say \$40,000, so that even after the return of capital, carried out since the close of the financial year, the Company remains in a very strong and satisfactory position. Following on the revaluation of our plant and machinery, orders have recently been sent home to renew and supplement certain items in order to bring our plant, &c., up to date in a position to undertake and deal satisfactorily with any work that may come along. Of course our exceptionally busy time has pressed hardly on the executive staff of the Company, who one and all have acquitted themselves to the entire satisfaction of the Directors. Following up the complimentary tribute paid to them in this respect by Mr. Lowder from the chair at this time last year, a bonus of one month's salary was paid to them for the half-year ended 30th November last, and, as will be seen from the report, the Directors now propose to make a similar recognition of their services for the half-year ended 31st May last, which they hope may meet with the approval of the shareholders. I now beg to propose from the chair the adoption of the report and accounts now presented, reminding shareholders that it will carry with it the adoption of the report and the payment of the bonus to our employees. Meanwhile, the accounts are before the meeting and I am prepared to reply to any questions relating thereto.

Mr. A. B. WALFORD—Mr. Chairman, the working of this Company for the past year has been so satisfactory that it is a matter of congratulation

for all the shareholders. It is doubtless owing to my own stupidity that I do not understand the way in which the reduction of capital is to be brought about. In the report you state that there is an amount of \$65,000 taken from the sum of \$81,013.40 the balance of profit and loss account. I think that if that balance is taken from the profit and loss account it cannot be capital in any way; as capital it never belonged to us, and therefore cannot be returned to us as capital. Another difficulty that I find, which doubtless will be explained to me, is that you have on your balance-sheet, liabilities of \$130,000, capital, and \$81,000, odd, balance of profit and loss account, and you offer us \$65,000 to be applied to the reduction of \$81,000. Now, having applied \$65,000 to the reduction of \$81,000, balance of profit and loss account, how can you again apply it to reducing the capital by one half? If you apply the sum to the reduction of the balance of profit and loss, I do not see how you can use it to reduce capital. If, on the other hand, you apply it to reducing the capital, then you leave the profit and loss account, to that amount, entirely untouched.

The CHAIRMAN—Mr. Walford was kind enough to mention the difficulties he has just mentioned, in conversation with me this morning. I am not a professional accountant, but I saw one of our accountants, Mr. Keil, a gentleman of considerable experience in these matters, and he said that he could not see the difficulties that Mr. Walford mentions. The \$63,000 returned to shareholders is not made from the profit and loss account, it arises from the working account, and is the accumulated assets from several sources, such as the sale of the Kobe property, the realisation of plant and stock paid for out of capital, etc. I think that the report explains pretty clearly how these profits have been made. I think Mr. Walford is wrong in taking the profit and loss account of this balance-sheet as he does—that is a mere balance. What is shown is the amounts that are to be taken out of the profit and loss account of \$81,000 and after these sums are paid what will be carried forward, as from the 1st of June. The Board has been advised that it is competent to make this return of capital to shareholders, and I think that when the next accounts are presented the matter will be perfectly plain.

MR. WALTER—If in order, I might let Mr. Walford that our legal adviser under affidavit sent all the accounts to Hongkong up to the 1st May, and he certified that there were then no debts owing by the Company either to shareholders or other people.

The CHAIRMAN—The affidavit is dated prior to the 1st of May, but it makes no alteration in the position.

MR. MARTIN seconded the adoption of the accounts, that were then passed.

REPORT.

The Directors have now to submit to you their Report with a Statement of Accounts, for the year ended 31st May last.

The net Profits for that period, including \$17,965.36 balance brought forward from last Account, after paying all charges and making provision for bad and doubtful debts, amount to.....\$120,013.40

From this amount Interim Dividends have been paid, viz:—

On 2nd Dec., 1895, 10%\$13,000
On 25th, Jan., 1896, 20% 26,000.00

and provision made for reduction of Capital by return of \$50 per share..... 65,000.00

leaving balance for appropriation of.....\$ 16,013.40

This balance the Directors propose to deal with, under the sanction of the Shareholders, by the payment of a further Dividend at the rate of 10% per annum, absorbing

the payment of a Bonus to the European Staff and to other Employees of the Company on monthly wages

and to carry forward

\$ 16,013.40

The gross earnings during the past year again show a marked increase over those of the previous year, viz—\$150,548.24 as against \$98,820.55, testifying to the general prosperity of the Company, chiefly due to the increase of the shipping trade of the Port. Although the Directors hope that this may be maintained, they think that the figures of the past two years must be regarded as more or less abnormal.

Of the profit made during the year a sum of \$26,109.64 arises from the sale of the Kobe Property, and it was this, together with the profits on general working that have supplied the funds which enabled the Directors to seek the consent of Shareholders to a return of half the original capital subscribed, which will appear in next Accounts.

Considerable changes have taken place on the Board

of Directors during the year, through Messrs. Hepburn and Rickett having left the Port, and the resignation of Mr. Lowder. Messrs. C. Giussani, James Walter, and F. Gillett have been elected to fill these vacancies. Messrs. Johnstone and J. Walter retire under the provisions of the Articles of Association, but being eligible offer themselves for re-election.

The Accounts have been audited by Messrs. Keil and St. John, and the Directors suggest that these gentlemen be re-elected as Auditors for the present year.

O. KEIL, } Auditors.
R. N. ST. JOHN, }

The CHAIRMAN—The Board have to regret the loss during the year of no less than three Directors, Messrs. Lowder, Rickett, and Hepburn, who have all rendered long and exceptionally good service to the Company through varying good and evil times, and now Messrs. Johnstone and Jas. Walter retire by rotation. Both are eligible for re-election, and as there are no other nominations I shall be glad if some one will move the re-election of the retiring Directors.

MR. WALFORD moved, and Mr. MARTIN seconded, the re-election of the retiring Directors. Carried. In like manner the Auditors, Messrs. Keil and St. John were re-elected.

The CHAIRMAN—As I mentioned in my opening remarks, this meeting has to sanction the recall of the old \$100 certificates, and the issue of new certificates of \$50 face value.

MR. GILLET asked if the resolution needed confirming at another date.

The CHAIRMAN thought not. It would be competent for the meeting to pass such a resolution, the reduction in capital having been passed and approved.

The CHAIRMAN then moved the calling in of the \$100 certificates and the issue in their stead of \$50 certificates.

MR. MARTIN seconded.—Carried.

The CHAIRMAN having announced that dividend warrants would be ready to-day, a vote of thanks to the Directors and employees brought the proceedings to a close.

In a Scotch bank there still lies the fortune of a young lady who ran away with an English officer to Gretina Green. Her family discarded her. After her death her husband received a letter to the effect that her money was lying in the bank for her children. He threw the letter into the fire, and the fortune is still unclaimed.

The third engineer of the British steamer *Zafiro*, while in Hongkong, carried \$700 in the pocket of his overalls. The money fell out of the garment into the hold, and Chinese coolies working below divided it among themselves. They have now to answer a criminal charge before the Magistrate.

TIDAL WAVE RELIEF FUND.

Yokohama, 30th July, 1896.

Dear Captain BRINKLEY,—

I enclose herewith Mr. Bennett's report, which can be used in any way you think proper. I also send his receipt for the sums received from you. The following is a statement of account:—

RECEIPTS.

From the <i>Japan Mail</i>	\$4,203.12
From the <i>Japan Gazette</i>	815.00
From "In His Name"	9.00

\$5,027.12

EXPENDITURE.

16 cases Milk	\$ 160.000
5 Piculs Hemp	88.73
150 sets Futons	524.85
Freight on Milk, Hemp and Futons ..	24.96
For Boats	4,228.58

\$5,027.12

Yours very sincerely,

CHARLES V. SALE.

July, 1896.

Received from the *Japan Mail* the sum of four thousand two hundred and three dollars and twelve cents (\$4,203.12) for distribution among the sufferers by the Tidal Wave in Miyagi, Iwate, and Aomori Kents.

ALBERT ARNOLD BENNETT.

Yokohama, July 31st, 1896.

Received from the *Japan Mail* Office for Seismic Wave Fund, Forty yen (\$40.).

CHARLES V. SALE.

Yokohama, July 27th, 1896.

Having completed to the best of my ability, the task that was assigned me, I respectfully present my report.

After the return of the other members of your Committee, I visited important points not previously visited, and have thus alone or in company with them examined the whole district. All that I have seen and learned has but deepened my conviction that the course practically decided by the Committee when together was the wisest one we could pursue under the circumstances. Thus, while the carrying out of the plans has largely fallen to me, the plans themselves met with our unanimous approval. Of course the details could not be decided conjointly, for many facts now known could not then be ascertained, and the amount of funds at first entrusted to the Committee was only a small part of that which was finally given to them to expend.

It was early determined to spend the bulk of the money in Iwate Ken. The greatness of the comparative claims of Iwate Ken will suggest itself on a view of the figures published in the tables prepared by the three afflicted Kents. For example, the number killed in Aomori Ken* is reported as 316, in Miyagi Ken† 3,346, in Iwate Ken‡ 18,158. The wounded in Aomori Ken number 214, in Miyagi 726, in Iwate 2,943. The houses carried away or broken up show a like proportion. Thus Aomori Ken reports 863, Miyagi Ken 1,367, and Iwate Ken 6,036.

The articles to be purchased and distributed were also decided by the Committee as a whole. These were hemp, condensed milk, *futon*, and boats. Let me speak of them in detail.

The hemp was purchased at the especial suggestion of the head-man of Ofunato-mura. It is to be used in making and repairing nets. The variety of nets used is great, and the fineness or coarseness of the cord differs with the character of the net required. Hemp, however, may be twined into the desired cord, and this again used in making or mending the desired nets. It is true that net-making is an industry of itself, and that many fishermen cannot make their own nets, but it is also true that there are those who can, and such, we were assured, was the case in Ofunato. The need of nets is great. Iwate-ken reports 23,296 nets lost, which, together with other fishing implements [not including boats], are valued at over one hundred thousand yen. It was my purpose to distribute in person the hemp and milk, having been informed by the steamship agent in Ishinomaki that I could call at all the ports along the devastated district. On reaching Oginohama, however, I found that owing to the large amount of freight, it had been determined to divide it among three steamers, sailing at the same time for different ports. As I could sail in only one of

* Table of June 30. † Table of June 26. ‡ Table of July 15.

the three, I sent the hemp and part of the milk, with full directions, to places already visited, while I went in person with that which was to be distributed in the other parts. The receipt of everything has since been duly acknowledged, and thanks for the same expressed.

In evidence that the Committee have endeavoured to prove worthy of the confidence generously imposed in them, the steps taken in the purchase of hemp may be mentioned as a sample of much of their work. First the price of hemp at the best terms in Yokohama was ascertained. Then, as Ichinoseki, in the midst of a large hemp-growing district, was recommended as the best market, one of the members of your Committee went there ascertaining prices and securing samples, while another member, in company with Mr. Miller of Morioka, searched that city. In the course of this search a native gentleman gave names and addresses of firms in Maesawa and Mizusawa, which he said were the principal wholesale firms in that region, according to the Japanese directory. To each of these firms letters were accordingly addressed inquiring terms and requesting samples. From one of them the surprising answer was received that they did not deal in hemp, but that the best place to purchase what we wanted was in Yokohama. Others sent answers and samples. After comparing all the prices learned and samples received, it was found that the answer referred to was correct, and the hemp was accordingly secured in our own port.

The condensed milk, sixteen boxes, was distributed at the various hospitals. One hospital was omitted because of difficulty of delivery, and others were omitted because of insufficient information or doubts as to whether or not they were still continued. The sixteen boxes were distributed as follows:—

Miyagi-ken, Shizugawa	three boxes.
do Kesennuma	do
Iwate-ken, Sakari	two boxes.
do Kamaishi	do
do Ozuchi	do
do Yamada	do
do Miyako	do

The amounts apportioned were not those at first planned. The change in plan was due to the fact that, just before shipment, it was found that others were carrying milk to some of the above places. It therefore seemed wise to decrease the amount determined for such places and send more to the two hospitals to which we were sending in Miyagi Ken. The milk was greatly welcomed in the hospitals. While the number of patients is decreasing, especially of those treated for fractures and bruises, there are still some who will long need medical care and special diet, as pneumonia, pleurisy, and now typhus or typhoid fever are found in almost all the hospitals. Dr. Saiki, in charge of the hospital at Kamaishi, told me that milk was in constant demand for recovering patients. Dr. Miyamoto, in charge of the hospital at Ozuchi, told me that he could not there get fresh milk or meat or any other nourishing food for his fever patients, and said he was very glad to have the milk for them. Dr. Mimura, of the hospital at Yamada, not only thanked me most heartily, but as we went from ward to ward, insisted on telling the poor sufferers what I had brought them, and they in turn expressed their gratitude to both donors and messenger by the best bow their pained and bandaged forms would permit. As I examined the daily records in different hospitals, and saw how well some old as well as young people were doing who had been seriously injured, even operated upon after their cases had been dangerously long concealed by would-be friends wishing to keep them out of the dread hospital, I was impressed with the skill of native physicians, and the vitality of patients.

After it was decided to purchase *futon*, the question of the place of purchase naturally came up, and involved the expense of much time and labour. The feasibility of purchasing in Morioka, and shipping from there, was thoroughly investigated and abandoned. The question of Tokyo or Yokohama was also considered and abandoned. It was finally decided that, all things considered, it would be best to purchase in Sendai. That city was therefore pretty thoroughly scoured, but *futon* are not kept in stock at this time of year, and the hope of purchasing ready-made ones was at last given up. A number of firms were consulted with reference to the manufacture of new ones, and at last an arrangement was made with an establishment which had furnished large supplies of them to the Government, whereby one hundred and fifty sets of two *futon* each were made, out of coarse strong cloth with clean cotton-batting inside. Into the corner of each *futon* was sewed a small piece of white cloth on which was written the character "Yoko" (横) and a number. The

number of the upper and lower *futon* of each set is the same, the numbers running consecutively from 1 to 150. They have been securely wrapped in bundles of seven or eight sets each, and shipped in lots of fifty sets each to the three places decided upon, viz., Sakari, Toni, and Kamaishi. These *futon* are to be given as far as possible to the old men and old women who have been left without proper supporters. I consulted about this matter in the *Gunyakusho* at Kamaishi, and afterwards sent explicit letters to proper officials, copies of which letters were also enclosed in a letter to the Governor of Iwate Ken. When the *futon* are distributed, a list of the recipients, with the residence and *futon* number of each, is to be forwarded to the Committee. It may be well to remark here that the aged and the orphans seem to call most for sympathy, but that the latter class are being well provided for. Most if not all of the established orphan asylums of the country have sent letters or delegates to secure orphans. A number of new orphanages, both *bond fide* and bogus, are making this calamity an excuse for their claims, and private individuals are opening their own homes to the bereft children. But the people of the various towns are slow to give up these children. I have asked about them in a number of places, but have not heard of any going to a regular orphanage. Almost the last telegram I received was from a gentleman who came from Hokkaido, in search of orphans, but who, at the close of his first week's search, could only wire "Koji wa arimaisen" (there are no orphans).

The bulk of all the monies contributed has been spent for boats. This point had been settled by the Committee as a whole, but of the wisdom of the course I became more and more convinced. Two considerations will help to make this palpable to others. First, until boats are supplied, the time will not come when other supplies will not be needed. Survivors who are able to support themselves and their families must themselves be fed and cared for until they can have the means of self-support. A sad tale was told me at Kuji of fishermen going to the shore and seeing there an abundance of fish, and then in despair turning back again to all that was left of their shattered homes. Second, while it is true that there is need of almost every necessity of life, the Government is now supplying rice, and people from near and far are sending in things new and old. Household utensils, clothing, &c., are being provided by other relief committees, by Christian and by Buddhist bodies and various other agencies. They told me at Yamada of a large number of handkerchiefs, &c., received from the prostitutes of Tokyo. These articles are all needed, and many more of the same kind will be needed, but they can be sent by individuals or committees having little money to disburse, and so are more apt to be provided than the more expensive boats. I have heard of no other committee giving boats.

The money devoted to the purchase of boats is about four thousand one hundred dollars. As these boats must be made from seasoned timber and as they are to be made in a number of different places, your Committee early appreciated the practical impossibility of personally superintending their construction. The matter of construction was at length entrusted to the Kencho at Morioka, whose officers kindly accepted the care and responsibility of having the boats bought or made, and delivered according to the stipulations. The boats were to be made and delivered as soon as possible, to cost not more than forty or at most fifty yen each [it was thought they could be made for about thirty yen each], to be marked "Hama" 波, and numbered consecutively from one up; were to be delivered in the places and proportions suggested by your Committee, and when all should have been delivered, a list of recipients with residence and boat-number indicated, was to be furnished to the Committee. In the event of a final surplus too small to purchase another boat, it was to be used for nets or other fishing implements and also reported.

The matter of the distribution of the boats has received much consideration. At first thought it might seem wise to give most to towns which had suffered most, but often towns which have lost boats have also lost many people and so are not specially in need. A table was then prepared showing the percentage of boats lost, and the percentage of life lost, and towns were selected which showed the largest percentage of boat-loss compared with the smallest loss of life. But this table, even, did not fairly represent the respective claims of different towns, for while some places had lost a large percentage of their boats and only a small proportion of their population, it was found that they had in the first place comparatively few boats to the whole number of inhabitants. For instance, Kuji-machi lost ninety-six per cent. of all its boats, and only four per cent. of her population, but then it

had only one boat to every fifty-three of its population, in the first place, so the city as a whole lost but little. According to the apportionment finally determined upon:—1st. Only those towns receive boats in which the original number of boats was more than one to twenty of the population, 2nd. In every case (except Toni) the percentage of loss of boats was at least four times or more the percentage of loss of life. 3rd. In no case is the extreme limit of boats to be given equal to one-seventh of the number washed away. Boats reported as broken but not washed away have not been taken into the reckoning, for it is impossible for your committee to tell from what information they could get in what cases such boats were ruined, in what cases only slightly damaged, and what cases represented various degrees of injury between these two extremes.

From ten to fifteen boats are furnished to each of the following places, all in Iwate Ken:—

Name of Kori.	Name of Place.	Original Population.	Reported Killed.	Approximate Per cent. Killed.	Original Number Boats.	Reported Lost.	Approximate Per cent. Boats Lost.
	Mura.						
Kesen	Hirota	3,200	500	16	405	336	83
Kesen	Suzuki	3,965	600	15	573	276	48
Kesen	Okirai	4,440	432	10	301	274	91
Kesen	Toni	3,807	3,100	75	243	208	86
Higashi Hel	Sakiyama	981	260	27	137	108	79

The exception in the case of Toni was made because the Committee as a whole, on their visit to that place, being much impressed with the devastation everywhere apparent, had consulted with its officials, and had led them to expect that the boats which they requested should be granted. A glance at the above table will show that though Toni is an exception to the rules which have been decided for the other places, yet had the whole amount of money entrusted to the Committee been spent for this one place alone, it would not have sufficed to make good to its inhabitants again their former quota of boats. When the first of the money was paid to the Kencho, it was still a question under discussion by Government whether or not the wood for boats would be given from the government forest lands. This and other unknown factors in the problem of cost made it seem wise to allow the broad margin involved in the apportionment to each place of "from ten to fifteen." Smaller numbers might have been assigned to a larger number of places, but this did not seem necessary, especially as it would enhance the task which the officials had so kindly consented to perform for us in the way we ourselves suggested.

In closing, I wish to express my thanks to Rev. E. Rothery Miller, of Morioka, who spared no effort to assist the Committee in the carrying out of their plans; and also to bear testimony to the uniform politeness shown your Committee by officials in the various Kencho, *Gunyakusho*, *Keisatsujo*, &c.

Respectfully submitted,

ALBERT ARNOLD BENNETT.

THE DOSHISHA.

Kyoto, Japan, April 30th, 1896.
To the Honorable Members of the Prudential Committee of the American Board of Commissioners for Foreign Missions.

GENTLEMEN,—I beg to inform you that the Trustees of the Doshisha Corporation feel ever grateful for the work which the American Board has been doing in the past twenty years or more for the evangelization of our country, and especially for the contributions made to our schools by sending us teachers and also by means of financial aids. Though there are very many causes for the great success of our Institution, we acknowledge that your generous and enthusiastic support was one of the most important elements which contributed to its rapid growth and development. Our feeling of gratitude to the American Board has never lessened at any time, notwithstanding our views in some things did not agree with those of the missionaries sent over by the Board.

The fact that you have lately sent the Deputation to our country shows your deep interest in the affairs of Japan, and indeed, it was an undertaking well suited to the needs and requirements of the missionary work. We regret, however, that we have not been able to come to any agreement in matters upon which we have had conferences with them while they were in Kyoto. We have no other purpose but to serve our Lord Jesus Christ, and follow him in spirit and act according to his teachings. Moreover, we have no heart to prove

ever ungrateful to the American Board. But we, as servants of Jesus Christ and also as citizens of Japan, can never conceal the fact and cover with a veil what we think is the truth, even though we have sometimes to displease the Board. When we heard that the Deputation was coming, we expected that they would fairly and minutely inquire into the causes of misunderstanding between ourselves and the missionaries, and we hoped that the unpleasant feelings now existing between us would be removed in the future. But the result turned out quite contrary to our expectations, so that the misunderstanding seems to have rather increased than diminished. In this letter we confine ourselves to the relation of the Doshisha to the missionaries, and omit all mention of the Kumi-ai Churches and their connection with the missionaries.

First, as to the property question, it must be stated that all the nine houses for the use of our foreign teachers were built by the funds of the American Board. But we have always understood them as gifts to our institution, and until recently, we have not heard that the missionaries themselves have held any other opinion on this subject. For the past twenty years, we have given to our foreign teachers no inconvenience with regard to their using these houses owned by the Doshisha. Within the past few years, they have begun to feel very uneasy about our proprietary right over these houses, we know not why, and a rumour has even gone out to the effect that the missionaries were to be turned out of the Doshisha, and their buildings to be appropriated for the private purposes of the Trustees.

Second, with regard to the principle of education in our schools, we have no other purpose than to carry out the aim of the founder, subject, however, to the requirements of the times and to the development of the Institution on the whole. While Christianity is the foundation of the moral education according to the unalterable constitution of the Doshisha, it is not an institution belonging to any one sect or denomination. The late Mr. Neesima, its founder, valued so highly the spirit of free inquiry and belief that he communicated freely with men of all sorts of beliefs. We have followed his example by our strict adherence to the principle of Christianity on the one hand, and on the other, by allowing both to our teachers and students the large amount of the freedom of thinking. We are convinced that only in this way we could exert the best and healthiest influence of Christianity over all our schools. But the views of the missionaries have often been different. They have urged the Trustees not to allow in our institution, either by our teachers or by temporary lecturers invited from the outside, any expression of opinions which they have judged to be adverse to the interest of Christianity. The reasons why we are unable to grant their urgent request were; firstly, because such a policy, we believe, is against the original purpose of the founder of this institution; secondly, because it would rather injure the influence of Christianity and retard the progress of true religion; and thirdly, because the opinions considered so heretical by missionaries are not so in our view. Since the missionaries could not agree with us on this point, perhaps they misunderstood us, and reported abroad that we have altered our principles, while in fact we are trying to uphold, as far as circumstances allow, the very spirit of the founder of our institution. They urged us at one time to make some public declaration of our principle, as they thought there are some who, not knowing the facts, have come to doubt us on this point. But we relied upon fact and behaviour, which would tell more to our credit in the end. So with this object in view, we have been making effort to improve the internal management and ensure the general progress in the moral and religious tone of our several schools. Such was the state of things, when the Deputation came to visit our institution. We hoped that they would make full observation and judge most impartially in regard to the matter in dispute. But we are sorry to say that we were much disappointed, and the misunderstanding seems rather to have increased as a consequence.

We were very eager to read the report of the Deputation presented to the Prudential Committee of the American Board, Jan. 22nd, 1896. In this report we find many statements very unfavourable to ourselves and to our institution. We regret very much to take adverse views of the matter, but we can not pass over the report in silence, as, we take, it presents only one side of the matter in question, and has the tendency to deepen the misunderstanding about our position before our Christian brethren in America.

I.—PROPERTY.

In the report of the Deputation, it is stated that the nine houses for the use of our foreign teachers and the lands on which they are built belong legally to the Doshisha, but morally they are the

property of the American Board. This is a point of difference between your deputation and ourselves. Although there is no written statement as to conditions of gift at the time of their building, the Trustees have never doubted for a moment, that these houses and lands were morally as well as legally the property of the Doshisha Corporation.

Among the manuscripts left by Mr. Neesima we find the copy of his letter, dated April, 1883, addressed to an officer of the Kyoto Prefecture. It reads as follows:—

"I am informed that, when the officer of the Board of Education has lately visited our School, he has inquired whether the foreign teachers and the Trustees of the Doshisha Corporation do hold the lands in common or not; from which we judge that the Governor himself is in doubt on this point. Now the foreign teachers employed in our school are not the members of the Doshisha Corporation; and they do not share any right of property in the lands, which are all under the control of the Trustees of the Corporation, who are five in number."

We do not know whether this letter has been actually presented to the officer or not, but we do know that he has always proclaimed this to the public at large.

In 1893, when the houses and lands outside of Kyoto, belonging to the use of the missionaries of the American Board, were to be given over to the Doshisha, the following letter was sent to us through Rev. Geo. E. Albrecht, in behalf of the Committee *ad interim* of the Mission, dated Kyoto, March 28th, 1893:—

"To the Honourable Board of Trustees of the Doshisha Schools: Gentlemen.—The question of missionary residences in the different parts of the country having become quite serious and complicated, the Committee *ad interim* of the Mission has been asked to seek its best solution. One suggestion has been that the Trustees of the Doshisha be requested to take charge of all the various pieces of property used as missionary residences in the interior towns. If we are not mistaken you have at one time kindly expressed your readiness to do so, and we would, therefore, respectfully ask whether and under what considerations you are ready to do so now."

"Perhaps it may be well to divide the question, considering by itself respectively the property in Kyoto, and that in other cities."

"Regarding the former, we believe we are quite safe in saying that, no matter if in the future foreigners should be allowed to hold property in Japan, the American Board would in no way seek to receive control over the school property itself. But we have always thought that the residences of the foreign missionaries are not to be put on exactly the same basis as the School property. With regard to these, we would ask whether we are right in understanding that the trustees of the Doshisha, while being the legal owners, consider the Mission authorized to decide upon the use to which these residences are to be put, as long as the American Board is working in Japan? We should be glad to receive your verbal, or if convenient, your written reply to this question. We are sure that just at present it would be reassuring to the Board to receive your reply."

Regarding property in other cities, the question to which we would request your reply is: if you kindly consent to hold such property, could you give to the Mission any kind of statement with regard to it, and if so, what statement? Suppose you consent to hold property in Tsu, used for a missionary residence, and in the course of time it should become desirable to remove our missionaries from Tsu, while some missionary society would be ready to buy the property, we to open a station somewhere else, could such a sale be effected? And would you be able to give us a written statement to that effect? That is, could you give us a statement to the effect that you hold such property for some special purpose, and that it is held so as to be transferable?

"Supposing again that the ladies of our churches in America, who have lent to the Baikwa-Jo-Gakko the money for the land on which a part of the school stands, should wish to give that land to the school, could that be effected?"

"We, of course, realize that you are in duty bound to obey the laws of this country in regard to the holding of property, and we would not ask you in the least to swerve from this path of duty. But we, on our part, can also not forget that we have serious responsibility in this matter toward the American Board and the churches at home who have cheerfully contributed the money with which this property in question has been bought, and we are confident that you would not have us forget this responsibility, but would rather aid us in meeting it most wisely. In this confidence we come to you asking you kindly to give us a care-

ful statement of what you can, as well as what you can not, do in this matter. Such a statement would be most helpful to us, and with it you would put us under great obligation."

In behalf of the Committee *ad interim*, yours, etc.

In this letter a question was raised as to whether the houses for the residence of our foreign teachers are to be put on exactly the same basis as the school property or not. Our reply to it was to this effect:—

"Although while the work of the Doshisha has been carried on hitherto largely through the aid of the A.B.C.F.M., especially such being the case with reference to the buying of lands and the buildings, the Trustees do not recognize this property as subject to any condition in regard to its present use. Yet, as we do not intend to be disloyal to the goodwill of the Board, it is our intention not to change the mode of the use to which it is to be placed, so long as we recognize that there are the same needs for such uses as at first."

At the same time, we made the following resolution as to the question of the missionary properties outside of Kyoto.

"In the future if the American Board and other societies would send us any contribution for the purchase of lands and buildings in order to promote the work of the Doshisha, we are willing to accept it even though the lands and houses purchased by it have to be used for the purpose of the missionary work for the period of a certain number of years."

The missionaries of the American Board were then satisfied with both of our replies, and have given over to us a large number of properties, worth about twenty thousand yen, lying outside of Kyoto. Since that time, we have not heard from the missionaries that they had any other understanding about the subject. If they had, they should have given us a communication to that effect. The fact that they did not do so, but have given over to us even properties outside of Kyoto is the conclusive proof that the missionaries had consented at that time to the decision of the Doshisha.

The report of the deputation reads as if the resolution referred to had no connection with the question of the houses in Kyoto, but it is totally contrary to the fact.

The resolutions of the Trustees at that time were expressly made to settle the question raised by the Committee of the Mission about the condition under which these houses were to be held. This is evident from the latter of the Committee transcribed above.

If the right of property over these houses for the use of our foreign teachers were meant to be nominal, the missionaries ought to have taken some steps at that time, because we have there expressly declined to accept any gift to the Doshisha, which would be only nominal.

The Deputation have repeatedly declared in public that it is wrong to ask rent from the American Board for the properties purchased out of the treasury of the Board. This is the point on which they have not rightly represented us to the public. If any property was given over to the Doshisha, it is our duty to use it for the object intended by the donor, and the right to ask rent for the use of it in other than the object for which it was given is inherent in the right of property. This is what we did claim; but in fact we have hitherto never asked any rent for the use of the houses in question from the missionaries of the American Board, and in the future we would not ask any rent from the missionaries connected with the school, and from those missionaries other than teachers we said we may require rent in the case of extraordinary emergency. The future policy of the Doshisha with regard to them is very plainly stated in our letter addressed to the Deputation. We have stated there:—

"Now since it is our intention not to prove disloyal to the goodwill of the donor, and so not to change the mode of the use to which it is to be placed so long as we recognise that there are the same needs for such uses as at first; as it has been expressly said in the letter quoted above, you shall be assured that we will grant free use of these houses to all foreign teachers sent over by the American Board, so long as they are in the employ of our institution."

"We have no evidence, either written or oral, that these houses in Kyoto were built for the use of missionaries, and it has been always our understanding that they were given as the residences of our foreign teachers. But as we feel ever grateful for the generous gifts you have bestowed and are still bestowing on us, as an expression of our gratitude to the Board, we will give free use of a certain number of those houses when they are not occupied by our foreign teachers, for the period of a certain number of years, provided there be no

occasion in future of a great financial stress, which endangers the very life of our Institution.

"We believe that we have done hitherto nothing which gives to our foreign teachers or missionaries any inconvenience or embarrassment concerning their residences here. And we assure you that we cannot think that there will be any occasion in the future which will give to them any anxiety or trouble concerning their residences. The only regret we have is that we have been unable to come to any satisfactory understanding on this point."

Thus on account of our gratitude to the Board, we would allow the missionaries of the Board, even if they have no connection with the work in the Doshisha, to use the houses without rent as well in the future as at present, "provided there be no occasion in future of a great financial stress which endangers the very life of our Institution." So under the present circumstances, there is practically no inconvenience at all to the missionaries as we have clearly indicated in the above letter to the Deputation.

Therefore, we do not understand why the American Board claims at this epoch of time the moral right over these properties. We can explain it only on the ground that the Board has some doubt in regard to the Doshisha Corporation itself. But our corporation will never depart from our moral obligations, and expect never to fail to be loyal to the good will of the donor; so that, as long as the Board could have confidence in the Doshisha, there will practically arise no embarrassment in the future.

We are sorry for having such misunderstanding and discussions with the Board to which we owe so much. It is only because we are afraid to stain the good name of the founder, and also because we are afraid to injure the principle for which we have stood so long in the past before the public.

II.—THE NURSES' TRAINING SCHOOL AND THE HOSPITAL.

We offer only a few remarks on this head. The question has been one of long standing. It is not true, when the Deputation reports as if we have made an attempt of reform by taking advantage of the absence of Dr. Berry. The reasons why we intended to put them under full control of the Trustees as any other part of our institution are two: first, to ensure their success by adapting them more closely to the needs and requirements of our country; second, to put an end to perpetual misunderstanding which used to arise between the missionaries and the Japanese for the lack of clear understanding on their relations to each other. The question was brought up for the first time before the Trustees five or six years ago, and since that time it used to come up almost every year at the meeting of the Trustees.

The report states that the Trustees "noted that if Dr. Berry returned he should not hold his former position as director, but that a Japanese should occupy the place, and Dr. Berry hold the position of advisor. An opinion like this was held by some of the Trustees, but it has never been voted at the meeting of the Trustees. The report adds further, that we also plan to put a Japanese in Miss Fraser's place. There is no ground whatever for this statement.

The Trustees do not intend to make any unjust requirement in regard to the management of the Nurses Training School and the Hospital. But we regret that, since Dr. Berry does not return to Japan as we hoped, we are obliged to make further changes in this part of our Institution.

III.—THE SPIRIT OF THE DOSHISHA.

With reference to the spirit and principle of our institution, the report states that there was marked concurrence in the opinion that a change had taken place in the spirit of the Institution. It is not only untrue that a change had taken place in the spirit of the Doshisha, but the Deputation does great injustice in making such statements to the Trustees and our Institution on the whole. He who is really acquainted with the religious situation in Japan would not make such a statement which is so biased and prejudiced.

It is true that our Institution has grown up within the past twenty years from a little school to its present magnitude, almost reaching the size of university. We admit that there has been great development in the past which necessitated some changes in the management of our institution. Such transformations are only the natural course of events in the evolution of any Institution. At first the Theological School was everything in the Doshisha, so that the college was entirely subordinated to it. Then the college grew up fully, to which was added the Preparatory School. Next the School of Science was formed, and lastly, the School of Politics and Law, so that the whole institution has now become

quite complex. The boy has grown up to his manhood, and yet he is the same person. But his features and actions, his moral and intellectual powers are not the same. Growth and development are the universal laws of Nature, from which Schools are not exempt. Such transformations are to be seen in every institution, for which the Doshisha alone is not responsible. We can not understand why the intelligent Deputation should not be able to comprehend this truth.

It is well known that the religious movement in Japan has not been brisk for several years past, and the churches at large were not able to keep up former outlines. It is true that the Doshisha also was much affected by these influences, although it has stood firm against the adverse current. The strictures of the Deputation on the Doshisha would be quite reasonable, if all the churches and other Christian institutions in Japan were flourishing, and only the Doshisha was in a backward religious condition. But this is not the case, and the simple truth is that our institution was also affected by the general influences unfavourable to all religious movements in the country.

The criticism is perhaps founded on the difference of views with regard to the original purpose for which our institution was established. The Trustees, however, hold fast to the principle of the constitution of the Doshisha, which is expressly stated there to be unchangeable.

Art. I.—It is the object of this corporation to promote the work of education on the principle of the joint moral and intellectual culture.

Art. III.—Christianity is the foundation of the moral education promoted by this corporation."

This is the spirit of the Doshisha. Mr. Nishima, its founder, has always avowed to the public that the object of the Doshisha is education and not missionary work. This is explicitly stated in his public announcement of three reasons for the establishment of the Doshisha University, from which we quote the following sentences:—

"He who will say that this is only a means for the propagation of Christianity and for the training of preachers does not understand us at all. Our purpose is yet far above it. We do not mean to establish this University in order to propagate Christianity; but as we are convinced there is a living power in the principle of Christianity in moulding the spirit and conduct of our young men, we do mean to apply this principle in education and to produce men whose character is formed by this principle. Therefore we intend to establish, beside our present Theological course, the University courses of Politics, Economics, Philosophy, Literature, Law, etc. If we are not able to found all these courses at once, we intend to found them gradually, beginning from those which would be more easily put into execution. Our object in view is manifest from the above statement. Hence this University is not the organ of any religion or of politics in any sense. And it is taken for granted that our object could not be attained by relying on the power of any one party or locality."

This is the spirit and principle of the founder of the Doshisha, to which the Trustees hold fast and which we are trying to develop more and more. Therefore the Trustees can say conscientiously that we are not conscious of any change in the spirit and principle of our institution.

We can not believe that a Deputation so intelligent, could of themselves fall into such misunderstanding as they did. We believe that the missionaries in Japan first misunderstood the Doshisha. More than once they have proposed to put restriction on the freedom of thought in our institution, while the policy of the Trustees is to extend the sphere of this freedom and quicken the spirit of faith by the positive method rather than by any negative means of restriction. From this course arose the conflict of views and from it the misunderstanding now existing between us. Any person who could judge the case fairly and impartially should be able to understand us with regard to these points. We have no desire to attack the missionaries, but we can not understand the reason why they ascribe all the causes of the decline of the religious movement to the Japanese and they themselves seem to feel least responsibility for it. Even admitting as facts that there are a few Japanese teachers whose views on Christianity differ from those of the missionaries, why is it that the influence of so many veteran missionaries on the ground is not able to counteract it? It is true that the religious influence in the Doshisha is not as fully strong at present as we hope. The responsibility for it rests on the President, the Trustees, and the Japanese teachers, but not on them alone. It rests also on the foreign Missionaries, whose duty by profession is

missionary work. We do not know how to answer it, if one should criticise the missionaries that they take all credit for themselves, when the work is successful, but blame the Japanese when it is not.

The deputation, coming under such a situation, should have pronounced their judgment after inquiring most carefully into all the circumstances of the case. On the contrary, they proceeded at once to request us to make some declaration in regard to the fundamental truth of Christianity. We assured them that there has been no change in the principles of the Doshisha. We asked them to inspect fully the real state of things in our several schools and to see the Trustees and teachers individually to acquaint themselves fully with their spirit. We assured them moreover that we have always tried to maintain in the past and will also hold up in the future the spirit and principle of our corporation. But the Deputation persisted in their demand, and presented as one reason for making this demand that, though they were themselves satisfied, they could not thus satisfy the Christians in America and remove the misunderstanding unless we made some statements or confessions of faith. We told them that it was enough for us if they were themselves satisfied, and requested them to speak of what they had seen and declare what they were convinced of.

The principal reason why we could not comply with the request of the Deputation was that the Trustees did not find any necessity for making such statement as they desired; we were convinced that the only means to remove this misunderstanding is the actual conduct and practical management of our institution, and not mere confessions or profession by words. Speaking from the individual standpoint of faith, the President and most of Trustees do not hesitate to affirm their belief in the articles presented by the Deputation. To tell the fact, of nine Trustees at present, four, including the President, are ministers of Kunitai Churches, three are prominent members of the same church and the remaining two are graduates from the Doshisha. All the deans of several schools except one are members of the Christian Church; so are a large majority of the Japanese professors and instructors. We have chapel service during the week, where all members of the faculty and the students are required to attend, while every Sunday morning divine service is held in the same place. The instruction in the Bible is offered to all students. If such an institution is not a Christian school, we can not think of any that is Christian.

We apprehend that the misunderstanding will rather increase if we make such confessions of our faith, especially under present circumstances in Japan. First, it is common in the churches to make such confessions of faith, but we have not heard of any case among the schools we know of. We have been often accused by the public that we confound education with propagation of religion. The late Mr. Nishima tried always to repudiate such accusations. We are afraid that the misunderstanding would rather be increased if we publish anything resembling confessions of faith or creed. Such a proceeding on our part would rather confirm the false report believed by the missionaries and other people that a change had taken place in the spirit and principle of our institution. If we now act under appearance of compulsion from outside, we would surely bring upon ourselves the reproach that we have made declarations which we do not like simply in order to please the desires of the Christians in America. The consequence of such an act would have a bad influence and injure the independence of our institution.

Moreover, the four articles of faith which were presented to us by the Deputation may seem as very simple truths to the churches in Europe and America, but it is not so among the churches in Japan. They can not be regarded as very simple, especially when theological discussions are as active as at present. In one sense, there is no Christian in Japan who would deny the personality of God. But these are many whose views will differ widely from each other, if by personality of God is meant some anthropomorphic representation of God. There are some people here who regard as atheists our pastors who are very earnest and faithful, or denounce as pantheists those who proclaim God as the absolute reason of the Universe. Under such circumstance as this, it is extremely perilous to make such a simple statement of the truth as was demanded by the Deputation. It is especially perilous for the institution of education to make such a statement, and will produce more misunderstanding, when there are so much discordance of views between the missionaries and the Japanese on the Divinity of Christ, the Immortality of the Soul, and the Nature of the Supernatural Revelation. We hope that you will

understand that the reasons for our refusal to make any declaration on these articles of faith are not so simple as they appear on the pages of the report made by the Deputation.

We present this letter to you with profound respect, hoping that you will judge the case most impartially and will remove all misunderstandings now existing between us. We deeply regret that we are obliged to present such a letter to the Board, to which we are bound by so many ties of gratitude.

But we can not pass over in silence the report of the Deputation, which is likely to produce more misunderstanding. So we have freely and frankly stated our views, and respectfully leave the matter to your careful consideration.

Finally, we close this letter with our prayer that God, who is the Father of all things, may bless you and your works now and ever more.

In behalf of the Trustees of the Doshisha,
I remain, yours truly,

H. KOZAKI, President.

YOKOHAMA SILK-CONDITIONING HOUSE.

The Yokohama Silk-Conditioning House, an institution built and established in accordance with the Silk-Conditioning Houses Law, that came into force on April 1st, was opened with much ceremony on Wednesday morning by Viscount Enomoto, Minister of Agriculture and Commerce. There was a very numerous assemblage of Japanese officials, merchants, and foreigners interested in the silk industry. In the course of the proceedings, Mr. Oka, Director of the House, gave an address; Viscount Enomoto, Governor Nakano, and others, followed; and Mr. Consul-General McIvor, and Mr. James Walter, Chairman of the Yokohama General Chamber of Commerce, spoke. We are indebted for the translation of Viscount Enomoto's address and the other speeches to the *Japan Herald*.

Viscount ENOMOTO, who in his ministerial capacity, delivered the most important of the vernacular addresses, spoke in substance as follows:—The building of the new Silk Conditioning House having been finished, and the installation of its plant having been completed, the ceremony of opening the most important native silk inspecting office in Japan is now being conducted. The necessity of constructing such a Silk Conditioning House has been felt for a long time, because since the port was first opened to trade, the export of silk has been increasing year by year, and now it is nearly ten times greater than it was at the time of the opening of Yokohama to foreign commerce. Now therefore the time has arrived for entering upon a new phase of the industry. We all know that it is an inevitable fact that advantage and disadvantage walk always hand in hand, also that prosperity and decline has each its own day. Thus, as the silk industry developed, it was abused, and the production of a deteriorated or carelessly manufactured article began. As a result of this it is a fact that the credit of Japanese silk is almost lost so far as the European and American markets are concerned. Occasionally we export silk of the finest quality which surpasses even that of Italy and France. But these are very rare exceptions to the general rule, and the few samples of excellent quality which we may have sent out, are cast into the shadow by the immense amount of the inferior quality article produced. Now this is a fact much regretted by myself as well as by the Japanese and foreign purchasers. The Government has stimulated the improvement and development of the silk industry at home, and at the same time made every effort to obtain credit for the country's output in the places of demand. However, finding that the effort has not met with success, the necessity of erecting this establishment was recognized; and preparations were made for the establishment of two such offices, one in Yokohama and the other at Kobe. The Kobe House has already been opened; in Yokohama the ceremony of opening is being conducted to day. Now that the arrangements for the inspection of silk have been perfected, I shall see that the officers are attentive to the inspection of all silk submitted to their scrutiny so as to consummate the object of the institution. Those Japanese and foreigners who are engaged in the silk trade ought to endeavour to further the intention of the Government and avail themselves of the facilities offered for the inspection of silk by the institution, and thus conduce to promote the interests of both parties permanently. This is what I earnestly desire.—(Applause.)

Mr. McIVOR spoke as follows:—I have taken great interest in the establishment of this Silk Conditioning House. In my opinion, it marks

another mile-post in the march of Japan's progress. The fact of its establishment shows that your Department of Agriculture and Commerce, under the leadership and guidance of a distinguished Minister, who is one of your broadest and most enlightened statesmen, has determined not to be outdone by your military departments, which have pressed your country's flag forward with such success as to attract the attention of the world. He realizes that commercial integrity and development are the real foundations of a nation's greatness. We are told that in the dawning days of commerce, men bartered goods for goods, and money was not used; that later, when the precious metals came into use as mediums of purchase, they were weighed and tested for fineness on each transaction. This, while necessary, was most inconvenient, and tended to block the wheels of free commerce. It was not until the Governments of the civilized world recognized the fact that the stability and integrity rested upon the removal of all possible obstructions to commerce, that they began to coin money, or to place their stamp upon metal to guarantee that it was of certain fineness and weight. Thus the value of the metal was accepted as that stamped upon its face, and inconvenience and delays in commercial transactions were reduced to a minimum. This was properly considered a great achievement of civilization. In the same way, it is, I believe, intended that this Conditioning House shall give to each parcel or bale of silk offered, a sort of mint certificate of weight and fineness which will probably gain for it a recognised status in the world of commerce. It will also give the producer information as to what is lacking in his product, and will have a tendency to keep it up to the standard. We all know how important this is, because experience has taught us that when we have succeeded in introducing our wares, the battle is but begun; our energies must be faithfully exerted to keep them up to the standard which first attracted purchasers. We, of America, have always felt a friendly interest in your development. We are glad to congratulate you on every progressive step which will increase the trade between us, because, while, now we buy more from you than any other nation, and sell you less than most, we indulge the hope that, as the volume of our mutual trade increases, it will gradually become more reciprocal.—(Applause.)

Mr. JAS. WALTER, who next addressed the gathering, said:—Your Excellencies and Gentlemen, Mr. Oka, the Director of the Kiito Kensa-Jo, or Silk Conditioning House, as known to foreigners, has kindly invited me to say a few words at the opening ceremony of this establishment. I am afraid there is little or nothing new that can come from me, as you are all too well acquainted with the silk trade of Yokohama and the great progress it has made during the past thirty years. As, however, there are many merchants here present who are largely interested in other branches of the export trade of Japan, you will perhaps pardon me for mentioning that when I first came to Japan in the year 1867 the total export of raw silk for that year was 13,500 bales, of the value of seven and a half million dollars, whilst for the past year, 1895, the export reached the enormous total of 56,503 bales, of a value of over 47½ million dollars. Such a trade as this, which has undoubtedly added so materially to the wealth and prosperity of the land we live in, is certainly deserving of the fostering care of those most directly interested in its development, and worthy of the Government's solicitude in encouraging by every means in its power the expansion of this, the chief and noblest of Japan's industries. Why, some may ask, do I call it the noblest industry in Japan. My answer would be, for the reason that it gives the best, the healthiest, and the most ennobling employment to the largest number of your women and your children from the highest to the lowest in the land. Though personally averse to Government subsidies in the matter of trade, there are times and occasions, and nowhere more so than in Japan, where the Government can and has led the people in the right direction, when individual effort would have failed to achieve any appreciable result. Where would Japan have been to-day had it not been for her little elementary schools to be found in every village and hamlet throughout the country. To my mind it is to the far-seeing statesmen who inaugurated that system of education, and chief amongst them the late Viscount Mori, that Japan owes her present proud position. Ignorance and superstition, mainly the latter, which still bars the way of progress in China, has been well nigh eliminated from the rising generation in Japan, thanks to your schools. You will, I hope, pardon this digression, but it leads up to the question, what has the Government to do with this Raw Silk Conditioning House, for if I understand

rightly it has been established by the Department of Agriculture and Commerce. What is a silk conditioning house and for what purpose is it erected? My answer is to facilitate trade and to prevent fraud in an article of such great commercial value and held in such a very small compass that fraud is easily perpetrated, and this establishment is inaugurated to-day to assist the buyer and give him a certain amount of guarantee that he is receiving from the seller what he intended to purchase. Early experiences in Japan remind me of sleepless nights passed through unpleasant remonstrances received from England that silk which had passed my inspection contained small bags of sand, old nails, umbrella frames chopped up, lead, cement, copper cash, all carefully concealed in the folds of the silk skeins. Such misdeemeanours are now happily of very rare occurrence, but there are still other matters of much vexation to the foreign buyer, viz.:—unevenness of size and loss in weight by the silk containing too much moisture. In Canton, China, some 20 years ago, so great was this latter grievance, owing to the Chinese persistently watering his silk as if it was a rose garden, that foreigners in self-defence (as the silk used to lose 8 to 10 per cent.) combined and insisted on the establishment of a conditioning house. The Chinaman naturally objected, as at first no doubt many Japanese sellers will do here, as we buyers, even now, often pay for more water than is conducive to our benefit, but this will all right itself in time. To you, Mr. Oka, and your staff I will say that you have the hearty best wishes for the successful working of the silk-conditioning house inaugurated to-day, and we foreigners look for your helpful co-operation and assistance. Co-operation to get the work done as expeditiously as possible, and assistance to disseminate as widely and quickly as possible to the country people the reforms which you and ourselves most intimately connected with the trade know too well are necessary for its prosperity. I refer chiefly to careful preparation and reeling of even size of thread as required by the trade, your customers. Mr. Oka, you and your staff have an arduous task before you, and your abilities and energies will be taxed to the uttermost on those occasions, fortunately not too frequent, when our purchases of raw silk amount to several thousand bales a day. At those times you will have to stand the severe criticism of the buyers, and I sincerely hope you will be equal to the emergency and prevent anything like a deadlock in the passing of silk through this establishment. We cannot expect perfection from this conditioning house; we do not get it in the conditioning houses of Europe. Buyers in Milan, Italy, of silk conditioned at the Lyons house, will not accept either the weights or size as given on the bulletins of the latter, and *vice versa*; but your Government funds will have been well spent if only for the fact that the examination of silk and sizing, will indubitably have the effect of bringing home to the producer the necessity of more careful preparation of the silk he has to sell. Your Excellencies and Mr. Oka and Gentlemen, I have much pleasure in wishing every success to the Kiito Kensa Jo.—(Applause.) Proceeding, Mr. Walter said:—With your Excellency's kind permission, and I address myself more particularly to His Excellency Viscount Enomoto, now Minister of State for Agriculture and Commerce, nothing would delight me so much as to see the Government set to work immediately and inaugurate a condition house for a totally different article and one of large home consumption, I refer to *saké* (Japanese). Many of us are fond of *saké*, and the original Japanese *saké* was a mild alcoholic beverage which did harm to few and was a blessing to many. I am now no doubt going to make enemies, some probably amongst members of our General Chamber of Commerce, but I will not, and cannot let this opportunity pass of giving the warning note, that if the Government doesn't look out, the very best life blood of your countrymen will be sapped, and is now being sapped, by the admission into this country, and in large quantities of that vile stuff and deadly poison, alcohol, or potato spirit, which is used to adulterate your native *saké* and other liquors sold as foreign wines. Away with the stuff at all risks, even if you have to fight your treaty battles over again with the nations of the world individually and collectively, and you need not fear, for your action will meet with the approval of all right-thinking men.—(Applause.)

THE P. & O. AND THE N.Y.K.

The chairman and directors of the P. and O. Company gave a lunch on the 19th June to Mr. Shoda, director of the Nippon Yusen Kaisha, now on a visit to England in connection with the inauguration of the company's new service to Europe,

Sir Thos. Sutherland, chairman of the P. & O. Company, presided, having on his right Mr. Takaki Kato, Japanese Minister in London. Several of the directors of the Company were also present, the lunch taking place in the handsome board room of the company.

Sir THOMAS SUTHERLAND, in proposing the toast of the prosperity of Japan, said that the function in which they were engaged that day was chiefly attributable to the fact that, through the good offices of his Excellency the Minister for Japan, the settlement of a very serious and embarrassing legal process between the Government of Japan and the P. & O. Company has been effected, which involved an international contention of very great and serious moment, and issue of no little importance to this company. It was a process which, if it had not been terminated in the happy manner which he had described, would probably have continued in some shape or form at all events to about the middle of the next century, if not longer—(laughter)—but was happily put an end to by the judicious interference of his distinguished friend on his right, and it was terminated with an expression of hearty goodwill on the part of Japanese Government towards the P. & O. Company.—(Applause.) Well, gentlemen, that circumstance induced, as events of that description are apt to do, other events also of no little importance. It so happened that a difference of opinion and a considerable conflict of interest had taken place in a certain part of the world between the great Japanese company which is known as the Nippon Yusen Kaisha. A conflict of interest had arisen between that company and the company which he represented, but owing, again, to the circumstance to which they referred in connection with the legal process, they were happily able by means of the kind assistance of his friend to obtain the influence of the distinguished director of that company, who favoured them with his presence that day; he referred to Mr. Shoda.—(Applause.) We were happily able by his presence in this country to put an end to that misunderstanding in a manner which he trusted would prove beneficial to all the interests concerned. There has been evolved out of the circumstances to which he had so briefly alluded an agreement between the shipping interest of Japan and the shipping interests of Great Britain which he trusted might long be maintained.—(Applause.) He referred to these matters casually as bearing upon the toast which he proposed—namely, that of the prosperity of Japan. He believed that the commercial interests and the political interests of Great Britain and Japan were thoroughly identical, and that the union between the two countries could not fail to be productive of great benefit to both.—(Applause.) When one spoke of the progress of Japan—at least, when a man of his own unhappily lengthened experience adverted to that topic—he could not fail to cast his memory back to former days in which Japan and all its interests were an unknown quantity, not only in the West but even in the East itself. In those days, sequestered and remote as Japan was from the rest of the world, they must remember that she was, even then, a country within herself possessing the very highest civilisation. He ventured to say that within the scope and purpose of what we termed civilisation—that is to say, that which is adapted to the peculiar conditions under which different people live—it would have been very difficult to have found in those times a more highly civilised race than the Japanese, and it was only necessary to give one example—namely, that in the great region—he would not say of commerce, nor of steam navigation—but in the great region of art, those who were best qualified to form an opinion were able to place the Japanese even in those days, in point of quality and artistic achievement, on a level with the Greeks of olden time. With all the goodwill which he brought to bear on the subject of her status and advancement, he did not venture to prophesy that Japan would not take the high place and assert the great progress which she has asserted within the last few years in the civilised world.—(Applause.) They congratulated Japan on her progress and success. He believed that those conditions applied to her were equally beneficial to themselves, and he trusted that the *rapprochement* which has been instituted between the N.Y.K. and that great benevolent institution, the China Conference, might long continue.—(Applause.) They equally and more devoutly trusted that the great political alliance between Great Britain and Japan might continue for the benefit and the expansion and the aggrandisement of the interests of both of the countries concerned. He gave the health of His Excellency the Minister of Japan, who was their guest that day, and he ventured to couple with the toast the name of their friend Mr. Shoda, who had come to this country

for the purpose of settling this very important question, and who would go back to Japan, he hoped, carrying a good report of what he had done and found here. He would at all events carry back the conviction that he has earned the esteem of those with whom he has come in contact in this part of the world.—(Loud applause.)

Mr. KATO, the Japanese Minister, said—Sir Thomas Sutherland and Gentlemen: I wish to thank you very much for the very kind way in which the prosperity of my country was drunk. And, in the first place, I wish to say that the very cordial sympathy which has been so eloquently expressed by your Chairman is most heartily reciprocated by my countrymen.—(Applause.) Politically, our relations are very excellent and leave nothing to be desired, and commercially, the peaceful settlement (which has been arrived at) between the P. & O. Company and the Japanese Mail Company will no doubt conduce to the satisfaction of both parties, and in a certain sense also to the countries which the two companies represent. Sir Thomas Sutherland referred, in the preface to his speech, to the settlement of the legal dispute in which my Government was unfortunately engaged with his great company, and I am very glad that I was in any way instrumental in bringing about this peaceful and amicable settlement. But I must say that more credit is due to the gentlemen of the Foreign Office here who very kindly took the matter into their hands unofficially, and with whom I communicated in regard to it. My Government from the very beginning of this legal suit, I think I may say, were not at all desirous of getting any material compensation, or anything of the kind; but a principle was involved in the matter and they were determined to proceed with it if necessary for the sake of principle; but fortunately before the matter had got too far, a very amicable spirit was shown on both sides and the affair was very satisfactorily settled to both parties. I can assure Sir Thomas Sutherland that my Government very highly appreciated the very peaceful and amicable feeling which was exhibited by the company which he represents, and which feeling the Japanese Government very fully reciprocated. I am much obliged to you, Sir Thomas, for the very kind way in which you proposed this toast, and I thank you all for the kind manner in which you received the same.—(Applause.)

Mr. SHODA, in returning thanks on behalf of the Nippon Yusen Kaisha, alluded to the fact that his company had commenced its operations about twenty-five years ago, and had limited them at that time, and until recently, entirely to local trade and to international trade between China and Japan. But with the development of his country and its mercantile interests, and in view of the great strides which had been made by Japanese merchants in their commercial operations, the N.Y.K. had been compelled, not unwillingly, to spread its branches further afield. It had, in the first place, extended its operations to India and the Southern Hemisphere, and it was now further developing its system to Europe, and possibly in other quarters. In doing so, however, they had the greatest desire to work in unanimity with the P. & O. Company and the other great shipping interests of England and Europe. In conducting their business they were influenced by a very friendly feeling towards their competitors, and they hoped that the extension of their lines to which he had referred would be found to be for the mutual advantage of both Japanese and foreign trade, and that the developments now taking place would be attended by increasing prosperity both to European and Japanese shipping interests. Mr. Shoda concluded by proposing the health of the P. & O. Company, coupled with the name of the Chairman.

Sir THOMAS SUTHERLAND having suitably responded and referred to the share of his colleague, Mr. F. D. Barnes, the proceedings terminated.—*L. & C. Express.*

The situation in Crete is becoming worse. The insurgents have announced their determination to resume fighting unless their demands are complied with.

The Greek bands in Macedonia have defeated the Turks.

July 28.

The second reading of the Uganda Railway Bill has been passed by the House of Commons.

Complications are apprehended between Greece and Turkey.

The finding of the Court of Inquiry into the loss of the steamer *Drummond Castle* states that the disaster was caused by the excessive speed at which the vessel was being driven and by an inadequate allowance for the current. The Court further expresses the opinion that the loss of the vessel would have been averted had the Captain used the lead sufficiently.

London, August 3.

Sir Matthew White Ridley, Secretary of State for the Home Department, has advised Royal clemency being extended to Dr. Jameson and his fellow prisoners, all of whom therefore have been returned to Holloway Gaol as first class misdemeanants.

London, August 5.

The Times states that the real object of Li Hung-chang's visit to England is to obtain the sanction of the British Government to an increase of the tariff. Russia, France, and Germany have already assented, but the real decision rests with England, whose trade with China is 80 per cent. of the whole China trade. The article further states that it has been decided that China shall have a new army and navy, the extent of the reform depending upon the amount derivable from the increase of the tariff. Li Hung-chang has virtually ordered the artillery from Germany and the rifles from France, but is resolved to construct the navy in England, on English lines, and to have English officers.

The German gunboat *Illis* was lost ten miles north of the South-East Promontory in the typhoon of the 23rd inst.

Ten men were saved; all the others, including the officers, perished.

(FROM THE JAPANESE PAPERS.)

Toyama, August 2.

The incessant rain has caused a breach in the Okawa embankments. The flood has invaded the houses in the eastern part of Toyama, three feet above the floor. The water is now gradually decreasing. The Jindzugawa rose 11 feet above the normal level, and the western part of Toyama was flooded, the houses being immersed in water four feet above the floor. The afflicted are receiving assistance. The houses flooded are more than 6,000. It is said that the town of Tekaoaka is also flooded.

Soul, Aug. 2.

Kim Tai-ché, who was sent to Shanghai to draw yen 40,000, which had been deposited by the late Queen in the Hongkong and Shanghai Bank, has returned to Ninsen with the money. He is accompanied by Min Kim-tao, brother of Min Yōng-yok.

A rumour is afloat that the French Minister is trying to obtain the concession for building the Wōn-san and Northern Railway for his nationals.

Nagasaki, August 2.

A Shanghai correspondent wires:—The Consul-General of Austro-Hungary, Mr. Joseph Haas, while bathing with his wife, and the Italian Consul, on the 26th ult., in the neighbourhood of Pao-too, was carried away by the strong tide and drowned. He was an old resident in China, having lived there for over 30 years. He was the *doyen* of the Consular body.

The German military instructors have been removed from Nanking to Woosung. They arrived here on the 26th ult.

Four ringleaders of the Mahommedan rebellion in Kansueh have been arrested, and were at once decapitated by order of the Taotai.

Local Chinese papers discuss the project of selling Tibet either to Great Britain or Russia. The money thus obtained would be used in developing the martial resources of the Empire.

Gifu, Aug. 3.

The Kisogawa overflowed last night. The water rose 15 feet above the normal. The river Nagara is six feet higher than its ordinary level, and other rivers in the vicinity have broken their embankments again.

Fukui, Aug. 2.

The heavy rain last night has caused a greater inundation than did the storm of the 21st ult.

Niigata, August 3.

The villagers of Nakano, in South Kanbara, are discontented with the Authorities for making a reservoir near their village.

Osaka, August 3.

Mr. Matsumoto Yuro, Councillor of Osaka-fu, paid a visit to the rice-market at Dojima, to-day.

Toyama, August 3.

The head-waters of the Shyogawa have broken their embankment, and the stream ran into the town of Takaoka. Ninety houses were swept away.

Kobe, August 4.

H.I.H. Prince Arisugawa received about 100 members of the Shinyenkwa to-day.

Niigata, August 4.

Above 100 villagers of Nakano, that was visited by the recent floods, have broken into the house of the Headman. The police were called in and order was restored.

Gifu, Aug. 4.

Damage was done to embankments in 1,400 places, measuring in all 88,950 yards; partial damage was done in 212 places, measuring 31,884 yards. The Province of Hida is not included in the above.

Kanazawa, Aug. 4.

The Tedorigawa overflowed the day before yesterday. The flood swept away 40 houses, and 20 people were drowned. The Governor and Police have hastened to the scene.

A telegram from the magistrate's office of Nomi district says that the number of persons drowned by the flood was, 20; houses swept away, 83; demolished houses, 116; houses flooded 10,000. Southward of Tetori all communication are blocked.

Soul, August 4.

Li Ju-on, ex-Governor, and one hundred of his sympathisers, will go to the Russian Legation, and petition the King to return to the palace. Han Kyu-chōl, Chin So-kun, Sin Ki-sōn, and Li Seung-mang are behind the scheme.

Soul, August 5.

Yun Yōng-sōn, Prime Minister, and Han Kyu-chōl, Minister of the Judicial Department, sent in their resignations, but they were not accepted.

The commission for investigating the resources of Pyēng-yang and five other places has been discharged.

Ming Yōng-chun has been released from disciplinary punishment.

The River Han-kan has overflowed.

Gifu, August 5.

The sum of yen 30,000, from the Central Reserve Fund, arrived here to-day.

Kumamoto, August 5.

Signs of the spreading of dysentery are apparent and the authorities are taking precautionary measures.

Tottori, August 5.

An extraordinarily heavy rain fell yesterday, and caused the rivers to overflow. Some houses were invaded by the flood above the floor, but the water gradually abated.

Soul, Aug. 6.

District Regulations have been promulgated whereby the old system of eight great divisions of the State is altered to 13 principal divisions (or provinces), viz: Kyōng-kwi-do, Kang-wōn-do, Hwan-nai-do, South Ham-gyōng-do, North Ham-gyōng-do, South Kyōng-sang-do, North Kyōng-sang-do, South Chhung-chhōng-do, North Chhung-chhōng-do, South Chōl-la-do, North Chōl-la-do, South Ph्यों-an-do, North Ph्यों-an-do.

Bakan, August 6.

Mr. Oura, Governor of Yamaguchi Ken, it is said, will be appointed Director of the Civil Administration Office in Formosa, and his recent visit to Tokyo was connected with the appointment.

Kobe, Aug. 6.

Major-General Kamamura, Commandant of the First Brigade of the Imperial Guards, has left for Himeji.

Soul, August 6.

Major Watanabe Tetsutaro, military attaché in the Japanese Legation, is obliged to return home on account of an ophthalmic ailment.

| 37—B to B 8 | 37—R to Kt 7 (i) |
| 38—Resigns. | |

NOTES BY EMIL KEMENY.

(a) White, of course, could not play K takes P on account of P to KB 3 winning a piece.

(b) Premature play, that causes the loss of a piece and of the game. White either overrated the value of the attack and sacrificed the Kt, or else he overlooked Black's ingenious continuation that enables him to keep the piece. Instead of Kt to Q 5 White should have played P takes Kt, and if Q takes P then Q takes P, with a perfectly even position.

(c) If White now plays P or Q takes Kt, then Black answers Q takes Kt, coming out a piece ahead.

(d) Another powerful stroke. White cannot continue P to Q 4 on account of Black's reply, Kt to B 3, attacking the Queen and winning the Q P.

(e) The only way to save the Queen. Of course, defeat is a question of time only. White has no equivalent for the piece.

(f) This loses the exchange. White, however, had his only chance by playing a lively attack at any hazard. The text move subsequently opens the diagonals for White's Bishop.

(g) Quite ingenious, but not sound. White gains temporarily some attack. If Black answers Q takes Kt, then White continues Q to B 3, with some drawing chances. On B takes Kt, White answers R to K 7, as the progress of the game shows.

(h) Black cannot play B takes R on account of Q to R 6, and the mate, at Kt 7, could not be well averted. Of course, Black might have played K takes R, and his opponent could not have drawn the game by perpetual check, since the Black King gets over to the Queen's wing. The text move, however, seems the safest and easiest won. Black exchanges Queens, and remains the exchange and a Pawn ahead, forcing a win in a few moves.

(i) White now loses the Q Kt P, and his adversary's Q B P cannot be stopped; he therefore resigns the game.

GAME NO. 542.

- | WHITE.
H. H. Cole. | BLACK.
Mr. X. |
|--------------------------|------------------|
| 1—P to Q 4 | 1—P to Q 4 |
| 2—P to K 3 | 2—Kt to KB 3 |
| 3—B to Q 3 | 3—Q Kt to Q 2 |
| 4—P to RB 4 | 4—P to K 3 |

| 19—Q to R 6 | 19—R to B sq. |
| 20—R to B 6 and wins (a) | |

(a) Nothing can now prevent a win by Q R to KB 3, and then to KR 5.

U.S. CORRESPONDENCE.

The reception of the Newnes chess trophy at the Brooklyn Chess Club was an occasion long to be remembered. The trophy seen at short range confirmed and added to the reports of its beauty of design and admirable workmanship, and was an object of admiration for the entire evening. An address eulogistic of Sir George Newnes and his public-spirited gift was made by President Marean.

During the evening a game was played between Mrs. Showalter and Mrs. Worrall, the two strongest women players in America, which attracted an interested throng of spectators. The contest was stubbornly fought. Just as Mrs. Showalter had victory in her grasp she omitted to move her king's bishop's pawn, which made her game very difficult, and in the end Mrs. Worrall succeeded in forcing a win.

Both Pillsbury and Showalter are entered at Nuremberg for the coming tourney, their entrance fees having been posted by President Marean of the Brooklyn Club. America's chess reputation, with two such doughty and already famous players to uphold it, certainly should not suffer. Their work at Nuremberg will be watched with interest by their numerous admirers throughout this country.

Pillsbury played a game of chess with Showalter immediately after the latter had played off his final game with J. F. Barry. The score follows:

GAME NO. 543.

QUEEN'S GAMBIT DECLINED.

- | WHITE.
Pillsbury. | BLACK.
Showalter. |

END GAME NO. 32.

The following extraordinary ending occurred in a game between Samuel Loyd, the eminent problem composer, and Golmayo, in the Paris Tournament of 1867:—

BLACK—LOYD.

WHITE—GOLMAYO.

Black continued as follows:—

- | | |
|----------------|-------------------------------|
| 1—R to R 8 ch. | 1—R to R 8 ch. |
| 2—R takes R | 2—Q to Kt 4 ch. |
| 3—K to Kt sq. | 3—Kt to Q 7 ch. |
| 4—K to B sq. | 4—Kt to R 6 ch. |
| 5—K to Kt sq. | 5—Q to B 8 ch. |
| 6—R takes Q | 6—Kt to Q 7 ch. |
| 7—K to R 2 | and Black mates in two moves. |

*White could delay the mate by playing K to R 3.

HONGKONG.

We hail another Chess column in the Far East and reprint the following from the *China Mail*. Needless to say we welcome our *confrères* with open arms and wish the new venture every success.

How we admire the enthusiasm of the Hongkong Chess Club, meeting in the tropics in August "every Thursday from four to eleven p.m." and in a *Grill-room*!! Surely it would be worth changing the name of the institution to the "Salamander Chess Club" or some epithet equally suggestive.

CHESS COLUMN.

CONDUCTED BY "BLACK BISHOP."

Hongkong, July 23.

The addition of a Chess Column to the *China Mail* seems to demand a word of introduction, which may be very brief. Every Thursday evening, this column will appear and will contain problems, games, and notes of transient or permanent interest to Chess players. Contributions will be heartily welcomed, and no effort will be spared to make this new feature of the paper successful and characteristic. Thanks to the Hongkong Chess Club the game is well played here, and appreciated as the noblest of games should be. The history of Chess is the history of civilization. No man can say where or when it originated, and it is a game not only of all time but of all countries. Classic Greece is a unique instance of a nation attaining a pre-eminent place without a knowledge of Chess. It forms a universal language, and few studies are more interesting than national characteristics as shown over the Chess-board. We shall illustrate this by occasional games and problems from all countries. The world-wide reputation of Chess has been won by its own merits. In no other game is the element of chance or the fortuitous advantage of eye or muscle so completely excluded. Luck counts for something on the billiard table and on the cricket field, but in Chess mind is pitted against mind, and skill or carelessness alone can win or lose a game.

The Game of Chess ranks high in the history of recreations. Its origin is more ancient than that of history itself and few games alter so little as centuries pass. Wherever there is civilization, there is Chess. The game is not only of all times but of all places. The points of difference between even Chinese and European Chess are fewer than the points of resemblance. No game has so glorious a history

nor so extensive a literature. It forms an international language in which all countries learn to esteem each other. The game has left its mark on the history of our own country. The Chancellor of the Exchequer borrows his title and that of his office from the Chess-board.

The Hon. H. E. Pollock, Acting Attorney General, managed to defeat his latest challenger for the Championship Cup of the Hongkong Chess Club. His opponent was Mr. M. J. Danenberg, who lost two games and won one. In the deciding game, Mr. Danenberg made an unfortunate slip which lost him a Knight. Mr. Pollock was the donor of this Cup. The first holder was Mr. E. Bischoff, who was defeated by Lieut.-Colonel The O'Gorman, who was in turn defeated by that brilliant Portuguese player, Mr. P. C. de Souza. It was he Mr. Pollock defeated, and since then he was challenged by and defeated Mr. Bischoff, Col. The O'Gorman, Mr. C. A. M. de Jesus, Mr. J. H. Pidgeon, and Mr. Danenberg. Mr. Pollock is satisfied, as he may well be, with the result of his matches with these strong players, and as he has had plenty of work to defend the title of Champion since the 2nd of April last, he is handing back the cup to Mr. de Souza, who will now be open to challenge. The cup must be held for a year before becoming the property of any member.

The following bright little game illustrates a trap not so familiar as it deserves to be:—

GAME No. 1.

CENTRE COUNTER GAMBIT.

WHITE. J. Mieses.	BLACK. J. Oelquist.
1—P to K4	1—P to Q4
2—P takes P	2—Q takes P
3—Kt to Q B 3	3—Q to Q sq.
4—P to Q4	4—Kt to Q B 3
5—Kt to K B 3	5—B to Kt 5 (a)
6—P to Q5	6—Kt to K4
7—Kt takes Kt	7—Resigns (b)

(a) Kt should not be pinned till Black has developed his Queen's side.

(b) If B takes Q, White wins by B to Q Kt 5 ch.

The following skirmish occurred in a recent match between the Universities and the Metropolitan Chess Club:—

GAME No. 2.

SCOTCH GAMBIT.

WHITE. E. Lawton (Univ.)	BLACK. H. L. Bowles (M.C.C.)
1—P to K4	1—P to K4
2—Kt to K B 3	2—Kt to Q B 3
3—P to Q4	3—P to Q4
4—Kt takes P	4—Kt to B 3 (a)
5—Kt takes Kt	5—Kt P takes Kt
6—B to Q3	6—P to Q3 (b)
7—Castles	7—B to R2
8—P to K B 4 (c)	8—Castles
9—P to B3 (d)	9—P to Q R 4
10—R to B3 (e)	10—B to Kt 5
11—P to K5	11—P takes P (f)
12—P takes P	12—B to B4 (ch.)
13—K to R sq.	13—Kt to K5 (g)
14—Q to B2	14—B takes R

(a) Kt to B3 is a safe defence, but Mr. Gunsberg holds that B to B4 far better.

(b) Cramps Black's game. P to Q4 would be preferable.

(c) White should develop his Queen's side first. This attack is premature.

(d) Loss of time, if not immediately followed by Q to B4. Kt to B3 would have been better.

(e) If B takes R would have been safe, but the move in the text leads to a fine attack. If B takes R, 12—Q takes B, P takes P, 13—P takes P Kt to K sq., 14—Q to K4, P to Kt 5.

(f) Contrast Black's concentrated attack with the stagnation White's Queen's side.

(g) If 13—B takes Kt, B takes P, and White cannot retake with the Queen owing to Q to Q8 being threatened. If 13—P takes B, Kt to B7 ch., winning easily. See the diagram below:—

MAIL STEAMERS.

THE NEXT MAIL IN DIS.			
From Hongkong	per P. & O. Co.	Saturday, Aug. 8th	1
From Hongkong	per P. M. Co.	Sunday, Aug. 9th	2
From America	per P. M. Co.	Tuesday, Aug. 18th	1

REPORTS.

The German steamer *Hohenzollern*, Captain A. Harnassowitz, reports:—Left Hongkong the 29th July at 10 a.m. but anchored in Typhoon Bay expecting bad weather. Heavy gale from N.N.-W. in the afternoon and night, both anchors out. Next morning better weather, left anchorage in the forenoon; at noon passed East Nine-pin. Wind south strong with high swell. Passed Van Diemen Channel the 2nd August at 0.30 p.m. wind S.W. wind and fine. Arrived at Quarantine the 4th at 6 a.m. Last part of voyage fine weather, strong S.W. winds. Duration of voyage, 4 days and 18 hours.

The British steamer *Doric*, Captain H. Smith, reports:—Left San Francisco the 21st July at 4.35 p.m.; crossed 180° meridian in lat. 47.27 N.; had smooth to moderate sea, with log much of the time, and moderate winds and adverse current throughout the passage. Passed O. & O. steamer *Coptic*, bound east, at 4.30 p.m. on the 3rd August, in lat. 41 N., long. 154 E. Arrived at Yokohama the 6th August at 8.32 a.m. Passage, 14 days, 22 hours, 20 minutes.

White Refined	7.00 to 9.25

EXPORTS.

RAW SILK.

Rather more done, but the trade is of a very retail character. A second parcel of Kaimeisha Filatures has found a buyer at \$670 and some No. 1 Joshi Re-reels are said to have been weighed up at \$655. Dealers are again spoiling their market by trying to force prices up: a suicidal course, seeing that all foreign markets in Europe and America are dull and lifeless. Shanghai reports a stagnant market, with sellers inclined to lower quotations. The feature of the week here has been the opening of a Conditioning-house. It remains to be seen whether the working of it will be successful or no. At present the venture meets with little practical approval either from Japanese or foreign silkmen.

QUOTATIONS.

BISSET & URE'S SHARE REPORT.

Yokohama, August 3rd.

Hongkong wired us that the following were the closing quotations on Saturday, the 1st inst.:—Buyers of H. & S. Banks at 191 per cent. premium, Hongkong Lands \$73 ex dividend, H. & W. Docks 192 per cent. premium; National Banks \$28 and Straits at \$27. Sellers of China Fires at \$95; H. & K. Wharfs \$54; Indo-Chinas at \$54 and Union Insurance at \$235. Sales of the following took place the same day—H. C. & M. Steamboats \$32.75 ex dividend; Punjom Mines at \$14.50 and China Traders at \$79. Douglasses were offering at \$65.50; Raub Mines were ruling steady at \$5.50, whilst Balmorals were weak at \$2.50.

Local stocks continue unchanged.

Yokohama, August 5th.

Latest mail advices from Hongkong report that business in the share market during the week ending 25th ultimo has been generally dull, a few of the leading stocks only having improved their positions.

The following changes are reported since the 21st ult.:—

	21st July.	25th July.
H. & S. Banks	187 1/2 B.	188 1/2 B.
National Bank	\$29 S.	\$28.50 S.
China Traders	\$78.50 S.	\$78.50 B.
Hongkong Fires	\$335 S.	\$332.50 S.
China Fires	\$96 S.	\$95.50 S.
H. C. & M. Steamboats	\$335 S.	\$332.50 S.
H. C. & M. Steamboats	\$33.50 Sa.	\$34 Sa.
Indo-China	\$55 S.	\$54.50 S.
China & Manilas	\$74 S.	\$73 S.
Dougless Steamships	\$64.50 B.	\$65.50 S.
China Sugars	\$11 S.	\$11.10 S.
Luzon Sugars	\$68 S.	\$67 S.
Punjom Mines	\$14.50 B.	\$14.25 B.
do. (Preference)	\$3.70 Sa.	\$3.85 S.
New Amoy Docks	\$11 N.	\$11 B.
Hongkong Lands	\$76 B.	\$76 S.
Hongkong Hotels	\$26 B.	\$28 B.

Green Islands	\$17.50 Sa.	\$17.25 Sa.
Hongkong Electric	\$6.75 S.	\$6.75 B.
Dairy Farms	\$5 N.	\$6 Sa.
Dakin Cruickshanks	\$1 B.	\$0.75 B.

Only a few forward transactions were effected, consisting of a fair number of Punjom Mines at \$15 for October and Green Island at \$19.50 for January next.

The Manager of the Punjom Mining Co. in Hongkong has received a wire from the Mines, reading "The cyanide plant ran 15 days treating 430 tons of clean tailings, yielding 280 ounces of bullion valued at £1.133 per ounce." The Manager of the Raub Mines has also been advised from the Mines that 2,550 tons of stone crushed yielded 1,000 ounces of gold. The Company has called an extraordinary general meeting to be held at Brisbane for considering the proposal of the Company's Board at Singapore for the calling up of the unpaid capital of the Company, and to employ this portion of the capital towards electrical machines for working the mines. The meeting will be held on the 4th December next.

Telegraphic advices received from Hongkong to-day report a rise in Hongkong Lands to \$74

and in H. & K. Wharfs to \$54, also in New Amoy Docks to \$12, at which rates these three stocks are wanted in Hongkong. A parcel of the latter has been sold to that port to-day at the rate offered.

The Hongkong Ice Co. has declared an interim dividend of \$2 per share, equal to 8 per cent. for the year, for the half-year ending 30th June last.

Local stocks rule as reported in our last issue viz., Breweries are wanted at \$225, Bretts at \$7, Grand Hotels at \$165, Langfeldts at \$185 and Debentures of all local Companies at quotations viz.:—Club Hotel and Brewery Debentures at \$107 and Brett Debentures at \$102.

Yokohama, August 7th.

H. & K. Wharfs have been bought to-day from Hongkong at \$55; there are now buyers at \$55.50. At \$57 shares were purchased from Hongkong for delivery on 30th September and at \$57.50 on 31st October. Hongkong Lands have also been purchased from the same place at \$75.50.

New Amoy Docks.—After being sold yesterday at \$12 rose to \$12.20, at which rate shares are wanted in Hongkong.

Club Hotels have changed hands to-day at \$75.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tribu-
taries in Abyssinia," says—"I ordered the druggist Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In 1
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout
World.
May 1st, 1896

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 15TH, 1896.

MARRIAGE.

On the 12th inst., at the French Consulate, by M. Penet (Consul), ROSINE BERNHEIM, of 81, Rue du Temple, Paris, sister of Mrs. A. Levy, of Yokohama, to ISIDORE BICKART, of Yokohama.

SUMMARY OF NEWS.

SEVERAL changes in Local Governors have been gazetted this week.

H.I.M. THE Emperor and Empress have headed the funds now being subscribed towards the relief

of those persons in Formosa who suffered in the suppression of the recent rebellion.

H.E. LI HUNG-CHANG has received the Grand Cross of the Victorian Order.

THE Irish Land Bill has passed through Committee of the House of Lords.

THE O. & O. steamer *Galic* grounded in the Straits of Shimonoseki on Thursday.

RICE has risen enormously in value at Hakodate: at Osaka and Tokyo quotations are fallen to their normal level.

AN action between Colonel Plumer's column and the Matabeles, in which five impis were routed, lasted for seven hours.

SENATOR GUICHARD, who was elected Chairman of the Suez Canal Co. in 1893, in succession to M. Ferdinand de Lesseps, is dead.

ALL the vernacular papers express sympathy with the foreign astronomers at the failure that attended their eclipse expeditions.

INTENSE heat prevails in New York. One hundred and twenty deaths from sunstroke have been recorded within the past five days.

H.I.H. PRINCE FUSHIMI, the Emperor's Special Ambassador to the Czar's Coronation, returned to Yokohama with his suite on Wednesday.

MR. MIYAGAWA HISAJIRO, Japanese Consul in Paris, has been ordered home; Mr. Matsukata Shosaku has been appointed to succeed him.

THE present Korean Cabinet is said to be steadily revising the various regulations governing local, district, and the central administration.

THE Naval officers who are to bring out the *Yashima Kan* from England, left Yokohama for Europe on Saturday per the N.Y.K. *Ryofun Maru*.

A KOREAN who petitioned the King to leave the Russian Legation, punish the murderers of the late Queen, and drive out Japanese traders from Seoul, has been arrested.

VISCOUNT KATSURA, Governor-General of Formosa, is in favour of various restrictions on the opium trade in Formosa. It is useless, he thinks, to prohibit it altogether.

MR. A. C. SIM, who has been distributing the Kobe, Shanghai, and Hongkong relief funds in the Sanriku Districts, has completed his task to the satisfaction of all the recipients.

THE political horizon in Japan is fairly clear, though the Opposition are said to have determined to bring the Government to account for the delay in relieving the sufferers by the recent floods.

MR. OTANI KAKI will leave for the United States in the middle of next month to investigate the causes of the decline in the Japan tea business. He will be back before February of next year.

BARON IWASAKI YANOSUKE, Messrs. Shibusawa, Masuda Ko, Okura Kihachiro, Yasuda Senjiro, Morimura Ichizayemon, and several others, on the 11th inst. banquetted Chevalier de Luzzatti at the Imperial Hotel.

At a reception given by the London Chamber of Commerce in honour of Li Hung-chang, the latter promised that he would do his utmost to make the remotest corner of China accessible by railways.

THE acquittal of Major Lothaire on the charge of murdering Mr. Stokes, a British trader, has

been confirmed on appeal by the court at Brussels. The English newspapers comment bitterly on the decision.

MR. NABESHIMA KEIJIRO, a secretary in the Foreign Office, has been permitted to wear the decoration of the Second Class of the Order of St. Stanislaus, conferred on him by H.M. the Czar on July 23rd.

THE Astronomical Expeditions that proceeded to the north of Hokkaido to take observations of the total eclipse of the sun on the 9th inst., fared disastrously, clouds and storms preventing the phenomenon from being seen.

MARQUIS SATONJI KIMIMUCHI, Minister of State for Education, and Foreign Affairs *ad interim*, has been permitted to accept and wear the decoration of the Legion of Honour presented by the President of the French Republic.

THE Railway Bureau, notwithstanding the petitions of Yokohama merchants, capitalists, and residents, have decided to run the new line trains direct from Shimbashi to Kobe without touching at Yokohama from the 15th inst.

THE sum of yen 35,889.429 has been sanctioned towards the relief of districts visited by the seismic wave, and the sum of yen 7,601.758 is allowed for Yokohama Harbour construction repairs from the Second Reserve Fund, during the 29th fiscal year (1896) as a fifth installment.

SOME reports from Japanese Consuls in America are printed in the *Official Gazette* this week. They warn their nationals against the dangers they are running in sending goods inferior to the contract samples, and also charge them with seldom being up to time in implementing contracts.

H.E. LI HUNG-CHANG has been entertained at a banquet at the Crystal Palace, London, by two hundred and fifty of the leading China merchants, the Manager of the Hongkong and Shanghai Bank presiding. Replying to the toast of his health, Li Hung-chang spoke of the services rendered to China by the Bank.

THE amount of currency, bank notes, etc., issued from the 3rd inst. to 8th inst., was as follows:—yen 80,923.100 in gold bullion; yen 25,473.735 in silver; total, yen 106,396.835. public loan bonds, yen 17,906,740; Government bonds yen 22,000,000; ordinary bonds, yen 11,000,000; commercial notes, yen 13,146,749; silver certificates yen 64,053,489; total, yen 170,450,324. Bank notes, yen 170,450,324 (including yen 3,830,544 in the Central Safe Stock, and yen 7,400,000, to exchange for paper money). The amount of currency in circulation was yen 159,219,780; the amount in the week preceding was yen 159,207,554.

THE import trade is generally without improvement, and business in Textiles has been confined to small enquiries, induced probably by the fall in exchange. Dealers in Metals are inert, contracts being slow in the taking-up and fresh bargains few and far between. In Kerosene there is nothing to report but fresh arrivals of Oil on a dull and declining market. In Sugar there has been a moderate amount of business in Browns, but at somewhat irregular prices, while Whites continue to be well held. A few purchases have been effected in Silk, but sellers became more difficult to deal with as exchange dropped. In Waste Silk there has been no business worth mention. There has been a little more life in the Tea trade, but the sales of the season remain far behind those of last year at the same date. Exchange declined a point for several days in succession, after which rates came to a standstill.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

This has again been a tolerably quiet week with the vernacular papers. Some, however, contain articles very readable, displaying good sense, judgment, and knowledge. Now that the long rumoured appointment of *Jiyu-to* Governors has been made, our readers will not be surprised to hear that some Tokyo editors write upon that topic in a tone the very reverse of self-contained. We need not reproduce their violence.

The *Jiji* has an article entitled "Dreams of Anti-Mixed-Residence," the gist of which is this:—Years ago some persons were opposed to any foreign policy involving mixed residence, however advantageous the policy might be in other respects. But the War must have roused them for their dreams, for assuredly they were no better than dreamers when they entertained fears about foreigners getting the whole of Japanese business and industry into their hands if mixed residence became an accomplished fact. The War furnished proof of the fact that the Japanese race is competent to march abreast of Occidentals along the road of civilized progress. It cannot be supposed that the struggle with China produced any sudden growth in the capabilities of Japan or her people: what they were before the War, that they must be now. After pursuing this theme in a style that can scarcely fail to impress those to whom the article is addressed, our contemporary concludes by urging its countrymen not to slacken their preparations for mixed residence.

In the columns of the *Nichi Nichi* there is a long article headed "China after the War." It is a learned essay such as rarely appears in the vernacular press. The opening and middle portions, however, being chiefly historical, our limited space forbids their reproduction. The conclusion is this:—Among the many faults committed by China in modern times, the recent War stands preëminent. Chinese statesmen ought to have learned a lesson from its results. What then is the wisest policy for China to pursue in the future? We positively state that no course is open to her except to form a close alliance with Japan, and thus to maintain the peace and security of the Far East. We often hear it stated that China is about to ally herself with Russia for the development of her empire. We do not believe anything of the kind. China already holds a realm too large for her administrative capacities. What purposes can she hope to achieve by an alliance with the Northern Bear? The policy that makes for China's interests and the policy that makes for Russia's interests are diametrically opposed, one being defensive and the other aggressive. They may agree, or may have agreed, to a mutual exchange of benefits or accommodations, but the idea of an alliance between them is simply inconceivable. Russia, even if courted by China, would refuse, for she must know that the Middle Kingdom is not to be trusted. On the other hand, the tide of Occidental civilization reached the shores of Japan long ago, and brought to her many things that place her far ahead of China. It is inevitable that the same tide will sooner or later come to renovate China, whether her statesmen welcome or oppose it. Had they even a little wisdom they would invite this rejuvenating influence. But from whence? Undoubtedly from Japan. Western civilization, as assimilated by Japan, has been to a great extent Orientalized, and in that form it is much easier for China to receive it than in its original European or American garb. Chinese statesmen undoubtedly have many internal reforms to achieve, which must severely tax their strength, and there are consequently strong reasons for them to choose the simplest route for approaching Western civilization. What is of the most urgent importance for China, is to provide speedily for the development of facilities for communication. All the maritime routes will soon be monopolized by the Japanese

unless the Chinese stretch out vigorous hands, for the Japanese have proved themselves experts in the art of navigation. On land, too, little has yet been done by the Chinese in this all important matter, and nothing demands their attention more urgently than the construction of railways traversing the interior of the empire and connecting the more important places, and of lines forming a junction with the Manchurian trunk road. If China desires to conserve her integrity and to develop her political and economical interests, railways are absolutely indispensable. Not a few people say that she is counting upon Russian and English projects for extending the Siberian and Burmah railway systems, the one into Manchuria and the other into the centre of the Middle Kingdom. If Chinese statesmen really entertain such an idea, they are not considering their country's best interests. China could afford to build railways for herself, if only she had materials and engineers, and those Japan can provide at considerably less cost than would be involved in obtaining them from either Europe or America. As to rails, in particular, this country will be able to sell them very cheaply after the completion of the Iron Foundry. We firmly believe that it would be an ill-advised step for China to have her railways built and managed by foreigners. It may be noted, *en passant*, that some people exercise their sagacity to discover links connecting European aggressive designs with the Russian and English railway projects from Siberia and Burmah to China. But to us it appears only natural that contiguous countries should, one day or other, come to have a common system of railways. If, therefore, we recommend China to construct her own railroads by the help of Japan, our counsel is not dictated by any such fears as the above, but because we are persuaded that her best interests point in that direction.

A writer signing himself "Tetsu Kouron" declares, in the leading columns of the *Nippon* that sweeping measures must be taken in Formosa on and after May 9th, 1897. That date, as our readers probably know, is the time when the Formosans must either leave the island, or become Japanese subjects on whatever terms Japan dictates. The first measure he recommends is to forbid the wearing of "pig-tails." His view is that uncivilized people are much more effectually convinced of their rulers power and influence by a visible display of those qualities than by any amount of moral teaching. Hence he recommends that all Formosans desirous of becoming Japanese subjects should be required to cut off their queues. He thinks that the gendarmes and police now in Formosa would not be sufficient to enforce the edict, but he would not hesitate to enforce it even though it involved the despatch of two or more Military Divisions. The article is unfinished, and we are not yet informed what other "sweeping measures" the writer has in contemplation.

The *Mainichi* has a lengthy leader upon the rumour of an approaching financial panic in Japan. Its views are similar to those entertained by Mr. Tsuruhara, of the *Nippon Ginko*, as recently reproduced in these columns.

While recommending the Authorities and the public to be on their guard against any financial disturbances, our contemporary strongly denounces any craven apprehensions calculated to chill the spirit of enterprise that has sprung up since the War.

One of the *Nippon's* leading articles is headed "Those that are fond of Wealth and Rank," words taken from a Chinese classic. The article is simply a collection of all the hard things that occur to our caustic contemporary's mind with reference to the present holders of Japanese portfolios. It expresses its deliberate opinion that the present Cabinet Ministers remain in office solely because their luxurious mode of living makes the receipt of high salaries a necessity. Had they money enough to procure all the luxuries they desire, they

would prefer lives of ease and retirement, and would not think of taking upon themselves the onerous tasks of the Administration. Such being the case, concludes this decidedly querulous article, the nation would best consult its political interests by making a donation of, say, 200,000 *yen* on the average to each of the Cabinet members and other talented statesmen, about twenty in number. The total donation would be 4 million *yen*, a respectable figure in itself, but only 3 per cent. of the national revenue. As for the talented statesmen, they would then be able to satisfy all their extravagant propensities, for 200,000 *yen* would yield at least an income of ten thousand *yen* annually. Our contemporary gravely recommends the Diet to take measures in the above sense next session.

The *Kokumin*, in its Sunday's issue, gives a few short expressions of its sentiments about politics and politicians. Some of them may not be uninteresting:—First, the relation between Counts Okuma and Matsukata resembles in some respects that between the Tokugawa and Mayeda chieftains after the death of the *Taiko*; and Ishida, who failed in his attempt to sever the friendly ties between Tokugawa and Mayeda, may be said to be represented by Marquis and Baron Ito combined. Second, Should Counts Okuma and Matsukata bide their time and maintain their union, power will naturally come into their hands. The tide of time flows silently but steadily and irresistibly. Occasional ripples and waves need not be taken into account. Another statement that evidently pleases the *Kokumin* for its pithiness, refers to the rumour said to be current among the Chinese that the Peking Government is about to issue an Edict ceding the Liaotung Peninsula to Russia:—"We don't think such a thing will happen yet, but it may happen when the ultimate strength of Japan and England is completely prostrated by Russia. Alas! poor England! poor Japan!"

"The Progressive Party," writes the *Tokyo Shimbun*, "is reported to have passed a resolution calling for an extraordinary session of the Diet to discuss disbursements from the Treasury on account of the recent inundations. If that be true, we cannot but be surprised at the Party's wants of reflection." Our contemporary then enumerates the various steps that the Government has to take in framing a Bill to be submitted for the consideration of the Diet, and declares it impossible for any Government to make preparations with sufficient speed to meet the demand of the *Shimpo-to* (Opposition).

The *Kokumin*, in a leader entitled "A Life and Death Question for the Statesmen in Power and out of Power," says:—"The Tokugawa Government was overthrown by a foreign question and the rule of Clan Cabinets also is destined to fall similarly. As to internal affairs, everything indicates the improbability of any occurrence important enough to cause the downfall of the Clan Government. It must be upon a foreign problem that the politicians out of power will engage in a life and death struggle with the Government. At this present moment, is not the Government setting at naught the Imperial Declaration of War against China? Is it not turning the glory of the War into disgrace? Is it not losing all the fruits of the War? These are the most suitable points for the Opposition to choose in attacking the Government. Victory may be obtained by appealing to the nation on such principles as these, namely, to secure the independence of Korea and maintain the peace of the East, in accordance with the programme laid down in the Imperial Declaration of War against China; to oppose whatever State interferes with the independence of Korea or disturbs the peace of the Orient; to wipe off, in course of time, the disgrace attending the Liaotung fiasco; and not to suffer any foreign Power to occupy an inch of the Liaotung Peninsula, since that would certainly endanger the tranquillity of the East."

The *Yoroku Choho* prophesies that nothing of

importance will take place in the political world for some time to come, although contentions, keen and fierce, may be carried on between Marquis Ito's organs and those of Count Okuma. These are the only statesman among Japanese politicians that may fight political battles. But they both lack strength and courage to engage in open warfare. They merely shake their fists at each other, but never come near enough to deal earnest blows.

The *Fiji* has a sensible article in which it recommends the Government and the nation to lay aside all the feelings holding them apart, and to approach, in frank union, the consideration of measures relating to the increase of war preparations. It compares the differences between the Government and the people to those between a parent and his children, and says that, as domestic disagreements do much harm to a family in its social relations, whatever benefits may accrue to the actual combatants, so discord between rulers and ruled are seriously detrimental to the interests of a State in its relations with other States.

All the Tokyo papers, most of them in their leading columns, offer hearty congratulations to H.I.H. Prince Fushimi on his return from Russia, and thank him for having undertaken the trouble of a journey to Europe. Some journals also take occasion to allude to the distinguished part His Imperial Highness played in the late War, both in the field and at Headquarters. The writings of our Tokyo contemporaries on such an occasion are so refined and appropriate that we are forcibly reminded of the altogether exceptional richness of the Japanese language in terms of courtesy and congratulation.

EDITORIAL NOTES.

KOREAN TRADE.

THE trade of Korea before the war was entirely in the hands of the Chinese. Then the Chinese merchants went back home and left the field vacant for Japanese traders. At one time Japanese merchandise made its way into the interior of Korea in considerable quantities, but from July and August, of last year the Chinese merchants reappeared, and Japanese imports have since been steadily on the decrease. During the first half of this year the Japanese imports and exports at Jinsen were yen 1,137,386, while the Chinese were yen 847,536, showing an advantage of yen 289,850 for the Japanese traders. The general tendency, however, has been unfavourable to the Japanese since January last as the following table proves:—

JAPANESE AND CHINESE IMPORTS AT JINSEN DURING THE FIRST HALF OF 1896.

	Japanese. Yen.	Chinese. Yen.
January	331,867	91,241
February	119,942	5,356
March	171,043	175,650
April	203,629	274,200
May	201,898	194,438
June	109,007	106,651

Japanese total 1,137,386
Chinese total 847,536

In January and February Japanese trade excelled Chinese by yen 350,000, while in March and April the latter beat the former by over yen 7,400. In May and June the Japanese were again ahead, but this time only to the amount of yen 9,000. Instituting a comparison between Chinese and Japanese imports in May and June of this year and those in the same months of last year, the following figures are obtained:—

	May. Yen.	June. Yen.
1895.		
Japanese	234,318	211,610
Chinese	61,356	35,980
1896.		
Japanese	121,121	70,447
Chinese	188,573	101,865

Last year, in May and June, Japanese imports at Jinsen amounted to yen 445,928, while this year in the same months they were only yen 191,568. On the other hand, while the Chinese

imports were only yen 97,336 last year, this year they amounted to yen 290,438. Again, in the first half of this year, Japanese exports and imports amounted in all to only yen 1,137,386, while last year in the same period imports alone totalled yen 1,505,514. Similar figures on the Chinese side are respectively yen 297,202 and yen 847,536.

MR. BARNEY BARNATO'S VISIT TO SOUTH AFRICA.

A COMPLETE and very remarkable change has come over the South African Gold Share Market during the last few days, says a recent issue of *Fairplay*, in consequence of a further instalment of President Kruger's "clemency." Mr. Barnato last week laid the situation very clearly before that gentleman, and proved to him that if he did not quickly set about liberating the Pretoria prisoners there would be a wholesale shutting down of the Rand Mines. What that would mean did not require very minute demonstration, and in the course of a few hours all except the four Reform leaders were free men. By this means a great catastrophe to the gold mining industry has doubtless been averted, and there is now every reason to believe that matters will settle down in their former channel and move along smoothly. The news referred to was the only thing needed to set the Kaffir market on the "boom," and not a moment's delay occurred in rushing up prices. From dead stagnation the market at once broke into a state of the wildest excitement, the volume of business transacted on Monday, when the revival may be said to have definitely set in, and the accompanying uproar and excitement, being such as had not been experienced since the summer of last year. Up to Saturday the West-Australian market held the field. It had grown immensely in consequence of the influx into it of large numbers of dealers from the African department, but since then it has grown smaller, and much of the old froth has disappeared, speculators and investors having once more returned to their old favourites. Barnato specialties, Chartered shares, East Rands, Consolidated Goldfields, and such like have been bought in enormous amounts, but chiefly to close "bear" amounts, which were unquestionably of very large dimensions. The Continent has again come in as a buyer, and is likely to keep the ball rolling. Looking at the position and prospects as a whole, the chances are that prices will rise considerably all along the line. It will not signify very greatly what one buys during the next few months, as everything in the market is likely to be pushed up now that the political tension has been relaxed. Until President Kruger came to his latest decision the outlook was extremely grave. There can be very little doubt that a decision of a different character to the one come to in the case of the prisoners would have prompted the shutting down of the mines as an act of reprisal, and Mr. Barnato did not in the least degree exaggerate the probable consequences of such an event when he told the Boer President that it would throw back the industry for many years. But even that might not have been the worst effect. One need not, however, speculate about the consequences of an event which has been finally averted. "Barney" has triumphed in his mission to Pretoria, and nobody will seek to diminish by a single leaf the laurels he has won for himself. He comes through this miserable business a head and shoulders above everybody else who was in any way connected with it, and it would be churlish in the extreme to seek to minimise the immense debt of gratitude which investors in South African enterprises owe to him. As regards Westralian mines, these may be expected to fall into the background until they prove, what is still quite uncertain, that they are really worth the inflated values placed upon them. Indian mines have had a great rise, but now that Kaffirs have once more come to the front, they are somewhat dangerous to meddle with.

JAPAN'S KOREAN POLICY.

MR. HARA, Japanese Representative at the Court of Seoul, according to the *Yorosu Choho*, gave an interviewer to understand that Japan

sincerely wishes to see the independence of Korea secured, and that she does not mind what State brings it about, be it Russia, America, France, or England. Should these countries succeed in securing the Peninsular Kingdom's independence, Japan would gladly be a looker-on. She sees no necessity for doing the work herself. Such words from the mouth of the Japanese Minister at Seoul, says the *Yorosu Choho*, are matters of no small amazement. They may be taken as a public announcement of the Japanese Government's changed attitude toward Korea. We (*Japan Mail*) do not think so.

THE RECENT TYPHOON AT HONGKONG.

SAYS the *China Mail* of July 30th:—Hongkong has emerged from another typhoon, but not unscathed. From every part of the Colony, in the city, east and west, at the Peak, and on the Kowloon Peninsula, information is gradually coming to hand regarding the wreck of buildings, the wholesale destruction of matsheds and other light structures, the uprooting and dismantling of trees, the loss of Chinese craft and damage to European vessels. Not since 1894, has the Colony experienced such a severe typhoon, and some old residents are inclined to believe that the sharp severity of the present typhoon is only equalled by that of 1874 when the Colony suffered much more serious damage. According to the Observatory notices sent out, we learn that Dr. Doberck expected the typhoon centre to pass close to the Gap Rock, a forecast which must have been correct judging from the messages cabled by the lighthouse keepers. At ten p.m., we are told, the wind velocity, as tested by the anemometer at Kowloon Observatory, was 108 miles per hour, coming from the east. The typhoon eventually entered China near Macao. The Observatory Staff, continues the *Mail*, deserves to be complimented on having given timely notice of the close proximity of the typhoon. Thanks to the warnings issued from the Observatory, the majority of the vessels in the Harbour were able to get into the typhoon anchorages, where they rode out the storm in safety. The captains of the P. & O. S. *Ancona* and the *City of Peking* preferred to remain in the Harbour. With their usual dilatoriness, a number of Chinese failed to avail themselves of the typhoon warnings; the result is that their boats are now matchwood, and in some cases, it is feared, loss of life has occurred. Captain Norman Jay lost his life through insisting that a Chinese sailor, who was on board the schooner *Wu-chow-foo* with him, should be saved first.

AN ADVENTUROUS VOYAGE.

ONE is irresistibly reminded of the

Three wise men of Gotham who went to sea in a bowl, when recording the beginning of Capt. Ridgely's trip across the Pacific in a 22 ft. boat. For the last two years the daring Swede has been making preparations for the voyage, and several times has almost been on the verge of departure, but something or other intervened. On Monday afternoon (August 10) he managed to get away. With two companions he will make his way up to the Kuriles and then will proceed across the "smoky, cold grey seas," as Kipling calls the North Pacific, to Vancouver. His boat's measurements are, length 22 ft.; depth, 2 ft. 6 in.; beam 5 ft. 7 in.

THE FORK.

THE humble fork is a comparatively modern convenience. *The Literary Digest* translates from *Cosmos* some interesting facts about the existence of this table adjunct:—

"Pierre Damien and St. Bonaventure narrate that at the close of the tenth century, the sister of Romanus Argulus, Emperor of the East, having espoused a son of the Doge Pierre Orseolo, scandalized all Venice by an odd and unnatural form of luxury, which consisted in using, instead of the figures, small gold two-pronged forks. The old chronicler Dandolo, full of horror at such depravity, adds that the unhappy woman was, by a chastisement sent from Heaven, attacked by a frightful disease that changed her body to powder and caused it to exhale, even before death, the odour of corruption. In spite of this terrible example, the use of forks, becoming re-

garded as convenient and proper, established itself at Venice. A traveller, Jacques Lesaige, speaks thus of it, not without astonishment, in describing a feast given by the Doge: "These lords, when they desire to eat, take the food with a silver fork." A little later, Sabba da Castiglione mentions the use of forks *à la Venitienne* to avoid seizing the food with the fingers.

"After the sixteenth century, mention of forks appears in some inventories, though not often.

"The inventory of Charles V. (1380) proves, among a mass of silver worth more than 1,500,000 francs [\$300,000] the existence of 12 forks, some of them ornamented with gems. The inventory of the Duchess of Touraine (1389) enumerates nine dozen silver spoons, and only two forks, of silver gilt. This shows that the uses of spoons were varied and frequent, while that of forks remained for a long time special and very limited. They were seldom used except in eating certain fruits. Three forks belonging to Piers Gaveston, favourite of Edward II., are said to have been 'for eating pears.' The Duke of Bourgogne employed his only for eating strawberries, and those of Charles V. were used by him to eat cheese-cakes.

"It was not until the reign of Louis XIV. that this precious instrument began to be used at all generally, and even in the midst of this reign Anne of Austria used to eat with her fingers, as is stated in the 'Historic Muse of Loret (April, 1651):—

The lovely fingers of the queen
Full often took the pains, I ween,
To carry toward her crimson beak
(With due respect I mean to speak)
Full many a savoury bit of meat,
Of pastry, or confection sweet.

"Preliminary ablutions became altogether indispensable when every one plunged his hand into the plate, and this usage explains the quantity of basins which date from the Middle Ages and the Renaissance. The most elegant feasters washed their hands after each course. . . . Montaigne says somewhere that he loves little to avail himself of fork and spoon, and prefers to eat with his fingers.

"A note of Saint-Simon marks with precision the epoch when the use of forks became *de rigueur* in polite society at Versailles. The manners of M. de Montausier, who lived with great splendour, were very refined at table, where he used great spoons of his own invention, and large forks, which he introduced into fashionable use."

"Even in our own day, when the fork has been adopted by all the peoples of Europe, a number of countries of considerable civilization have not adopted it.

"The Chinese use ivory shop-sticks; Turks have just begun to adopt the fork, and some of them are always showing themselves novices in the art of using it properly. Witness the amusing story told by Ampère and cited by Bourdeau of a grand Turkish official who at a diplomatic dinner, expressed to a Frenchman his countrymen who did not know how to manage their forks; and, so saying, used his own—to comb his beard!"

RAILWAYS IN ASAKUSA DISTRICT.

THE following railways and trams are projected for Asakusa District:—An elevated railway from Iida-machi Station on the Ko-bu line to Kinshibori Station, Honjo, on the So-bu line, through Hongo, Shitaya, and Asakusa Districts; another, an extension of the So-bu line, to Yorozyo Bashi, *via* Kinshi Station through Asakusa; another, from Shimo Heiemoncho in Asakusa to Senju through Sakamoto; an electric railway reaching Senju Ichhome along the Oshu highway, starting from Kaminari-mon; an electric tramway from the western corner of Azuma Bashi to Senju Station along the Oshu highway; two tramways from Kaminari-mon to Senju Station along the Oshu highway; an electric railway running straight to the western corner of the sixth section of Asakasa Park from the Tokyo Tramway Company's stables at Yamashita-cho, Ueno; a railroad from Asakusa Park to Ishibashi in Shimotsuke Province; and a railroad passing behind the Yoshiwara through Ryusenjimachi in Saitaya. The people of Asakusa District are entirely opposed to the elevated lines, but intend to raise no objections to the other schemes until they have made thorough investigations.

THE SOLAR ECLIPSE AT NIKKO.

VISITORS to Nikko obtained a fairly good view of the eclipse last Sunday. At first, the sun was hidden by clouds; but, at a little after two o'clock, the clouds passed away, and

showed the sun then about one-sixth eclipsed. For an hour the progress of the moon over the face of the sun was clearly visible, except for occasional short spells of cloudiness. At the time of maximum obscurity the view was very good: but soon after three o'clock clouds covered the sun, and a heavy rain-storm ensued, so that there was no further view of the eclipse. Not only foreigners, but many Japanese, were out with smoked glass.

MAT DEALERS.

A NUMBER of dealers in "flower matting" met in Tokyo at the end of last month and resolved to establish special offices for the benefit of the trade. The following are the points they agreed upon in regard to the work that the office is to undertake:—1. To act as agents for the producer. 2. To re-inspect mats once inspected by the Producer's Guild. 3. To see that proper store-houses are provided. 4. To investigate and report upon places abroad where mats are in demand, and to inspect the places at home where mats are manufactured. 5. To see that direct exportation to foreign countries is properly carried out. The head office will be at Kobe.

ALLEGED EMBEZZLEMENT.

KATSUMATO ROKUSABURO, aged 23, a *banto* in the employ of the Pacific Trading Company, has been arrested on a charge of embezzling \$162.18, the monies of the Company. The man had been sent out to collect various bills, and instead of paying the money into the office went off for a night's entertainment in the brothels at Maganecho. Here the money quickly went. Upon being asked to account for the monies, next day he alleged that he had not received them. Detection quickly followed.

THE PROPOSED FAST CANADIAN MAIL.

A LONDON telegram appearing in the Australian papers says that the amount of subsidy required by Messrs. J. and A. Allan, owners of the Allan steamship line, for the proposed fast service between England and Canada, is £225,000 per annum. Messrs. Allan's tender was the lowest received, and was also the only one that complied with the required conditions. The service is to be a weekly one, with a minimum speed from port to port of twenty knots.

AN O'ER TRUE TALE.

WE are indebted to the *Ist*, remarks the *Globe*, for reviving, apropos of the performance of the band at the Oxford Theatre, a story from Boston. A piece was being played which dealt with French life under Louis XI., and a certain actor had to come on and say these dramatic lines:—"Stop the music: the King is dead." The weather was thirsty and the music was bad. History does not relate to which of these the subsequent climax was due, but certain is it that the actor came on, and in a tone of intense earnestness said, "Stop that music: it has killed the King."

THE PROJECTED FORMOSAN RAILWAY.

THE projectors of the Formosan Railway are said not to be desirous of any further support or assistance from the Government than the concession of the ground on which to build the road, and the remission of import duties on the rails, engines, and other material imported from abroad. As to the land, the promoters are reported to be prepared to buy it at reasonable rates, if the Government can not give it them free of cost.

THE PORT ARTHUR PANORAMA.

THE Port Arthur Panorama at Ueno Park, Tokyo, was courteously thrown open to the representatives of the foreign press on Wednesday afternoon. The painting was carried out by Nomura Yoshikuni and Nomura Yoshimitsu, of Kyoto, old pupils of Mr. Bigot, and is a spirited performance. The building has been entirely renovated and nicely lighted, and the spectacle should attract everyone interested in battle-scenes.

THE LATE MR. BAUERFEIND.

THE *N.-C. Daily News* says that the body of Mr. Bauerfeind, who was drowned in the Soo-

chow Creek, was found quite close to where he sank. According to German law, no inquest will be necessary, as the circumstances attending his death are well known. He was only 23 years old, and was an only son, a brother having been previously killed in an accident.

LADIES VISITING LAW COURTS.

THE decision of Lord Chief Justice Russell not to allow ladies on the bench at future sittings of the court for the trial of Dr. Jameson, is well received, says an exchange. There have been many protests about the way in which the recent sittings of the court in this case were turned into society functions.

CHINESE CUSTOMS CRUISER MISSING.

THE Chinese Customs cruiser *Dolphin*, which left Chefoo about the same time as the *Illis*, with stores, for the N. E. Promontory Light-house, had not been heard of in Tientsin, according to the local paper, up to the 1st inst. She carried a crew of one foreigner and five or six natives. Grave fears are entertained for their safety.

FATAL BOATING ACCIDENT AT SHANGHAI.

MR. BAUERFEIND, while sculling on the Soochow Creek at Shanghai, on August 6th, was thrown into the water through the capsizing of his craft, and, being unable to swim, was drowned. Mr. Staats, who was sculling near-by, did all he could to rescue the drowning man.

DEATH OF THE REV. J. GOBLE.

THE Rev. Jonathan Goble, the first Baptist missionary to Japan, died recently in St. Louis, Mo. As a sailor he was present at the opening of Japan to foreigners by Com. Perry's expedition, 1854, and he claimed to be the first to introduce the *jinrikisha* in this country.

AN EXAMPLE.

A FOREIGN beachcomber at Kobe, who had been disowned by the Consular Board, has been sent to gaol by the Japanese Local Court, for one year with hard labour, for assaulting a twelve-year old Japanese boy.

A BOWLER'S SALARY.

JONES, the Adelaide bowler, has accepted a five years' engagement from Sussex County C.C., at a salary of £365 per annum and a house at Brighton. He returns to Australia with the team, after which he will proceed to England with his family.

MR. DE BUNSEN.

MR. DE BUNSEN, British *Chargé d'Affairs* at Bangkok, is at present, by medical advice, taking a round tour via Singapore, Java, and Hongkong, for his health's sake.

THE GROUNDING OF THE "GAELIC."

THE O. & O. steamer *Gaelic*, Captain Pearne, while on her voyage from Nagasaki to Kobe, grounded on Yojibei Rocks, on the north side of the eastern entrance to Shimonoseki Straits, at 4 o'clock on Thursday morning. It appears that the *Gaelic* got out of control after collision with a large sailing junk, and thus came too close to the dangerous reef: the tide, that runs through this channel with great swiftness, caught her and swung her on, and she sustained some damage. By noon she was floated, and it was then deemed advisable to beach her inside the Hamo Bank. Telegrams were dispatched to Nagasaki for pumps and divers, but the extent of the damage done can not be ascertained till they arrive at an early hour this (Saturday) morning. The Yojibei Rocks lie E.N.E. 4½ cables from Kibune Point, and uncover 4 feet at low water springs.

The N.Y.K. *Genkai Maru* is bringing up the mails—including the English mails of July 10th, which the *Gaelic* was conveying from Hongkong—and passengers to Kobe, and is expected there this morning.

Information has reached Yokohama that the *Gaelic* has been pumped dry, but the extent of the damage to her bottom is unknown. She will dock at Nagasaki.

CURRENT TOPICS.

The *Yi-yu* learns that a number of persons are shortly to be raised to the peerage, and tells us the reasons assigned by rumour for so many additions to the already long list. Irrespective of the old *Kuge*, *Daimyo* that formerly enjoyed incomes of more than 50,000 *koku* of rice and are now capable of telling what property they possess, may be numbered on the fingers of one hand, as Marquis Hachisuka, Viscount Akimoto, and Viscount Okabe. The other noblemen are all too great personages to ascertain the facts about their own fortunes, the assessment and management of which they leave entirely in the hands of their Stewards. With regard to those formerly classed as lesser *Daimyo*, they are for the most part poor, although of some the very opposite is true. For this and other reasons, they receive little respect from the so-called "great peers." In the ranks of the Japanese nobility there are to be found, it is true, men of undoubted talent, as Prince Tokugawa Iyesato, Marquis Asano Chokun, Marquis Kuroda Nagashige. But they too are said to be ignorant as to their own wealth. Hence, however ably they may carry on a discussion in the House of Lords any arguments that they employ about financial measures must of necessity be purely theoretical. Under the circumstances, the present noblemen are not suited to discharge legislative functions, and it becomes necessary that able and experienced persons should be raised to the peerage, to supersede the worthless members in the Upper House. Briefly speaking, the renovation of the House of Peers appears to be the chief object contemplated in creating new peers, if, indeed, any such are to be created.

A person signing himself "Shinna-sei" writes to the *Nippon* from Jinsen about the currency in circulation in the Peninsular Kingdom. He tells us that there are two kinds of coins in use in Korea. One is that usually called "Korean coin;" and the other, the new money first struck in August 1894. The former comprises two copper coins named *ichimon sen* and *gomon sen*, respectively. Like the old Japanese coins, they are round and have a square hole in the centre. The new coins are a 5 *ryo* silver piece, exactly like a Japanese one *yen* piece in weight and appearance; a 1 *ryo* silver piece, resembling the Japanese 20 *sen*; a 2 *sen* 5 *bu* nickel piece, like the Japanese 5 *sen* nickel; a 5 *bu* copper piece, like the Japanese 1 *sen*, in weight and appearance; and a 1 *bu* brass piece, equivalent to 2 *rin* of Japanese money. When these coins were originally issued in 1894, the Korean Government fixed the rates of exchange as follow:—

1 <i>bu</i> brassequivalent to	1 of the old coins.
5 <i>bu</i> copperequivalent to	5 of the old coins.
2 <i>sen</i> 5 <i>bu</i> nickelequivalent to	25 of the old coins.
1 <i>ryo</i> silverequivalent to	100 of the old coins.
5 <i>ryo</i> silverequivalent to	500 of the old coins.

By "old coin" in the above table both kinds of the original Korean coins are designated, for they are equal in intrinsic value, though different in denomination, so greatly has the higher coin been debased. The article from which we quote is still unfinished.

Tokyo papers of Saturday allege that the conditions submitted by Messrs. Ozaki Saburo and Omiwa Chobei for the consideration of the Korean Cabinet with reference to the building of the Sôul-Fusan Railway are as follow:—

1. The land required for the road and for structures connected with it, shall be given gratis, and shall be exempt from all taxes.
2. Materials necessary for constructing the railroad shall be free of import dues.
3. In the employment of Korean labour and in procuring material the Korean Government shall give all possible aid and assistance.
4. The work of construction shall be commenced within three years and completed within ten.
5. For thirty years after the completion of the railroad, the profits accruing from it shall belong to the builders, but after those thirty years the Korean Government shall be entitled to purchase the railroad at a price settled by competent appraisers.
6. If, on the termination of the first thirty years, the Korean Government does not purchase the

line, the builders shall be permitted to appropriate the proceeds for another term of thirty years.

7. In the case of the Sôul-Jinsen Railway it has been agreed that military men shall be carried free. But having regard to the much greater length of the Sôul-Fusan line, it will suffice if a discount be granted on military tickets.

Osaka has long been, and is acknowledged to be, to-day, the commercial centre of Japan. Moreover, its manufacturing industries also have developed so rapidly in recent years that no other place in the empire can compare with it in this branch of enterprise. Any one entering the city for the first time is surprised by the multitude of chimneys rising high above the roofs. Including chimneys built of mud, they numbered last year about 820, and this year those of brick and iron have reached a total of 800. The number of factories is about 3,000, giving employment to 30,000 males and 20,000 females. The reasons of Osaka's industrial progress are very evident: they are the abundance of cheap labour procurable there, and the exceptional facilities that exist for transportation. But scarcity of labour is already beginning to be felt, especially by Spinning Companies, some of which, as has already been explained in these columns, have formed a combination not to compete among themselves for labour, each factory promising not to receive hands that have left another factory. Some critics infer from this fact that Osaka's industrial capacity has already reached its limit, a most shallow conclusion, as we think. More rational is the argument advanced by others that Osaka, not having a colliery in its immediate vicinity, can not hope to become the chief industrial city in the empire.

News comes from Gumma Prefecture that some uneasiness has been caused there by the alleged prospect of the Prefecture's being soon placed under the jurisdiction of a *Yi-yu-to* Governor, and that Messrs. Sassa Harumoto and Shinojo Yagoro, who will immediately be followed by Mr. Arai Keigoro, have come up to the capital to represent to the Government the inadvisability of making the rumoured appointment. It is stated that these gentlemen are now in the metropolis, and that they met yesterday for the purpose of holding a secret conference. If the Tokyo papers be well informed, the agitators have resolved to invoke the coöperation of politicians in Yamanashi Prefecture. They are believed to be acting as representatives of a large number of people in Gumma, and rumour says that they are determined to resort to every means in their power to prevent the *Yi-yu-to* appointment, or to render the position impossible for the new Governor should he be actually appointed. In order that our readers may understand this news, we should add that Messrs. Ishizaka Masataka and Sakurai Tsutomu, both distinguished members of the *Yi-yu-to* and of the Diet, are considered likely to be appointed Governors of Gumma and Yamanashi Prefectures, respectively.

COUNT OKUMA ON FORMOSA.

The *Chuo* prints the following remarks attributed to Count Okuma:—"If the Government really intends to establish a permanent administrative system in Formosa, a railroad must be built, whether the undertaking be profitable or not. Tea is chiefly produced in the north of the island and finds a market principally in America. The best route for it to take would be *via* Kobe, but now it first goes westward to Amoy and thence is sent to America. Our merchants should see to this system being altered. Formosan Sugar is now refined in Amoy and Hongkong and thence brought to this country. Japanese refiners must take this work into their hands and carry it out somewhere in Japan. The same must be done with camphor. In Formosa there are a small number of landed proprietors and a very large number of peasants and farmers. The capital invested in the land, however, chiefly belongs to Westerns, so that the latter reap the main profits from Formosa. This state of things must be changed without delay. That done, the

proposed railway between Tainan and Taipeh could be made to pay. I told one of the promoters of the railway that a Government so wanting in back-bone as to return the Liaotung Peninsula, overawed by foreign interference, was not to be depended upon, but that the projectors might count upon the help of the nation at large. The promoters of the Formosan railway should not look for profits, but be prepared to sacrifice ten to twenty thousand *yen* in the interests of the State. To achieve great things one must be adventurous. Look at Warren Hastings and Clive! Look at Jameson! He was a mere physician, but he invaded the Transvaal at the head of troops to secure its gold mines for British hands! Had he not failed, he would have been another Clive, instead of which he has been tried as a criminal. Who says it is impossible to prohibit the use of opium? Who says that it is impracticable to entirely prevent the smuggling of opium into Formosa? Persons who say these things are weak-hearted and unwise. Did not the English prohibit even the secret importation of iron into India, and not one bar was smuggled! If ordinary measures fail, diplomacy may be used. Does the present Government lack diplomatic skill? What is it doing now? Industrial people should proceed with their undertakings in Formosa and Korea: The Government may be cold to them, but the nation will warmly endorse their activity. In case of emergency national enthusiasm would be aroused and then the torpid Government may be galvanized into activity. A strong Government can only exist upon the foundations of a strong nation."

PROPOSED SALE OF GOVERNMENT RAILWAYS.

The *Yiji* endorses the advisability of selling a part, or the whole, of the Government railways. In Japan, it says, there has of late been much controversy on the point, whether it is better to have the railroads solely in the hands of the Government or have them transferred to private companies. Public opinion seems inclined to favour private holding, for although the main object of private railways is profit, many scandals are known to disgrace the State lines. Yet again, many of the present private railroads are very far from perfect, and in the past a great many evils developed in private companies that were unknown on Government lines. We cannot unhesitatingly cast our vote for private railways; but looking to the State railways, we find no spirit of improvement displayed either in the treatment of passengers or in the handling of freight, or in the framing of time-tables. Nor are these the worst evils. Take the case of the Tokaido line. Gifu and Ogaki are places noted for inundations, yet every time a flood occurs trains are invariably interrupted for a week or a fortnight. Under the old *regime*, when people travelled on straw sandals, it was not unusual for travellers on the Tokaido to have to stay several days on the banks of a swollen river ere they could proceed. Now, when even a moment is highly valued, the frequent and long interruptions on the Tokaido line must be a source of great inconvenience to passengers in general and of great loss to commercial people in particular. Were the authorities truly mindful of the people's interests they would have built the road in this particular district in such a manner that floods would have caused little or no inconvenience. They failed to build the line in a thorough manner, and they urge, by way of excuse, a number of paltry reasons, among them being the restrictions imposed by the Law of Accounts. If that be the case, the Government had best sell all their railroads to the people, making at the same time a law regulating the minimum number of departures of trains and the manner of building roads near rivers or bordering on the sea. Moreover, the Government has achieved its initial object, the construction of railroads to serve as object lessons to the people. For these reasons the *Yiji* strongly advises the Government to sell its railways to private companies.

THE IMPERIAL MINES AND OSAKA MERCHANTS.

A number of Osaka merchants have organised, according to the vernacular papers, a syndicate to purchase the Imperial mines and smelting works, under the appellation of "Goryo Kozan Seirenjo Harai-uke Domei-kwai," or "Union for purchasing the Imperial Mines and Smelting Works." The promoters of this union have agreed on the following prospectus:—1. That this union will admit as members all persons living in the neighbourhood of the Sado and Ikuno Mines, and in other places in Japan, provided they are Japanese subjects. 2. That the promoters of this union shall each pay the sum of thirty *yen* as security. 3. The promoters of this union shall each contribute the sum of one thousand *yen* on or before the 25th of August, 1896, in the shape of currency or public loan bonds, by way of making up the sum to be deposited with the Authorities as security. 4. That when the proposed purchases shall have been made, measures shall be taken to organise a joint stock company and to raise the necessary funds. 5. That a committee of thirty members shall be constituted, ten of whom are to be elected from among the promoters and the remaining twenty to be nominated by the elected ten. 6. That the mines and smelting works shall be visited and inspected, the Committee defraying the necessary expenses. 7. That any one who desires to join this union shall apply on or before the 25th of August, 1896. The papers from which we have taken this information say that as Mr. Furukawa Ichibei and other distinguished miners are among the promoters, the Union may attain its object. We also learn that the Osaka millionaire, Mr. Sumitomo, has declined to join, while Barons Mitsui and Iwasaki are rather inclined in its favour. It may interest some of our readers to know that, although the minimum price for which the Imperial Household will part with the estates naturally remains a secret, yet it will not be less than 1,300,000 *yen*.

THE NIPPON GINKO AND THE MONEY MARKET.

The amount of convertible notes that the Nippon Ginko is authorized to issue is only *yen* 4,000,000. On the one hand people are pressing their applications for help on the Bank, and yet that institution is not allowed to make use of the portion of the indemnity that has already arrived in Japan. Under these circumstances what course should the Bank take? It appears altogether improbable that it will follow any line different from those outlined below:—First, to obtain authority to issue an additional amount of convertible notes, making an engagement with the Government as to the Chinese indemnity to be brought to Japan so as to meet the present pressing demands for financial assistance. Second, to discourage further loans and thus prevent the reaction that would inevitably follow if all the wishes of the market were granted. Third, to lessen the demand for money by raising the rate of interest. Of these plans the first two appear inadvisable, for, if present demands be acceded to by the Bank without limit, the country will be driven into as bad a fix as that experienced by Germany after the Franco-Prussian War; or, on the other hand, if the bank cease to lend, the industrial and mercantile development of Japan may be nipped in the bud, not to revive for a long time. That would also be detrimental to the country's interest. The Bank would do well to take the third course. Import business, in other words the outflow of specie, might be lessened and the mushroom growth of companies, now the order of the day, would be satisfactorily checked. After taking this step, should it be found to produce bad consequences, the Bank might resort to the first plan and so contrive to keep industry in a healthy state of development. Such are the concluding remarks of the *Nichi Nichi* in an article headed "The Nippon Ginko and the Money Market."

THE DEVELOPMENT OF FORMOSA.

We translated in a recent issue a remarkably outspoken article from the *Yiji Shimpo* urging the necessity of raising a large loan, domestic and foreign, for the development of Formosa. By way of security the island itself was to be mortgaged, and if, after due trial, the Japanese proved unable to develop its resources and administer its affairs satisfactorily, then they were to make up their minds that they lacked ability in that line, and were to sell the island off-hand. There is something large and refreshing in the breezy courage of such a programme, and we were glad to find the *Yiji* take that line. But in an article published on the 4th instant, our contemporary draws in its horns. "When we wrote," it says, "that in view of the large sums of money required for the development of Formosa, a foreign and domestic loan should be raised on the security of the island, so that drastic measures might be at once undertaken, we referred to a case of emergency only. So far as we ourselves can see, the revenue derivable from taxation in Japan leaves a considerable surplus. That is especially true with regard to the tax on *saké*: it is capable of very large development. An expert, who has had long experience, affirms that the quantity of *saké* actually drunk by the Japanese nation each year is six million *koku*. His calculation is doubtless correct if all the different kinds of *saké*, as well as the home-brewed, be taken into the account. The question then arises, what should be the limit of taxation. The average annual quantity of *seishu* (the best quality of *saké*, drunk by the middle and upper classes) manufactured in Japan during the past two or three years has been three and a half million *koku*, approximately. The tax formerly levied upon this was 4 *yen* per *koku*, but it has now been raised to 7 *yen*. We can see no reason whatever why the new rate should not be doubled or even trebled. Even if it be only doubled, i.e., raised to 14 *yen*, the revenue derived from 3½ million *koku* would be 49 million *yen*; and if the tax be trebled, the corresponding revenue would be 73½ millions. It should be observed that the *saké* thus taxed is a veritable luxury. It is drunk by the well-to-do classes only: the *saké* drunk by the lower orders belongs to a different category. Thus a large revenue might be obtained without imposing any hardship on the people, or causing any disturbance of trade. It will be seen, therefore, that by recourse to an ordinary fiscal measure, all the money required for the development of Formosa can be obtained. The issue of domestic and foreign loan bonds for the purpose is a step to be taken only when the resources of reasonable taxation have been exhausted."

The above is something more than a mere modification of views on the part of the *Yiji*. It amounts, almost, to a complete retraction. But it has much interest as an expression of intelligent and well-informed views on the subject of Japan's taxation capabilities. Foreign critics were naturally startled at the great and sudden increase of expenditure shown by the Japanese budget after the war, and the general consensus of opinion appeared to be that the country's resources possessed no elasticity commensurate with such an addition to her outlay. It is not surprising that doubts of that kind should have existed. The Japanese have long been leading the world to imagine that the expansive capacities of their national revenue were very small. Year after year every session of the Diet witnessed a strong agitation for the reduction of the Land Tax. That Tax contributes 38½ million *yen* to the Exchequer, the rate of impost being 2½ per cent. of the value of the land as assessed for purposes of taxation. What the agitators wanted was that the rate should be reduced to 2 per cent., which change would have involved a loss of revenue to the extent of about 8 million *yen*. How to compensate that loss was the great question. The House of Representatives could discover no method except to economise the public expenditure, above all in the matter of salaries and emoluments already mischievously small in some cases and the very reverse of

liberal in all. About this problem the tide of political discussion raged for years, and no outsider could fail to gather the impression that, Japanese financiers had to sail very close to the wind, and that the revenue's margin of possible expansion was exceedingly limited. At that time the middle and upper classes were paying a tax of 4 *yen* per *koku* on the *saké* consumed by them, that is to say, something less than three pence per gallon. Could there be any doubt that the quintupling of the tax would be perfectly feasible? But to quintuple it meant to raise the revenue derived from this one source from 14 million *yen* to 70 million *yen*, a difference of 56 millions, or very nearly two-thirds of the whole national income at that time (87 million *yen*). If the Japanese Government can obtain a revenue of 72½ million *yen* by requiring the middle and upper classes to pay a tax less than 14 pence per gallon on their *saké*, there ought to be no idea of financial difficulties in this country. The present extreme cheapness of alcoholic beverages is by no means a blessing to the country.

MR. TSURUHARA ON THE MONEY MARKET.

Mr. Tsuruhara, Chief of the Banking Bureau of the Nippon Ginko, recently delivered the following opinions to a *Kohamin* interviewer:—Rumour has it that a panic is imminent in commercial circles in Japan. But if by panic these pessimists mean a financial crisis, such as occurs in Europe and America, they will have a long time to wait for their prophecy to come true. The Japanese economic world has not yet become so highly developed as to witness a panic. In the West the principal work of a bank is connected with deposits. In this country, however, banks of ordinary standing hold very little money in the shape of deposits. A true panic is therefore an impossible thing in the Japanese money market. Various industrial enterprises have arisen since last year, but unfortunately nine out of ten of their projectors are penniless speculators. That being the case, within a year or two the few banks that have given them credit on the security of their worthless shares may fail, causing perhaps a slight disturbance in the economic world. But such a disturbance can by no possibility rise to the dignity of what is known as a panic in Europe and America.

Some persons allege that the excess of imports over exports has already reached 26,000,000 *yen*, and that at the close of the year the difference may be about 50 million *yen*. This they argue will cause a great disturbance in financial circles. Persons who talk in that way are ignorant of the manner in which our importers' purchases are paid. They are in fact paid by the Government in London out of the Chinese indemnity. The importers' purchases do not cause a drain on money in Japan. Under the circumstances, the difference between imports and exports can have little or no influence upon the money market at home.

RETURN OF PRINCE FUSHIMI.

H.I.H. Prince Fushimi, the Emperor's special Ambassador to the Coronation of the Czar, returned to Yokohama on Wednesday by the M.M. steamer. A large crowd of eminent personages gathered on the pier to welcome home the distinguished traveller, among them being young Prince Tokugawa, several heads of Bureaux in Tokyo, Governor Nakano, of Kanagawa, Chief Inspector Yoshida, Marquis C. Nembrini de Gonzaga, Mr. Otani Kahei, Mr. Hara Zenzaburo, and others. A steam-launch conveying several high naval officers also came up from Yokosuka. The Prince, who looked in extremely good health, was in military uniform and wore several orders. He was loudly cheered as he took his seat in the carriage awaiting him, and at once drove off to catch the 10.30 train for Tokyo.

FORMOSA AND THE "JIJI SHIMPO."

The *Jiji Shimpō*, representing, doubtless, a large section of intelligent public opinion in Japan, adheres firmly to its old contention that no mercy should be shown to the rebels in Formosa, and that the prohibition of the use of opium should be enforced with just as much strictness and precisely in the same manner as it is enforced in Japan proper. As to the contention that the result of such a policy would be to drive all the Chinese out of the island, the *Jiji Shimpō* laughs at the apprehension. The whole trouble, it affirms, is that the inhabitants of Formosa have no true idea either of the hopelessness of resisting Japan's military strength, or of the advantages of submitting to Japanese rule. In the northern districts, where the rebellion of last January broke out, order has been fully restored, because the drastic measures adopted at that time furnished a sufficiently striking object lesson. But in the central parts, the disaffected elements of the population, not having had any such experience, were found ready to take up arms. Hereafter they, too, will probably be better advised. The inhabitants of Formosa must be credited with some discernment. In time they will recognise the vanity of violent resistance to Japanese rule, and the quickest way to educate their faculty of recognition, as well as the kindest way to deal with them in the long run, is to show no leniency at the present juncture. Once the disaffected elements are brought under control, the great superiority of Japanese administration over Chinese will soon be appreciated, for the Chinese are not ignorant of the value of absolute security of life and property, and absolute immunity from extortion or injustice in any form. The opium problem, again, is not to be paltered with. Half-hearted measures will only open the door to abuses. Opium smoking is deleterious. There is nothing to be gained by discussing that point now. The Japanese nation long ago decided that the use of opium is a vice sufficiently harmful to justify restrictive legislation. That rule must be applied to every part of the Japanese Empire. If there be any persons in Formosa so addicted to the vice that they can not abandon it, let them leave the island. Wholesome laws are not to be held in abeyance because a few persons are too depraved to escape their punitive provisions. Everything goes to show that the opium vice is due, in great part, to the absence of more legitimate forms of self-indulgence. The drinking of *sake*, the smoking of tobacco, the eating of cakes, the pleasures of the table, are all to be condemned, if we follow the strict lines of morality, but human nature being what it is, some deviations from the rigidly straight path are inevitable, and the function of the prudent administrator is to substitute the least harmful forms of enjoyment for the most pernicious. By and by, when Formosa, like Japan, comes to possess *sake*-shops, restaurants, tea-houses, and other resorts for seekers of comparatively innocuous pleasure, the opium vice will be remembered with surprise. It is essentially the vice of the solitary, and the stupified, and no toleration should be shown towards it for a moment. These views of the *Jiji*'s are admirably virile.

MARQUIS ITO ON FORMOSA.

Some merchants of Tokyo and Yokohama, at the suggestion of the Tokyo Chamber of Commerce, invited the members of the Cabinet, Viscount Katsura, Governor-General of Formosa, Messrs. Kaneko and Kitagaki, respectively Vice-Ministers of the Agricultural and Commercial and the Colonization Departments, to a banquet at the Kame-seiro, Yanagibashi, Tokyo, on the 1st inst., with the hope of inducing them to state their opinions upon the future of Formosa. The hosts numbered about sixty, chief among them being Messrs. Shibusawa Eitichi, Okura Kihachi, Watanabe Hiro-moto, Kondo Rempei, Kato Masayoshi, Nakamigawa Hikojiro, Hara Rokuro, and Otani Kabei. After a short speech from Mr. Shibusawa, Marquis Ito, the Premier, rose and delivered

the following address:—Gentlemen—More than a year has passed since Formosa became a possession of the Japanese Empire, and yet frequent insurrections have broken out, as you all know. These outbreaks have kept the Government busy at the work of subjugation, and consequently we have been unable to attend to administrative measures in any satisfactory degree. I made a trip to the island lately in obedience to His Majesty's command, but having stayed there only a short time, it need hardly be said that I could not make a thorough investigation. The commerce of Formosa used to be in the hands of Chinese and foreigners. But as the island has become a part of our Empire, our merchants should take the leading part in developing its trade. Could not Japanese merchants take the Formosan trade into their hands? The Government aims at starting nothing in the way of industrial enterprises in Formosa. It is not going to repeat the mistakes made in the colonization of Hokkaido. The Cabinet will leave all industrial enterprises to the people, giving as much help and protection as possible to their undertakings. The policy of the Government towards Formosa has been thus decided, and therefore I call on you to exert yourselves in the encouragement of emigration, in the development of means of communication and transportation, and in many other ways. I cannot but hold decided opinions upon one or more special subjects relating to Formosa, but I am unable to bring myself to lay them before you to-day. I may consider them with you some other day.

THE FINANCIAL SITUATION.

The *Nichi Nichi* relates that a person recently returned from a tour in the Kwansei Districts remarked to a representative that no symptoms of approaching panic had been observed in economical or financial circles during his tour. "On the way from Shimbashi to Nagoya the fields showed signs of a plentiful crop, and at Nagoya Station the accumulation of goods was very considerable. These are facts that seem to belie the approach of any financial crisis. Thence I took the Kwansei Railroad, and, on reaching Tsu, made enquiries of the members of the Branch Office of the Nippon Ginko there and other bankers as to the condition of the money market. They furnished me with facts proving that the money market was very quiet and that the wealth of the inhabitants of Tsu and its vicinity had greatly increased these last few years. At Yamada travellers were in greater numbers than had hitherto been known. This speaks favourably for the commerce of the town. At Kyoto I stayed a few days and observed that *orimono* were being sold briskly at reasonably high prices. I also noticed that a considerable number of industrial and commercial firms were about to begin business. The distribution of the War Funds has made business in Osaka so active that even the stocks of Kisshu flannel, that had long been neglected, have now all been sold. Land has risen enormously in value at Osaka. The Branch Office of the Nippon Ginko is said to have been asked 320 *yen* per *tsubo*, when it attempted to buy a plot adjacent to its present site. This figure is the more astonishing when we reflect that the ground on which the Edobashi Post and Telegraph Offices stand, was purchased at 120 *yen* per *tsubo*, and that an offer of 120 *yen* a *tsubo* would find sellers in the vicinity of the City Hall, Yokohama. The Chiefs of Police I met told me that thieves had considerably decreased in numbers of late. This may in part be due to the fact that many bad men have emigrated to Formosa, but the general prosperity of trade has much to do with it. The Superintendents of Taxes told me that tax-collectors experienced no difficulties in gathering the taxes, while a few years ago they often had to have recourse to law to make the people pay. The Chiefs of the Tax Bureau were hampered through the insufficient number of collectors. Formerly the supply was greater than the demand. This was due to the higher rates of wages now to be obtained outside the Government service."

THE VOLUME OF THE CURRENCY.

According to the computation of the Treasury, writes the *Jiji Shimpō*, the volume of currency required in Japan is about two hundred million *yen*. But in view of the numerous enterprises that are springing up, and of the consequent calling-in of capital, it is conceivable that a deficiency of the circulating media may be felt. A student of political economy, who lately returned from Germany, remarks, with reference to that point, that there has been of late years a gradual increase in the volume of the currency. For example, a comparison of the amounts in circulation at the end of April, 1895, and at the end of June, 1896, shows the latter to be greater by about 32 million *yen*. Besides, there has been a great growth in the quantity of securities which, though not actually currency, do duty as such—bills of exchange, public loan bonds, and shares. The amount of the cheques that passed through the Tokyo Clearing House during the first half of the present year was 184 million *yen*, which is 53 million *yen* greater than the total for the corresponding period of last year, and 114 million greater than the aggregate for the first six months of 1893, the year before the war. Since the middle of 1894, there have been issued war bonds to the extent of 120 million *yen*, and there has also been issued an immense volume of shares of railway companies, commercial companies and manufacturing companies. All these bonds and shares are taken by the banks as security for a considerable amount of their face value, and being lodged with the Bank of Japan, virtually play the part of currency. Thus, although the volume of the currency itself has not increased in a very marked degree since the war, there has been a large increase in the volume of securities that perform the function of currency, and such increase will continue so long as the spirit of enterprise prompts the formation of new companies. What has to be now most carefully guarded against is any severe shock to this system of credit that is gradually being built up and consolidated. Such a misfortune would be equivalent to a sudden contraction of the volume of currency in circulation. At present the only quarter from which danger threatens to come is the competition among the banks—competition that leads to the acceptance of potential shares—*kenri kabu*, that is to say, shares upon which nothing has been paid up and which merely entitle their holders to subscribe after the company in question has commenced operations—the acceptance of such shares as security for advances. That kind of thing may at any moment cause trouble.

ECONOMIC VIEWS OF THE JAPANESE GOVERNMENT.

Economical circles in Japan entertain some anxiety lest there should come a panic in the fall of this year. This feeling is said to be due to the increased demand for money as a result of excessive importations; the springing up of many banking firms; the calling in of subscriptions to State loans; the new or increased taxes, and so forth. Shares generally have fallen. Under the circumstances, the Agricultural and Commercial Department, so rumour runs, is inclined to interfere, but the Nippon Ginko thinks it advisable to leave things to proceed naturally to their logical end. The principal economists in the service of the Government have from the first held views that we now proceed to give from the columns of the *Yomiuri Shimbun*. The prevention of a panic has to be consummated by bringing demand and supply to a level. To effect this, two different kinds of measures may be taken: *negative* measures, such as the prevention of mushroom firms; the putting a check upon importations, by increasing the import duties, and so forth; or *positive* measures, such as increasing production, importing foreign capital in the form of loans, and so forth. Under present circumstances it is next to impossible to resort to negative measures. There-

fore, in order to prevent a panic, no other measure than that of increasing production and bringing foreign capital into the country can be effective. As the initial step towards importing foreign capital, Government loan bonds should be placed on foreign markets, so as to pave the way for disposing of Japanese shares to foreigners. To discuss measures for increasing production would be a tedious matter, but as the panic may not reach its zenith earlier than 1898, there is still plenty of time to devise effective schemes. New banks should be encouraged, more railroads built (unless of too speculative a nature), and thus, by the time the panic is at its height, the productive capacity of the country will have so increased that the ill-effects of the financial stress will be considerably minimised.

FORMOSAN AFFAIRS.

A telegram from Formosa, dated the 9th instant, says:—"Few of the inhabitants have returned to their homes in the disaffected districts. But there are no rebels in the vicinity, especially in the lowlands. On the 27th ultimo, Colonel Imahashi placed two companies of foot and a detachment of engineers under the command of Major Naito, and sent them from Liupa-pu to the region at the head-waters of the Tsing-shui, to operate against a place called Kwanshinro, some 17 miles distant. At the same time Major Suzuta, with two companies of infantry, was to make a second search for rebels in the Ta-ping-ting vicinity. There is nothing to report about Pa-li-sho, except that a certain number of rebels are apprehended daily. The Matsui Battalion, on its march from Taisi-chie to Pa-li-sho, on the 16th ultimo, killed 272 rebels and captured 70, taking, at the same time, 80 rifles, one cannon, and a quantity of swords and spears. The Imahashi forces' casualties since the 8th (ultimo?) have been 2 non-commissioned officers and 9 privates killed, and 4 officers, 4 non-commissioned officers, and 20 privates wounded. They took 108 prisoners, and captured 75 rifles and 153 swords and spears."

The Sixth Regiment of the Third Division forwards the following report from one of its companies:—

"On July 14th, this company (the 5th company of the Sixth Regiment) left Yunlin in the van of the force despatched against the rebels, and had a fight at Ho-kia-lih, incurring some loss in wounded, but none in killed. The day following, the same company marched out of Liupa-pu and met the rebels at Ton-shi-hang, where the casualties caused by the latter's fire were 2 non-commissioned officers and 6 privates killed and 12 privates wounded."

Lieutenant-Colonel Imahashi writes as follows from Yunlin to one of his friends in Tokyo:—

"On the 15th of July, my force made a thorough search among the mountains in the vicinity of Liupa-pu and in the fastnesses about Tai-ping-ching, Ton-shi-hang, and other places, and dispersed the rebels. On the 16th, we renewed the search in places where insurgents had been seen the preceding day. The rebels all made some resistance before flying, especially on the 15th at Tai-ping and Ton-shi-hang, where they held their ground very resolutely. Immediately after these operations, an urgent message reached me from the commander of the Brigade that, as the garrison at Po-li-sia had been attacked by the rebels in force, and had retreated, Major Matsui must be sent to recover the post. Accordingly the Major left Liupa-pu at once for Po-li-sia. But before he reached that place, the garrison managed to regain possession of it. Major Matsui arrived at Po-li-sia on the 18th. My force returned to Yunlin from Liupa-pu on the 17th, and on the 18th made an attack on the rebels at Tai-ping-ching and Won-lu-choung, and drove them into the mountains. We are now encamped at Yunlin, and are engaged reconnoitering its neighbourhood. Within a few days we shall penetrate farther into the mountains and rout out any rebels that may be found." In the same letter the Lieut.-Colonel praises in very high terms the officers and troops

under him, who, it is said, are acquitting themselves splendidly, although they have no houses to sleep in at night, the insurgents having burned down all the villages and hamlets, and by day the heat is intense.

Of the eight lighthouses that the Authorities have commenced to erect in Formosa, seven are already completed and the eighth will be finished next November. Steps are being gradually taken for the building of the Formosan Railway by its promoters. The premises hitherto occupied by them as an office being found too small, they have moved to Minami Odawara-cho, Shichome, Tsukiji, the house recently occupied by Mr. Li Chung-yong, the well known Formosan who visited Tokyo. On the 10th inst., Viscounts Okabe and Hotta, Messrs. Yasuba Yasukazu, Manaka Tadanao, Ono Kinroku, and some others, met and passed resolutions to the effect first, that experts should be engaged, secondly, that Barons Mitsui and Iwasaki, Mr. Yasuda Zenziro, a wealthy merchant of Tokyo, and certain others should be invited to act as promoters; thirdly, that a deputation should be sent to consult the merchants of Yokohama; fourthly, that the percentage of shares to be held by the promoters should be fixed at a certain figure; and fifthly, that the Company's prospectus and application for a charter should be at once drawn up. After these various steps shall have been taken by a sub-committee elected for the purpose, the Committee is to meet again and make preparations for opening a general meeting of promoters by the end of the current month.

The *Yiji* states, in an editorial note, that the Authorities seem inclined to increase the number of Prefectural Offices in Formosa from three to seven and so remove the evil of centralization that now obtains there. Our contemporary, commenting on this, says that, inferring from the state of things in Japan proper at the time of the Restoration, fifteen Prefectural Offices and one Governor's Office may not be too many for Formosa. Writing on the same subject, the *Nippon* and the *Yorodu Choho* assert that they have gathered that the capital towns of the Prefectures will be Kagi, Giran, Shinchiku, and Taito. The *Yiji* hears that an independent Sanitary Office will be established in Formosa and an able and experienced person appointed as its Chief Commissioner. The hygienic measures to be undertaken in the new territory are very numerous and important. We gather from the same authority that the Budget of the Governor-General's Office for the next fiscal year has lately been completed and forwarded to the Financial Department. In this connection our contemporary gives 22,000,000 yen as the expenditure, and 8,000,000 yen as the revenue, of Viscount Katsura's Office for the coming fiscal year.

A letter received a day or two ago by a friend of the *Yiji Shimpō* contains some additional facts regarding the recent rebellion. When, on the 3rd of July, signs of disturbance appeared at Rokko, the sick soldiers stationed in its neighbourhood were sent in junks to Taiko, but it being found impossible to land there owing to the heavy seas, they were transferred with great difficulty to the *Sekkai Maru*, a merchantman, fortunately lying at anchor there, and sent to Kelung. About the middle of July, some 600 insurgents surprised Rokko, and, notwithstanding the Japanese fire, succeeded after nine hours in destroying the town, in consequence of which communications were interrupted until a week ago.

THE GLOSS OF CIVILIZATION.

An Amoy correspondent of the *North-China Daily News*, writing under date July 28th, arrives at the conclusion that the so-called "rebels" in Formosa were "made to order" of General Katsura, and then goes on to argue that, despite any official telegrams received in Tokyo from Japanese sources, "a decided check has been given to the Japanese in the fall of Changhwa and the loss of 1,000 of their forces." He concludes by asserting that "Japan has only the gloss of civilization" and

by predicting very sad things for her. But unfortunately he makes the stupendous blunder of revealing his source of knowledge. "If Chinese reports from the north of the island are to be believed," he says. "Chinese reports from the north of the island!" That is the kind of information that he credits in preference to Japanese official telegrams, furnishing details as to the movements of the troops and the dispersal of the rebels from day to day, commencing with July 8th, when Colonel Imahashi's forces moved out of this very Changhwa that "Chinese reports from the north of the island," represent as being still in the rebel's hands at the end of July. Changhwa never did fall into the rebel's hands, and we must confess that whether the Japanese "gloss of civilization" be thin or thick, we look in vain for any trace of it on a writer who, blindly trusting "Chinese rumours," which he has no means of verifying and which have never yet proved correct, does not hesitate to accuse the Japanese of gross barbarity and deception.

RELIEF FOR THE SUFFERERS BY THE REBELLION IN FORMOSA.

Their Majesties the Emperor and Empress have signified their intention of subscribing a sum of 3,000 yen for the relief of inhabitants of Formosa that suffered at the hands of the rebels or in connection with the military operations undertaken for the suppression of the rebellion. We learn, also, that the leading Japanese journals are about to open subscription lists for the same purpose. That is a step deserving hearty applause, as evincing the Japanese nation's sympathy not only with Chinese subjects of this empire whose lives and properties were not effectively protected by the administration in Formosa, but also with any of the islanders that suffered unjustly in the confusion of repressive measures, or owing to mistakes of identification. There is reason to fear that a considerable number belong to the latter category, for the difficulty of differentiating peaceful inhabitants from bandits whose habit was to disguise themselves in the garb of farmers, artisans, and so forth, must have been very great, and we doubt whether commensurate pains were always taken to discriminate. Money can not restore the dead to their sorrowing friends, but it can do much to console the survivors, and to convince them that they will not again be exposed to similar dangers with the consent of the Japanese people.

RAILWAYS.

Speaking of the progress of railway enterprise in Japan, the *Nichi Nichi Shimbun* gives some figures interesting on account of their comprehensiveness. There are now 54 railway companies actually in existence, with a total capital of 145,140,000 yen. Among these, 32 have obtained temporary charters only, and their total capital is 53,850,000 yen. The mileage thus far constructed by these various companies, and already open to traffic, is 2,572 miles, and the total paid-up capital of the companies owning these lines was 84,640,000 yen on July 31st, so that the average cost of construction would appear to have been somewhat less than 33,000 yen per mile. How many other companies are projected and what their capital may be, it is difficult to say, but the *Nichi Nichi* points out that the conclusion of the Central Road (*Chu-o Tetsudo*) and of the other State lines standing on the Railway Construction Programme, as sanctioned by the Diet, will give an additional impetus to the building of lines to connect with these. Our contemporary estimates that, taking account only of companies already formed, capital aggregating 114,350,000 will be called up in the near future, but is nevertheless persuaded that not want of funds, but the difficulty of procuring competent experts, is the grave obstacle at present to rapid progress in this matter.

when, with even more brevity and without doing any violence to the old rule that every verb must agree in number with its subject, we might write, "the names of the contributors are as below?" Conservatives are very peremptory about such things. "Hoity, toity," they exclaim; "going to change the English language, are you?" and with that suggestion of appalling presumption they silence all discussion. But the English language is perpetually changing; perpetually progressing. If JOHNSON had been told that two-foot metres must never be suffered to appear in prose, the iambic foot being the only permissible unit, he would probably have used some muscular language to denounce the new canon. Yet it has become an accepted rule. Language is not to be held beyond the range of improvement: it has the same title as anything else to grow better as the years go by. We are still condemned to many mannerisms that complicate without in any way improving our language. It is necessary, for example, that we should write "moneys," "valleys" and "chimneys," instead of bringing these words under the general rule of plural formation, and writing "monies," "vallies," and "chimnies." So despotic is custom in these instances, that to employ the endings in "ies" is to be accused of a gross blunder in spelling. Whenever a useful reason can be assigned, no one will object to departures from the general rule. Thus, one willingly writes "storeys" when alluding to a house, to distinguish the word from "stories" in the sense of narratives. But why on earth "chimneys," "valleys," and "moneys," instead of "monies," "vallies" and "chimnies?" Yet there are folks who, though liberal and progressive in all other respects, will not for an instant listen to any of the arguments advanced in this article. The fetters forged in their school days continue to hamper their mental processes all through life. "Gracious heaven," these pious conservatives cry, "whoever heard of such a hideous solecism as that of deliberately writing 'monies,' 'vallies,' 'as follow,' and so forth? Let us not be guilty of the impiety of tampering with the tongue of our forefathers." So there is no exit from the rut.

THE JAPANESE POLICE SYSTEM.

THE *Kobe Chronicle*, referring to our comments, not—as our contemporary fails to see—on the SCHROEDER case, but on the hysterical importance attached to it by two Yokohama journals, says:—

We ourselves, for the sake of mutual good-will, try to be as pro-Japanese as reason and justice allow, but we cannot blind ourselves to the fact that the Japanese police system is diametrically opposed to European notions of what is right, and however much change is made, even at the best there is bound to be trouble, which should be minimised and not ridiculed. That is very interesting. "The Japanese police system is diametrically opposed to European notions of what is right, and

however much change is made, even at the best there is bound to be trouble." It must be presumed that the *Kobe journal* has some warrant for its very radical assertions, and we invite it to state explicitly the grounds of its dictum that the Japanese police system is not only diametrically opposed to European notions of what is right, but is also so hopelessly bad that however much change be made, there is bound to be trouble. Some time ago, a Yokohama journal, notorious for hysteria and want of balance, alleged that in Japan the police are competent to enter private houses at any moment without a warrant. Such a state of affairs, if it really existed, might well inspire uneasiness in the mind of any person looking forward to passing under Japanese jurisdiction. We, therefore, took some pains to expose the fallacy, and demonstrated, by reference to the laws themselves, which we quoted, that the police possess no such power. The newspaper in question, unable to controvert arguments so conclusive, but always resolute in its determination to adhere to its own blunders however injuriously its readers may be misled, had recourse to the extraordinary subterfuge that the law might not confer any power of the kind, but the instructions of the police certainly warranted its exercise. In other words, the editor, who, it may safely be assumed, had never seen the police instructions and did not possess the smallest conception of their real nature, took it upon himself to allege that the orders framed by police inspectors for the guidance of their subordinates were in direct violation of the laws of the land, the divergence being, moreover, on a point of vital importance to the liberty of the subject. We do not expect that species of controversy from the *Kobe Chronicle*. We expect fair and logical discussion, and we therefore ask our contemporary to say plainly in what respects the Japanese police system is diametrically opposed to European notions of what is "right." It will not do to refer to particular instances of reprehensible conduct on the part of the police. The charge is against "the system," and the evidence adduced must relate to the system. An isolated example of a constable's exceeding or falling short of his duty does not affect the quality of the police system, any more than the general tactics of an army are impugned by the desertion of one or two soldiers. No one questions the impropriety of Mr. SCHROEDER's expulsion by the police from the Yokohama meeting. The police themselves admit that they made a mistake—two mistakes, in fact, for, in the first place, they erroneously imagined the meeting to be political; and, in the second, they erroneously imagined that because a foreigner was on the platform he intended to take an active part in the meeting, which would have been contrary to law. But the fact of

their subsequently acknowledging their error proves that not the system, but the blundering of an individual, was to blame. Of course, there is always the stock contention that the power vested in policemen to suspend or disperse a political meeting is contrary to British ideas of free speech. But that has nothing to do with the police system: it is a matter connected solely with Japanese politics, and, under any circumstances, it has no practical concern for foreigners. If, as the *Kobe Chronicle* alleges, "the police system is diametrically opposed to European notions of what is right," and if, "however much change is made, there is bound to be trouble" under that system, then nothing could be more desirable than a clear exposition of the facts. Either the section of foreign residents represented by the *Kobe Chronicle* labour under a false impression about the Japanese police system, and disquiet themselves needlessly about the dangers of being brought under it, or else a state of affairs exists that should be publicly demonstrated without loss of time in order that steps may be taken to promote reform, and to guard foreigners from control of a dangerous and vexatious character. We invite our *Kobe* contemporary to coöperate in elucidating the truth of this important question.

THE "RYOJUN MARU" DEPARTS.

The N.Y.K. steamer *Ryojun Maru*, Captain McKenzie, should have left Yokohama for Europe at 4 o'clock on Saturday afternoon. At that hour, however, she had but nine firemen on board, and it seemed as if the full complement could not be obtained before Sunday. About six o'clock the necessary men were forthcoming and at 6.30 the *Ryojun* steamed out of harbour flying the British, Japanese, and N.Y.K. flags. The delay in starting robbed the vessel's departure of some *clat*, for two alphabetical torpedo boats that had come up from Yokosuka to escort her down the Bay, as a compliment to the Commander and officers of the *Yashima Kan*, who were leaving for England to take delivery of that stately battleship, had to leave before the *Ryojun*, in order to return to Yokosuka before sunset. Among the passengers on the *Ryojun* are Mr. J. H. Curtis, of the N.Y.K., and his wife, Mr. Curtis going home on six months' sick leave.

Nine out of the thirty stokers who joined in the assault on Mr. Barrie have been handed over to the Local Court for trial. The ringleaders' names are Kuroda Zenkichi and Hirose Tsurukichi, the latter looking more like a *soshi* than a stoker. Mr. Barrie is progressing very favourably we are glad to hear.

REWARDS FOR MERITORIOUS SERVICES.

We read in the *Tokyo Asahi* that the number of persons decorated or otherwise rewarded for meritorious services performed in 1894 and 1895 had reached the large figure of 230,000 at the end of last month, and as the decorations and rewards to the Second, Fourth, and Sixth Divisions remain to be added, the final aggregate will probably be some 300,000. We do not find that total at all excessive, seeing that Japan had 120,000 troops actually in the field at one time.

THE TOP-KNOT IN KOREA.

A writer, signing himself "X.Y.Z." in the *Korean Repository*, for July, gives some interesting information about the now celebrated top-knot. He shows that this particular form of head-dress means much more to a Korean than the "pig-tail" does to the Chinese, or than the queue did to the Japanese. In the first place, the top-knot has the sanction of antiquity: two thousand years of use have made it venerable. In the second place, it represents manhood, for the Korean youth commences to wear it when he passes the line that separates boyhood from virility. In the third place, the assumption of the top-knot is a species of adult baptism: with it the Korean receives his "grown-up" name. In the fourth place, not to have a top-knot is to be disqualified for marriage. And, in the fifth, the rites of ancestral veneration can not be properly performed by one without a top-knot. Thus, there are many powerful arguments swaying the Korean in favour of the top-knot. A good deal in the same sense might be said about the Japanese queue, and we are inclined to think that "X.Y.Z." underestimates the affection with which it was regarded in old Japan. Its retention was always accounted a species of protest against any radical change of costume, and although the shrewd, progressive Japanese soon detected its incongruity and killed it with an epithet, certain men of note persisted in wearing it to the end. But that is not a point of much moment in this context, and, besides, "X.Y.Z." writes with remarkable modesty, not far a moment claiming to speak authoritatively about anything either Chinese or Japanese. He does effectively demonstrate, however, that to abandon the top-knot must have cost every Korean a sharp struggle, and that the issue of an edict controlling men's liberty in such a matter was most unwise. There can be no second opinion on that subject, we imagine. What we wish to draw attention to, however, is this. Critics of Japan's policy in the Korean peninsula, notably Bishop Corfe, have always insisted on laying to her discredit the issue of the arbitrary edict abolishing top-knots, as well as the various sumptuary measures taken during the past year, or year and a half, in Seoul. We, on the other hand, have denied the justice of these charges. We had the direct assurance of the Japanese Representatives in Seoul at the time that, so far from prompting such vexatious interferences, they strongly discountenanced them, and even without such assurances it seemed to us that the history of progress in Japan could not be reconciled with the imprudent and precipitate action attributed to her statesmen in Korea. It is satisfactory, therefore, to find a writer evidently so well informed as "X.Y.Z.," placing the following on record:—"From the time the Japanese first undertook to introduce reforms, the Korean Cabinet evinced a curious, and what always seemed to me, most unstatesmanlike and petty disposition to enact sumptuary laws, interfering with the habits and customs of the people. Among these (I have only space to mention a few) were laws regulating the width and cut of the sleeves of the coats of the men, the length of the pipe-stems, the size of brims of hats, the colour of the outer sleeveless coat usually worn by Koreans when not in working clothes, the number of servants that could attend the sedan chairs, &c. I must in justice say that the Japanese Officials have always, to me, deprecated such laws and disclaimed any responsibility for them."

THE BRITISH CONSULAR SERVICE.

On Sunday the Consular Service in Japan received an accession by the arrival in Tokyo of two new Student Interpreters, Mr. J. Twizell Wawn and Mr. Thomas J. Harrington. They will of course remain in Tokyo for some time. We understand that Mr. A. H. Lay will assume the duties of the Consulate in Tokyo, and that Mr. Kenny, on his return to Japan, is likely to be sent to Hakodate.

THE RECENT FLOODS.

The *Keisai Zasshi*, in its latest issue, has an article entitled "The Negligence of the State." The recent inundations, it says, were experienced all over the country, except in Kyushu. In Gifu, Toyama, and Niigata Prefectures they have been even more appallingly cruel in their devastations than was the seismic wave in the north-east. The latter catastrophe did very little harm to the State viewed from an economical stand-point. According to the Authorities, floods were experienced every year from 1884 to 1893 inclusive, the average yearly loss of life being 1,000, and that of property 13,000,000 yen. The floods of 1890 were by far the most serious and therefore must have caused damages far exceeding 13 million yen. But they were much less widespread than the recent inundations. The damage to property caused by the floods of 1896 may easily be calculated at several millions of yen. Besides, the indirect losses caused by the destruction of railways and thoroughfares, and the interruption of telegraphic communication would at least amount to some ten millions. Turning to another point, one can not help shuddering when one reflects on the effect of such inundations in time of war? Here the Japanese *Economist* refers to the damages done to the Tokaido, Nakasendo, and San-yo Railways, and says that the conduct of the Japan-China War could not have proceeded so smoothly had such a thing occurred while it was raging. We again quote the words of Mr. Taguchi's organ:—"When increasing the national armament the building of men-of-war is of urgent importance; but the doubling of the Tokaido railway line cannot be dispensed with. Yet unless the river beds and embankments are improved on a sound and permanent plan, the millions of yen expended on war-preparations will be thrown away. In this country special attention has to be paid to the relation between rivers and war projects. Our Tokyo contemporary proceeds to state that the establishment of the proposed Industrial and Agricultural Banks will fail to attain its object of relieving the poverty of farmers and others, unless the State takes timely measures for preventing future inundations. It then calls on the nation to exert itself to the full in seeing that forests are planted in the neighbourhood of the head-waters of rivers, and in having the beds and embankments of unruly rivers strongly constructed. Further, the *Keisai Zasshi* states that restoration works after inundations cannot be delayed for even a day, and in conclusion positively asserts the necessity for convoking a meeting of the Diet to vote the necessary funds, as there only remains some 200,000 yen in the Second Reserve."

THE BRITISH MINISTER IN CHINA.

The first mutterings of discontent against Sir Claude Macdonald are beginning to be heard. The arrangement endorsed by him in the matter of the Chefoo fore-shore question is journalistically declared to be a downright confiscation of Messrs. Fergusson & Company's property, and the consent that he has just given to the new Telegraph Convention is also strongly condemned, chiefly on the score that he failed to consult the leading merchants among his own nationals. As to the latter point, we do not imagine that any need for consultation existed, the opinions of British merchants being already well known. The Convention is decidedly objectionable in that it establishes the Cable Companies—Great Northern Telegraph Company of Copenhagen, and the Eastern Extension and Australasia Telegraph Company—and the Chinese, in their present monopoly of the service to Europe, which means, of course, that though rates may be raised, they certainly will not be lowered. Unquestionably, it is an objectionable arrangement, but in the absence of competition we do not see how it could have been prevented.

"THE PAGET PAPERS."

The publication of "The Paget Papers" is quite a literary event. They consist chiefly of the diplomatic correspondence of the Right Honorable Arthur Paget, G.C.B., between 1794 and 1807, and they are arranged and edited by his son, the late Right Honorable Sir Augustus Paget, G.C.B., whose son is now Second Secretary of the British Legation in Tokyo. The generation of Pagets of whom Sir Arthur was one, achieved a remarkable record. They were fifteen in all, nine daughters and six sons, the children of Lord and Lady Uxbridge. The second son died at the age of 24, a captain in the navy. "The eldest served with distinction in the Peninsula, lost a leg at Waterloo in the celebrated cavalry charge, was created Marquis of Anglesey, and twice appointed Viceroy of Ireland. General Sir Edward Paget, the fourth son, likewise served under Wellington in the Peninsular campaign, was Governor of Ceylon, Commander-in-Chief in India, and finally Governor of Sandhurst College. The fifth son was Vice-Admiral Sir Charles Paget, G.C.B., and the sixth, the Hon. Berkeley Paget, was A.D.C. to the Duke of York, served in the Peninsular War, was M.P. for Anglesey, and became a Commissioner of Excise. The subject of "The Paget Papers," Sir Arthur Paget, was the third son, and between 1794 and 1807 he was successively Secretary of Legation at Berlin, Envoy Extraordinary and Minister Plenipotentiary to the Elector of Bavaria and the Diet of Ratisbon, Minister to the Sicilian Court at Palermo, Ambassador at Vienna, and Special Ambassador at Constantinople." That is certainly as illustrious a chapter as can be found in the history of any family. We have not the book before us, and are obliged to be content with the reviews, all of which are highly favourable, though some regret that Sir Augustus, the editor, did not give fewer despatches and a greater number of "human documents." One passage has attracted the attention of every reviewer, and been quoted in full or in part. It is an extract from one of the Prince of Wales' many letters to Sir Arthur Paget, whom his His Royal Highness always addresses as "My dearest Arthur," and it derives its interest from the picture it presents of the Carlton House set:—"After the first glass after dinner every round was a Bumper to you in the very best claret I had: Chig thought it too weak. Of course stronger, the old Queen's House Claret, was produced for him, which he swore was the b-pup-pup-pup-pest Cha-a-teau Margeau he had ever ta-a-asted, and tumbled smack on his face, and was obliged to be carried off between two Servants. The rest were bad enough, God knows, except myself, though my every glass was a Bumper to your health, I can safely swear I never flinched one, dear Arthur, and you well know I am not even upon indifferent occasions a Shirker. Since that day the old Girl has never ceased being tipsy twice a day, first at dinner and on—but after supper—for she always makes a regular supper first—and a couple of bottles of iced Champagne, after a couple of quarts of small beer which She calls, you know, a swig of beer, has completed about six in the morning the Gentlewoman since She has been with us here." No one seems able to guess who "the old Girl" was, but perhaps that is no great matter.

THE HAT THAT TOOK THE BAILS OFF.

The Shanghai umpire who refused to give a batsman "out" because a ball, rising quickly, knocked off the batsman's hat, and the hat displaced the bails, justifies his decision in a letter to a Shanghai journal. From what he says we gather that the ball bumped so as to endanger the batter's head, and the batter, making no effort to play it, merely ducked to avoid. The umpire says that "as the batsman had made no attempt to play the ball, the decision—'not out'—was sound, and in accordance with rule." That is a difficult contention to endorse. For

example, when the wicket is fiery, and a batsman finds that a difficult-length ball bumps so much as to be hard to play without danger of giving a chance, and yet, in his judgment, may be left alone without peril to the wicket, he often refrains from any attempt to play it. But he is none the less responsible for everything that may happen in connection with the ball, his playing it or not playing it being purely a matter of his own choice. We fail, therefore, to follow the line of reasoning adopted by the Shanghai umpire, but we shall nevertheless be surprised to learn that his "not out" is condemned by cricketers. It would be entirely contrary to the spirit of sound cricket that a man should be put out for such a cause. See what the thing leads to. Suppose, for example, that in playing a ball it glances off the batsman's glove, and that, while the ball goes safely into the slips, the rubber being torn off one finger of the glove, flies in the direction of the wicket and displaces a bail. Would the man be out? Or suppose that a button stripped by the ball from a batsman's coat were to knock off the bails. Would he be out? An affirmative answer would eliminate every principle of sport from the game, and reduce it to an affair of mere trickery. The rule that, in playing a ball, a batsman must not displace the bails with any part of his person or clothing, is simply intended, as we interpret it, to confine his range of back play within reasonable limits: he must contrive to leave his wicket intact whatever kind of defence he adopts. The framers of the rule can never have intended that if a ball, not threatening the wicket in any way, drives a man's hat against the bails, he shall be held to have lost his wicket. The notion is too utterly unsportsmanlike.

JAPANESE JEWELLERS.

Pure gold" from China, says the *Tokyo Shimbun*, is remarkable for its malleability and ductility, showing that it is unalloyed. Gold articles imported from Europe and America always contain alloy, from 20 carat gold, upwards or downwards. But gold articles made by Japanese jewellers contain, in many cases, forty or sixty per cent. less gold than they are alleged to contain. That is a commercial falsehood little suspected by the ordinary public. Years ago, it appears, all the jewellers in the empire held a secret conference and passed a resolution to stamp all their goods as containing 20 per cent. more pure gold than really enters into their composition. This culpable imposition on the public remained a secret until very recently. What made further concealment impossible, was a confession made by a jeweller to a certain broker. The *Tokyo Shimbun* urges the Authorities to inquire into the matter in the interests of public morality.

ARREST OF A SUSPECTED BURGLAR.

On Sunday afternoon the Japanese police arrested on suspicion an American subject named J. J. Allen. It appears that some few days ago, a burglary took place at Mr. A. H. Dare's house on the Bluff, No. 261, and some articles of wearing apparel and a sporting rifle were stolen. A few days afterwards Kanamaru, the gun-dealer in Benten-dori, reported to the police that a foreigner had sold or pawned a rifle at his shop. Soon afterwards a second-hand clothes dealers' shop near Maganecho reported that a foreigner, giving the name of R. M. John, of 117 Bluff, had sold some clothes to them. These clothes were identified by the police as the lost property of Mr. Dare's. Armed with some further information the police went to the prostitute's quarters and found Allen, who had just given a handkerchief, bearing Mr. Dare's name, to a girl there, together with an opera glass, gloves, and other presents. The man was accordingly arrested and handed over to the American Consulate this morning.

OSAKA AFTER HARBOUR CONSTRUCTION.

To ascertain the effect that may be produced upon commerce by the conclusion of the Osaka harbour construction scheme, the following statistics have been drawn up:—

A.—DOMESTIC TRADE (OSAKA).			
Exports from Osaka to various places in Japan.		Imported from various places in Japan.	
1891	yen 55,845,371	yen 61,613,008	
1892	yen 65,130,069	yen 66,811,982	
B.—DOMESTIC TRADE (KOBE).			
Exports from Kobe to various places in Japan.		Imported from various places in Japan.	
1892	yen 3,627,001	yen 3,575,041	
C.—MERCHANDISE DISPOSED OF IN OSAKA.			
Total amount.		Direct Through Kobe.	
64,900,605	25,848,440	39,052,165	
D.—FOREIGN TRADE (OSAKA).			
Re-exports to foreign countries.		Sent abroad from Osaka.	
1891	5,565,763	5,570,873	
1892	6,559,071	6,604,784	
E.—FOREIGN EXPORTS AND IMPORTS (OSAKA).			
Exports.		Imports.	
1891	1,142,401	4,084,704	
1892	1,503,020	5,547,370	
F.—FOREIGN EXPORTS AND IMPORTS THROUGH KOBE (OSAKA).			
Exports.		Imports.	
1891	5,618,921	21,270,327	
1892	9,228,546	26,195,920	

As seen in Table B, out of the total merchandise now taken to Osaka for purposes of sale in that city, to wit, yen 64,900,605, only yen 25,848,440 was carried direct, the remainder, yen 39,052,165, coming through Kobe. This is due to Kobe harbour being a better anchorage for large ships, than Osaka. At present goods have to be taken to Osaka in smaller ships than can discharge at Kobe, thus involving considerable expense and delay, as the following figures illustrate:—

IMPORTATION OF COTTON INTO OSAKA, 1895.	
From China	... lbs. 26,181,613
From India	... lbs. 25,863,794
From America	... lbs. 7,182,663
From Annam and Saigon	... lbs. 319,831
From Egypt	... lbs. 290,913
From other places	... lbs. 99,994
Total	... lbs. 59,938,808

Chinese cotton is first taken to Kobe and there landed at 5 *sen* per bale and then transported to Osaka by railway at the rate of 6.5 *sen* per bale. Not only Chinese, but also Indian, American, and Egyptian cotton have to be imported into Osaka by the same expensive and tedious process. On the head of cotton alone it is calculated that the harbour construction scheme will benefit the City of Osaka to the amount of a hundred thousand *yen* per annum. As Osaka is the greatest commercial and industrial city in Japan, any benefit it receives will be felt sooner or later by the whole country. Its harbour construction is, in fact, a work of State importance. The *Yiji*, from which we are translating, hears that the Government is inclined to render pecuniary assistance to the project. Our Tokyo contemporary concludes by saying that the Die will give its consent to granting a subsidy if Osaka people are really in earnest about their scheme.

A RUNAWAY PONY.

A pony attached to a carriage was being driven by a Japanese betto for exercise round Negishi this morning, when it broke loose and made a dash for Yokohama. Its passage through the "dirty village" was unattended by accident, but on turning on to Jizozaka it ran into a group of fish-wives, who were gossiping there. One of the women was so seriously injured about the head that she had eventually to be taken to the Hospital. Mrs. Manley, of No. 1, Bluff, hearing the clatter of the flying hoofs and the cries of the wounded women, went to the spot with what medical necessities she could hastily gather, and when Dr. Wheeler arrived he found that "first aid" had been efficiently rendered by this kind Samaritan. Meanwhile, the pony continued its course, knocking down four other people at Ishizaka: then it proceeded to its stable.

THE "ILTIS."

The survivors of the *Ilitis* apparently continue silent as to the incidents of the gun-boat's loss. The death of all the officers is accounted for by the fact that the ship broke in two after striking the rocks, and though the bow remained above water, the stern sunk, carrying the officers with it. There is still some uncertainty as to the number of men saved: one account says 12, another 11, and yet another, 10. The survivors are alleged to have remained on the wreck two days, and then, as no assistance seemed to be forthcoming, four of them swam ashore, and obtained help from the light-house. More than 75 persons lost their lives. The *Ilitis* had been lying at Chefoo since June 23rd, and she steamed out on July, under orders to proceed to Nagasaki. The meteorological reports show that on the 22nd, 23rd, and 24th the weather was of a character that ought to have induced the captain of the gun-boat to remain in harbour. On the 22nd, a typhoon announced two days previously, was reported to be in the neighbourhood of the Riukiu Islands, and the barometer was falling again in Manila and Shanghai. On the 23rd, the typhoon was declared to be approaching Shanghai; the barometer was falling rapidly, and the locality of low pressure was between the Formosa Channel and Japan. Nevertheless, the *Ilitis* put to sea on the 23rd, and it is asserted that, after a few hours, she was obliged to take shelter in a bay, where she anchored; but the fury of the typhoon was such that her anchors could not hold her, and she drifted on the rocks, breaking in two within a short time. She was a comparatively old vessel, having been built in 1878, but we have never heard anything to justify the allegations made in some quarters that she had become unseaworthy. A gun-boat of 489 tons encountering the fury of a typhoon off the Shantung Promontory could scarcely hope to escape, whatever her condition.

THE NEW CHIEF OF POLICE IN SOUL.

In the *Korean Repository* we find the following about the new chief of police in Soul:—

The new Chief of Police is a conservative, a stalwart of the stalwarts. He comes to his office with his face turned toward the ancient models. The reformers pilfered the name of one of his ancestors when they called the office *Kyeng Mu*. This was an unwarranted use of a dead man's surname and must be changed at first opportunity. The barber to cut off the top-knot and tailor to make the uniform need not apply. The city authorities fell in with some suggestions for the prevention of cholera made by our morning contemporary. The suggestions were at once simple and practicable such as cleaning garbage from the streets, watching the wells that no refuse contaminate them, and to stop washing vegetables in the city gutters, into which such harmless things as dead dogs find their way. The sturdy Chief would have none of your new fangled notions. His reply was in substance: We have lived in filth, allowed the accumulation of garbage on our streets and washed our cabbages in the drains for 500 years, and I decline to order my men to look after such unimportant matters.

Since then the chief has had other and more serious difficulties. The assistant judge of the Supreme Court in the discharge of his duties has had occasion, we suppose, to address communications to the worthy chief. What about we do not know, neither do we care. Instead of speaking vaguely to an imaginary third person, the direct form was used. "This was not 'proper,' no such address can be allowed. The chief happens to be a notch higher in rank than the assistant judge and as a consequence there is a dead-lock between these scrupulous officials, over thirty cases accumulated in the Court and 'several men are still in prison suffering the heat and confinement on account of the quarrel.'" We admire a man who has the courage of his convictions. We are not talking of the kind of convictions.

Talking about washing cabbages in drains reminds us of an interesting injunction that may be seen at any time in a street in the neighbourhood of the Tokyo Hotel. Along the base of a *naga-ya* wall runs a miniature moat, filled with water about as dirty as they make it—black, slimy, ill-smelling, and scanty at that. Over this abominable stream is posted a notice in good ideographic script, "*Kono tokoro sen-taku su bekarasu*," or, "Washing must not be done here."

THE FIRST STAMP.

The first stamps that passed through the post on the morning of the 1st instant, that is to say, the new war commemoration stamps, are said to be worth 1 yen each in Tokyo to-day. It should be explained, perhaps, that the various batches of letters collected and brought into the post office at the appointed hours on any day, are distinguished, as they pass through the post-office, by the syllables of the *Kana* in due order. Thus the post-mark of the first batch bears the syllable "i," in addition to the date; that of the second batch, the syllable "ro," and so forth. How many letters constituted the first batch on the morning of August 1st we do not know, but it is to the stamps on these letters that a fictitious value is now said to attach. Could anything be more extravagant? Any ordinarily clever mechanic could forge a die suited, in all respects, to put the much cherished mark on a million stamps, if necessary. And even supposing the mark to have been genuinely stamped by some sleepy clerk in a dingy post office, how does it add an iota to the value of the stamp? Talk of collecting rabbits and pigs, this stamp mania is away beyond any of those wild caprices.

THE RAILROAD BETWEEN SŪL AND FUSAN.

According to the *Hochi*, the rumoured rejection by the Korean Government of the Japanese application for building a railroad between Sŭl and Fusan, may be a well-founded fact. Koreans have from time immemorial respected the sepulchres of their ancestors. Therefore, were these sepulchres desecrated, the consequences might be so serious as even to culminate in an insurrection. In Korea filial piety is considered a potent agency in making one happy or unhappy in this life. If calamity overtakes a Korean he ascribes it to failure in the performance of filial duty. Therefore he is extremely averse to removing the tombstones of his ancestors. Indeed, he holds an outrage done to the ancestral mausoleums as the vilest form of filial impiety. There are thousands of graves between Sŭl and Fusan, and should the Korean Government consent to the Japanese promoters' application, difficulties of a serious nature are certain to arise. It would be altogether impossible to lay a line that did not traverse one or more cemeteries. Now to surmount these difficulties peaceably, the country to which the builders belong must be strong enough to over-awe the fanaticism of ignorant Koreans. Also the help of the Peninsular Government must be secured. Japan's influence in the Peninsula is anything but strong just now, nor is it to be expected that the present Korean Government will lend aid to Japanese contractors. Under the circumstances the construction of the projected railway will be no easy matter, even were it granted to Japanese by the Government of Korea.

DYSENTERY AT KARUIZAWA.

A telegram from Karuizawa, published by the *Nichi Nichi Shimbun*, says that a bad epidemic of dysentery has made its appearance at Karuizawa. The type is said to be very virulent, over 70 persons having already succumbed in the little village. It is added that several foreigners have been attacked, but we are disposed to doubt the accuracy of that statement. It is true that Mr. and Mrs. Silver Hall have lost their youngest boy from this cruel disease, and that their youngest girl was for some time in great danger, but we have not heard of any other cases among foreigners. Karuizawa, however excellent it may be in most respects as a health resort, can not boast the fine supply of water usually found at villages among the hills in Japan. Few foreigners attach much importance to dysentery in Japan, but when we remember that it claimed more than sixty thousand victims in one year quite recently, we are compelled to regard it as an enemy not much less formidable than cholera.

PUBLIC COMPANIES.

According to the latest returns of the Agricultural and Commercial Departments, the numbers of commercial and industrial companies, excepting banks and railroads, are now as follow:—

I.—COMMERCIAL COMPANIES (1896).

	Number.	Capital. Yen.
At the end of June	704	73,793,760.200
Established in July	27	9,295,600.000
Increased capitals	6	392,000.000
Totals	731	83,481,360.200

The average capital is thus yen 114,066.

II.—INDUSTRIAL COMPANIES (1896).

	Number.	Capital. Yen.
At the end of June	690	113,710,156.500
Established in July	26	9,295,600.000
Increased capitals	15	2,032,820.000
Totals	716	110,950,376.500

The average capital is yen 167,570.

AGRICULTURAL COMPANIES (1896).

	Number.	Capital. Yen.
At the end of June	77	1,879,165.450
Established in July	—	—
Increased capitals	1	7,500.000
Totals	78	1,886,665.450

The average capital is yen 24,502. These three tables show that agricultural, industrial, and commercial companies now number one thousand five hundred and twenty-four, and that their capitals aggregate yen 205,318,402.15, or an average of yen 134,723 per company.

KOREAN NEWS.

A special correspondent of the *Nichi Nichi* sends the following letter, dated the 1st instant, from Sŭl:—"The news that the present Russian Minister to Mexico, who is acting as *Chargé d'Affaires* in Sŭl, has been appointed the Czar's Representative at the Korean Court, seems well grounded. But, as the appointment has not yet been gazetted, the *Corps Diplomatique* have not yet paid their congratulatory visits to Mr. Waerber. It is true, as I wrote, in a previous letter, that a telegram was received from Min, the Korean Ambassador to Russia, to the effect that the Czar's Government, while offering all protection to the person of the King should he remain in the Russian Legation, did not consent to the stationing of a Russian garrison in Korea or the granting of the proposal loan of 5,000,000 yen. But now a rumour runs that the two favours asked have been granted by Russia. This, together with another rumour, which alleges that the Czar has conferred on Min Tŏng-hwan the decoration of the First-class of the Order of the Silver Eagle, and the same of the Second-class upon Yun Chhi-ho, Min's attendant, is worthy of notice.

"Li Chai-Chŏng, the Vice-Minister of Finance, has been released from his *ad-interim* duties, the Minister's resignation not being accepted. The present state of affairs indicates that the rumoured Ministerial changes, in consequence of the promulgation of the Provincial Regulations, may not take place. But who can foretell the future of any Cabinet in Korea? The revised Provincial Regulations, that have so long been under the consideration of the Cabinet, are said to have been this day submitted, by special order of the King, to his Majesty for approval. Their promulgation may therefore be looked for within a few days. The revised Regulations for the various Government Departments are also said to have been prepared and will, within a few days, be brought before the Ministers for consideration.

"Mr. Clarence Greathouse, American Adviser to the Finance Minister, has proposed, it is said, to revise the New Code and issue an English version, and Mr. Kwon Yu-man and others on the Committee of the Compilation of the New Code have already commenced the work of translation. A Law for punishing persons who damage telegraph wires is soon to be pub-

lished. In consequence of the reforms of 1895 the Korean Government have experienced great difficulties in raising funds to provide for the State funeral of the late Queen. Before the reforms were carried out, certain classes were obliged to make large contributions towards such funds, in lieu of being exempted from ordinary taxes. The funds must be obtained by hook or by crook, and the Authorities lately decided to raise them from among the officials, who will each have to contribute amounts varying from 7 yen 80 sen, to 5 yen 20 sen, and 2 yen 60 sen, according to their rank. It is said, indeed, that the Treasury deducted these sums from the official salaries for the month of July. Mr. Brown, Adviser to the Royal Household, is acting with a high hand, and refuses to defray the salaries of the officials of the Household for this month, his reason being that there is a deficit of 10,000 yen in the funds appropriated to the Department. The Household officials are in consequence murmuring against the adviser. Min Yong-tai, reputed to be the greatest and most patient of the Min family, has lately been invited to the Russian Legation by the King, a Special Royal Messenger being despatched to his residence at Kyoha. The assassin of Kin Ok-kyun and the would-be assassin of Pak Yŏng-ho are all in Sŭl now, the first, Hong Chong-u, having been given an official appointment."

BANKING BUSINESS.

Banks, writes the *Fiji*, are now springing up like bamboo-shoots after rain, but most of them have only scanty capitals. Some are said to be working on a nominal capital of ten thousand yen, but in reality they have only two thousand yen, the rest of their capital consisting of personal property. This seemingly abnormal growth of banking business has caused some people much anxiety for the future, but the critics labour, for the most part, under mistaken ideas. The fact is that the majority of the new banks are merely the metamorphoses of private money-lenders, who have been driven by the stress of the times to bring their business within the purview of the Banking Regulations. Walking along the streets of Yokohama one may see in front of almost every raw-silk dealer's house a sign-board indicating that the place is also so-and-so's bank. This means nothing more or less than that the silk-dealer is also a money-lender, who has placed his business under the protection of the Banking Regulations. Such being the case, it is no wonder that the number of so-called banks has of late considerably increased. Banking business, however, has not increased and is not increasing, in proportion to the number of new banks. The *Fiji* says in this connection that the growth of Japan's banking business is very poor as compared with that of many other industries after the War. Yet the margin for growth and development is very wide, and the Government and the Nippon Ginko are inclined to foster the growth of minor banks as necessary organs for helping the progress of industry at large.

THE ECLIPSE IN TOKYO AND YOKOHAMA.

The solar eclipse was not very well seen in Tokyo. During the early stages of the phenomenon the sky remained tolerably clear, and the shadow could be distinctly seen creeping across the sun's disc, but at the last and most interesting period clouds more or less obscured the view. Under no circumstances, however, would the spectacle have been very impressive at a place so far beyond the belt of totality.

The conditions for viewing the partial eclipse of the sun were very favourable in Yokohama. The morning broke cloudy and overcast, but by noon the sun was riding in an almost clear sky. Just at the period of greatest obscuration some light, fleecy clouds formed in the direct line of vision thus allowing the phenomenon to be easily observed by the naked eye. At this
